in the matter of the reconciliation of clans, especially when
the hostile clans are pandf'y to each other, as not infrequently
happens, and we have already expressed in the section on re-
venge our own belief that the institution of blood money itself,
in all probability, owes its origin to the beneficial influence
of women and the religio-social bonds which tie together the
matrimonial clans.

*614 Such are the relations between the akhmal'k and ymgi clans,
615 relations which broaden the narrow framework of the closed
609 clan and extend its sympathies to a whole series of foreign
clans. This is a whole school of social training, a school of
benevolence, hospitality, compassion, and, finally, social
good-breeding. In this school are formed those social habits
and feelings which finally become stronger than interclan
ties and are transformed into sympathy for a whole tribe and
finally for people in general. The term navkh, which the
members of the ymgi and akhmal'k clans of the corresponding
generations give to each other, has finally become the cus-
tomary appellation with which any member of another clan or
stranger is addressed. This formal change is none other than
the expression of a true and profound change in attitude toward
members of other clans.

609 Hospitality, courtesy, compassion -- these are virtues
594 which the Gilyak in reality practice toward all without dis-
• [159] crimination, not only toward tribesmen of other clans, not
only toward indigenous neighbors of other tribes, such as the
Orok, the Goldi, and the Ainu, but also toward newcomers,
the Tungus, the Yakut, and, finally, the Russians, who have
done them so much harm. How often have escaped convicts
slain whole families of Gilyak after the most hospitable

832 complaint against a local woman,
*835 who the evening before had seized
834 him by the leg, on the grounds
834 of which he was demanding
607 "ransom." They summoned the
114 culprit. She confessed and by the
decision of the assembly she was
obliged to hand over publicly to
her accuser an adjudged ransom,
namely, a puppy and a birch-
bark dish. Why the fine was limited
to such insignificant objects (if
they were not merely symbols of
especially female labor) I explain
only by the fact that the guilty
woman was entirely alone and did
not possess anything more valuable.

834 /171/ One must keep in mind the fact that the Gilyak
*835 are very passionate and by no means like to let felicitous
[104] opportunities for lovemaking, even with alien women, slip
• [159] by, so it is necessary to regard the aforementioned custom
as a survival from that epoch when intercourse with alien wo
was under a religious prohibition. Still more strictly regarde
is an affair between persons of prohibited categories; this
meets with the censure of society, the reproaches of kinsmen
punishment of the gods, the gnawing of conscience, and in-
evitable banishment. Such a relationship between even quest
of a casual passion, and a more serious feeling is regarded as
the result of one's being inhabited by an evil spirit, and the
persons prefer to kill themselves. Restraint toward persons
of forbidden categories has become converted into that same
respect which is felt among us with regard to one's mother or
own sister. All the more reprehensible is the idea of illegal
intercourse between the categories of pu and an'ge; realized.
In this respect, one can express oneself about the Gilyak in th

/463 cont./

preservation and augmentation of their property, which is peculiar to the Gilyak to a high degree; for with the large number of participants at such festivals the host's expensive supply of arak(a) would be gone in no time, apart from other dangers. Furthermore, thanks to this characteristic of the Gilyak and the rare energy of their character, there appeared at the very beginning of their relations with the Russians a phenomenon which may hardly be doubted in the history of the relations between primitive and civilized peoples: instead of being exploited by the Russians through liquor and long everything, they, on the contrary, knew how to win many an advantage from the Russian sailors and Cossacks with their small supplies of Chinese liquor. Their moderation and power of resistance were also greatly aided by the fact that during the first years of the Russian occupation of the Amur region only very little liquor was imported, while the number of the Russian consumers of it grew rapidly (1). Later, however, after

1. For instance, in 1855 the crews of several war vessels from Kapchatka and several detachments of Cossacks from Transbaikalia were added to the previous garrison of the lower Amur region.

the end of the Crimean War, when the importation of liquor into Nikolayevsk, handled by many and in particular North American and Hamburg trading ships, /466/ greatly increased, and, simultaneously, the ancient, original ways of life and views of the Gilyak were more and more undermined and began to disappear under the impact of Russian immigration and colonization, it was also the end of their moderation and power of resistance to alcohol, and as early as the sixties one could read in the local newspapers, as well as in the reports of returning travelers and other eyewitnesses, of the ever increasing drunkenness and gluttony among the Gilyak, especially during their bear festivals and other celebrations (1).

1. Cf., for instance, Arth. Nordmann,

SS 204 / 19

Tobacco smoking is common among all the peoples of the Amur region, and, indeed, both men and women smoke, and even the children are given the opportunity to become accustomed to it at an early age. It seems obvious to me where these peoples first learned about the tobacco plant and its use. As is well-known, Manchuria is the country from which China, at least the northern part, obtained the tobacco plant and the custom of smoking tobacco, and, indeed, this is said to have happened only about two and a half centuries ago when the now reigning Manchu dynasty ascended the throne (1644), upon whose orders the introduction of tobacco into China took place (2) and under whose protection the

501 and in any brisk or gusty wind using the sail is cautiously avoided. I also observed that the Gilyak, and likewise the Olcha and Goldi, who accompanied me as guides or oarsmen in my boat always became mentally afraid when sailing in a brisk wind; in spite of the fact that my boat had a mast (1)

114 / 157

1. Needless to say, after my above-mentioned experiences with the Gilyak boat, I had adequate mast bearers put on the bottom board.

and a regular sail, they usually sat there deathly pale and implored me to pull in the sail and to go ashore as soon as possible. There is no doubt, to be sure, that a boat without a keel, when it is heavily loaded, can easily draw water and even capsize with high waves and an unskilled steersman. In order to prevent the boat from drawing water at the side, the edge is sometimes raised on either side by a board attached to the side wall. The Gilyak equip their boats with such sharp-edges (Gilyak ardach) in particular when they undertake sea voyages, for instance, along the coast of Sakhalin to the Japanese, etc.

G 157 / 204 / 648 / 439 / 648 / 113

Of great usefulness on the Gilyak boat is the continuation of the bottom board extending under the prow, because it not only protects the latter from the immediate impact of the waves and possibly also from a severe impact on steep rocks along the shore, with another boat, etc., but it also permits the boat to glide over the waves more easily. Since the oars sit on fixed prongs, very little effort is required to propel a Gilyak boat if it is not moving against a strong current or high waves. It is not very well adapted to battle against them, however, and demands skilled and powerful handling of the rudder. More than once it has happened to me in traveling around rocks and capes protruding into the Amur River that the boat, seized by the strong countercurrent, suddenly turned around and was irresistibly driven back. Undoubtedly the

/656 conj./
grandson, etc., depending on the degree of kinship. No nach of the person slain will be ready to accept this substitute if it is too. On the other hand, if the person slain was wounded by the act of bloodshed comes away with his life, the carrying out of the blood revenge remains reserved for him, but he may then ask the injured party to help him by finding out the whereabouts of his enemy, trying to arrange a meeting with him, and helping him in such a way as possible in carrying out the revenge, indeed, if need be, even stepping in for him. Quite similar obligations exist, on the other hand, for the nach of the injured party in the act of bloodshed. /657/ They must do everything to thwart the designs of their opponent and to protect their relative from the revenge coming upon him. Thus blood revenge with the demands and obligations growing out of it creates a strong family tie which arouses and preserves the consciousness of solidarity and mutual assistance in all members of the same paternal kin-group. The larger a kin group is, and the stronger this consciousness is in it, the more protection and help it can offer each one of its members. It is therefore understandable that the members of a paternal kin-group like to live in one place or within easily reachable distances, and that also those members who, as children and as a result of a second marriage of their widowed mother, have moved away with their stepfather do not like to become estranged (1).

1. See p. 1062 above.

The solidarity of all the nach among one another with respect to blood revenge further offers each individual and especially the members of larger kin-groups a certain guarantee against wanton bloody attacks. And this is of no little significance in view of the easily wounded, vindictive temper of the Gilyak, treacherously reserved, but quickly resolved on an act of bloodshed at a favorable moment. Most of their blood feuds, however, arise from urgent motives, especially from the abduction of women so common among them and the conflicts brought about by this. Often, however, only petty motives, as imagined insult or antipathism damage to property or profit, or, for

/655 conj./
and that after their return home he once traveled from Aliof to Kaki and stopped at one of the houses there. His hort and hostess, well known to him, were quite friendly toward him; in the evening, however, after he had eaten their meal offered him, a nlag lying next to him on the sleeping bench, the very one with whom he had had the quarrel, suddenly drew a knife out of his side. Returning to Aliof, he soon recovered from his wound, but his blood enemy had set out for Lange the following night, accompanied by a relative, and had not been seen again. Meanwhile two years had passed, during which he himself had in vain gone to the place to find out what had happened to him, and he could not go to Lange itself, because he is a stranger there, whereas his blood enemy could count on the protection of his relatives. Thus, even in the future he had no prospect or hope of getting rid of the obligation for blood revenge weighing upon him. /658/ And he said, sadly shaking his head, "I must do it. I do not know what happened to him later, for I did not see him again, and I have never heard about him. Undoubtedly, however, the psychic condition in which such a superstitious fear of death pers primitive man can have a fatal effect simply through its influence on the mind of the man who is the hunted in the manifold dangers through which his life moves. And in this way, as well as in consequence of the universally prevalent logic of post hoc, ergo propter hoc, the superstition connected with blood revenge it constantly nourished and spread.

/659 conj./
Not only that, however, but the fear of death pure made other people and a part more difficult for the individual because it is not restricted to those who directly participated in the act of bloodshed, but also more or less involves their relatives and imposes certain obligations on them. Among the Gilyak, however, these obligations do not extend to all the relatives, but only to the nach, the paternal relatives. Without any qualification and with all the consequences, they are bound with the obligation of blood revenge if the person concerned lost his life through the act of bloodshed, either immediately or after a period of wounds received, and is therefore no longer able to carry out the revenge himself. It must then be carried out by the son, brother, brother's son,

/654 conj./
in the snow on either side of the path in front of the house for the departing guests, to be taken along by those driving by -- only the bear-head and the bear-paws are left in the house and remain there in their nlaga as provisions for the trip.

/655/ Bear-festivals are also given during of the dogs and the dog races did not take place until shortly before noon. In the afternoon, however, for the first and only time the women actively participate, in the inspire entertainments, in that they executed a dance to the drum music which resounded in a very strange and wild rhythm. At my request, they danced in their ceremonial dress, hairy in her hands either fir branches or cantaser-like wooden clappers, and the dance actually consisted of only the occasion postures and contortions of the body and the rhythmic beat of the drum. It is vividly reminiscent Dittmar of the bear dance of the Kamchatka women, and even the music was similar, except that here it was drummed, likewise by women, on a swinging beam with cudgels and sticks, whereas in Kamchatka the dancers and the spectators jointly sing. Incidentally, I must note that such an outburst of enertirment among the Gilyak women is probably very rare, because the women, living in the tents in complete seclusion, are not social and are always much better than the latter at all sorts of work and entertainment. But it could not have been that such outbursts of high spirits induced by liquor, for this is, or was at the time of my visit among the Gilyak, absolutely prohibited during the bear festivals, a measure, as they say, introduced by Cz, amongst by coal running

2: See p. 719 above.

and evidence of their great strength of character. Another fact is much more surprising and much more difficult to explain, namely, that no shamanistic activities are permitted in a house where a bear festival is being celebrated. The reason for this may be that in the eyes of the Gilyak the uncanny art of the shaman would disturb the festival and, through the power that it exerts over the spirit world as well as over the human spirit, would cause bewilderment and misfortune among the participants in the festival.

/653 conj./
nowhere had set out from Tkyl merely on ski, continued on his way without further delay, and in the 10th day of reaching his nearby native village of Kuli? before nightfall. Not did he spend the night there, but he set out for the village of Tyrmy-Lake. The other guide, a Tro Gilyak from Lake-wo, named Enpit, who had guided the through part of the Tymy Valley, behaved worse: he forgot to stop at the night in Tulk-wo in a small inter-year, where after the fire had died down the mercury froze, he crept out of it, cut the straps of one of my pack-sleds, burrowed through the content, and made off with a few of my people's garments.

Only in one respect should the Gilyak never be trusted, namely, when it comes to setting the time when something is to happen, for their word and their sense of time are not to be trusted, etc. This is undoubtedly due to the fact that they have no proper conception of time and only a very inaccurate way of determining time and reckoning time. Time is only roughly determined as day (mas) and night (nik), morning (ut) and evening (nek), the time of day is determined only roughly and very inaccurately bad. For the most part, especially in remote areas, it is very difficult to determine the time of day. Thus I once had to wait for two days and fearful to give up their freedom and cut their lot in with that of the traveler. More than once I failed completely, but when I did get some I usually had reason to be satisfied with their determination, their exact knowledge of the locality, and, in the evening hours, their ability to find their way unmistakenly and circumvent. Among the many guides whom I had on my journeys, there were only two who deceived me. And this happened under circumstances which in part make their faithlessness understandable. On one occasion, when I was traveling along the coast of the Sea of Okhotsk, I was surprised by a bad weather. The broad-soled Russian sled stubbornly stuck to the wet snow, and the dogs were already so tired that they constantly collapsed and could not be started up again by being beaten. There was nothing for us to do but to drag the dogs and the sled up the moderate height of the bank, which, covered with small dwarf birch trees, did not even offer the prospect of a cheerful campfire. He vonder that under such circumstances my guide, who on account of the earlier

/652 conj./
theatrical presentations, no fantastic costumes, no masks etc. Not other Tribes statistic peoples, for instance, the Aleuts and the Northwest American Eskimo, have such a wealth of these and such great skill in these entertainments that there are complicated arrangements for setting up the stage, the entrance of /653/ the actors, etc. in the kashim for the most part erected for the purpose, and, in the Northwest, even with a roof.

2. Concerning the theatrical performances of the Aleuts see in particular Veniaminov's "Zap. obl. oper. Unalash. ord. /Notes on the Islands of the Unalaska Sector/". St. Petersburg, 1840. Part II, pp. 68. 80. With regard to the Eskimo, see above, pp. 1056 ff.

of mind that they are not in a state of illusion.

Their social entertainments are principally of such a kind as to offer the men an opportunity, in competitive tests, to parade their great skill. Feasting with drinking is a very rare and afterward to enjoy an opulent, hearty meal, whereas the women, except for this very rare occasion, are prevented from participating. I play an almost entirely passive role at them and hardly have a chance to enjoy the results of their own labor. In the next section, devoted exclusively to the bear festival of the Gilyak and their immediate neighbors. I shall also discuss the entertainments on the bear festival and in the order in which I myself became acquainted with them.

Mention might be made here, however, of one Gilyak game which does not belong there and which they owe to the Chinese: I mean playing with cards. They are the well-known, small, Chinese playing-cards, which Russian traders bring from the Sungari and upper Ussuri down the Amur, through the territory of the Goldi and Olcha (2). And this into the bands of the Gilyak.

2. Maack (Petrah na Amur, p. 198) also for example, these Chinese playing

/651 conj./
Gilyak family customs and organization are constantly being changed by the Orthodox and by the Russian laws which were sent and spread in much the same form among them. Of course, they were bound to undergo certain modifications in their general character, in that they were transplanted in the soil of a very different people with respect to their natural disposition. The Orthodox, a branch of the large Tungus tribe spread over all of Siberia and the Amur region, are by nature much more kind-hearted, gentler, more pliable, more carefree, and more easy going than the Gilyak. They do not have the perseverance and energy of the latter, but, on the other hand, they are free from having their avariciousness, treachroousness, and vindictiveness. These original character traits of the Olcha, however, are likewise undergoing change in consequence of the mixture of the people by the Gilyak -- and this has in part already taken place -- but they appear time and time again, and, among other things, also in their family relations.

Among the Olcha, for instance, in addition to the generally customary purchase of wives, there is also the abduction of women, though by far not as frequent and usually, as among the Gilyak, primarily for the sexual satisfaction, with more moderate demands, they more readily come to terms in dealing with one another and with their neighbors of the Tungus tribe, and that for absolutely quick and decisive action in case of need, which is not in their nature, and, finally, probably also out of a natural love of peace and fear of the evil and bloody consequences that usually follow the abduction of a woman. Strangely enough, however, they most often carry it out exactly in the direction from Gilyak to Olcha, and, in the Gilyak, they have a strong revenge, namely, among the Gilyak, either because they have the most active intercourse with these neighbors of theirs or because the Gilyak women have a special attraction for them, and, on the other hand, the high demands of the Gilyak for their daughter, especially if they are to go out of the country, often make a peaceful settlement impossible. In such cases, which the Gilyak often told me about, bloody conflicts are unavoidable. Although, when

/650 conj./
cigar running. I had even greater confidence in the latter. Since I had to face the danger that a mechanical weaving shop erected in the immediate neighborhood of my house prepared for me, in that I must constantly draw upon them in emergency over my house, which was covered only with tree bark and hence might easily go up in flames, I decided, since I had planned a trip, to take my manuscripts and collections to the village of Sabakh for the summer and entrust them to the Gilyak headman. The boxes were provided with a cover, tied crosswise by means of a rope, and put in the summer dwelling of the Gilyak. My trust was completely confirmed.

/651/ Finally, hospitality, too, is based on the national principle. At first it seemed that the Gilyak were inhospitable to me. They are too suspicious, too avaricious, /652/ too cunning, too shoot their own advantage to be easygoing. On Sakhalin, on the occasion of my first visit to the islands, they wanted to prevent me from using the fire in the yurt and to have me spend the night in the open. Later, on the other hand, I had to resort to grave threats with my pistol in order to have my way. Later, I was treated very polite to my first journey to Sakhalin the runner had spread among the Gilyak that a Russian wanted to stand for themselves and therefore intended to kill all the Gilyak. After I had spent a winter in the Amur region, however, and had formed numerous connections, from which I could be too friendly, I was treated and was always friendly toward them, they became friendly and hospitable toward me, so that a very good relationship developed, and I even enjoyed their confidence to some extent. But there was always a great difference according to whether it was a Tungus (tenchu) or a other Gilyaks who was to be given lodging: as soon as the cry "nilach pilnak" rang out, the fire, stirred up by the women, crackled more vigorously, a saber-shaped piece of wood (Gilyak wirwin) was used to scrape and heat the stove from the person entering, a bowl of fish and ma was offered as a welcome, and, the meal being late it was, a meal was prepared. Then the host and the guest sat down by the blazing fire, the events of the day were discussed, in which the women also

/649 conj./
took part, and until far into the night one small pipe after another was smoked, sometimes also tea drunk. Very early in the morning, deliberate manner. Hospitality also requires that one should be fed before they continue on their journey the following day.

The Gilyak thus travels only in short daily trips from village to village. If, with greater distance between the villages or when bad weather taken him by surprise, he is forced to spend the night out-of-doors, and he reaches the next village after dark, unnecessarily be waken of a rope, and put in the summer dwelling of the Gilyak. My trust was completely confirmed.

/650/ Finally, hospitality, too, is based on the national principle. At first it seemed that the Gilyak were inhospitable to me. They are too suspicious, too avaricious, /651/ too cunning, too shoot their own advantage to be easygoing. On Sakhalin, on the occasion of my first visit to the islands, they wanted to prevent me from using the fire in the yurt and to have me spend the night in the open. Later, I had to resort to grave threats with my pistol in order to have my way. Later, I was treated very polite to my first journey to Sakhalin the runner had spread among the Gilyak that a Russian wanted to stand for themselves and therefore intended to kill all the Gilyak. After I had spent a winter in the Amur region, however, and had formed numerous connections, from which I could be too friendly, I was treated and was always friendly toward them, they became friendly and hospitable toward me, so that a very good relationship developed, and I even enjoyed their confidence to some extent. But there was always a great difference according to whether it was a Tungus (tenchu) or a other Gilyaks who was to be given lodging: as soon as the cry "nilach pilnak" rang out, the fire, stirred up by the women, crackled more vigorously, a saber-shaped piece of wood (Gilyak wirwin) was used to scrape and heat the stove from the person entering, a bowl of fish and ma was offered as a welcome, and, the meal being late it was, a meal was prepared. Then the host and the guest sat down by the blazing fire, the events of the day were discussed, in which the women also

/648 conj./
advice as to whether he should not "buy" a pretty woman who has attracted his attention, and, finally, he had married for a long time and could not praise his wife enough. He did not, it is true, take part in the nightly adventures of his young companionship, but this was because the companion was already too great without that, since it very nearly went as far as at a time when he can catch them. And if the guest has made a proper impression, the matter is consummated very quickly. The man follows her to the well, or to the berry patch, or simply catches her in the entrance hall of the house, after a short symbolic dialogue, such as, "Let's smoke together a little (i.e., drawing in turn at the same pipe)," or "Let's hear the news," the matter is settled very simply. Sometimes the guest simply remains in the yurt of his beloved and at night creeps over to her couch, or vice versa. Sometimes the business is consummated without words, limiting itself to a very significant look, a gesture, a slapping on the leg, and if this symbolism does not encounter any rebuff, the consent of the woman is regarded as given. Even the symbolism of amnesty proposals recalls the rites of the wedding ceremonies. The proposal to smoke together is a strong intimation of the rite of conferring /649/amnesty/. The matching of the leg or the breast, although it does not figure at the present time in the wedding ceremonies of the Gilyak, is still to be found among certain peoples of North America, for example among the Lillooet Indians, according to the testimony of Boas and Teit.

Such license in alien villages is practiced not only by the unmarried youth, but by the married, middle-aged Gilyak as well. On one of my first trips there was among my companions an old respectable Gilyak, Gibel'ko, who enjoyed great fame among the Gilyak because of his reason of his wealth and outstanding intellect. When we stopped in the golden time, he spoke boastfully on a par with the young companions about the pretty women of the settlement, and once he became so carried away that he began to ask my

/647 conj./
customs may have taken in consequence of the long trade relations of the Gilyak with the Manchu-Chinese and Japanese, who in Santa-Kai, on a certain place, carried on a brisk trade in the same manner, deliberate manner. Hospitality also requires that one should be fed before they continue on their journey the following day.

The Gilyak thus travels only in short daily trips from village to village. If, with greater distance between the villages or when bad weather taken him by surprise, he is forced to spend the night out-of-doors, and he reaches the next village after dark, unnecessary be waken of a rope, and put in the summer dwelling of the Gilyak. My trust was completely confirmed.

/648/ Finally, hospitality, too, is based on the national principle. At first it seemed that the Gilyak were inhospitable to me. They are too suspicious, too avaricious, /649/ too cunning, too shoot their own advantage to be easygoing. On Sakhalin, on the occasion of my first visit to the islands, they wanted to prevent me from using the fire in the yurt and to have me spend the night in the open. Later, I had to resort to grave threats with my pistol in order to have my way. Later, I was treated very polite to my first journey to Sakhalin the runner had spread among the Gilyak that a Russian wanted to stand for themselves and therefore intended to kill all the Gilyak. After I had spent a winter in the Amur region, however, and had formed numerous connections, from which I could be too friendly, I was treated and was always friendly toward them, they became friendly and hospitable toward me, so that a very good relationship developed, and I even enjoyed their confidence to some extent. But there was always a great difference according to whether it was a Tungus (tenchu) or a other Gilyaks who was to be given lodging: as soon as the cry "nilach pilnak" rang out, the fire, stirred up by the women, crackled more vigorously, a saber-shaped piece of wood (Gilyak wirwin) was used to scrape and heat the stove from the person entering, a bowl of fish and ma was offered as a welcome, and, the meal being late it was, a meal was prepared. Then the host and the guest sat down by the blazing fire, the events of the day were discussed, in which the women also

/646 conj./
grandson, etc., depending on the degree of kinship. No nach of the person slain will be ready to accept this substitute if it is too. On the other hand, if the person slain was wounded by the act of bloodshed comes away with his life, the carrying out of the blood revenge remains reserved for him, but he may then ask the injured party to help him by finding out the whereabouts of his enemy, trying to arrange a meeting with him, and helping him in such a way as possible in carrying out the revenge, indeed, if need be, even stepping in for him. Quite similar obligations exist, on the other hand, for the nach of the injured party in the act of bloodshed. /657/ They must do everything to thwart the designs of their opponent and to protect their relative from the revenge coming upon him. Thus blood revenge with the demands and obligations growing out of it creates a strong family tie which arouses and preserves the consciousness of solidarity and mutual assistance in all members of the same paternal kin-group. The larger a kin group is, and the stronger this consciousness is in it, the more protection and help it can offer each one of its members. It is therefore understandable that the members of a paternal kin-group like to live in one place or within easily reachable distances, and that also those members who, as children and as a result of a second marriage of their widowed mother, have moved away with their stepfather do not like to become estranged (1).

1. See p. 1062 above.

The solidarity of all the nach among one another with respect to blood revenge further offers each individual and especially the members of larger kin-groups a certain guarantee against wanton bloody attacks. And this is of no little significance in view of the easily wounded, vindictive temper of the Gilyak, treacherously reserved, but quickly resolved on an act of bloodshed at a favorable moment. Most of their blood feuds, however, arise from urgent motives, especially from the abduction of women so common among them and the conflicts brought about by this. Often, however, only petty motives, as imagined insult or antipathism damage to property or profit, or, for

/645 conj./
theatrical presentations. Not fantastic costumes. No masks etc. Not other Tribes statistic peoples, for instance, the Aleuts and the Northwest American Eskimo, have such a wealth of these and such great skill in these entertainments that there are complicated arrangements for setting up the stage, the entrance of /646/ the actors, etc. in the kashim for the most part erected for the purpose, and, in the Northwest, even with a roof.

2. Concerning the theatrical performances of the Aleuts see in particular Veniaminov's "Zap. obl. oper. Unalash. ord. /Notes on the Islands of the Unalaska Sector/". St. Petersburg, 1840. Part II, pp. 68. 80. With regard to the Eskimo, see above, pp. 1056 ff.

of mind that they are not in a state of illusion.

Their social entertainments are principally of such a kind as to offer the men an opportunity, in competitive tests, to parade their great skill. Feasting with drinking is a very rare and afterward to enjoy an opulent, hearty meal, whereas the women, except for this very rare occasion, are prevented from participating. I play an almost entirely passive role at them and hardly have a chance to enjoy the results of their own labor. In the next section, devoted exclusively to the bear festival of the Gilyak and their immediate neighbors. I shall also discuss the entertainments on the bear festival and in the order in which I myself became acquainted with them.

Mention might be made here, however, of one Gilyak game which does not belong there and which they owe to the Chinese: I mean playing with cards. They are the well-known, small, Chinese playing-cards, which Russian traders bring from the Sungari and upper Ussuri down the Amur, through the territory of the Goldi and Olcha (2). And this into the bands of the Gilyak.

2. Maack (Petrah na Amur, p. 198) also for example, these Chinese playing

/644 conj./
Gilyak Charta (1) recounted: "When I was little I saw

1. L. L. Stiernberg's guide around Sakhalin.

a dog and wanted very much to have it, but did not dare. I felt so ashamed because the Gilyak ate the dog bit one in the very place that was sore. I lay just as if dead. Then my father bought the dog and gave it to me. Now I eat -- and immediately fried a piece and I began to recover."

Everyone confirmed this fact. The husband of his present wife died from Ichm'ad'ad.

/643 conj./
instance of such amusing heroism in the village of Nyaiwo. The most respected and wealthiest man of the local clan at this time was a Gilyak by the name of Nyugun. At one time he believed was forcibly given in marriage to another man. He slew his competitor, after which he was amnesd and taken to Nikolaevsk. In the meantime the father of the widow again gave her in marriage against her will to another man. Breaking out of prison, Nyugun immediately set off for the settlement of his beloved. Going up to her yurt, he stripped everything off himself, except the short pants of modesty, and naked, dripping with water, he sat down in this state into the yurt, which was overflowing with people, and by his appearance struck such fear into those present that he was able without hindrance to take his beloved by the hand and take her to his home, after which he lived with her tranquilly for many years (his last wife had time to wait for him four fin-for costs and four fur coats out of table tails).

The most tragic obstacle in love is the position of lovers (1) in the forbidden degrees of kinship. Here the tribal community. The parents themselves insist on suicide. Ordinarily in such cases the lovers go to the forest and hang themselves or hide in one of two trees. Before taking their lives, they sing songs to each other, singing of their journey to the world beyond. Often one, when no one is looking, hides the lovers. Some of these songs have come down to us in the following way. It has happened that one of the parties, among the man, breaks loose and after this loses the desire to repeat the attempt. It is the duty preserve for poverty /644/ his crying song. One of these tragic cases of illicit love has become a popular legend. The time was a hundred years ago. Two Gilyak maidens became enamored of a Gilyak man, a brother. Shortly after this, her sweetheart set out on a long trip to Sakhalin. The girl, meanwhile, became ill and began to show signs of pregnancy, it was no longer possible to conceal the fact, and she took her own life by hanging. When her sweetheart returned, he hurried on her grave all

/642 conj./
and the Gilyak, appeared somewhat stooped, his eyes looked straight ahead, staring and sad, and wash would not come. Since I would not desist from demanding various questions to him, he finally broke out with the words, "I must die soon," and when I then asked whether he was sick and what ailed him, his answer was, /643/ "Your sake, bad yet I must die soon." This though seemed to dominate him completely, and then he told me the following. Ko-ni-ya-ko-ni-ya-ko-ni-ya-

/77 cont./

756 the furies and all the frenzied shrieks of the shamans. When the paroxysm was over, the face of the poor boy was terribly exhausted /78/ and seemed like the face of an old man. In a dream two kekhn appeared to him, one a man, the other a woman; they were the kekhn of his deceased father. They said to him: "We used to play with your father, now let us play with you." Another Gilyak boy, Indyn, also present there, observed the phenomenon of the paroxysm with profound amazement. "Well, now Koynyt will not be a man," he said "The kekhn want to force him to conform to their law."

In this remark is clearly expressed the Gilyak view of the shaman as a special being, as one chosen by the gods. But, as we see, even among the Gilyak selection is not easily attained.

756 Thus, the shaman is a chosen one, a person who believes
• 158 in his power and selection. This conviction could not correspond more to his entire physical make-up, for real shamans are almost always people who suffer from various kinds of hysteria, acquired or inherited. And, as is well known, hysteria is that fertile soil which produces the gift of clairvoyance, hallucination, delirium, and obsessions. They are the individuals who most easily yield to hypnosis and autohypnosis. From childhood, the future shaman is hypnotized by the idea of the protection of the kekhn, and during seances of kamlaniye he uses any means necessary for autosuggestion. The study of the psychics of shamanism, in my opinion, amounts to the study of autohypnosis due to hysteria, and, of course, against a gen-
756 eral background of an animistic world-view. Apart from the
774 gift of being chosen, the shaman has another enviable advantage over the common mortal. An ordinary mortal has only one soul, a rich man has two, while a shaman may have twice as many as they. Thus, the Ady-Tymovskiy shaman, Chamkh, the father of the boy-shaman, Koynyt, about whom I spoke earlier, had all of four souls. One of these souls was given to him by the mountain, another by the sea, a third by the sky, a fourth by the underground kingdom. During my stay on the

50 cont./

Such instances must not be regarded as a general enomenon, however. Along with the factor of heightened uality and sexual freedom, other, restraining factors also acting. Among the married women, such factors maternity, economic cares, and, finally, among both rried and unmarried women, such feelings as love and shfulness. In general, however, sexual dissoluteness plays small role in the life of the Gilyak, not only in an eco-mic, but in a psychological sense as well. Ordinarily Lovelaces either do not maintain households at all or, they do, maintain their economies very carelessly. Both life and in poetry one constantly comes across sharp proaches and the reviling of the youth by the older people for ziness at work in connection with licentiousness. And thermore the Gilyak themselves attribute childless marriages dissoluteness. But the saddest of all is the influence of ssoluteness on the psychics. A whole series of nervous sorders specific for the Gilyak, such as myarechenie among th men and women, and diseases connected with the full ss of psychic composure (self-control /given in English/) e the result of dissoluteness, which furthermore, among omen, is accompanied by serious transgressions in the realm the sexual sphere, and the latter, in turn, lead to the pearance of hysteria.

Side by side with the wide sexuality and sexual freedom escribed above, the feeling of love still plays a great role the life of the Gilyak. The most extensively used term r love, es'-mund, denotes both sexual love and love in eneral, for children, friends, etc. There is a special term r reciprocal love -- os'mund; for marriage for love, 'mur:kir, vavynd. There are also some other terms for ve, for example, hyvnd and others, but there are no special rms for "beloved" /male/, "beloved" /female/, although 251/ one can say es'mula nig:yvyn, i.e., "man whom they ve," but in the language of lovers the beloved designate ch other either by the terms "husband" and "wife," or by

A woman not infrequently succeeds through her talen
832 singing. In their songs the women are capable, not only
533 expressing their love with great delicacy, but also of ridi
626 unwanted suitors most maliciously. In her sarcasm the woman does not stop at any hyperbole. In one song the n of the undesired one is compared to open patches of wate a frozen surface, to an open door, and his clothing, his d his harness, etc. are described in similar tones.

839 /256/ Sexual Abnormalities and Perversions. I asked the Gilyak many times if such sexual perversions as pederasty and bestiality were practiced among them. No one, ap parently, had ever heard of any cases of pederasty. As f
● [158] bestiality, only in one village on the Tym' was I told, a then with disgust, of one psychically sick Gilyak who had
839 copulated with a dog. The attitude of the Gilyak to thes
539 perversions is made clear by the following legend, which wrote down on the Amur. The tiger, the panther, and e the lion (?) were once men. Once, by chance, the god saw that they were copulating through the rear orifice. in indignation he said: "Well, since you copulate like beasts, henceforth be ye beasts forever." Thus, in the v of the Gilyak, the above-mentioned perversions are acts make a man like a beast.

143 The Gilyak have an extremely simple attitude towa
826 hermaphrodites (miskund in the eastern dialect, miskij - in the western dialect), in whose peculiarities they appa see a plain anomaly, but feel no abhorrence for them an
[588] are glad to have sexual intercourse with them. Marriage hermaphrodites are a common event.

XI.

Miscellanea

The cliff Uj-parne, in the form of an isolated stone pillar, is between Khez' and Chil'mi. Formerly one could hear how the master of the cliff beat on a tambourine. Three times (a year) they made sacrifices to him and addressed to him the request: "Pkhys'kyr ururungja'! -- do good for us with your risk!"

During a pila-dakh (smallpox epidemic) they bring firewood and water to the sick, but do not themselves enter the house.

When they learn that it is all over in all the settlements (i.e., the epidemic is over), then the dead are taken out of their graves and burned; they are afraid of burning them earlier for they believe that smoke spreads infection. The only thing that is allowed is the smoking with marsh tea in the yurt.

The Female Character. Proverbs. 1) The female character is like a whirlwind, similar to the wind. 2) With just a tug you will change the female character. 3) A woman is like a fire started in a clear field: the wind blows and it is out.

Meryachen'e. In Charbakh two people suffer from the disease meryachen'e -- two women; this sickness is inherited in the female line. Those who suffer from meryachen'e repeat literally everything, even in a foreign language; they repeat even actions. The attacks come during a fright. The sick woman is then unconscious, but later she comes to. If attempts are made to compel her to repeat something many times, she is ready to attack with a knife. In their youth they did not suffer from meryachen'e.

There are other such sick people in Tymvo and Pronga.

/323 cont./

756 When shamans fight, the one who has more souls wins. The
774 killing of one shaman by another is accompanied by the acquisition
776 of the kekhn of the opponent. During his supposed death, the soul
[578] of the shaman travels over islands of the sea (tol). On these islands, which are of various colors, the houses are of stone tol-kekhn. Sometimes his soul goes into the mountains to the abode of pal-kekhn. The shaman kekhn fears only Pal milk and Tol milk, but not the milk of sables, foxes, otters, and rats (1).

1. Concerning the rat, see Chapter VII, "Miscellanea." S. Sh.

Among the kekhn there are variously colored eared seals, iron trout, and tigers.

756 How the shaman Chomkx resurrected a woman (the settlement of
539 Rykovskoye). A husband and a wife were fishing. The wife fell sick and died before morning. The husband said: "All you shamans are deceiving me. Now my wife is dead. Well, make her live!" The shaman became angry and said: "I shall shamanize all night; if before morning she moves her left little finger, she will live." That is what happened.

756 A shaman stabbed himself and shot himself in the mouth, and "nothing."

756 A female shaman has more spirits than a male shaman.
84 She kills her shaman competitor, sending her kekhn to rub her
754 competitor's eyes with the menstrual blood of shankh-chokh. A
[562] feature of this blood is that a drop in food makes a person waste
[578] away. Copulation during the menstrual flow also leads to local
[833] ataxia.

756 The kamlanie of a female shaman, who, according to her
796 own words, was milkternd (mad) after the birth of her first daughter.
[158] She first made inau and then rubbed her face, breast, and so forth with marsh tea, lighted it on the hearth, and warmed her tambourine... Then she bound her legs and arms with shavings and girdled herself with shavings.. She yawned. Moderate blows... The sounds grew stronger. She sighed loudly and whispered. She

773 the women boiled the grandchildren, ate them, ran into the taiga, and disappeared.

778 Chnyr-chkhnaj. If a loss has occurred, they make chnyr-
776 chkhnaj, a figure of grass, and beat it (thresh it); if the chkhnaj
789 is good, the lost thing will be found on the following day. If it is not known what milk caused the harm, chnyr-chkhnaj is hung up over the plank bed and fed.

685 For stealing bear meat or a fishing rod, the face is maimed.

• 158 Kleptomania. There are thieves-kleptomaniacs, for example, Sentukh from Ady-Tymi. After his brothers threatened to kill him, he ran away to /344/ Lungvo. There he and his
[774] wife continued doing the same. He has one soul -- a rat sitting in his belly. The things that tempt him shine in the dark for him. The Gilyak confined themselves to depriving him of the things.

756 The shaman Koynyt's father, from Tro, once noticed that
774 his trousers had disappeared. He began to shamanize, found a rat in the belly of a woman, killed it, and on the following day the woman died.

683 Over an insult it is necessary to fight with sticks (chkharkirvand), or pay tkhusind, or take something by force. Frequently they kill over an insult.

787 Fortunetelling with a stone parnkhasind, with a kettle. The parnkhasind replies thanks to the chekhn. If the kettle swings straight, one has hit the mark; if to the side -- one has not hit it. If one has hit the mark, he must make a wooden chkhnaj, hang it around his neck, and feed it.

/367 cont./

000 suffering. He does not understand religious ecstasy. Shamanism,
756 with its ecstasy, seems to me to be a borrowed phenomenon. It
771 does not fit in with the religious beliefs of the Gilyak. It is true
[754] that he believes the shaman, trusts him to cure the sick, superstitiously fears him, believes in his predictions and in the power of his magic, believes, for instance, that the shaman can kill any man no matter how far away from him this last may be (thus they say that the Rykovo shaman killed the Nikolayevsk one by shooting a bird that was flying past); shamanism, however, is not typical
756 of Gilyak religious views. It is perhaps appropriate to mention at this point that shamans do a great deal of harm to their worshipers.
[754] In the case of the unsuccessful outcome of their treatments, they often pass the blame onto quite innocent people, whom they subject to physical violence and to cruel persecutions if the patient
• [158] dies. Also, by suggesting to their patients that their illness is the result of possession by devils, they cause serious psychic disturb-
[782] ances in people whose nervous state is healthy. The prayers of the Gilyak are quite characteristic, simple and clear like their beliefs. "Kur, piongukhia!" (Oh, God, please!) -- the Gilyak limits himself to this when he asks for something from his god.

776 The Gilyak have a hazy conception, or better a feeling, abo
577 a supreme deity, the father of all men and of all that exists, but for him it is just a vague feeling for which he does not have a clear formulation. The gods have a relation, not only to the material
577 life of man, but also to his moral life. Moral principles of com-
573 munal living, helping one's neighbors, and respect for the life
[776] and property of another enjoy divine sanction. Violating them leads to punishment in this life (sickness, premature death) and in the future life. I happened to hear such a statement from a Gilyak: "If a rich man abuses a poor man, it is a great sin, but if a poor man abuses a rich one (in the material sense, if he borrows and doe not repay, deceives him, etc.), that is not a sin!" This statement sounded all the stranger to me, because the Gilyak who made it was a very rich man himself, a big kulak, who did not hesitate to oppress the poor in any way. I do not venture to judge how much this extremely altruistic belief is really the belief of the Gilyak, or whether it is the result of Russian influence, or mere hypocrisy.

/176 cont./

000 such situations also in the richest and most respected families.
● 159 My good friend and first teacher of the Gilyak language, the
* 835 aforementioned resident of the settlement Tangi, the richest Gilyak on Sakhalin, lived in just this way with his younger brother, Pleun. The latter was himself a no less capable person than his older brother, enjoyed the name of an excellent hunter, and had been able to accumulate a huge quantity of "valuables," so that he could easily have taken for himself not one but several wives; nevertheless, he preferred to enjoy the wife of his older brother. It had evidently come about in this way: as a youth, he had enjoyed the wife of Gibel'ka with the rights of any younger brother, but gradually a stronger attraction had arisen between them, and he preferred, instead of an individual marriage, to live constantly with the wife of his older brother, whom in fact, he loved. It is characteristic here that everyone, including Gibel'ka himself, regarded this as an entirely normal phenomenon. When I approached Gibel'ka himself with a question about this, a slight shadow slipped across his handsome, intelligent face; he well knew how the Russians regarded such relations, but in general my question did not produce any particular impression on him.

[593] He spoke enthusiastically about his own wife, loved his children tenderly, although he could not have any confidence whatsoever that they were his, and his son, a boy of 14, felt a greater affection for the younger brother of his father than for him himself. It goes without saying that nothing prevented
[595] Gibel' from removing his younger brother from his house, or
[583] him together with his wife, and buying himself another, and not one but several, of the most beautiful and distinguished wives. With his extreme ambition, with his excessive love of popularity, he would not have failed to undertake the most drastic steps for the /177/ restoration of his marital reputation, if he had felt anything shocking in the regular and well-known cohabiting of this brother with his wife. As luck would have it, Gibel' outlived his younger brother, who perished tragically in solitude in his hunting balagan

/177 cont./

● 159 body was laid on the funeral platform amidst a huge and
764 solemn crowd of Gilyak who had assembled from all directions,
* 835 a few minutes before the cremation the wife of the older brother, with her hair undone as a sign of mourning, climbed up on it, seated herself beside the deceased, and in everyone's hearing began to mourn for her "younger husband" and "beloved" in the same pathetic and tender terms as if she had been his individual wife.

* 835 This public act is better evidence than any description as to how the Gilyak understand relations between men and the wives of their brothers.

The custom of the common, continual cohabitation of brothers with a common wife is not always easy to notice. In the first place, sexual relations are carefully guarded from publicity; furthermore, the Gilyak usually live in large yurts, with several brothers with families together, and for a stranger it is very difficult to figure out their secret relations, the more so because they are very unwilling to speak about such things; finally, any young Gilyak rarely has the desire to attach himself to the wife of an own brother; he prefers irregular relations with the wives of many of his tuvn.

595 Besides the group-marriage relations between brothers and
* 835 their wives, however, other purely communal forms are also encountered among the Gilyak -- true, not often -- namely, when two or several brothers are quite openly and admittedly married to one woman. I encountered such cases in 1910 even on the Amur, where the Gilyak distinguish themselves by a particular individualism. Two or three brothers formally seek in marriage a common wife from the akhmalk clan or buy an alien woman and then continue to live with her in a communal marriage. Of course, at the same time both the husbands and their wives are joined in group-marriage relations with a large number of their class pu and an'g-ej.

[538] In olden times such cases were evidently common phenomena. The so-called n'astund (heroic tales) and fairy

/247 cont./

000 amatory experience and art. The Gilyak woman, it is true,
834 conducts herself in an extremely inaccessible manner. Upon
832 the appearance of a strange man, she lowers her eyes, sits all
[834] the time with her brows knit, and hardly answers the questions of the stranger. But this is only external inaccessibility, concealing an inner lasciviousness. Unnoticed by those about her, she /248/ casts oblique, curious glances at the new man at a time when he can catch them. And if the guest has made a proper impression, the matter is consummated very quickly. The man follows her to the well, or to the berry patch, or simply catches her in the entrance hall, and then, after a short symbolic dialogue, such as, "Let's smoke together a little (i.e., drawing in turn at the same pipe)," or "let's hear the news," the matter is settled very simply. Sometimes the guest simply remains in the yurt of his beloved and at night moves over to her couch, or vice versa. Sometimes the business is consummated without words, limiting itself to a mute symbolism, touching the breasts, seizing the leg, and if this symbolism does not encounter any rebuff, the consent of the woman is secured. It is curious that the symbolism of amatory proposals recalls the rites of the wedding ceremonies. The proposal to smoke together is a joking imitation of the rite of conferratio /confarreatio/.

[585] The snatching of the leg or the breast, although it does not
[171] figure at the present time in the wedding ceremonies of the Gilyak, is still to be found among certain peoples of North America, for example among the Lilloet Indians, according to the testimony of Boas and Teit.

836 Such license in alien villages is practiced not only by
837 the unmarried youth, but by the married, middle-aged
● 159 Gilyak as well. On one of my first trips there was among my companions an old respectable Gilyak, Gibel'ka, who enjoyed great fame throughout all of Sakhalin by reason of his wealth and outstanding intellect. When we stopped in the settlements, he spoke breathlessly on a par with his young companions about the pretty women of the settlement, and once he became so carried away that he began to ask my

/248 cont./

836 advice as to whether he should not "buy" a pretty woman who
837 had taken his fancy, although he had been married for a
● 159 long time and could not praise his wife enough. He did not, it is true, take part in the nightly adventures of his young companions, but only because the competition was already too great without that, since it very nearly went as far as revolvers among the young men.

839 By reason of the comparative accessibility of women, the use of force upon them is rare. I have, however, heard of instances where a group of youths, at the season when the women go for several days to places very distant from the villages after berries and sarana, made genuine raids upon the defenseless women, and, when the women have not yielded voluntarily, they have had no scruples about using force. Violence, however, principally amounts to /249/ tearing the cloth trousers which, as among the Chukchee and the Koryak, are made closed, without any openings. Such adventures, like all romantic pursuits in general outside one's own kinship circle of women, bear the characteristic designation s'ankh nan'gynd --
[196] "to hunt after women." This term, however, is also applied to searching for a bride, since it has two meanings: "to hunt" and "to seek something, somebody in general."

484 Special distant expeditions to alien settlements in search
83 of women, of course, are exclusively the affair of real
836 amateurs, so to speak, since in a distant village the new arrivals ordinarily encounter the fierce competition of the local youth, and the women already have their local admirers, not to speak of husbands, and special qualities are required to win an easy success on alien soil. I managed to meet such fortunate individuals: they are ordinarily good and worldly tellers of tales, jesters, and singers. There are, however, very few such outstanding lovers, even among the Gilyak, and there is a special term for them. Ordinarily the unmarried youth is either content with the women of his own village or pays visits to the settlements of his akhmalk'i, where, as we have seen, a most joyous

/252 cont./

831 The importance of the role of love in the life of the
533 Gilyak may be judged by the wealth of song material. Not every Gilyak can relate a story or poem, but everyone knows love songs. Songs play a quite exceptional role in Gilyak love. The song is the language of lovers. At their assignations lovers sing improvised songs to each other in place of conversation, and, if they find it impossible to meet, they send each other songs, composed ad hoc, through a third person. Special terms have even been made up for such songs.

831 An idea of the intensity of love among the Gilyak may
584 be gained from the reaction of lovers in cases where their
513 love encounters insuperable obstacles. In such cases the
762 solution is suicide. Obstacles in the Gilyak environment are of a twofold nature. Most frequently the obstacle is presented by the parents, who, either from mercenary motives or from an unwillingness to violate /253/ the childhood agreement of betrothal, force a marriage, or when a
831 woman is violently carried away. In such cases suicides
58 frequently take place quite a long time after the involuntary
513 marriage. In such cases the woman first of all seeks to save
762 herself from the unloved man by flight and, in the event of failure, ends with suicide. I remember one such characteristic instance. A girl from the village of Nyanivo was given in marriage against her will. Soon she ran away from her husband to her father, who handed her over to her lover, tempted by the idea of getting a second bride price from him. Her first husband would not reconcile himself to this and utilized a favorable moment to take her back by force. Within half a year the unfortunate woman hanged herself.
[847] There have been instances where a woman, fleeing from her unloved husband, has slain the children that she had
831 by him. Men prefer to defend their rights to love by action.
58 Ordinarily they seek to carry the woman away by force with
● 159 the aid of clansmen, but they will not stop at slaying the
[582] husband of their beloved. I noted one very outstanding

/253 cont./

831 instance of such amorous heroism in the village of Nyanivo.
58 The most respected and wealthiest man of the local clan at
• 159 this time was a Gilyak by the name of Nyugun. At one time his beloved was forcibly given in marriage to another man. He slew his competitor, after which he was arrested and taken to Nikolaevsk. In the meantime the brother of the widow again gave her in marriage against her will to another man. Breaking out of prison, Nyugun immediately set off for the settlement of his beloved. Going up to her yurt, he stripped everything off himself, except the short pants of modesty, and naked, despite the winter season, he rushed in this state into the yurt, which was overflowing with people, and by his appearance struck such fear into those present that he was able without hindrance to take his beloved by the hand and take her to his home, after which he lived with her tranquilly for many years (his late wife had time to sew for him four fox-fur coats and four fur coats out of sable tails).

835 The most tragic obstacle in love is the position of lovers
762 in the forbidden degrees of kinship. Here there is no solu-
831 tion. The parents themselves insist on suicide. Ordinarily
533 in such cases the lovers go to the forest and hang themselves side by side on two trees. Before taking their lives, they sing songs to each other, singing of their journey to the world beyond the grave, where no one shall hinder their love. Some of these songs have come down to us in the following way. It has happened that one of the parties, namely, the man, breaks loose and after this loses the desire to repeat the attempt. It is he who preserves for posterity /254/ his

835 dying song. One of these tragic cases of illicit love has
762 become a popular legend. The time was a hundred years ago.
831 A certain maiden became attached to a younger brother of
533 her father. Shortly after this, her sweetheart set out on a
538 long trading trip to Manchuria. At the same time, she began to show signs of pregnancy; it was no longer possible to conceal the fact, and she took her own life by hanging. When her sweetheart returned, he burned on her grave all

/288 cont./

753 The Gilyak Churka (1) recounted: "When I was little I saw
• 159

a dog and wanted very much to have it, but did not dare. I felt ill under my armpits. I dreamed that the dog bit me in the very place that was sore. I lay just as if dead. Then my father bought the dog immediately -- he had to hurry -- and immediately fried a piece and I began to recover."

Everyone confirmed this fact. The husband of his present wife died from kkhmäs"ind.

V.

The Rescue of a Drowning Man

752 Having heard the cry of a drowning man, they come to his aid, press down on his stomach so that the water will come out, clean his mouth with shavings, and place a stick in his mouth. Then they wrap him in fur coats and tightly bandage his face (if he looks at fire, he will die). When he becomes warm, his face
[182] is uncovered. He gives chukh-chugynd to Tol and then carries out a procedure called shavynd.

952 A Gilyak was drowning under the broken ice. He was
789 rescued and brought to a yurt where the rescuer-host and the one rescued sat down opposite each other; a bowl with sarana and puchka was placed before each of them on both sides, and a white dog near each of them. They hooked together with hooks which they held in their hands (an imitation of the rescue) and pulled against each other, saying: "You will live to an old age, and so will I." Then, at the departure, the rescued man stepped in the bowl of his host and in his own, and they exchanged bowls. After the exchange, the rescued man said: "Nikhkhakhrä --

/655 cont./

614 and then in swift flight to reach a safe hiding place offering pro-
602 tection, in order not merely to escape immediate revenge in
628 this way, but also to make it more difficult or even impossible for the opponent to carry it out in the future and thus expose him to the unavoidable evil consequences of neglected blood-revenge. The Gilyak therefore usually executes an act of bloodshed resolved upon in his heart in the most treacherous manner with the ngawla-dshakko, the large knife which, always worn at the belt, arouses the least suspicion and which he can most easily and inconspicuously plunge into his opponent's side while he is sitting beside him in apparent peace and eating a meal or smoking a pipe. Having fled to his native village, he will henceforth avoid setting foot in the village where he committed the act of bloodshed and will also carefully avoid its inhabitants elsewhere. The victim, however, if he has escaped with his life, henceforth thinks only of how he can take revenge on his enemy without delay, for the more time is wasted, the worse he can expect the consequences of his neglect to be and the more fraught with danger the future
• 159 looms before him. The power which this constantly nourished
628 superstitious fear can exercise over the mind and the entire being of a primitive man was vividly brought to my attention in one case. The Gilyak Nenjdan, a respected man in his village (Allof), who visited me occasionally in Nikolayevsk and to whom I owe many an interesting bit of information concerning his people, was one day, when he appeared before me again after a long interval, in a strikingly downcast and depressed mood: his otherwise erect and quite stately figure, such as I seldom found among the Gilyak, appeared somewhat stooped, his eyes looked straight ahead, staring and sad, and words would not come. Since I would not desist from directing various questions to him, he finally broke out with the words, "I must die soon," and when I then asked whether he was sick and what ailed him, his answer was, /656/ "Not sick, and yet I must die soon." This thought seemed to dominate him completely, and then he told me the following. On a trip to the Manchu, while trading with them, he quarreled with a Gilyak from Kaki. The matter finally ended peacefully, however, and he regarded it as closed and forgot it to such an

/656 cont./

• 159 extent that after their return home he once traveled from Allof
628 to Kaki and stopped at one of the houses there. His host and hostess, well known to him, were quite friendly toward him; in the evening, however, after he had eaten the meal offered him, a man lying next to him on the sleeping bench, the very one with whom he had had the quarrel, suddenly thrust his knife into his side. Returning to Allof, he soon recovered from his wound, but his blood enemy had set out for Langr the following night, accompanied by a relative, and had not been seen again. Meanwhile two years had passed, during which he himself had in vain gone to the greatest trouble to find any trace of him, but he could not go to Langr itself, because he is a stranger there, whereas his blood enemy would have the secure protection of his relatives. Thus, even in the future he had no prospect or hope of getting rid of the obligation for blood revenge weighing upon him, "and therefore," he concluded, "I must die soon." I do not know what happened to him later, for I did not see him again, nor did I hear anything about him. Undoubtedly, however, the psychic condition in which such a superstitious fear of death puts primitive man can have a fatal effect simply through its influence on his physical condition and his behavior in the manifold dangers through which his life moves. And in this way, as well as in consequence of the universally practiced logic of post hoc, ergo propter hoc, the superstition connected with blood revenge is constantly nourished and spread.

614 Carrying out blood revenge is in part made easier and in
602 part more difficult for the individual because it is not restricted
628 to those who directly participated in the act of bloodshed, but also more or less involves their relatives and imposes certain obligations on them. Among the Gilyak, however, these obligations do not extend to all the relatives, but only to the ngafk, the paternal relatives. Without any qualifications and with all the consequences, they are faced with the obligation for blood revenge if the person concerned lost his life through the act of bloodshed, either immediately or as a result of wounds received, and is therefore no longer able to carry out the revenge himself. It must then be carried out by the son, brother, brother's son,

settlements the settlement of Mos'bvo on the banks of the Tym' River, seven versts from the settlement of Rykovskoye. In connection with this settlement of Mos'bvo, the author makes the following comment: "It is inhabited only in autumn and winter. In spring and summer the inhabitants pass on to the western coast, mainly to the village of Arkyvo, where in the early spring they hunt seals and during the summer catch fish which are not to be found in the Tym' at this time of the year. At the beginning of August, before the Siberian salmon run, the population returns to their winter dwellings." Editors of the journal, Etnogr. Obozr."

000
16

with 109 yurts. The total population here is 703 persons (197 on the Tym' River, 506 on the Okhotsk coast), of whom 416 are male and 287, female; there are 169 families and 133 households, 483 adults, 175 married persons, 9 male polygamists, average fertility -- 3; 332 children survived birth; 169 died. Guns -- 64 (of these 30 are on the Okhotsk coast and the remainder on the Tym'), 121 nets, 122 boats, 1,480 dogs. During the last season 688 seals killed, 586 sables, 134 foxes, 43 otters, and 63 bears.

422
33
50
411
433

162
592

[589]

1. The word bachelor is applied only to older, so to speak, inveterate bachelors.

161

161 POPULATION--enumerations and estimates (with dates); density (e.g., metical, for arable land); population trends; etc. See also:

Population policy . . . . . 168 Census taking . . . . . .

164 conjunctivitis, corneal obscuration, and sty. Some cannot
293 stand a strong light and this is particularly noticeable in February and March because at that time, in the mid-day sun [249] the snow which is already partly melting on the surface, is intolerably blinding. These people, if they must go out during the day, wear spectacles of braided horsehair, which they make themselves. Among Gilyak women who do a great deal of fine needle work, nearsightedness occurs.

164 The infrequency of eye diseases seems to be partly connected with the non-prevalence of miasmatic and infectious diseases. (1) Soldiers also suffer little with their

1. Disguised ague and scurvy are to a certain extent exceptions.

eyes, in spite of the blinding snow. The abundant summer rain fall, the long, severe winter, and, finally, the sparse population account for the scarcity of miasmatic and infectious diseases, in spite of the widespread swamps.

But as for the febrile skin diseases, which among the Russians occur more seldom than in Europe, they are a veritable scourge among the natives. Whether they were known before the advent of the Russians is difficult to say, but one may assume that they were less frequent and permitted the population to recover. Now, however, they suffer more.

After several murderous epidemics of smallpox and measles, there remained gaps which will not be so easily filled. This seems to be the chief reason for the decrease in the native population.

64 The nervous and mental diseases which occur among the
58 European inhabitants more frequently than in Europe,
732 chiefly from causes of a social nature (nostalgia, alcoholism etc.) are not wide-spread among the Gilyak. I heard of epilepsy, but nothing of neuralgias, paralyses, and idiocy. I know of one case of chronic intermittent mania. However, diseases in this category will increase if whiskey-drinking should become prevalent.

752 External illnesses such as: burns, frost-bite, sprains, breaks, etc., of course occur, but I saw no case which resulted in permanent injury. From this one may conclude that the primitive methods of healing combined with the power of nature usually conquer such illnesses. [250]

64 Chronic skin diseases occur rather frequently. The chief cause of these is, of course, the lack of cleanliness, but it

*114 121 127 [212] revolutionary activity, M. A. Krol', Shternberg writes (2):

> 2. I am indebted to the kindness of the widow of the deceased, S. A. Ratner-Shternberg, for acquainting me with the contents of this letter.

"I have discovered among them (the Gilyak) a kinship terminolo and family-clan rights identical with those of the Iroquois and th famous punalua family (on the Sandwich Islands), in a word, the remains of that form of marriage on which Morgan based his theo and which served as a point of departure for Marx' and Engels' w on Der Ursprung der Familie, des Staates, u.s.w. /the origin of family, of the state, etc./. The interesting clan organization o the Gilyak, however, rests on this kinship system. At first I was afraid to trust my own discovery, but, having let not a single fa or a single yurt go by during the census without detailed question as to what different members of the clan and family call one an and who has what rights, I finally became convinced (3). /xiv/

• [161]

> 3. Earlier in the same letter Shternberg mentioned that he had covered 1,040 Gilyak in his census.

though there are voluminous studies on the Gilyak, no one in the literature known to me has studied this aspect of the question."

*114 After his investigation of the Gilyak of the northwest coa there followed a series of other trips which resulted in a full ethn [125] graphic study of all Sakhalin. Thus, in June, 1891, he took the census of the Gilyak and the Orochi on the river Tym' and on the east coast of Sakhalin, and a partial one of the Tungus. In the winter of 1891 he encountered the Olcha who visited Sakhalin la in the fall for trading purposes. He spent the summer of 1892 [125] traveling on the river Poronai and around the entire southern part of Sakhalin as far as the settlement of Kosunaya, where, along w the Ainu and the Orok, he also studied and took a census of the Gilyak.

/13/

The Gilyak

I.

Territory. Linguistic Isolation. Origin.

The small tribe of Gilyak, whose number at the present time does not exceed four and a half thousand persons, is scattered over the vast territory of the entire northern half of Sakhalin Island and the neighboring continental shore, being distributed almost equally between the two regions.

On Sakhalin they occupy the entire shore-line of the western coast from Cape Sakhkotan to the northern extremity of Cape Marii, then on the eastern shore -- from Cape Levenshtern to Cape Delil'-de-lya-Kroyer, and finally, in the interior the island, they occupy the upper and middle reaches of the Tym' River, which is the only significant river of northern Sakhalin.

In southern Sakhalin in the lower reaches of the Poronai River and on the shore of Terpeniye Gulf a few dozen representatives of the Gilyak tribe, who migrated to this alien territory due to fortuitous circumstances only very recently (in the last 30 years), have become lost among the alien Ainu and Orok.

On the continent the Gilyak occupy both banks of the lower reaches of the Amur River to the settlement of Geri, and then the banks of the Amur estuary and the seashore: to the north, from the mouth of the Amur to the Kol' River, and to the south to the Choma River. The northernmost boundary of the spread of the Gilyak may be regarded as the mouth of the Tugur River, to which, by the way, the Gilyak only very rarely go on business, not having a permanent place of residence there.

/155 cont./

835 614 women increases correspondingly in these clans of father-in-law, because in each of these clans there is a whole new class of wives -- an'g:ej. Nevertheless, the extension of [198] prohibitions to clans of akhmalk'i of the most remote degree [161] has naturally brought about within a small-sized tribe, with a population of scarcely four and a half thousand, entirely understandable constraints, leading to some limitations of the strict principle, namely, that the prohibitions at the present time do not go back further than the clans of akhmalk of the third degree, and, if one clan or another takes wives from many clans, then the prohibitions are limited to the second generation, and, if an acquired woman dies childless, then even in the second generation the limitations fall away.

835 The class of jokh. Finally, one more class prohibited to men, called jokh, remains. From the kinship nomenclature we know that a man gives this name to two completely different classes of women, namely, on the one hand, to the class of wives of his og:la (descending line), and, on the other hand, to the class of wives /156/ of his as'kh, i.e., of his younger brothers (tuvn), and sisters of these wives. As concerns the first class, we have already noted its prohibited character in examining the prohibition between persons of the ascending generations and the wives of those of descending ones. The prohibited character of the second category is not so absolute. From the kinship terminology we know that with respect to the wife of the elder tuvn various forms of designation are practiced [184] in various places. In several places on the Amur, on the coast of the mainland, and on the northwestern coast of Sakhalin (if "I" am a male) one and the same appellation (an'g:ej -- wife) is used for wives of the younger as well as of the older brother, and in such places sexual intercourse is permitted with all wives of brothers. But this arrangement is not the dominant one; the dominant arrangement must be considered that of designating the wife of the elder tuvn as an'g:ej, i.e., the same name that one gives to one's own wife,

/201 cont./

161 199 614 231 * 174 Still-more destructive is the process of depopulation. We are speaking not of the gradual dying out of separate families, but mainly of the process of catastrophic depopulation. This process is of comparatively recent origin, for it is an immediate consequence of clashes with cultured peoples, first Eastern and later European peoples as well. These peoples, together with their alcohol and exploitations, have brought the Gilyak a whole set of communicable diseases with an especially destructive effect in their non-immunized primitive surroundings. We have already discussed the ravaging effects of this process. It is sufficient to say here that whole clans died out before my eyes, and one not infrequently meets clans in which only one or two individuals are left. It must be borne in mind that the process of depopulation does not by any means strike clans equally, so that at any given time one clan may remain untouched, while another may lose a considerable number of its members.

161 614 72 * 194 War also has an effect similar to that of diseases and various other causes. Although according to the interclan rules the women are spared and the number of men who are killed is limited, nevertheless /202/ in the heat of battle the rules are not always observed, and thus a military epopee can also lead to the destruction of a clan.

* 194 199 Contact with other peoples, both primitive and more highly cultured, must have acted in an indirectly destructive manner. As a general rule, the contact of outlooks broadens intellectual horizons and weakens the strength of religious imperatives. A representative of a higher culture looks down on the institutions of a lower race, and the representatives of the latter gradually begin to observe their own institutions less rigorously themselves. At first separate individuals begin to violate the law a little, and they gradually begin to draw after them many others. The [582] Gilyak themselves assert that with the coming of the Russians their marriage regulations were considerably weakened. But even before the appearance of the Russians the Gilyak had contact with various other peoples.

[The Western Coast]

162 592 128 /385 cont./

or adolescent, living apart from their parents or not, and therefore "households" are counted separately, and, secondly, widows and widowers and their children, and also orphans (brothers and sisters) who live as a single household.

162 595 [161] The total population is 1,041, of whom 561 are male and 480 female; the adults (including adolesce number 678; there are 278 married or widowed persons, and male polygamists (four of these have three wives each and the others two each); for each polygamist there are nine individu who have only one wife each (3). The number of children wh

[587]

3. Under the rubric of "married we have also included widowed persons, since, in order to have accurate percentage figures for the bachelors and polygamists, widowed persons must be considered along with the married persons. The terms "polygamist" and "bigamist" are used interchangeably, since, though there are no prohibitions in this regard, we have not met on the Okhotsk shore a single case where a native had more than two wives; on the western shore and on the Amur many Gilyak have three or four wives each.

[128] [184]

163 165 The number of chil survived birth is 515, while the number of those who died at is 247, so the rate of infant mortality is at least 33% (4); the

[124]

4. For lack of a better method, the number of children was ascertained by asking each married man the questions: (1) how many of his children were present (the name of each child was called out and written down one by one) and how many were absent; (2) how

SS /317 cont./ Next come the Olcha,
162 who, however, occupy only a small territory in the Amur region.
Gi The Goldi, certainly more numerous in their totality, are dis-
[131] persed over a wide territory and therefore are only sparsely rep-
[162] resented everywhere, most sparsely between the mouths of the Ussuri and Sungari. The southernmost part of the Amur River, between the mouth of the Sungari and the Bureja /Bureya/ Mountains, is a prairie wilderness almost completely without people, and then begins the upper Amur region, which is only temporarily visited by nomadic hunting peoples, except for the part cultivated by the Manchu, Chinese, Daur, and, immediately above the Bureja Mountains, by sedentary Birar.

SS In general the population situation on Sakhalin is different
162 from that on the mainland. Here the southern part, occupied
132 by Ainu, seems to have a greater population than the northern,
G Gilyak part of the island. To be sure, the southern part, washed
A on both sides by the branches of a warm current, is climatically
131 much more favorable than the northern part, which, especially
162 on its east coast toward the Sea of Okhotsk, has an extremely
132 harsh, almost polar climate, but here again the reason for this phenomenon may lie in historical and political circumstances rather than in physical conditions. Warred upon and subjugated

SS by the Japanese in the southern part of their area centuries ago,
162 and constantly oppressed and afflicted since then, the Ainu moved
A northward more and more and found a homeland on Sakhalin,
648 where up to a few decades ago they led a free and independent
160 life, unmolested by their enemies (1). It is not surprising, then,
131
161

1. See above, pp. 148 ff., 256 ff.

that in the course of time their number there increased considerably. In the northern, Gilyak part of Sakhalin, on the other

SS hand, a decrease in the population has taken place. I believe
162 that I have shown on linguistic grounds that a part of the Sakhalin
G Gilyak left the island, perhaps as a result of the pressure from the
131 Ainu, and moved to the mainland, to the lower Amur and the
161 coast of the Sea of Okhotsk (2). A more numerous Gilyak
648
160
ooo

2. See p. 214 above /untranslated/.

SS /317 cont./ A more numerous Gilyak
162 population on the island in former times is indicated, among
G other things, by the fact that on the west coast there are two
174 villages which bear the name "Pilja-wo," that is, great village,
161 the one on the Sea of Okhotsk, the other on the northern part of
361 the Sea of Japan, and both are highly insignificant today (3).

G
SS
[113]

3. According to Glehn ("Reiseber. von der Insel Sachalin /Travel Report from the Island of Sakhalin/." -- Beitr. zur Kenntn. des Russ. Reiches, Vol. XXV, p. 233), the first of these villages has only one yurt today; concerning the other one, which has three of them, see above, p. 29, note 1. Incidentally, when Glehn, while discussing these traces of a formerly larger population on the Gilyak part of Sakhalin, also mentions the smallpox which broke out devastatingly in the fifties, this has nothing to do with the depopulation under discussion here. This is the above-mentioned epidemic of the winter of 1857/58, which at that time was still fresh in the memory, whereas that village had been deserted long before. But the smallpox left other marks of devastation behind, which will be discussed later.

G
[114]
[131]

SS
162 Nevertheless, this west coast of Sakhalin, turned toward the
[132] continent and the mouth of the Amur, is now, next to the Tymy /Tym'/ Valley, the most populous part of the island; the east coast with its much harsher climate is understandably much more deserted.

SS /318/ I must content myself with these general remarks con-
161 cerning the more or less large population of the various parts of
114 the Amur region and forgo numerical values because of the lack of adequate data. To be sure, one does occasionally find state-

SS ments concerning the total number of individuals for particular
[175] Amur peoples, but these figures have little value. That the data

3. Although all the later statements concerning the number of persons of the indigenous peoples of the Amur region, which, as a consequence of the Russian occupation and colonization of it, must have undergone great changes, lie outside the scope of this work, I should like to mention one of these statements here in passing, because it refers, or is supposed to refer, especially to the Gilyak who are in the forefront of my considerations. I am referring to the estimate of their number (in the years 1878-1880) made by Dr. N. Seeland in his article, "Die Ghiljaken, eine ethnographische Skizze" (Russische Revue, ed. by Carl Röttger, Vol. XXI, St. Petersburg, 1882, p. 99). After he had considered the tax figures of the Russian ispravniks (district chiefs) for the mainland and with regard to Sakhalin questioned traveling fur traders, he came to the conclusion that "the whole Gilyak people amounts to 8,000 souls." The particulars of this total number, given according to the individual districts, explain its exceedingly large size, but at the same time make it absolutely untenable. For the number of the Gilyak of the Nikolayev District (from the seacoast up the Amur to Mariinsk), de Castries Bay, and Kaiserhafen is said to amount to about 4,000, the Gilyak in the Sofisk District (from Mariinsk to the Gorin) 1,000, and he estimates the number of Sakhalin Gilyak at about 3,000. According to this, Dr. Seeland includes as Gilyak

G
[113]

3. (cont.)
not only all the Olcha, who are regarded as Gilyak by the ordinary Russian along the Amur as a rule and hence unfortunately very often by Russian travelers (see above, p. 213 ff and elsewhere), but also the Orochi of the seacoast from de Castries Bay to Kaiserhafen. How strange it must seem to one to find at the very beginning of an article supposedly dealing specifically with the Gilyak such a confusion of them with their neighboring tribes who are completely different linguistically and to some extent in their ways of life!

count of the native population, a rather accurate yardstick for an approximate estimate of their strength might be found is the number of their winter dwellings, if this could be learned with certainty. One may easily convince himself of the correctness of this assertion with a more exact knowledge of how the dwellings are made among the Amur peoples. Let us now proceed to a consideration of this situation among the individual Amur peoples.

A people such as the Gilyak, who provide for the direct satisfaction of their needs with regard to food, clothing, etc. almost exclusively by fishing and seal-catching, understandably settle along the largest bodies of water with the most fish in their territory and as close as possible to the water. Hence, all the Gilyak villages lie directly on the Amur River and the Liman, along the seacoast or along the Tymy River, the main artery of the northern half of Sakhalin; one would seek them in vain in the mountains or /320/ at any distance from the waters named. A more or less favorable locality is always chosen as a place to live -- along the seacoast, a small bay or inlet protected by a rock ledge against the prevailing gales; along the river, a dry bank towering above the high-water level, but with sufficiently deep water for landing the boats, with high woods or dense brush for protection against the wintry snowstorms, etc. Wherever the locality is favorable in

/330 cont./

3. Specifically they were the Gilyak Jaftun and Pryngan from the village of Dshongi, and Tanskin from the village of Nganj-wo on the Liman.

A few years later
(1861) Glehn traveled through a section of this coast and made a list of all the villages there, as well as the number and nature of their yurts (4). In comparing my data with his, though they

4. Op. cit., pp. 232 ff.

essentially agree, they nevertheless show some differences which are almost entirely of such a kind as to lead one to conclude that there has been a decrease in the population in this part of Sakhalin during this interval of time. For instance, the number of villages in my list, especially the small ones with only one earth yurt, is larger than in Glehn's, in which the names also occur, but combined with other designations as referring to one and the same, no smaller settlement. Likewise, for the larger villages, my list almost throughout gives a larger number of yurts than Glehn's. This depopulation which took place after my time is fully explained by the above-mentioned severe smallpox epidemic which ravaged precisely this part of the Amur region in the winter of 1857/58. As has been noted, many a yurt died out completely, and in the case of many small settlements which numbered no more than one, only the name survived, which could easily have been taken by later travelers as a synonymous designation for one of the adjacent villages. Where /331/ our reports differ with regard to the nature of the yurts -- whether earth yurts or Chinese yurts -- they always deal with villages which Glehn had not visited and concerning which he therefore could report only on the basis of statements by the natives. For this reason and because in the preceding and following observations I always view the Amur region as of the time of my stay there, I must describe the distribution of the earth yurts and the Chinese winter-yurts on Sakhalin in accordance with the data that I myself collected.

/363 cont./

1) Most of the small villages mentioned here could not be entered on the map because of the limited space.

2) Located on the lake of the same name, which is connected with the Amur (see above, p. 27).

3) Between this and the following village are the two above-mentioned (pp. 27, 51) Olcha villages, Tyr with two yurts and Tschilwi with six yurts.

4) This Olcha village located somewhat to the north of Kidsi which among its six houses has three permanently inhabited by Gilyak, has been mentioned above (p. 27).

5) With the single exception of the one earth yurt of Pättach mentioned above (p. 469).

6) According to handwritten information collected by Middendorff among the Gilyak on Ulban Bay and made available to me.

7) The villages located along this coast of Sakhalin on the Liman and the Sea of Okhotsk, have already been enumerated above (p. 469) for a comparison of Glehn's information on them with the data collected by me, which do not entirely agree with his statements on the number and nature of the winter dwellings and in part on the names of the villages. It might therefore be excused if they are given again here for the sake of a general survey. Since, however, the comparison shows some decrease in the population of this coast in the years 1857 to 1861, and the point here is to substantiate the conditions present in the Amur region at the time of my stay before that, only the data ascertained by me personally are considered in this list.

8) Since this village and Pilja-wo to the south with the same number of yurts have a population consisting half of Gilyak and half of Ainu, only three yurts are counted for both places in the summary.

9) The villages Pud-wo and Tschchar-wo lie on both banks of the river, with the indicated number of yurts.

10) With this village Glehn begins the series of villages located along the west coast of Sakhalin, but he himself states that it lies at the northern point of the island, between Capes

/364 cont./

principal points, Tacht and Patt, exceed that number. Along the Liman, Langr in the north and Tschomi in the south are in dominant positions, the former as the chief exchange point between the mouth of the Amur, the coast of the Sea of Okhotsk and North Sakhalin, the latter in constant communication with both the west coast of Sakhalin, the Tymy and Tro Gilyak, and, on the other hand, with the villages on the Amur beyond the mountains. Along the coast of the Sea of Okhotsk, Kulj or Kolj is the principal village, about whose existence Middendorff received information even at Tugur Bay (1), and, according to the

1. In Middendorff's handwritten notes on his visit among the Gilyak the place is called "Kwol," and in Baer's report on his journey (Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, p. 620) "Kwel."

descriptions of the Gilyak, seems to play a role there similar to Wair's on the Amur River. /365/ Along the Liman coast of Sakhalin the same significance belongs to the above-mentioned Tamla-wo, of bad repute because of the predatory tendencies of its, as the name indicates, large population. The part of the west coast of Sakhalin that is washed by the northern part of the Sea of Japan has only small villages almost entirely, in that the village of Tyk with its six earth yurts is the only larger place and the principal point of the entire coast. In the Tymy Valley on Sakhalin, which has a great number of small villages in its upper part in particular, Pud-wo and Udmk-wo are the principal points, and, finally, on the east coast of Sakhalin Tschai-wo and Nyi are the principal places.

Now, if one wants to draw any conclusions about the size of the Gilyak population in its individual areas, as well as in general, from the number of winter dwellings, it must first be determined how many permanent residents on the average may be reckoned for a Chinese or an earth yurt. Just as the

342 /365 cont./ Just as the
161 Gilyak houses are not erected by individuals, but rather are erected
592 more or less with the help and participation of all the fellow-
[476] members or people belonging to a place, so also as a rule, in accordance with the communistic spirit which characterizes primitive peoples, are they not inhabited by a single family, but by several together. As may be seen from the above description, a winter yurt of the Gilyak, built following the Chinese pattern with its four long sleeping benches, provides adequate and comfortable space for four families. If one reckons the average family at four persons, husband, wife, and two children, this already gives 16 occupants for each Chinese winter-yurt. Some yurts, to be sure, are occupied by only one or two families, as I myself have repeatedly seen, and occasionally one even comes across a yurt apparently standing empty throughout the entire winter. On the other hand, over and above the family members mentioned, single persons of both sexes, be it out of considerations of kinship or in return for certain services, find fixed and permanent lodgings in the yurt. Also, the average figure of only two children per family assumed above is undoubtedly not any too large. Hence I think that it is not estimating too high if I reckon an average of 16 persons for a Chinese winter-yurt, and for an earth yurt, since it contains only three sleeping benches, and much shorter ones at that, and in general provides considerably less space, only half as many, that is, only eight persons on the average. On this basis, approximate counts of the population for the individual parts of the Gilyak area mentioned above can be ascertained without difficulty. The available data are inadequate for this for only one part, the coast of the Sea of Okhotsk, for the number of the winter dwellings of the Gilyak along this coast, with the exception of the small stretch between the Amur-Liman and the village of Kulj, is still unknown to us. Hence
161 estimates must be made here in another way. The part of this coast which is unfamiliar to us, from Kulj to Tugur Bay, is about six to seven times the size of the stretch between Kulj and the Liman, and one therefore only needs to multiply by six or seven the population figure ascertained for the latter according to the

G /365 cont./
161 number of their yurts to obtain the approximate size of the population of the entire /366/ coast up to Tugur Bay. Since, however, it is not unlikely that the size of the Gilyak population along this coast increases as one approaches the mouth of the Amur, the Amur-Liman, and Sakhalin, and, according to the statements of the Gilyak, there is no second Kulj farther westward along it, I believe that it would be more correct and again not reckoning too high if I take, not six or seven, but only five times the number ascertained for the stretch between Kulj and the Amur-Liman for determining the total Gilyak population along this coast.

Accordingly, the following minimum population figures are given for the individual parts of the area and for the whole area of the Gilyak:

Mainland		Sakhalin Island	
Amur River	1904	West Coast	1016
Amur-Liman	568	Tymy River	256
Coast of Sea of Okhotsk	1040	East Coast	432
Total	3512	Total	1704

Thus the total number of Gilyak on the continent and on the island of Sakhalin amounts to at least 5,216, or, in round figures, some five thousand souls.

Gi 342
[361] In going from the Gilyak to the Tungusic Amur-peoples, a glance must first be cast at the Orok roaming in Gilyak territory. As reindeer nomads they do not have permanent dwellings, but pitch tents, which are of very simple construction, when they stay at a place temporarily or even for a longer period. Long wooden poles arranged in conical fashion, form the framework of the tent, over which a covering stitched together out of fish skins is spread in such a way that only at the top, where the poles come together, does an opening remain to let the smoke escape when a
Gi [361] fire is made inside the tent. Since the migrations of the Orok

"The total number of natives on the island [LSS: Sakhalin] is between 4000 and 5000, of whom about 1300 are Ainus, more than 2000 Gilyaks, at least 750 Orotchons [LSS: Erratum; it should read Orochon] and perhaps 200 Tungus.

The island is therefore very sparsely populated; and how sparsely may be judged from the fact that during more than three days' journeying on the river Tim, the native highway to the east coast, I saw not a solitary person or dwelling."

174 mainland among Goldi as well as Manchurians. It is more likely that the first Gilyak who emigrated to the mainland from Sakhalin, took over the building methods as well as th language from the Goldi, and that the later ones who remained in closer contact with their native country, adopted the building methods of the Goldi and Manchurians but kept their own language.

The Russians became acquainted with the Gilyak as early as the middle of the 17th century when the first bold Russian pioneers traveled along the Amur. At that time there were also supposed to have been occasional bloody animosities. The Gilyak themselves, however, no longer know anything about this, unless perhaps there are accounts in rare legen which may be known by only a few. The majority know nothing of their own history and I was not even able to ascer tain whether there was not someone still living among them who might tell me something of their antiquity.

161 The population of the Gilyak can be only approximately de
177 termined, because, up to the present time, these people do not even pay yassak, and thus there can be no official methods set up to observe the shifts in their population. According to the estimates of the ispravniks (officials) the number of Gilyak of the Nikolayevsk district (1) and the

1. From the coast up-stream to Mariinskoye (270 versts from Nikolayevsk].

ispravniks, but instead I asked the traveling fur dealers whose business, when all is said and done, would give them a greater interest in this question than the ispravniks would have. According to their opinion, there may be about 3000
61 Gilyak on the island of Sakhalin. The entire race of Gilyak
621 (exclusive of the Negidal) may thus comprise some 8000 souls. I believe the figure is not too large for, although the Gilyak villages are small and present a diminutive appearan they are [100] relatively densely populated. One may assum that one house shelters no less than 12-15 persons. From a rough calculation which I made in the year 1880, there were about 900 persons in nine villages extending from the coast to the village of Vaida (30 versts above

frequent intervals with the evergreen pine, rivalled the October hues of our New England hardwoods. Hills and low mountains rose on both banks of the river and made a beautiful picture. The hills, covered with forest from base to summit, shelved gently to the water's edge or retreated and there lobbed bits of green meadow. In the distance was a background of blue mountains glowing in sunshine or dark in shadow, and varying in outline as we moved slowly down. The river was ruffled only by the ripples of the current or the motion of our boat through the water. Just a year earlier I descended the Saint Lawrence rapids from Lake Ontario to Quebec. I saw nothing on the great Canadian river that equaled the scenery of my first day's voyage on the Amour.

Soon after leaving Nikolayevk we met several loads of hay floating with the current to a market at the town. On the meadows along the river the grass is luxuriant, and I hay requires only the labor of cutting and curing. During the day we passed several points where haymaking was in progress. Cutting was performed with an instrument resembling the short scythe used in America for cutting bushes. After it was dried, the hay was brought to the river bank on dray-like carts. An American hay wagon would have accomplished twice as much with equal labor.

The hay is like New England hay from natural meadows, and is delicious food for six or eight dollars a ton, delivered. Cattle and horses thrive upon it, if I may judge by the condition of the stock I saw. For its transportation two flat-bottomed boats are employed, and hold about twelve tons apiece. A floor on these timbers and over the hatchways is made to keep the hay dry. Men are stationed at both ends of the boats, and when once in the stream they have only to do beside floating with the current. A mile distant one of these boats appears like a haystack which an accident has set adrift.

We saw many Gilyak boats descending the river with the current or struggling to ascend it. The Gilyaks form the native population in this region and occupy thirty-one villages at intervals with about two thousand inhabitants. The villages are on both banks from the mouth of the river to Mariensk, and contain in the aggregate about one hundred huts exclusive of the view of their houses, which will not bear close inspection.

Some of the houses might contain a half dozen families of ordinary size, and were well adapted to the climate. While we took wood at a Gilyak village I embraced the opportunity to visit the aboriginals. The village contained a dozen dwellings and several fish-houses. The buildings were of logs or poles, split in halves or used whole, and were roofed with poles covered with a thatch of long grass to exclude rain and cold. Because of the cold, building houses had the solid earth for floors, while others had floorings of hewn planks.

The store houses were elevated on posts like those of an American "corn barn," and were wider and lower than the dwellings. Each storehouse had a platform in front where canoes, fishing nets, and other portable property were stowed.

A GILYAK VILLAGE.

The Soviet authorities transferred the Udege from the isolated huts which were scattered over a wide area to larger compact settlements. This brought them within the range of medical attention and educational facilities. As a result of this contact with Soviet Russian culture, the young generation of the Udege now speak the Russian language almost without any accent.[29] The next step in the development of the Udege will be that they will forget their own native tongue, and soon 'the last of the Udege' will really have disappeared.

THE NIVKHI

Near the mouth of the Amur is the National District of the Nivkhi. They number about 4,000, of whom 1,700 live in Sakhalin, Kamchatka, and the rest on the Soviet Far Eastern mainland and on three small islands lying between the mouth of the Amur. There are two large towns Kevost, were ignored by the Soviet authorities until 1936, when the famous Russian pilots Chkalov, Baidukov and Belyakov, landed on Udd Island during their trans-polar flight. From that moment the islands became very popular. They were renamed after the three pilots, and it became almost a Russian patriotic duty to develop and colonize the little archipelago. The Soviet Far Eastern fishing industry established fish-fry, fish-meal, and Russian workers' settlements were built on both Chkalov and Baidukov Islands, which had previously been inhabited only by Nivkhi.

The Nivkhi of the Asiatic continent are very conscious of the fact that, together with the Nivkhi of Northern Sakhalin, they form one single people. According to the Soviet administration, under pressure of persecution by the Soviet authorities in the late 'twenties', the Shamans of the mainland Nivkhi fled to their kinsmen on the north of Sakhalin. But these Shamans only fled out of the frying-pan into the fire, because of the activities of the local anti-religious fanatics. In 1930 the League of Militant Godless in Northern Sakhalin even destroyed the Nivkhi cemetery in an attempt to cure the 'natives' of their religious prejudices. This action caused considerable unrest among the Nivkhi, who lodged a complaint with the authorities. The latter apparently condemned the 'left-wing excesses' of the Sakhalin Godless.[30]

In theory, the Sakhalin Nivkhi live in two National Districts, the 'Western National District' and the 'Eastern National District', and the 'Northern National District' which, together cover a large part of Northern Sakhalin. In point of fact, both National Districts have been completely fictitious right from the beginning of their existence. The so-called Western Sakhalin National District, for instance, had, in 1933, only a few hundred natives among its 17,000 inhabitants.

162 COMPOSITION OF POPULATION—distribution of population by age, sex, locality, marital status, mode of life (e.g. rural and urban, nomadic and sedentary), and by social groupings (e.g., occupation, religion, class, ethnic group), size of families, etc. See text.

Locality	101	Sex distribution	105
Urban	102	Age at marriage	106
Urban as a percentage of rural	103	Incidence of plural marriages	107
Urban and rural differentiation	104	Number of wives	108
Urban and rural differentiation	105	Age-sex statistics	109

Judging on the basis of the small amount of historical data that we have on the Amur region, the boundaries of the Gilyak area of settlement have remained unchanged for the last two and a half centuries.

The greatest density of population is found in the areas of the most abundant fishing, such as the banks of the Amur and its estuary (villages Kal' (168 persons), Lange (705), Vayda (184), Mago (154), and others) on the western shore of Sakhalin, the points Tamlevo, Lyrkeyve (144 persons), Vlakvo (116), Nyun (103), Nyanivo, and on the shores of the Sea of Okhotsk the settlements Chayvo, Nyyvo, and others.

The boundaries of the Gilyak territory are highly characteristic. [184] It is sufficient to take a look at the ethnographic map of the Russian Far East to understand that the Gilyak ethnic stock or tribe is surrounded by a complete circle of nationalities foreign to it. Abutting on it from the south on Sakhalin Island are the Ainu, a tribe which was once so numerous that it occupied the entire Japanese archipelago. On the continent the Gilyak are surrounded on all sides by representatives of the great Manchu tribe, and the Tungus nationalities: the Negda, Olcha (in my terminology -- the Amur Nani), the Goldi, the Orochi, the Samagir, and the Tungus proper. And even very lonely Gilyak live in the settlement, on the eastern shore of Sakhalin, the Tungus tribe of Orok (in my terminology -- Sakhalin Nani) has penetrated in a thick mass.

The most natural idea that occurs to one is the possibility of tribal kinship between the Gilyak and the Ainu, or their Tungus neighbors. The Ainu resemble the Gilyak in their mode of life and in a considerable degree. We shall see below, however, that the facial resemblance of these tribes has nothing in common with identity of origin, while the most important, and perhaps the only determinant of tribal identity, language, in this case gives a clear and unmistakable indication in the opposite direction. For neither in its lexicon, in its phonetics, nor in its grammatical structure does the Gilyak language have anything in common with the languages of the neighboring tribes; furthermore, throughout vast spaces, the static continent we find no other language which could lay claim to close relationship with the Gilyak language.

/284 cont./

from an Amur Gilyak named Tyr', 22 years old and from the settlement of Mdyjr, another Gilyak, from the Amur region, made the wife and went with her to the missionary Monvvtin. The husband overtook them and began to beg the missionary not to marry them, but he carried out the request of the abductor for a certain bribe. Then the husband collected his clansmen and took back his wife by force. The original abductor pressured his marriage certificate to the police, who, for a bribe, ordered the woman to be returned to her lawful owner. It ended with the husband's shooting his wife and himself. They return the bride price without litigation when the wife and fiddles soon after her wedding, or when she runs away because her husband is poor and is not in a position to feed a wife, and, finally, when a wife betrothed in childhood dies.

/285/

Separate Materials on the Ethnography of the Amur Gilyak

(Extracts from Notebooks and Diaries)

I.

The Tribal and Clan Composition of the Population of the Lower Amur

A legend. Long, long ago the Gilyak, the Orochi, and the Goldi were one people. They were born on one branch of an elder tree. The brother and sister did not know where to go. The sister said, "down to the earth," and was the first to descend.

Settlement of Bulava. Dse (Kugi Amur) -- 35 people. Some find them also in Patu, Tebakh, and Mago. When three men came there, they found one house of an Olcha khal'y. Mongol -- Tyr -- Djabkoj came down from the Goldi village of Chol'cha (1896).

/284 cont./

Settlement of Pilavo-khan' (five kilometers from Chil'ni). In this settlement exclusively the Pilavyng clan (1910).

Settlement of Khan'. Exclusively the Pilavyng clan.

Settlement of Tebakh (Tevsh in Gilyak). Three yurts in all, about 30 persons. The Arabong clan -- Alim; came from Komsuya on the Pronga and set up tents -- a shaman stands from behind came a man, and the stick fell in the direction of bisi. The Arabong clan is to be found most of all in Tebakh, further in Aldach, Chal'ni (one house), and in Iski (1910). The Igim together with the Arkhong who live in Aldcha constitute one clan; in Aldcha -- the Goldi half, -- the other half in Tebakh, (1896).

Settlement of Madkhal. Dse (Kugi Madkhal). Negdal (1910). In 1896 the Khen'-ping and the Negdal (Ky) lived here.

Settlement of Pachi (Bachi). Twenty-two families, about 100 souls. Nine Russian houses and two Ulgyf. In it, the Ulam (1) Tva-ning (Tva was the surname from Ulam, Ning' near Fat). 2) Alimkan live in Plakh (Pilavo), below Marinsk. They used to live on the Amgun, but the brothers fought and several brothers left for Plakh, taking a piece of the land -- "ting rodda" -- "to make a fire." There they became Onyr, and then, a long time ago, in the times of the Japanese, they migrated from Kopakov to Tevsh and Kal'vo. There, the Sol (of Sulting here, and also one in each of the following places: Kakl, Mago, Vanin Cape, and Tamlavo. 3) Fyn-ling-clan (two yurts, an old village opposite Kal'vo. In the past, a long time ago, Angun lived here. The green pine forest -- Tusu; in Uhita -- the Olcha (1916).

Settlement of Nykikh Khes'bin (one from Pilavo), on the channel Iky Mackalf. About 20 Gilyak here, and also Angun (Mackalf), who in Gilyak are called Mrkhlam. Two from Pilavo settled here in the last ten years (1910).

/289/

117 Settlement of Kalpa (the Gilyak Kalwo). Two clans:
119 1) Four yurts Lezing-yau-tva-hug (from lezing = tan, -- master).
614 The Lezing-tau are a Tva-bing generation (hyulalyvh nyzi).
They caught many bears and had a large lezing. They quarrelled while still in Tva and left long ago for Tamlivo. Now they are in Egila (Yaii) and in Mago. 2) Pyrfing, three Lezing and three Ugiryf (1910). One woman, Sy -- umgu -- female Negidal. 3) Lezgzang from the Sashalin Tamivo. 4) The Pyrfing Omyr came from above; the oldest clan is here. 5) Nartmang from above, near Khabarovsk; the Goldi (1896).

Settlement of Moskaya (Mokhrvo). Clans: 1) Nartmang (Omyr); -- Pyrfling (Ygdymyi from Kuf, where there are many). There, three houses of them; they have lived here for four generations. 2) Lezgzang -- one house, 17 persons. All of the Gilyak seem to have come from the Amgun (hymh) and settled down on the Amur. One Ugiryf (1910).

Settlement of Mago. Clans: 1) Mof-tan (Omyr); 2) Lezgzang (one house); 3) Naromlang; one house, three families (1910).

Clans: 1) Lezgzang, 2) Pyrfing, 3) Tyvlafing, 4) Hutyvish, from the Tym' River, 5) Nartmang, 6) Hurling (1896).

Yoom-ba' -- a mountain tax and a half kilometers above Vaydy; in former times Gilyak from the settlement of Yoom lived here. On the left bank of the Amur, beyond Yoom, there is a small bay; and beyond it a high bank with bare white kamen'sh daif (limestone) (1910).

Settlement of Vayr (Vaydy); in 1896 there were three clans:
1) Kegin, 2) Hirlung (Hurlung and Shafpung), 3) Lumr-ping. Now only 12 Omyr, 10 Gilyak, 17 Hirlung (see also below), 15 Shafping, and 7 Lumr-ping are left. The Kegin -- Olcha are from the settlement of Aur; four generations are in Vayr. There were three brothers; the eldest brother took a Hirlung wife; he was followed

/290 cont./

Settlement of Tebakh, a village some 20 years ago (1896). Vas', Cape Vastu. 1) Levkh-ping. The cape lies next to Bilkovo; 2) Derbir-vun (1896).

Kuktya and Meo. The first master of the village before the
● [162] Russians was the Kegin clan; now nine persons are left; they live in Vas' (1896). Meo-fing, from Khayma above Bogorodskoye (1896).

Settlement of Vas'. Clans: 1. Miera-fing. Miera -- the oldest khal -- this Chvunung khal (Larun) came from the north from the Ali River (a two-day walk from Shantar -- Kyvmit); the Ali is a river that separated, and part of it went to Sakhalin (Larun, 123 Elevut). It takes women from the khovnung. The Ali is a river as broad as the Amur. A long, long time ago Y'lur and Gilyak were one khal. They heard that the Aleut, too, raise dogs and hold the bear festival. 2. Tigr tor pingg. A man sailed on a horykh (raft) down the Amur. The Machinskiye Gilyak caught him and brought him here in a boat. Takes women from the
582 Pyshdvung. 3. Kedzung (from Petakha) -- takes women from the Khovnung. 4. Perkivung (from Sakhalin). Takes women from the Khovnung. 5. Nynkhaj-fing and Khovnung from the settlement of Kyr beyond Sofisk where the Nynkhay River is (they came from there -- chinivokh). There is here in Kol' one khal from Khovnung. It takes women from the Lang. 6. Khovnung (Goldi). Two brothers quarreled and decided to divide the or -- chain and stone on the little girl of one of the brothers, and then killed her. They have an Aimu dagger with a silver handle. Take women
582 from the Shantung. 7. The Snarning take women from the Perkhrvung. 8. The Tyvlling -- from Ukhtr, near Sofisk (Omyr). Takes women from the Perkhrung.

/291/ The old man Nashg (86 years of age); his clan has lived here for at least 150 years, in his opinion, eight generations. At the present time his khal is Snarnung. His ancestor came from the Amgun; at the mouth of the Amgun he set up a post, but it fell down. He traveled with his family to Lake Chlya and crossed to here. Now his clan is on the Amgun -- Nashdaji. He came on foot. He also broke the fire. He bought the Tyyr River (a tributary of the Kol') by exchanging his sister for it (1896).

/299 cont./

calls him a slave, he can bring suit against them, and therefore when you ask the descendant of a slave what clan he is from, he
601 replies quietly: "Pilavon kshkal purark hokhagim on" krygyr" (1).
683
614

1. Krygyr -- an Aimu slave; akh -- a Chinese one.

i.e., that he is from the Pilavo clan, by origin a slave ("root
[195] slave"). When people swear, they say: "You are pure only to your neck, while there you are impure."

/300/ If a krygyr bought himself free and his master had to give him a wife, an economy, and part with him, he would still be considered a krygyr, impure. Every krygyr was considered a kshkal, and, until he passed to a free state, he was avenged, and he participated in the sacrifices. A good krygyr is given a share of his earnings -- he has the right to half of the
[192] incoihe and can claim it through the courts -- of the khlaj-n'ivukh; older women have the right to participate in a trial (they are invited and have the right to come themselves if they feel sympathy for the slave). It is permitted to complain about beating.

A krygyr woman cannot demand a share in court, because she is married. Nor can a share be demanded for her by her husband.

A Chinese slave, akh, has the same rights as the krygyr.
682 A free one is kistyjgyr n'ivukh ("pure"). The killing of a slave
614 is punished by the clan. When drunk, they revile the murderer: "If you are a human, we have an elder beast (gal). Kill him -- big mountain bear, mer edr; -- tiger), fight with him; it would have been better if you had killed a bear and treated us. We do not need brave men like you. You can only exhibit your courage
● [162] in front of your wife." The women in particular attack him. Even at the present time, however, the descendants of the krygyrs are treated with condescension. In 1909 two yurts of
[582] former slaves still stood in Takhta.

Slaves were most frequently acquired through the purchase of Aimu women, who received a male and a female slave as a

/353 cont./

This form of family-kin relationship serves as the basis for the social organization of the Gilyak and is the basis of their clan organization ("khal" -- clan, also clansmen).

From what has been said of the primitive family of the Gilyak, it is obvious who constituted their clan. All of the brothers (of all degrees of kinship) of the father of some Gilyak NN are his fathers (ytk), their fathers are his grandfathers (ate), their children are his brothers ("nvun"), their grandchildren are his children ("ulu", and mutually. It is this huge family of grandfathers, fathers, children, brothers and sisters that constitutes the clan of the Gilyak. It is understandable that a clan so constituted
● [162] may be composed of a great number of people. In one clan in northern Sakhalin, I counted 150 people, and this is only a branch of a clan which lives on the mainland.

But the clan of the Gilyak is organized on the male basis. Even though the children of a sister of NN's wife are his children (ola) and they are considered brothers of his own children, if these sisters of the wife are married to Gilyak of a different khal; then they, i.e., the children of these sisters, will be alien to the clan of NN. Similarly, only the wives of clansmen and their unmarried daughters belong to the clan, and, conversely, when married, a woman passes over to the clan of her husband, while the dissolution of the marriage brings her back into her father's clan. Here are the principles which regulate the life of a clan:

1. The clan has only four degrees of kinship: grandfather and grandmother (atk and ytk), fathers and mothers (ytk and ymk), brothers and sisters (nvun), and children (ola). Clansmen call one another "khal" in contrast to aliens. To distinguish own brothers from own clansmen of the first degree of kinship, the word khal' is added, so that clan brothers are /354/ khal'-nvun, clan fathers -- khal'-ytk, etc. The elder of the clan, whose role will be described below, is called "khal'-geymar." Clansmen are thinking and acting social units bear the name of "khal'-nivush."

/384 cont./

128 realistically, we consider it appropriate to cite some of the nu-
121 merical data obtained by us on these questions during the detailed 1897 census. In doing so, it seems more convenient to deal separately with: a) the western coast, between the Aleksandrovsk post and cape Matii (the northernmost extremity of the western coast); and (b) the eastern coast and the basin of the Tym' River between Cape De La Kroyer and Cape Levenshtern (the northern extremity of the eastern coast).

1. The western coast. There are 25 Gilyak settlements between the Aleksandrovsk post and Cape Matii. They are located in the following order: Arkyvvo, Tamy, Mangiuay, Tangi, Khoe (Khoi), Vlakhtu, Tyki, Vaaz, Nyvde (1), Noksy,

[167]

1. Formerly the area of this settlement was inhabited by the Tungus, whose grave monuments, consisting of boxes with crosses on top of them, are still preserved on the low sandy shore of the strait.

Tyrki, Tengi, Tal'votigyro (2), Marulvo, Nyanivo, Marvo,

[491]

2. There is a road from here to the settlement of Lyangr on the mainland.

Vaskhonkivo, Kimidvo, /385/ Tamlyvo, Lirkyvvo, Vivkvo,
[114] Pomr (1), Pil'vo, Tumi, and Nyur. The village of Koybygyvo,
[491]

1. There is a road from here to the village of Kekhrvo on the Okhotsk coast (one or two days).

● 162 which is marked on the map north of Nyur, no longer exists. In the settlements enumerated there are 78 yurts in which 345 family-households live (2). The total population is 1,041, of whom

128
121

2. By the word "family" is understood here first, any married couple, adult

● 162 /385 cont./
586 or adolescent, living apart from their
128 parents or not, and therefore "house-
128 holds" are counted separately, and,
secondly, widows and widowers and their children, and also orphans (brothers and sisters) who live as a single household.

The total population is 1,041, of whom
162 561 are male and 480 female; the adults (including adolescents)
[167] number 678; there are 278 married or widowed persons, and 32 male polygamists (four of these have three wives each and the others two each); for each polygamist there are nine individuals who have only one wife each (3). The number of children who

[491]

3. Under the rubric of "married we have also included widowed persons, since, in order to have a correct comparison figures for the bachelors and polygamists, widowed persons must be considered along with the married persons. The terms "polygamist" and "bigamist" are used interchangeably, since, though there are no prohibitions in this regard, we have not met on the Okhotsk shore a single case where a native had more than two wives; on the western shore and on the Amur many Gilyak have three or four wives each.

The number of children who
162 survived birth is 515, while the number of those who died at birth
is 247, so the rate of infant mortality is at least 30% (4); the

[124]

4. For lack of a better method, the number of children was ascertained by asking each married man the questions: (1) how many of his children were present (the name of each child was called out and written down one by one) and how many were absent; (2) how

/385 cont./

179 many of his children had died between
162 the beginning of his marriage and the
165 date of the census. In this way, we ob-
tained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

/ actual one,
163 fertility rate -- 2.7%, although this figure is below the actual one,
162 for in the number of married people were included, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wives. There is an average of 12 people living in each yurt, although
● 162 592 there are a number of yurts with several dozens of inhabitants; for example, one yurt in the settlement of Nyanivo accommodated 42 persons of the same clan.

As to the size of the winter settlements, the largest of
163 these are the following: Tamlyvo and Lirkyvvo (144 persons each),
162 Vivkvo (116). Nyur (103), Arkyvvo (87), Tal'votigyro and Tengi
(64 each), Kimidvo and Pomr (59 each), Nyanivo (58); the
smallest settlements are Tamy (4 persons), Vaaz (8), Noksy (9).
In the summer the most densely populated settlement is Tamlyvo.
Seals killed in all the settlements during the last season,
[182] 1,026; rabbits killed in the settlements nearest to the Aleksandrovsk
[183] post, 258 (5). /386/ There are 143 guns, 201 boats (one boat

[182]

5. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual ones. The starosta in the village of Kimidvo, for instance, deliberately tried to persuade his people not to tell the truth to the Russians, who, according to him, would come and take away the bounty . .

/386/ There are 143 guns, 201 boats (one boat
[182] to every five persons), and 2,106 dogs. To make some money,
[183]

To make some mo
166 115 individuals, i.e., one-sixth of the adult population, m
163 the trip to Nikolayevsk. The settlements richest in seals an
[182] dolphins are Tamlyvo, Vivkvo, Pomr, and Tengi; the
[244] also richer in sables than the others. Potatoes are raised by
[182] Gilyak in Khoe and Tangi. In the settlement of Tyki, the
[244] Gilyak have made a request concerning the settlement amon
[244] them of at least one Russian with whose help they could sow
[244] potatoes. The settlement of Tyki should be mentioned for s
[648] eral other reasons. In the first place, starting from this pol
[244] the Gilyak are ceasing to hunt sables because of the overwh
[244] competition from the Tungus who have killed off the sables in the
vicinity of the settlement and now pursue them on their rein
Before the appearance of the Tungus, the Gilyak were very
[244] careful in hunting wild deer and sables. In the second plac
[244] glazing at this settlement one notices a progressive improve
[244] in the construction of the winter yurts. In Tyki the dugout
[244] little above the ground, it has windows made of fish skin,
[244] in one yurt even of glass; in the middle of the yurt, instea
[244] of a smoking hearth, one finds a chimney-like stove with a
Farther on, beginning with the settlement of Tengi, one en
enormous yurts with half a dozen large windows and a fairly
plex heating system which resembles our steam heating. T
horizontal stone pipes which lead out from the stove and stre
along the wall under the plank beds serve mainly to heat the
latter; the smoke goes through a subterranean passage into a
high vertical pipe which is made of a hollow tree trunk espe
[244] adapted for this purpose. A similar system of heating is use
the Amur Gilyak and in the fanzs /houses/ of the Manchu,
[244] whom it may have been borrowed.

As to the character of the region, the maritime sect
[137] of the western coast are mostly tundra-like, with grass vege
[137] tion. The road runs partly along the sea, partly through the
[244] taiga, and occasionally over the mountain ridges. Near the
settlement of Pomr the coast becomes more elevated, and,
ginning at the summer settlement of Muz'vo, it strikingly

161 Nikolayevsk.
621 Of the two sexes, there are fewer women, as far as may be judged on the basis of several examples. Thus, among 90 accurately counted Gilyak (1) there were 50 men and 40

1. This count was taken of the population in the houses in which a halt is made along the winter road to Sakhalin, namely, in the villages from Vasin Mys to Chëmi.

women. It has been proved that the same is true among other primitive tribes of Russia. As far as age distribution is concerned, there are not a great many children, but also
163 not very few. Large families of children which frequently occur among the Russian settlers here, are not to be found among the Gilyak. Nevertheless, the birth rate is not so small that one might see in it a cause for a decrease of this tribe. Among 240 persons of both sexes from various villages, I found, for example one-third of them were children of 0-10 years, which just about equals the condition existing in Western Europe.
61 Although nothing has been done in the way of gathering
77 regular statistics on the Gilyak tribe, there is nevertheless no doubt that the tribe has diminished since the Russian occupation of the country. Some villages are now only half as large as they were. We find a repetition here of the same sad phenomenon which we also observe in other countries where civilization and a natural state are contiguous. The more direct causes of this decrease I shall consider below. [RCH: see category 116, p. 249]

II. The Country of the Gilyak

33 The lower Amur valley and Sakhalin are mountainous
12 countries. The mountain ranges of the mainland belong to the so-called Tatar range, Sikhote-Alin, which covers the region between the lower Amur section, the Ussuri, and the sea. The Amur whose lower third flows northeastward becomes even more gigantic here than farther up-stream. It is one and one-half versts wide; the depth varies, but even in low water large steamers can travel up and down without difficulty. At Nikolayevsk (60 versts from the ocean) sea-going vessels lie at anchor that do not draw over 12-14 feet [101] but even the largest could enter if it were not for a short, shallow stretch (sand bar). In stormy weather the Amur has such high waves that the river steamers must seek shelter along the shore, and people get sea-sick, just as

161 It is as impossible to estimate with any certainty the number
of Gilyak, as it is the number of Goldi. Rittich estimates
their number to be about 3000. On the Amur Jakobsen found
quite a large number of villages; on Sakhalin Island, on the
other hand, there were far fewer villages.
439 Like their neighbors, the Gilyak are fishermen and hunters;
433 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and
flour for the inhabitants of Sakhalin. In accordance with their
primary occupations they spend their summers on the river
banks while in winter they move into the mountains and roam
through the woods. I am unable to say with certainty whether
they have summer and winter dwellings like the Goldi, but I
think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-
brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a
whole number of Gilyak villages that were at a considerable
distance from the river bank, while the summer settlements
of the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
perhaps, that these Gilyak villages were not simply fishing
villages for the summer, but served as dwellings for the
whole year; unless one wanted to assume that the Gilyak were
forced to withdraw from the immediate neighborhood of the
river in summer because of the partically marshy and there-
fore unhealthy river bank. In Sakhalin, moreover, there was
not a trace of the larger houses of the Gilyak such as those
mentioned above; rather, the huts were only small and half
under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller,
for with their confined space one can hardly avoid close con-
tact with the inhabitants and the dangers connected with that,
in short, being tormented by a multitude of vermin. In addition
the atmosphere created by the crowd of people present, by
the presence of the dogs, by the manifold provisions hung up
for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
136 on the main land are in better condition, but they, too, have

116, 161, 174

"The pair [LSS: A Gilyak man and woman] were m
8000 souls, called Gilaks, a branch of the Tungusians
found, a very different people from the Tungusians wh
journeys. The Gilaks were the original inhabitants of

and for an unknown period

/387 cont./

114 settlements the settlement of Mos'bvo
on the banks of the Tym' River, seven
103 versts from the settlement of Rykovskoye.
In connection with this settlement of
361 Mos'bvo, the author makes the follow-
821 ing comment: "It is inhabited only in
autumn and winter. In spring and sum-
mer the inhabitants pass on to the west-
ern coast, mainly to the village of
Arkyvo, where in the early spring they
hunt seals and during the summer catch
fish which are not to be found in the
Tym' at this time of the year. At the
beginning of August, before the Siberian
salmon run, the population returns to
their winter dwellings." Editor of the
journal, Etnogr. Obozr."

000 with 109 yurts. The total population here is 703 persons (197
16 on the Tym' River, 506 on the Okhotsk coast), of whom 416
are male and 287, female; there are 169 families and 133
households, 483 adults, 175 married persons, 9 male polyga-
mists, average fertility -- 3; 332 children survived birth; 169
882 died. Gunn -- 64 (of these 30 are on the Okhotsk coast and
the remainder on the Tym'), 121 nets, 122 boats, 1,480 dogs.
361 During the last season 888 seals killed, 586 sables, 134 foxes,
433 43 otters, and 63 bears.

From this one can draw the following conclusions: here
162 there are, on the average, six persons per yurt, an average
597 family has /388/ four to five members: there are 11 married
males for one bachelor (1), one bigamist in 19 married men.

[589]

1. The word bachelor is applied only
to older, so to speak, inveterate
bachelors.

/388 cont./

• 162 The ratio of the number of males to that of females (416:287) is
such that there are 694 females per 1,000 males. In Russia there
are 1,023 females per 1,000 males, and in Asia as a whole 960
165 females per 1,000 males. The infant mortality rate is 35.7%.
031 Every Gilyak, on the average, has two dogs and each adult Gilyak,
917 three dogs. There is very little hunting equipment, especially
417 guns, on the whole.

G1 The Tymovskie and the Okhotsk Gilyak belong to 18 clans (?),
101 882
[126]

2. The property of each person has been
registered to this or that clan, the figures
on the number of clans, etc.

of which especially numerous clans are: Chuy-goy in the testi-
ment of Chayvo (114 persons), Ady-Tymovskiy (156 persons),
Nymyri in Nyvvo (94 persons), Uilandzh in Chayvo (65 persons).
The most notable settlements in population are: Chayvo (151 per-
103 sons), Rekhtvo (90 persons), Nyvvo (46 persons), Tekhrvo (51
162 persons), and on the Tym' -- the trinity of settlements, Ady-Tym'
and the neighboring Khomvro and Pivvo (106 persons, not counting
the immigrant population from the western coast, Mos'bvo
(Rykovskoe, 56 persons), and others. Communication between the
361 first two of these settlements, Chayvo and Kekhrvo, is extremely
difficult, aside from the shallow water, the journey is difficult
because in several places it is necessary to carry the boats over long
stretches of dry land. As has been mentioned above, there is
communication from the settlement of Kekhrvo to the village of
Pomr and the western shore.

North of Kekhrvo the coast is uninhabited, and summer
133 travel to the north is extremely difficult and completely impossible
484 along the shore itself for lack of any means of transportation
across the wide mouths of numerous bays. The only means of
transportation is on reindeer by way of the taiga and over the
mountain ridges. If one adds to this the fact that a draft reindeer
makes its way with great difficulty in the summer, it is clear
how difficult and slow such a journey is.

G /16 cont./
101 It is different from the Amur on the Liman and along the
coast of the northern part of the Sea of Japan, in that there on
the mainland, between the Gilyak and Orochi areas, there is a
considerable stretch of uninhabited territory, which -- for reasons
that we shall touch on later -- keeps the two peoples strictly
G1 separated. On Sakhalin, however, with regard to the Ainu and
101 Orok, there is reported, and in part to an even greater degree,
G1 what we have seen on the Amur and on the Sea of Okhotsk. On
A the west coast of the island some permanent Ainu families have
101 mixed with the Gilyak even before they reach their southern
162 boundary. For example, it was said, at the Gilyak in Arkai nad
361 me, that of the villagers south of Dul', Adngi was still purely
Gilyak, Khbiu contained two Gilyak and one Ainu yurt, Chogranj
again was inhabited only by Gilyak, and, finally, Pilja-wo was
inhabited half by Gilyak and half by Ainu (4). The latter /17/

4. Coming from the north, Schmidt, too,
met the first Ainu in Khbiu, which, more-
over, at that time consisted of only two
miserable yurts. He likewise calls Chogranj
an Ainu settlement ("Histor. Bet.," etc.,
op. cit., pp. 65, 68). Again, however, I
cannot agree, with the version of the Ainu
for the above-mentioned places, "Ktausi,"
"Chokkoran," and "Pil-wo," on Schebunin's
map.

place bears among the Ainu the designation "Poro-kotan," with
361 the same meaning as its Gilyak name, "Pilja-wo," that is,
A "big village" (1). Beyond this place the coast is uninhabited for
114 [113]

1. Rudanofskij, too (Vortochnoe Pomor'e
/Eastern Seaboard/, 1866, p. 96), calls
Poro-kotan or (Gilyak) "Pile-wo" the first
Gilyak village as one approaches from the

G1 /136 cont./ A Gilyak from YEKYTUN in the
101 Tymy Valley, very well-versed for his means in the geography
G of the Amur region and who had undertaken many trading
[131] voyages to the mainland and was acquainted with the Ainu
[162] and Olcha language, mentioned to me, among other peoples on
the continent already known to me, the "K'kkal," who were
said to live along the seacoast to the south of de Castries /De-
G Kastri/ Bay. There has already been mentioned many times
[134] Kalbovo a village located on the east coast of Sakhalin and at
G present inhabited by Gilyak and in addition by Orok, which,
[162] according to the former people, bears the Gilyak name of
"K'kkr-wo" (10). A conjecture as to what circumstance is

G [192]

10. "Wo" means "village" in Gilyak.

responsible for this name is /137/ to be expressed later. If,
however, we first continue to discuss the names K'kkal or K'kh(a)r,
we would see that the Gilyak name for the Olcha, whose living
Gilyak is sounds just the same as among the Goldi and, with
G1 minor modification, also among the Manchu that the first
101 borrowed it from the latter, and not vice versa. For along the
177 entire line from the Chongar to the sources of the Usuri, the
Goldi are the immediate neighbors of the Orochi, they have all
kinds of associations and contacts with each other; I myself have
repeatedly met Orochi passing through Goldi territory; between the
Gilyak and the Goldi, on the other hand, there is a large
[139] stretch of uninhabited land, and the contacts between these two
[184] peoples can only be exceedingly few. Though the Gilyak in the
interests of trade often come down along the west coast of
G1 Sakhalin as far as Sirarumi, the deserted mainland coast, only
101 very sparsely inhabited by Orochi, remains alien and unknown
361 to them. The sea, too, becoming wider toward the south and
A not freezing in the middle in winter, precludes any contact be-
[133] tween the Orochi and the Sakhalin Gilyak living opposite them --
[162] and, of course, to a greater extent the Ainu as well. Judging
by those designations, then, the Gilyak seem to have first
become acquainted with the Orochi through the Goldi. If one

SS /316 cont./
114 of their possessions, of the danger of losing them at any time --
101 an awareness that had a paralyzing effect upon the joy of acquisi-
698 tion and could only increase the innate laziness and indolence.
If one adds to the impoverishment and dejection the many wrongs
to their family life committed by the foreigners, the many kinds
of sickness and vice brought by them, then one must grant that
these evils, working like a slow poison continually over a long
period of time, must have considerably reduced the numerical
growth of these peoples. The more the latter were exposed, or still
are, to Manchu-Chinese influence, the less one can expect to
find among them a relatively numerous, dense, prosperous, and
vigorous population. Suffering under this the most, of course,
must have been those peoples whose territories lie closest to
the main seats of the Manchu and Chinese, to the Sungari, to
the upper Usuri region, and to their culture area along the upper
Amur, that is, all the peoples of the upper Amur region, such as the
Goldi and the Ta-ches, or southern Orochi, whereas those living
farther away were better off, such as the Olcha and Negda, whose
territory remained untouched by the Manchu, and even more
the Gilyak, who denied entry into their territory not only to the
Manchu officials, but also to the Chinese merchants.
Thus, the two facts discussed above, the acute conflict
G1 of the Amur peoples with the Russians in the seventeenth century
101 and the chronic one, in part still going on, with the Manchu and
Chinese, explain the phenomenon, surprising at first glance, that
the lowermost part of the Amur region, in spite of its harsher and
more unfavorable climate, nevertheless has most of the indigenous
population, but upstream and to the south, where the climate is
milder, the vegetation more varied and richer, and the wealth
of fish smaller, to be sure, but the wealth of game is in part even
larger, the population is nevertheless sparser and the country more
G1 and more desolate. The Gilyak seem to me to be relatively the
101 most numerous and the densest, though still sparse, /317/ espe-
162 cially along the Amur River, while along the Liman and the Sea
of Okhotsk they are more greatly scattered. Next come the Olcha,

SS /317 cont./ NEXT COME THE OLCHA,
162 who, however, occupy only a small territory in the Amur region.
The Goldi, certainly more numerous in their totality, are dis-
[131] persed over a wide territory and therefore are only sparsely rep-
[162] resented everywhere, most densely between the mouths of the
Usuri and Sungari. The southernmost part of the Amur River,
between the mouth of the Sungari and the Bureja /Bureya/
Mountains, is a prairie wilderness almost completely without
people, and then begins the upper Amur region, which is only
temporarily visited by nomadic hunting peoples, except for
the part cultivated by the Manchu, Chinese, Daur, and, im-
mediately above the Bureja Mountains, by sedentary Birar.
In general the population situation on Sakhalin is different
from that on the mainland. Here the southern part, occupied
by Ainu, seems to have a greater population than the northern,
Gilyak part of the island. To be sure, the southern part, washed
on both sides by the branches of a warm current, is climatically
• 162 much more favorable than the northern part, which, especially
on its east coast toward the Sea of Okhotsk, has an extremely
137 harsh, almost polar climate, but here again the reason for this
phenomenon may lie in historical and political circumstances
rather than in physical conditions. Warred upon and subjugated
162 by the Japanese in the southern part of their area centuries ago,
698 and constantly oppressed and afflicted since then, the Ainu moved
137 northward more and found a homeland on Sakhalin, where
[139] where up to a few decades ago they led a free and independent
[184] life; unmolested by their enemies (1). It is not surprising, then,

1. See above, pp. 148 ff., 256 ff.

that in the course of time their number there increased con-
siderably. In the northern, Gilyak part of Sakhalin, on the other
162 hand, a decrease in the population has taken place. I believe/
G that I have shown on linguistic grounds that a part of the Sakhalin
[131] Gilyak left the island, perhaps as a result of the pressure from the
G Ainu, and moved to the mainland, to the lower Amur and the
[162] coast of the Sea of Okhotsk (2). A more numerous Gilyak

SS /319 cont./
161 the number of villages clearly cannot be a yardstick for judging
114 the number of the population, because the villages are extremely
36 variable in size, and some of them, for example, consist of only
one house (3). The single factor in which, lacking a direct

G 3. Although all the later statements concerning
101 the number of persons of the indigenous peoples
114 of the Amur region, which, as a consequence of
the Russian occupation and colonization of it,
must have undergone great changes, lie outside
the scope of this work, I should like to mention
one of these statements here in passing, because
it refers, or is supposed to refer, especially to
the Gilyak who are in the forefront of my consid-
erations. I am referring to the estimate of their
number (in the years 1878-1880) made by Dr.
G [113] N. Seeland in his article, "Die Gilyaken, eine
ethnographische Skizze" (Russische Revue, ed.
by Carl Röttger, Vol. XXI, St. Petersburg,
1882, p. 99). After he had considered the tax
figures of the Russian ispravniks (district chiefs)
for the mainland and with regard to Sakhalin
questioned traveling fur traders, he came to
the conclusion that "the whole Gilyak people
amounts to 8,000 souls." The particulars of this to-
• [162] tal number, given according to the individual
districts, explain its exceedingly large size,
but at the same time make it absolutely unten-
able. For the number of the Gilyak of the
Nikolayev District (from the seacoast up the
Amur to Mariinsk), de Castries Bay, and
Kaiserhafen is said to amount to about 4,000,
the Gilyak in the Sofiisk District (from Mariinsk
to the Gorin) 1,000, and he estimates the
number of Sakhalin Gilyak at about 3,000. Ac-
• [101] cording to this, Dr. Seeland includes as Gilyak

Olcha

/363 cont./

1) Most of the small villages mentioned here could not be entered on the map because of the limited space.

2) Located on the lake of the same name, which is connected with the Amur (see above, p. 27).

3) Between this and the following village are the two above-mentioned (pp. 27, 51) Olcha villages, Tyr with two yurts and Tschibei with six yurts.

4) The Olcha village located somewhat to the north of Kidzi-Much among its houses has three permanently inhabited by Gilyak, has been mentioned above (p. 27).

5) With the single exception of the one earth yurt of Pattach mentioned above (p. 469).

6) According to handwritten information collected by Nikolaievskiy among the Gilyak on Tchen Bay and made available to me.

7) The villages located along this coast of Sakhalin on the Limun and the Sea of Okhotsk, have already been enumerated above (p. 469) for a comparison of Glehn's information on them with the data collected by me, which do not entirely agree with him, especially on the number and nature of the winter dwellings and in part on the names of the villages. It might therefore be desired if they are given again here for the sake of a general survey. Since, however, the comparison shows some great changes in the population of this coast in the years 1857 to 1861, and the 1861 point here is to substantiate the conditions present in the Amur region at the time of my stay before that, only the data contained by me personally are considered in this list.

8) Sawar-ski village and Fija-wo to the south with the same number of yurts have a population consisting half of Gilyak and half of Aino, only three yurts are counted for both places in the summary.

9) The villages Pud-wo and Tschchar-wo lie on both banks of the river, with the indicated number of yurts.

10) With this village Glehn begins the series of villages located along the west coast of Sakhalin, but he himself states that it lies at the northern point of the island, between Capes

/371 cont./

vases, and consequently also the wish to it for a cure. The corpse of a person killed by an aff (tiger and leopard) is taken to a similar burial house, supplied with food, and the latter is used as a remedy. (Rm. 1, pp. 54-56.)

58. Gilyak. Between Hokh and Kalm (on the right bank of the Amur), T'pmod on the bank the north of a Gilyak who had met misfortune in the river. Here stood a small low house, in the manner of all Gilyak graves, surrounded by bench-bark mortet and bowls of various sizes, which were strung on the adjacent brush. This is the usual general custom of the Gilyak for designating the grave sites of persons and animals (beats, etc.). Next to the tomb lay a boat, probably the one in which the accident had occurred (**). (L. S.R. I, p. 7.)

** Cf. Pl. LXVII /p.127 /.

59. Gilyak. The inhabitants of the villages of Kak, Hokh, and Tschilvi (on the right bank of the Amur) are said to inter their corpses, but the other, including those of Tau-ako and the village up to Chiara (incl.), cremate them and erect aff for them. I personally saw many aff in Chiara. In the villages named, however, the population is in part Tungusic. (2 S.R.I, p. 9.)

60. Gilyak. Near Ny (on the Amur-Limun) I saw a fresh Gilyak grave. Here an aff was not yet erected, the ashes (of the cremated corpse) were covered with bast vertically and horizontally, and at each of their two ends there wat wood shavings (ceri). (2 W.R. II, p. 38).

61. Gilyak. If a Gilyak is murdered, his corpse is likewise (this village) cremated, but no aff is erected over the ashes (in the text: instead, a wagon is set up (**)). It is made out of a

** See Appendix 22 /p. 1306/.

tree trunk which is dug out of the soil with the roots. The various rear-watches serve to represent the head, arms, and legs of the

THE NIVKHI

S. V. IVANOV, M. G. LEVIN and A. V. SMOLYAK

(based on data by A. M. Zolotarev)

General information

The Nivkhi live on the lower reaches of the Amur and adjacent areas, as well as on Sakhalin Island. They are sharply different in language from their neighbors, who speak languages of the Tungusic-Manchurian group, and belong to the Mongoloid physical type (Nikolskiy 1928).

The name of the people derives from their name for themselves, Nivkh, or "man." The name known to Russian pre-Revolutionary literature as "Gilyaks," This word evidently derives from "Giolee" and "Giliyami," as the Nivkh are called among Tungusic-Manchurian peoples.

The census of 1926-27 set the number of Nivkhi at 4076 persons (1700 on Sakhalin Island and 2376 on the continent). In addition, according to data in 1928, 111 Nivkhi lived in the formerly Japanese part of Sakhalin.

The Nivkhi consist of two groups territorially: the continental, or the Amur, group, and the Sakhalin group. The continental Nivkhi live along the lower stream and along the coast of the Amur Estuary, and in the adjacent areas along the Tatar Strait and the lies of Okhotsk. On the Amur, the Nivkhi villages are interspersed among Russian and Nagiba villages. The Nivkhi village farthest up the Amur is Pad; others are situated lower on the Amur and on the Amur Estuary. In the estuary, the Nivkhi live in the villages of Tchnyr, Kenal, and Kenyr; in the estuary is Kul (18), Iu (now Khabarovsk-on-the-Amur). Individual families live along the Ulchi. In the past, some Nivkhi groups were found as far as the Sea of Okhotsk. In 1850, the well-known Russian traveler Middendorf encountered them on the Chumikan. In Sakhalin, the Nivkhi are living along the western and eastern coasts, as well as along the middle reaches of the Tym' River. On the western coast, their main mass is concentrated in the Rybnovskiy Region, in the Aleksandrovsky and Shirokopadsky Rayons there are only small groups (Ivanov 1954). The Sakhalin Nivkhi live in villages from Cape Lopatin to the Kirovskiy Rayon. The population of the latter is almost ground entirely concentrated on one large collective farm, Chir-Unal. On the eastern coast, the southernmost point is the village of Nyvro-Sartar; north, there are large villages, Dagi, Chayvo and Pil'tun, where the former residence of the tiny Samarkin aboriginal along the coast have

1: Shternberg--543 E-5 (1890-1897, 1910) 1933 RX3 Gilyak RX3
[The Western Coast]

/385 cont./

or adolescent, living apart from their parents or not, and therefore "housefuals" are counted separately, and, secondly, widows and widowers and their children, and also orphans (brothers and sisters). In the second sample, the total population is 1,084, of whom 541 are male and 480 female; the adults (including adolescents) number 678: there are 278 married or widowed persons, and 92 male polygamists (four of these have three wives each and the others two each). For each polygamist there are nine individuals who have only one wife each. Thus, there are 92 polygamists who have 184 wives.

3. Under the rubric of "married we have also included widowed persons, since, in order to have accurate percentage figures for the fecundity and sterility, widowed persons must be considered along with the married persons. The terms "polygamist" and "bigamist" are used interpretively, since, though there are no prohibitions in this regard, we have not met on the Chibonk Island a single polygamist during the last season, than two wives; on the western shore and on the Amur many Gilyak have three or four wives each.

The number of children who survived birth is 518, while the number of those who died at birth is 247, so the rate of infant mortality is at least 32% (4). The

4. For lack of a better method, the number of children was ascertained by asking each married man the question: (1) how many of his children were present (the name of each child was called out and written down by one) and how many were absent, (2) how

many of his children had died between the beginning of his marriage and the date of the survey. In this way, we obtained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

fertility rate -- 2.7%, although this figure is below the actual one, for in the number of married people were included, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wives. There is an average of 1.5 people living in each yurt, although there are a number of yurts with several dozens of inhabitants; for example, one yurt in the settlement of Ivan-ako accounted dated 42 persons of the same clan.

6. On the size of the winter settlements, the largest of these are the following: Tamlyvo and Likteyvo (144 persons each), Vinkvo (116), Nyur (103), Arkyvo (87), Tal'vontgro and Tengi (64-each), Kimidvo and Potro (59 each), Nyamivo (58); the smallest settlements are Tymy (4 persons), Vase (8), Nobey (9). In the summer the most densely populated settlement is Tamlyvo. Seals killed in all the settlements during the last season, 2,036; sables killed in the settlements nearest to the Aleksandrovsk post, 258 (8). /386/ There are 143 guns, 201 boats (one boat

5. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual one. The reason is the village of Kimidvo, for instance, deliberately tried to persuade his people not to tell the truth to Shternberg, who, according to him, would come and take away the bounty . . .

/386/ There are 143 guns, 201 boats (one boat for every five persons), and 2,109 dogs. To make some money,

161 Nikolayevsk.
621 Of the two sexes, there are fewer women, as far as may be judged on the basis of several examples. Thus, among 90 accurately counted Gilyak (1) there were 50 men and 40

1. This count was taken of the population in the houses in which a halt in trade along the winter road to Sakhalin, namely, in the villages from Vasin Mys to Gilimi.

women. It has been proved that the same is true among other primitive tribes of Russia. As far as age distribution concerned, there seems to be a great many children, but also not very few. Large families of children which frequently occur among the Russian settlers here, are not to be found among the Gilyak. Nevertheless, the birth rate is not so small that one might see in it a cause for a decrease of the tribe. Among 240 persons of both sexes from various villages, I found, for example, one third of them were children of 0-10 years, which just about equals the number existing in Western Europe.

Although nothing has been done in the way of gathering Yegular statistics on the Gilyak tribe, there is nevertheless no doubt that the tribe has diminished since the Russian occupation of the country. Some villages are now only half as large as they were. We find a repetition here of the same sad phenomenon which we also observe in other countries where civilization and a natural state are confronted. The more direct causes of this decrease I shall consider below. [Kill on category 1.6, p.249]

II. The Country of the Gilyak

The lower Amur valley and Sakhalin are mountainous countries. The mountain ranges of the mainland belong to the Sikhote-Alin' Range, which extends from Sakhalin, from reports of the Gilyak themselves. These figures are most probably somewhat below the actual one. The reason is the village of Kimidvo, for instance, deliberately tried to persuade his people not to tell the truth to Shternberg, who, according to him, would come and take away the bounty . . .

1: Pilsudski--7 E-5 (1895-1905) 1910 Gilyak

846 given birth to a child does not leave her place, the only during the most severe spells of frosty weather is she allowed to go to the dwelling place, in the edge of the forest, if the weather is fine. In case she herself in the housewife, if she cannot expect to be taken into the house 846 by another woman. Mishaps occurring to weak women 776 in confinement who were left to themselves in the hut are attributed to evil spirits. In order to keep these spirits out of the "house of birth", in which she of the most important and mysterious natural events takes place, a large axe is placed at the entrance of the hut, but designed to banish the evil spirits. But this convenient and easy way of protection is not always sufficient. I recall a Gilyak called Kan coming hurriedly to me for help [760] because his wife, who was complied to do all the work in the narrow and disgusting hut, even to sewing and chopping wood, had, inadvertently, hurt his newly born son's hand. On another occasion, the hut in which the wife of a Gilyak friend of mine was in confinement caught fire when she had started a fire in order to warm her chilled limbs. The fact that such mishaps do not occur as frequently as one should expect is due to the admirable strength of character and fortitude of the Gilyak women who, even worn out and sick, never loses her presence of mind and her ability to work. Seals killed in all the settlements during the last season, 2,036; sables killed in the settlements nearest to the Aleksandrovsk post, 258 (8). /386/ There are 143 guns, 201 boats (one boat

834 a way that every discussion of the fact is precluded.
864 If the baby was born in the summer, the children are told that it was taken from under the roots of a tree or trunk; if a baby was born in winter, one pretends to have found it in the snow.
845 Twin birth.
863 No tribe on Sakhalin Island has reported the birth of triplets to any woman at any time. That is why there are no legends about such an event either.
Not infrequently twin births take place among the natives. They contend that in each one of these cases both children are of the same sex. I personally cannot know of any living twins of the Gilyak tribe who were between forty and forty-five years old. In regions where I well known to me, there occurred three twin births in a population of more than 300 persons within a decade, but all three twins died immediately after birth. When I left in 1905 there were five month old twins living in the family of a Gilyak named
845 Mimo. Only one of the single-born old Gilyak song which I wrote
539 down are twins of different sex mentioned. The
863 brother is in love with his sister and, in the song, asks her to take his heart into her hands, or else he will die.
The Gilyak are convinced that one of the twins is the son of the god of the woods and mountains, pelmen (Tamin mang), a mighty deity now benevolent, now malevolent towards the poor, weak Gilyak. [761] (1) That is why the child the pel-mi-

1. I was, however, given another explanation by a Gilyak; one of the twins is said to be an offspring of the mountains, the other one an offspring of the sea.

roots, should be given back to his father right away. But in my opinion which of the twins is sent to offspring of human beings one prefers to treat them both equally.
845 It is a custom among the majority of the Gilyak to
766 cremate dead bodies (2), but twins are not allowed to

2. In general, only those Gilyak tribes

116, 164, 165, 511, 731

"The older Gilyaks say that during their time, and their fathers' before them, but one famine had occurred before the Russians came, about eighty years ago, but since then there have been many repetitions. In the winter and early spring of 1896, and again of 1897, there were successive bad times, and around Rikovsk special assistance had to be given to the natives by the authorities. In 1898, a wet autumn prevented the accumulation of the usual stores of dried fish, and was followed by another very bad winter. The worthy ex-overseer at Derbensk, in whose hut we had stayed, was on duty down the Tim during that year. So terrible was the state of things that he found 'one or more dying in every hut,' and in the hope of stemming the tide of disease following on the ravages of famine, he took upon himself the responsibility of giving away the Crown stores; but in most cases it was already too late, and large numbers died of the grippe. The filthy [275] condition of the huts, and the accumulations of winter, aggravated the effects of the ravages of disease and the exposure to the severities of the climate.

Such a state of things presses hardly on the children, and accounts for the high rate of mortality among them. There being no statistics of the early years of Russian occupation, we can only gather from tradition and the shrinking of villages and from isolated statistics of recent years, the gradual diminution of the Gilyak race on Sakhalin.

The figures already quoted show, for the population of the Gilyak villages lying between Arkovo and Cape Maria on the west coast, the miserable increase of $\frac{10}{43}$ per

9: Hawes--274-275 T-3 (1901) 1903 Gilyak-2
116, 164, 165, 511, 731

cent., or scarcely 1/4 per cent., per annum.

Lung and throat diseases and scurvy accounted for most of the deaths among the older people, but four died from accident, of whom one was frozen, another drowned, one already mentioned hanged herself, and another was beaten to death by her husband."

/432 cont./
*262 preserved in memory by tradition, may have given rise to the fear
171 and abhorrence of the enjoyment, indeed even of the presence,
[165] of whale meat and blubber in their yurts. Moreover, the Gilyak do not stand alone in this abhorrence, for the Koreans (9), /433/

[113] 9. Witsen, Noord en Oost Tartarye /North and East Tartary/, 1705, p. 47.

for example, and the Koljuschen /Kolosh/ (1), with the sole

[113] 1. Langsdorff, Bemerk. auf einer Reise um die Welt /Notes on a Trip around the World/, Vol. II, p. 112. Weniaminof, op. cit., Pt. III, pp. 60, 99.

exception of those from Yakutat, likewise eat no whale meat and no whale blubber or oil.

224 Since the Gilyak are not a hunting people and only pursue
*262 fur-bearing animals as an occupation in order to trade the pelts, the land mammals provide only a small part of their food in comparison with fish and seals. Yet whenever one of them occasionally falls into their hands, not excepting even beasts of prey, such as
*262 the fox, wolf, wolverine, etc., it is eaten. Only one animal is
[136] steadfastly detested by them, although it could be taken close at hand and without much trouble: it is the rat (Mus decumanus Pall., Gilyak njagrsch), which is present in such extraordinary numbers in their yurts. This is all the more surprising because, without doubt,
[171] the rat in the Amur region is a gift from China (2) and, as is well

2. See Vol. I, p. 128, of this work.

known, is not at all scorned as food by the Chinese, who otherwise are so authoritative for the Amur peoples (3). Could it be that the

844 erected for this purpose near the house, where a small fire can
[343] also be kept going. Nevertheless, with the low winter tempera-
[132] tures and the severe snowstorms in the Gilyak country, this is still
[165] a harsh demand for mother and child, and I do not doubt but that the high mortality among Gilyak children and the generally small population of the Gilyak are caused in large part by this bad custom. I am unable to say what conceptions gave rise to it. It is not likely, however, that it is based upon the superstition
[846] that there is something inherently unclean about the woman during delivery, for, as Dr. Seeland (2) and Deniker (3) note, she is

[113] 2. "Die Ghiliaken, eine ethnographische Skizze /The Gilyak, an Ethnographic Sketch/," (Russische Revue, edited by Carl Röttger, Vol. XXI, St. Petersburg, 1882.

2 peculiar. [105] In Europe and in continental Siberia the
relative humidity is lower in summer than in fall and winter,
but here the opposite is the case. Moreover the difference
between the maximum and minimum of atmospheric humidity
is much greater here than there. In winter during a purga,
it is true, the humidity increases, but afterward it decreases
again so considerably that the winter air may in general be
said to be very dry. In the houses furniture splits and to-
bacco turns to powder. We spoke above of the summer fogs,
but we must add that in these latitudes they seldom penetrate
more than a few German miles inland (1) so that in the Amur

1. Along the southern coastal region they travel farther inland.

country itself one cannot complain of them. In summer,
however, there are many rainy days.

The climate is generally healthful. Thus, for instance, the
2 army of the coastal region has an average of fewer illnesses
and deaths than the army of European Russia, although food
and manner of living are by no means better. The birth rate
among the Russian peasants between Nikolayevsk and
Sofiyskoye outweighs the death rate considerably and more
than in European Russia. However, some diseases occur
more frequently in the coastal region, such as neurasthenia
and mental diseases (2), chronic stomach- and intestinal-

2. This does not seem to apply to the natives.

catarrh and scurvy. The latter two seem to be of miasmatic
origin, of which I shall present evidence in another connec-
tion.

III. Bodily Characteristics and Features

1 In general the Gilyak are below medium height, but people
of very small stature do not occur, especially among the men
who are more often tall. The women are considerably short-
er and tall ones are not to be found. The average height of
12 men whom I actually measured was 162.2 centimeters, and
that of eight women was 150.4 centimeters. These people
had, of course, been picked at random.

2 The Gilyak are well-proportioned; they have relatively
6 broad shoulders, very well-developed chests, small hands
2 and feet. Their legs are usually slightly bowed (rider's legs)
as a result of their straddle seats on the sleds and their bent

153 etc. If such topics are brought up, however, one may
821 converse with the more intelligent of them for a short time.
177 As an example of a philosophical discussion with a Gilyak,
I should like to quote the interview of a Russian priest (1)

1. The deceased V. Kasansky.

with a Sakhalin-Gilyak who maintained he had observed
nothing of God's ways. After [247] a religious discussion
the Gilyak suddenly asked: "and why do the Russians say that
the earth moves around the sun, when what we see is exactly
the opposite?" "Do you have lice in your hair?" was the
priest's counter-question. The Gilyak became somewhat
embarrassed, but admitted that occasionally he had them.
"Good", replied the witty priest, "now if such a louse sits
in your hair and sees nothing but your hair, and then goes
walking about, it begins to think that it alone is moving, but
that your head is standing still. And yet your head, mean-
time, might be gliding along with you in your boat. Even
so is it with us lice on earth: the earth may be moving and
we may not be aware of it." The Gilyak grinned but did not
reply to the extemporaneous astronomical proof of the little
father.

147 838 XVII. Sickness and its Treatment.

In general, the Gilyak are healthier than civilized people.
Their endurance of cold and hunger is amazing. To go
without food for a few days and yet continue the hunt in the
taiga, or to stand for hours up to their chests in the coldest
water - all this is nothing to them. Moreover, weakness in
body structure, congenital defects, paunches, bad teeth,
etc. are seldom found among them. Hermaphroditism was
the only deformity that was known to me.

● 164 Constitutional illnesses and later sicknesses did not have
many representatives. I did not find cancer, tuberculosis
and scrofula. I saw two cases of leprosy in father and son
in one village; another son was healthy. Syphilis occurs,
but rarely, in isolated cases, and near cities and military
posts. In any case this disease does not have the significance
among the Gilyak that it has gained among the native
Kamchadals. In spite of the fact that they are hardened to-
ward wind and weather, they suffer rather frequently from
rheumatism. Toothache is rare.

● 164 The Gilyaks are unfamiliar with scurvy, although the
563 Russians suffer from it more than in Europe. I have
342 spoken in another connection (1) of the fact that I believe
362

1. St. Petersburg Med., Wochenschrift, No. 2-3. 1882.

this illness can be traced to earth miasmas, and particular-
ly to external causes. Rising up from the extensive marshes
and bogs, as well as house miasmas. The fact that the
natives are immune [248] may be attributed partly to habit,
(for Europeans suffer most from it when they first arrive)
and especially to the functional construction of the houses.
Russian barracks and private houses stand on frame work
which soon rots. Below the wood floor there is rotten wood
and damp earth which does not freeze even in winter. The
houses are badly ventilated and frequently have a definite
odor of mould. The Gilyak house has a solid floor of
pressed clay which does not let the earth miasmas penetrate;
it is well ventilated and is often filled with smoke whose
disinfectant qualities perhaps have an effect. Diet seems
to be only a limited factor in this question.

164 Another endemic disease, chronic stomach and intestinal
catarrh, occurs among the Gilyak, but relatively seldom
and soon disappears. It is usually accompanied by unbear-
able colic. This catarrh is also of miasmatic origin.

In spite of the constant fish diet, the Gilyak seldom suffers
from tape worm. Among Russians, too, it seems to come
mainly from pork, but the Gilyak rarely get this meat.

Bronchial catarrh occurs frequently, and pneumonia
seems the most frequent of the serious acute illnesses of the
Gilyak. The children of the Gilyak villages also suffered
from a whooping cough epidemic that was prevalent during
my time in Nikolayevsk-na-Amure.

Eye diseases occur more seldom than one would expect,
for in general, tribes that live in smoky houses frequently
suffer from them and present many one-eyed and blind
cases. The Gilyak houses are not always full of smoke, to
be sure, but so frequently that the relative absence of these
diseases must be attributed to a greater insensitivity of the
eye nerves. Actually, everyone who has been inside a
Gilyak house will be convinced that the natives can remain
calmly seated in smoke clouds that would immediately drive
164 a European out. However, the Gilyak do not escape entirely
293 unpunished. One finds among them people with chronic

● 164 conjunctivitis, corneal obscuration, and sty. Some cannot
293 stand a strong light and this is particularly noticeable in
February and March because at that time, in the mid-day
sun [249] the snow which is already partly melting on the
surface, is intolerably blinding. These people, if they must
go out during the day, wear spectacles of braided horsehair,
which they make themselves. Among Gilyak women who do
a great deal of fine needle work, nearsightedness occurs.

164 The infrequency of eye diseases seems to be partly
connected with the non-prevalence of miasmatic and infec-
tious diseases. (1) Soldiers also suffer little with their

1. Disguised ague and scurvy are to a certain extent exceptions.

eyes, in spite of the blinding snow. The abundant summer
rain fall, the long, severe winter, and, finally, the sparse
population account for the scarcity of miasmatic and infec-
tious diseases, in spite of the widespread swamps.

But as for the febrile skin diseases, which among the
Russians occur more seldom than in Europe, they are a
veritable scourge among the natives. Whether they were
known before the advent of the Russians is difficult to say,
but one may assume that they were less frequent and
permitted the population to recover. Now, however, they
suffer more.

After several murderous epidemics of smallpox and
measles, there remained gaps which will not be so easily
filled. This seems to be the chief reason for the decrease
in the native population.

164 The nervous and mental diseases which occur among the
158 European inhabitants more frequently than in Europe,
732 chiefly from causes of a social nature (nostalgia, alcoholism
etc.) are not wide-spread among the Gilyak. I heard of
epilepsy, but nothing of neuralgias, paralyses, and idiocy.
I know of one case of chronic intermittent mania. However,
diseases in this category will increase if whiskey-drinking
should become prevalent.

752 External illnesses such as: burns, frost-bite, sprains,
breaks, etc., of course occur, but I saw no case which
resulted in permanent injury. From this one may conclude
that the primitive methods of healing combined with the
power of nature usually conquer such illnesses. [250]

164 Chronic skin diseases occur rather frequently. The chief
cause of these is, of course, the lack of cleanliness, but it

● 164 also seems to me that the almost exclusive fish diet is a
contributory factor. At any rate, I knew people who had a
skin itch after eating fish, which, to a certain extent, points
to its etiological significance.

Lithiasis does not occur among the Gilyak or the Russians
of the Amur, and this may be partly explained by the soft-
ness of the water.

Goiter is also unknown. The only case I saw there, was
that of a woman who had come from Irkutsk.

755 The treatment of disease is of course very rudimentary.
They expect the most from the magic tricks of the shamans,
since usually black magic is part of the game. The natural
healing agencies over which the shaman commands are very
few in number and are carefully guarded.

752 Sprains are usually set by stretching. In cases of breaks,
splints are used. Wounds are frequently left quite open and
washed only with water. In cases of suppuration bits of
agaric [Lärchenpilz] are sometimes put in the wound.

757 Frozen limbs are wrapped in oiled or clean cotton. In cases
of chronic stomach and intestinal catarrh, bitter herbs,
especially wormwood, are used as infusions. In cases of
violent attacks of colic which occur with this illness the
Gilyak sometimes set Moxa of burning sponge. Rheumatic
bathe in the warm springs near the village of Mikhil, and
these actually prove to be very helpful. (1) In bad

1. They have a temperature of 24 to 36 degrees Reaumur and belong to the in-different thermal waters.

epidemics of measles, etc., the Gilyak sometimes separate
into groups of families and go into the taiga.

The natives generally do not like to undergo treatment.
They suffer patiently and call the shaman only in extreme
cases. They very seldom turn to Russian physicians, but
they regard them also as shamans, but wiser than the
native ones.

231 Of diseases occuring among their sole domestic animal,
the dog, I can mention only epidemic colds which sometimes
wreak havoc. As for rabies, [251] not a single case has
occurred up to now in the coastal region, which may be
related to the fact that among natives as well as among many
Russians, dogs are systematically kept for work, that is,
for draft purposes.

756 The shamans possess great power over their superstitious
subjects, and their commands are rarely refused. I heard of
an instance wherein a native caught a fine sable and preserved
the skin as a trophy. Very soon a man in the village fell ill.
The shaman after practicing his art announced that the spirit
commanded the sable skin to be worn by the doctor himself.
The valuable fur was given up without hesitation. A Russian
traveler stopping one night in a Gilyak house discovered in
the morning that his sledge was missing, and was gravely
told that the spirit had taken it.

756 In 1814 the small pox raged in one of the tribes living on
● 164 the Kolyma river, and the deaths from it were numerous.
The shamans practiced all their mysteries and invoked the
spirits, but they could not stop the disease. Finally, after
new invocations, they declared the evil spirits could not be
appeased without the death of Kotschen, a chief of the tribe.
This chief was so generally loved and respected that the peo-
ple refused to obey the shamans. But as the malady made
new progress, Kotschen magnanimously came forward and
was stabbed by his own son.

756 In general the shamans are held in check by the belief that
should they abuse their power they will be long and severely
punished after death. This punishment is supposed to occur
in a locality specially devoted to bad shamans. A good sha-
man who has performed wonderful cures receives after death
a magnificent tomb to his memory.

757 The Russians think that with educated Gilyaks they can
563 succeed in winning the natives to Christianity, especially when
the missionaries are skilled in the useful arts of civilized life.
Hence the school in Mihalofski, and it has so far succeeded
well in the instruction of the boys. Russian and Gilyak
children were working in the gardens in perfect harmony,
and there was every indication of good feeling between na-
tives and settlers.

165

165 MORTALITY--death rates (crude and corrected); infant and maternal mortality; distribution of deaths (e.g., by cause, season, age, occupation, locality); life expectancy; authentic cases of extreme longevity; prevalent causes of death (e.g., illness, accident, old age), etc. See also:

Homicide . . . . . 682 Suicide 762

/88 cont./

614 1175 sought by the deities, were prematurely torn from life in more natural ways, /89/ for example, those who died from longing for the mountain, sea, and such people who were enamored of them.

The beloved and chosen ones of the "master" of one or another element, upon whose bounty depends the entire welfare of the Gilyak, pass immediately after death into the clan of the corresponding "master" for a fairly long time (in the case of the mountain people, for example, up to their second death, i.e., for two generations, and during all this time, of course, they especially shower benefits upon their kinsmen, sending them forest beasts (the mountain man), or fish and sea animals (the water or sea man). And when the Gilyak speaks of some "mountain" man or some such man who feeds him, he has in mind his kinsman, who, within his recollection or at the most that of his father or grandfather, found himself, in the ways indicated above, among the host of the "masters." The time span of such

[165] a chosen one is not long (two generations at most) and frequently one clansman has barely joined the gods when he is followed by a second, third, etc.; cases of death from an attack by a wild beast or on the water are not rare. Thus, the bond between the living generation of clansmen and their divine clansmen-benefactors is profoundly alive and real. Many of them were known to everyone, either personally or through the vivid recollections of their contemporaries; special monuments (1) erected by their grateful

[166] 1. The monument of a man slain by a bear is the frame of a bear hunter, in which the remains of the slain man are kept in accordance with a special ritual (see below, subsection 6 /p.551 ff./). As for those who drowned, a boat with all the appurtenances of sea and river pursuits is put on the site of their

/313 cont./

796 782 morning it is necessary to take back the ski and so forth quietly and stealthily. These things are placed so that the Tly-nĭvukh descend the tree, and by these objects they find out the nature of the Tly-nĭvukh and "if he has a good heart," if he will give a "risk" /fart/ or not. "After all, five of us go, one caught something while another goes on and on pursuing but gets nothing. What is the reason for this?"

731 787 During a takh -- smallpox epidemic -- in Tyr all the Gilyak assemble, make a sacrifice -- bow, present rice, roots,

[165] and berries. First the 120-year-old man Zyavkayu from the village of Dyl'myu sacrifices. They pray before the tree chédzĭgr. This old man remembers four big takh.

796 782 Pal likes a tree with different peculiarities, and on solemn occasions such objects are selected. A sacrifice is always made to one's clan Pal-yz˝ (the master of the mountains), but they are not made to Pila-yz˝ (the great master). He is most frequently seen on a knoll. One must not shout to him. There is a conversation going on on the other side -- that is Pal-yz˝. Pal -- mountain master -- likes a black dog; Tol -- sea master -- a

392 354 white one. Each large house has two fires, Pal-tuur and Tol-tuur. If a person has one stove, it is only Tol-tuur, and if he must boil bear meat, he goes to a clansman of that khala who has two stoves.

798 782 224 225 Tol-takhej -- a takhej of larch; a hammer, chong-chtĭs˝, is hung on it. Near it is a halynyr (bench /labaz/)on which are placed the carcasses of dolphins, kaluga, and reindeer. And here they invariably boil the dolphins, here the bones are left to lie, except the skulls and heads, which are carried away to k:khork n'angof, i.e., a place where they put skulls. During the fynyndz: only two dishes are placed on the halynyr -- mos˝ and muvi (kissel/ a jelly-like dish/). It is also from here, in the presence of the entire khala, that they throw a little of everything into the Amur, but say nothing -- otherwise another misfortune will occur. -- Then on the takhej they hang tobacco, agĭa (akhydz˝) -- a bunch, yukola -- pyz˝ and announce that everyone should come out and feed it. This is the main office of Tol. People are sent

/385 cont./

162 582 576 128 or adolescent, living apart from their parents or not, and therefore "households" are counted separately, and, secondly, widows and widowers and their children, and also orphans (brothers and sisters) who live as a single household.

162 582 576 [167] The total population is 1,041, of whom 561 are male and 480 female; the adults (including adolescents) number 678; there are 278 married or widowed persons, and 32 male polygamists (four of these have three wives each and the others two each); for each polygamist there are nine individuals who have only one wife each (3). The number of children who

[398] 3. Under the rubric of "married we have also included widowed persons, since, in order to have accurate percentage figures for the bachelors and polygamists, widowed persons must be considered along with the

[128] [184] married persons. The terms "polygamist" and "bigamist" are used interchangeably, since, though there are no prohibitions in this regard, we have not met on the Okhotsk shore a single case where a native had more than two wives; on the western shore and on the Amur many Gilyak have three or four wives each.

The number of children who

163 165 survived birth is 515, while the number of those who died at birth is 247, so the rate of infant mortality is at least 33% (4); the

[124] 4. For lack of a better method, the number of children was ascertained by asking each married man the questions: (1) how many of his children were present (the name of each child was called out and written down one by one) and how many were absent; (2) how

/385 cont./

124 163 165 many of his children had died between the beginning of his marriage and the date of the census. In this way, we obtained an exact number of the children in a given family, living and dead. Hence, it was easy to calculate the rate of mortality.

163 165 fertility rate -- 2.7%, although this figure is below the actual for in the number of married people were included, on the one hand, children for whom their parents had bought child wives, and, on the other hand, adults who were married to child wive

162 582 There is an average of 12 people living in each yurt, although there are a number of yurts with several dozens of inhabitants; for example, one yurt in the settlement of Nyanivo accommodated 42 persons of the same clan.

103 162 As to the size of the winter settlements, the largest of these are the following: Tamlyvo and Lirkryvo (144 persons ea Viskvo (116); Nyur (103), Arkyyvo (87), Tal'votigrvo and Ten (64 each), Kitnidvo and Pomr (59 each), Nyanivo (58); the smallest settlements are Yamy (4 persons), Vaaz (8), Noksy (9 In the summer the most densely populated settlement is Tamly

224 225 433 Seals killed in all the settlements during the last seaso 1,026; sables killed in the settlements nearest to the Aleksand post, 258 (5). /386/ There are 143 guns, 201 boats (one boat

[126] 5. The number of fur animals and so forth killed during the last season was obtained from reports of the Gilyak themselves. These figures are most probably somewhat below the actual ones. The starosta in the village of Kitnidvo, for instance, deliberately tried to persuade his people not to tell the truth to the Russians, who, according to him, would come and take away the bounty . . .

411 467 467 231 /386/ There are 143 guns, 201 boats (one boat to every five persons), and 2,100 dogs. To make some money

224 traps begin. This is perhaps the most interesting season in the manifold yearly activities of the Gilyak. He leaves his home for several weeks and betakes himself to his inherited sable stream to watch for the valuable little beasts. During the daytime he inspects his snares and traps, shooting birds and any kind of animal that he meets along the way; for the night he betakes himself to his little balagan. He must live through some difficult moments in this little balagan. Here, in the wild taiga, amidst the gloom of night, the silence of the wilderness, or the howl of a snowstorm, to the lonely savage, cooped up at his minuscule hearth or vainly trying to warm himself /27/ at the temperature of the freezing of mercury, each rustle, each strange sound, each snap of a tree, howl of the wind, moan of a night bird, and, finally, the hallucinations of his own frightened imagination depict in all their terrible reality all the horrors of the Gilyak demonology. The devils and ogres of all the elements in the imagry of the Gilyak appear to him, to cause his destruction. And the terrible exhaustion after his labors, the lack of food -- all this aggravates the horror of the situation, bringing sickness often even death. Sable hunting, however, promises more than just terrors and adversity. A successful catch, gay company, a triumphal return home with the catch, stories about experiences, all this fully rewards the hunter worn out with suffering. But, on the whole, the Gilyak is not a hunter. Hunting with dogs is unfamiliar to him, the risky pursuit of bears, of which the Tungus are so fond, [262] does not attract the Gilyak. By and large he is an ichthyophagist, and someone has very correctly said about him that he lives by frutti di mare /the fruits of the sea/.

221 The winter months are the gayest ones in the year. The supplies of fish have not yet been exhausted. On the earnings from the catch, tea, tobacco, rice, and buda were stored up, and the [574] Gilyak cares little about the future. Endless visiting begins, and [196] listening to the storytellers at night, and, beginning in February, [538] there are the bear festivals, the happiest days in the life of the [261] Gilyak. In March, however, the results of the winter extravagance [164] begin to tell, and there come the hard days of hunger and sometimes scurvy, which carries away dozens of flourishing lives. In

Sakhalin

/337 cont./

845 Gibel'ka's wife gave birth to twins; one of the twins was a bear.

[532] A representation of twins -- tongch: -- is placed in a little
[778] storehouse. If one of the twins dies, they place one tongch:, while
[782] if both die, then two joined together on the sides. Chukh-chugynd is given to them at the full moon and at the new moon. Kinsmen and strangers sacrifice down to the third generation.

[775] When a twin dies, he goes to his father, Pal-n'gyvyn, who
[787] gave birth to him, appearing to his mother in a dream.

766 A dead twin is not cremated, but is seated in Turkish fashion in a specially built little house, in which a wedge is driven to support him.

He is dressed in a white shirt and trousers and is surrounded with shavings -- inau. The mother of twins is likewise not cremated after death, but is dressed in white and buried, also with inau placed around. According to B. Pilsudski, the same is done with the father of twins.

778 The tongch: helps catch bears and in hunting in general.
224 The tongch; is fed in case of sickness, especially tuberculosis
164 (Slyavo).
782 Infanticide. Infanticide is committed sometimes in secret or
847 even upon the order of the father of the underage husband of a woman.

682 A woman who was accused by a shaman of poisoning a boy, the son of another woman, was beaten, and, after they cut off her braids, she was thrown into a funeral pyre.

753 Illness. Illness is sent either by Pal-n'igyvyn or by Tol-n'igyvyn,
776 but each of them takes a milk not from his kingdom.

/338/ A milk can be of different shapes and often is red as blood and hard as stone, but when he enters a person, he becomes lively, "as if he were walking."

732 A violently insane person is imprisoned in a cage (in
758 summer) and fed; he must not be killed.

753 Kkhmas'ind -- to be sick from not getting what one saw and wanted. Either the one who did the seeing or his family becomes sick. Then it is imperative to get at least a small crumb of what one saw and to touch it, and the person gets well.

165 /432 cont./

[164] 8. For instance, in Vladivostok a newspaper of the same name reported several cases of severe epizootic diseases on Sakhalin, and among them one in 1882 in the Murawjof post, which came about as the result of using the fat of cast-up whales (S. Peterb. Viedom., 1883, No. 272).

9: Hawes--275 T-3 (1901) 1903 Gilyak
116, 164, 278, 757

"Coughs, colds, and pulmonary complanints are very prevalent, and the methods of healing scarcely adequate. For a sore throat, a concoction of moshun-tomash (field camo mile) is swallowed, and for inflammation of the lungs, a diluted exusion from the gungi of trees is drunk in place of tea.

Whether these herbal remedies are dictated by experience and the Gilyak knowledge of medicinal herbs, which is said to be considerable, or is anything more than Shamanistic lore and a series of charms, I cannot say. The treatment adopted for other ailments, such as toothache, swellings, earache, and ulcer, is certainly of the latter kind. For the first they apply some of the down of a hazel-grouse (Tetrao bonasia) to the cheek; for the second and third, the squirrel's tail (olf-rega) and a piece of its ear (tul-noss) are respectively tied to the parts affected; and for the last, gazhu, i. e. a piece of a wasp's nest, is placed on the ulcer."

The ratio of the number of males to that of females (416:287) is such that there are 694 females per 1,000 males. In Russia there are 1,023 females per 1,000 males, and in Asia as a whole 960 females per 1,000 males. The infant mortality rate is 33.7%. Every Gilyak, on the average, has two dogs and each adult Gilyak, three dogs. There is very little hunting equipment, especially guns, on the whole.

The Tymovskie and the Okhotsk Gilyak belong to 18 clans (2),

2. The property of each person has been registered to this or that clan, the figures on the number of clans, etc.

of which especially numerous clans are: Chuy-guy in the settlement of Chayvo (114 persons), Ady-Tymovskiy (156 persons), Mymyzi in Nyyvo (94 persons), Urlandzh in Chayvo (55 persons). The most notable settlements in population are: Chayvo (151 persons), Kekhrvo (90 persons), Nyyvo (46 persons), Tekhrvo (51 persons), and on the Tym' -- the trinity of settlements, Ady-Tym' and the neighboring Khomrvo and Plyuvo (106 persons), not counting the immigrant population from the western coast, Moz'bvo (Rykovskoe, 56 persons), and others. Communication between the first two of these settlements, Chayvo and Kekhrvo, is extremely difficult; aside from the shallow water, the journey is difficult because in several places it is necessary to carry the boats over long stretches of dry land. As has been mentioned above, there is communication from the settlement of Kekhrvo to the village of Pomr and the western shore.

North of Kekhrvo the coast is uninhabited, and summer travel to the north is extremely difficult and completely impossible along the shore itself for lack of any means of transportation across the wide mouths of numerous bays. The only means of transportation is on reindeer by way of the taiga and over the mountain ridges. If one adds to this the fact that a draft reindeer makes its way with great difficulty in the summer, it is clear how difficult and slow such a journey is.

3. Just at the time when the merchant Pargatschefskij /Pargachevskii/, traveling up the Amur, passed this place.

1857, following the lower Amur, it reached Kidsi, in July Uchtr, in September Nikolayevsk, and during the winter months of 1857/58 it raged at the Amur mouth, along the Liman, on the Sea of Okhotsk to beyond Kulj, and on Sakhalin. According to the description, which I owe to Dr. Pfeiffer, an eyewitness of these events, the disease throughout bore the character of a devastating epidemic appearing on new ground. Whereas individual Gilyak villages, such as Tebach and Allof, remained completely untouched in a curious fashion, others, such as Kulj and Langr, lost half of their inhabitants, and many yurts died out completely. The number of victims was all the larger, because the sick, still completely unfamiliar with their uncanny visitor, often sought cooling, half-naked, in the snow and wind, in order to escape the heat of the fever. Dr. Pfeiffer thinks, on the basis of the statistics collected by him, that this epidemic killed about 20 per cent of the Gilyak population. A few years later, in the

614 178 166 174 clan to change residence and to withdraw more and more from their kinsmen. Before my eyes, in the course of a few years, whole clans -- family after family -- in search of more advantageous hunting and fishing sites, moved to the most remote regions, from the Tym' to Taraika (in the territory of the Ainu), to the Amur, etc. Discord between clansmen and wars play a specific role in the dispersion. In the chapter on the history of the clans we saw what a huge role these factors played in the shuffling and distribution. A clear illustration is presented by the history of the Pilavo clan that we introduced; from /201/ the southernmost outlying districts of the Gilyak territory, bordering on the Ainu, they migrated first to the northernmost part of the western shore, near Cape Marii, and from there a part of them moved to the lower reaches of the Amur and, finally, to the middle Amur, almost in the environs of Khabarovsk, where they became completely Goldified. It is true, all the numerous branches of this so widely scattered clan, although they have not even preserved any ties among themselves, have remained exogamous up to the present, but to continue their old phratral marital relations has been completely impossible for them. To a greater or lesser degree, such phenomena are taking place even now. This is precisely the reason why in real life, just as in the epos, it happens again and again that a Gilyak must travel hundreds of versts to find a wife from the proper clan, but such individual acts of heroism cannot be performed by everyone, and willy-nilly there remain exceptions. Most often such a lone person is [597] obliged to have himself adopted into an alien clan and to marry the widow of a member of the adoptive clan and thus completely separate himself from his old phratry.

If it is not just unmarried individuals who move, but whole families, then their offspring willy-nilly begin to enter into marital unions with the nearer clans.

Sakhalin

/348 cont./

174 166 167 22 224 [136] With one's imagination it is not hard to recreate even the form of the migration. Even at the present time the Amur Gilyak are in the habit of setting out for Sakhalin in their heavy boats each autumn to hunt for sable. Some travel to Agnevo, others to Mauko, still others farther to the south. The sable in their homeland is incomparably better than the Sakhalin one, but he is so rare and those who hunt him are so many that the Gilyak prefer to leave their family hearths for as long as six months and to subject themselves to all the dangers of a thousand-verst sea voyage, striving toward those tempting areas where the population is sparse and sables may be killed by the hundreds. In early spring, loaded with their rich catch, they return to their distant hearths. These journeys to the south of Sakhalin are of a comparatively recent origin. As late as one hundred years ago the ancestors of the present-day sable hunters did not travel beyond Dué and the Tym' River, and at that time the Vaaz River was the northernmost point of their hunting. There is no doubt at all that in former times sable-hunting expeditions set out even farther to the north. There must have been some reason which com- [648] pelled the Amur Gilyak to travel farther and farther away from their homeland and finally to transfer the center of their hunting activities to the very south of Sakhalin, where the sable is quite poor and where their ancestors had been forced to buy from the Ainu the hunting territories which they now use. /349/ The reason is to be found in the gradual settling of northern Sakhalin by Gilyak from the continental coast. Originally, the ancestors of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the present day, traveled to Sakhalin in companies of kinsmen only in the season for sable hunting. Here they set their numerous traps on the banks of some stream and placed snares along the natural dams used by the sable for crossing from one side of the river to the other. It is not surprising that an annual pilgrimage to the same area for hunting ended in permanently settling on this island rich in sable.

/377/

423 Property. Among the Gilyak the notion of real property exists, although not in such a strictly individualistic sense as among civilized peoples. The territory of a settlement consists of the customary fishing sites, as well as the streams, and their banks, along which they hunt sables. But the Gilyak never make any claims to nearby territory which they themselves do not use. Use is the absolute element of property. While they recognize [185] [648] their rights to the streams and the nearby taiga where they set their traps, the Gilyak have freely permitted Tungus from the mainland to hunt the sable and reindeer some tens of versts from their settlements, although it could be easily foreseen that this would lead to the complete disappearance of the sable from those Gilyak territories. But on the other hand they are extremely strict in their rights to those streams along which they set snares 423 428 and traps. All the streams of the territory of the settlement are divided in perpetuity among the families of that clan which first settled near these streams and used them, and these streams, their tributaries, and separate extensions pass by inheritance and are divided among the sons on the same strict principles as any real property among us. Moreover, if a stream is bequeathed to be shared among several brothers, the co-inheritors take turns using it through the year. It is worthy of note that although the streams thus divided among the brothers and clansmen greatly vary in value with relation to the advantages of hunting, they are never re-alloted, but remain at the continual disposal of the same people. It is possible that the reason for this phenomenon is the fact that younger brothers in certain cases enjoy advantages in 423 the matter of inheritance. On the other hand, fishing sites are not held in such absolute possession. Where the god has been lavish, the Gilyak does not consider himself justified in fencing off this bounty exclusively for himself. The Gilyak is not in the habit of lying in the hay or of eating and not giving to others. 166 423 Very often the Gilyak move from one settlement to another or journey at given seasons for fishing or sealing, and the indigenous inhabitants of the settlements do not even dream of considering this a violation of any of their rights. Without asking anyone's

/377 cont./

166 423 permission, the emigrant builds a yurt, fishes, kills seals, fowl, etc.; only the streams are prohibited to him for the of snares for sable.

342 592 423 /378/ Only in exceptional cases does the Gilyak li alone with his family in the yurt. Customarily he lives wi brothers and clansmen, sometimes with his father-in-law, rarely with members of other clans. The winter yurts of n Sakhalin are frequently enormous, holding as many as 50 frequently all clansmen. The economic advantage of such munal dwellings consists in the fact that heating, which co a great deal of wood among the Gilyak by reason of the un factory construction of the stoves, is not so costly for each ual taken separately. Moreover, these dwellings guarante curity from abduction for the women. The summer yurts smaller and ordinarily house from one to three families. yurts are built through the joint efforts of several brothers clansmen, the summer ones -- frequently by one person. those who live in the yurt, temporary or permanent inhabi clansmen or members of other clans who had no part in bu it, all live in the yurt without any compensation to the bu and it is doubtful whether the latter enjoy any special priv in obtaining firewood. If the yurt becomes congested, the will always be found a pair of persons who on their own ini will undertake the construction of a new yurt, into which builders themselves move and gladly welcome co-dwellers the dwelling of the Gilyak is, it is true, the common prop several families who participated in its construction, but a same time it is an object of gratuitous utilization by clans [174] and, in general, by anyone who desires it. This is a vesti the time when the dwelling was built by the joint efforts o clan and was an object of collective property.

422 The views of the Gilyak concerning movable prope are perfectly clear and strictly defined. The ordinary arti movable property among them are boats, nets, kettles, ar dogs, sleds, supplies of dried fish, etc. It often happens t boat, a net, or dogs are the common property of two or th

16

6

/109 cont./

And this is just what is striking in the Gilyak system of life. Despite all the complexity of the social fabric, embracing all aspects of life, all those external-formal signs of organization which the European involuntarily seeks everywhere are either completely absent or assume forms which are too fluctuating.

/110/ Let us begin with territory. It is completely natural that the members of one clan should prefer to live together in immediate unity and community with each other. There are actually some settlements, such as Tangi, Nyanivo, Viskivo, and others, where the whole population belongs to one clan. In the large winter yurts of such settlements one can sometimes count 20 or 30 clansmen and not a single alien. Even where several clans live in one settlement, as in Kol', the yurts of each clan are arranged in a row, as if in accord with a strictly observed tradition. Each clan has its own clan streams for hunting, divided among the different families, among whom they pass by inheritance from father to son, although the right to property is limited by actual use, upon the suspension of which the stream becomes res nullius and can be utilized by anyone, even an alien.

Nevertheless, despite the natural tendency of clansmen to remain near each other, the principle of territoriality does not in fact exist. In the great majority of Gilyak villages the composition of the population is mixed. In the above-mentioned settlement of Kol' I counted representatives of eight clans, in smaller villages, from two to three clans, and but very few villages in which there were absolutely no members of other clans. There are clans whose branches are to be met in the most different and remote points of Gilyak territory. This dispersion, of course, is a fact that seems to be at variance with the principles of clan, but it is inevitable under the given economic and social conditions. A settlement located in a particularly favorable place from the fisherman's point of view will naturally attract newcomers from other clans, and, conversely, if the clan has grown so large

*835 /179 cont./ By way of an exception, I observed several cases
578 where jealous men moved to an isolated place immediately
182 after the wedding, in order to avoid the competition of their
166 brothers. Thus, the settlement of Sakh-Kotan, the southern-
[361] most Gilyak settlement on the western shore, was founded by
such a jealous man; when I visited it in 1897, I found there
only its founder with his numerous descendants, and my Gilyak
companions made not a few jokes about him, but he was in-
vulnerable -- his wife was of an age when women are well
*835 beyond suspicion. But such cases are exceptional, and all the
578 more exceptional are cases of sharp clashes between brothers
834 on account of jealousy. In order to avoid them, only an ob-
servance of tact is demanded. Such cases are possible when
an individual wife and a bachelor tuvn go beyond the bounds
of decency and tact: when a woman begins to run after her
sweetheart publicly, disappears from the home, and com-
pletely disregards her obligations to her individual husband.
In such cases it is sometimes necessary for the sweetheart to
move out of the house of his brother or even out of his village,
[166] and the woman sometimes gets a scolding. I met such exiles
a couple of times in northern Sakhalin. Usually, however, the
*835 relations between tuvn are quite peaceful. If the older brother
578 gets a little angry, it is in silence and without any consequences.
Any active reaction is considered a sin. It is considered a
great sin to challenge one's brother to a duel out of jealousy.
I personally never happened even to hear of such cases. I
happened to find out about one such case from B. Pilsudski,
but this was a completely /180/ exceptional instance. A
certain Lokhmatka, a young Gilyak also very well known to
me personally, a very poor lad, but one who enjoyed unusual
success with the Gilyak women, allowed himself to live too
openly with the wife of one of his tuvn. According to the
[626] Gilyak custom, as I have already said, publicity in such cases
[554] is not allowed. It is allowed in exceptional cases, when the
[556] hero is an outstanding and rich man, esteemed by all.
Lokhmatka, however, was a thriftless Gilyak, everlastingly in
debt to everybody, lightheaded, and undistinguished by any

/200 cont./

347 124 171 murdering the girls are possible. Such examples are well-known among the Toda tribes, in spite of the fact that the number of males is greater there than the number of females.

583 174 10. Likewise, with this arrangement the institution of bride price is impossible under normal conditions. Payment for the bride is not permitted; otherwise the obligation of marriage would be merely fictitious. This is still to be seen among the Gilyak today: no matter how avid the Gilyak may be for bride price, it is not permitted in cases of marriage to the daughter of the mother's brother.

582 174 In order that such an essentially exogamous system might be preserved and function in all its purity, a whole series of favorable conditions is necessary. First of all, a whole complex of favorable economic, social and sanitary conditions is required in order that, on the one hand, in propagating themselves the various families of the phratry should be able to maintain themselves on the common territory, and, on the other hand, that the increase should exceed the losses of the families, and that there should be no cases of extinction of entire clans constituting links in the phratry. Furthermore, some degree of isolation of the tribe from alien influences is necessary, so that the religious imperative of obligatory marriages within the phratry may be preserved in all its rigor. Finally, it is necessary that there be preserved economic conditions under which, on the one hand, the social equality of the members of the phratry would remain more or less the usual phenomenon, and, on the other hand -- that under the influence of new economic conditions there should not be engendered one or another temptation to make woman the object of purchase and sale.

74 14 78 66 582 The preservation of all these conditions among primitive peoples in the course of a long time inevitably encounters a whole series of obstacles. And so it has been among the Gilyak. No matter how much the Gilyak prize the primordial abode of their forefathers, economic conditions force individ-

/386 cont./ To make some money,
115 individuals, i.e., one-sixth of the adult population, make the trip to Nikolayevsk. The settlements richest in seals and dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is also richer in sables than the others. Potatoes are raised by the Gilyak in Khoe and Tangi. In the settlement of Tyki, the Gilyak have made a request concerning the settlement among them of at least one Russian with whose help they could raise potatoes. The settlement of Tyki should be mentioned for several other reasons. In the first place, starting from this point the Gilyak are ceasing to hunt sables because of the overwhelming competition from the Tungus who have killed off the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, beginning at this settlement one notices a progressive improvement in the construction of the winter yurts. In Tyki the dugout rises a little above the ground, it has windows made of fish skin, and in one yurt even of glass; in the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by the Amur Gilyak and in the fanza /houses/ of the Manchu, from whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the taiga, and occasionally over the mountain ridges. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Muz'vo, it strikingly

I.

Territory. Linguistic Isolation. Origin.

The small tribe of Gilyak, whose number at the present time does not exceed four and a half thousand persons, is scattered over the vast territory of the entire northern half of Sakhalin Island and the neighboring continental shore, being distributed almost equally between the two regions.

On Sakhalin they occupy the entire shore-line of the western coast from Cape Sakhotoan to the northern extremity of Cape Marii. On the eastern shore -- from Cape Levenshtern to Cape Belil'-de-lya-Vrokyer, and finally, in the interior the island, they occupy the upper and middle reaches of the Tym' River, which is the only significant river of northern Sakhalin.

In southern Sakhalin in the lower reaches of the Poronai River and on the shore of Terpenije Gulf a few dozen representatives of the Gilyak tribe, who migrated to this alien territory due to fortuitous circumstances only very recently (in the last 30 years), have become inert among the Ainu and Oro.

On the continent the Gilyak occupy both banks of the lower reaches of the Amur River to the settlement of Gerl, and then the bank of the Amur and the seashore to the mouth of the Amur to the Kol' River, and to the south to the Chona River. The northernmost boundary of the spread of the Gilyak may be regarded as the mouth of the Tugur River, from which, by the way, the Gilyak only very rarely go on business, not having a permanent place of residence there.

/20 cont./

observations of the physical peculiarities of the Gilyak give us, at the same time, other facts and conclusions provide us with a full basis for thinking that the ancient Gilyak type has completely perished, drowned in the stronger wombs of the neighboring tribes. This took place, however, not in an ordinary way, not through a gradual interbreeding with the neighboring tribes by means of interbreeding marriages, which would be not at all so surprising, but in quite peculiar, extremely instructive way.

In conducting the census of the Gilyak, I carefully collected all information and legends about the origin of each particular clan. The study of these data brought me to the strange conclusion that all the founders of the great majority of the clan now in existence were not the Gilyak, but representatives of the neighboring tribes.

How could this have happened? It is a common phenomenon even at the present time that separate individuals for one reason or another may abandon their native tribe and, escaping persecution or misfortune at home, seek refuge /21/ in a neighboring, alien tribe... Here they find traditional hospitality, settle down, marry (usually a widow), and, in this way, are adopted into the clan of that clan, naturally adopting the language and customs of the tribe that has bestowed on them the protection of such unknown normally form either independent clans or special branches of those clans that adopted them. And the history of the Gilyak clans shows that these clans, in spite of their small number, have flourished by them, in time invariably grew in membership and sturdily survived, while the older clans or the oldest branches of the clan decayed and in the course of several generations died out. The most vital, growing, and numerous clans are the descendants of precisely these newcomers. Whether the reason lies in the fact that the newcomers and exiles represent a natural selection of exceptionally energetic and vital individuals, or this is the result of interbreeding, the fact is not other than it was and is not only among the Gilyak.

As a result of the census of the Gilyak, I asked myself in perplexity. If in the course of a great number of centuries there has been a constant inflow of fresh elements from other tribes, an inflow that was strengthened by the purchase of wives and female slaves from the Ainu and the Golds, and if these new elements flourished and grew, why, then, the Gilyak should have died

/110 cont./

in its original size that the indigenous village can no longer feed the inhabitants, and they gradually degree depart from it to other places, selecting the nearest possible sites in order that the ties between the clansmen will not be severed. Immigration to very distant points involves an actual division of the "fire" and breaking up of the clan. A no less important cause of the mixture of population is the custom, in some instances, of son-in-law /yaa'ya/ moving to the clan of his father-in-law, about which we shall speak in detail in its place. Territory is in any case an indefinite sign of the clan.

The Gilyak do not even possess a consciousness of the right to property, not only with respect to others, but even with respect to /111/ strangers. When wandering Tungus appeared on Sakhalin Island, they, as they relate, had no representatives of the neighboring tribes. How could this have happened? It is a common phenomenon even at the present time that separate individuals for one reason or another may abandon their native tribe and, escaping persecution or misfortune at home, seek refuge /21/ in a neighboring, alien tribe... Here they find traditional hospitality, settle down, marry (usually a widow), and, in this way, are adopted into the clan of that clan, naturally adopting the language and customs of the tribe that has bestowed on them the protection of such unknown normally form either independent clans or special branches of those clans that adopted them. And the history of the Gilyak clans shows that these clans, in spite of their small number, have flourished by them, in time invariably grew in membership and sturdily survived, while the older clans or the oldest branches of the clan decayed and in the course of several generations died out. Tym in the settlement of Kol' there are clans which bear the designations, Tyvii-ling (inhabitants of the settlement of Tyvlin); M'yekire-ling (inhabitants of the settlement of M'yekhir), N'yenkayling (inhabitants of the settlement of N'yenkayu), etc., although the representatives of these clans have lived for a long time in the above-mentioned settlement of Kol', having broken all their ties with the primordial abode of their ancestors (1). The only clans

(1) 1. Similar territorial designations among the Australians were the reason that Kunow came to the completely unfounded conclusion that among these tribes there is no clan organization.

that have true clan names are those founded by emigrants from the neighboring Tungus tribes; thus were formed such clans as the Tkhamaring, the Chorli, etc. And it is noteworthy that in just these clans we observe a clear transition to totemism. In the Nogda tribe, for example, there exist -- the clans that have origin from one or another kind of animal (tiger, toad, bear, etc.). Among the Gilyak such phenomena are very rarely encountered.

/112/ Now let us proceed to what for the European is the most important sign of clan unity -- to the organs of power. However strange, as we have seen, clan life is, the clan does not know any established authorities. True, the Chinese, and after them the Russians, sought to establish among the Gilyak the institution of elders, and so that not clan but settlement elders, that is I had no relation to the life of the clan. This was a nasty epidem, but that was the Gilyak accepted it by way of the Russian authorities were selected, not from among the best or even the wealthiest inhabitants, but from the most officious ones, and there not frequently only indicates the village which was once the primordial abode of one or another clan.

Settlement of Mayya. 1) The clan of Yngin. His clan is also in Vayr -- they are the masters of Vayr, but it happened that one brother killed his brother, and then they separated and divided the fire: "If friend kills friend, who will be bomb" 2) The Belyy clan are from Tymovskoye. Gold was came down from Ulya. 3) The Polmik clan. Gilyak from the river near Mikhaylovskiy. They have been living here for five years (1896).

Settlement of Mongol'. The Valdzu clan from the village of Val' Oronugbu -- from the same village where the wan were. Dzaq from the village of Ekhaty.

Settlement of Ulya. Are four generations /kolenu/ from Uval'-khotin on the Sungari -- Solodo. When they arrived here, they found only the Sigdyli (nam); clan, but these all died out (1896).

Settlement of Koyts on the upper reaches of the Ulya. By a raft on a hillock near the very village (Lang) they placed a cannon (the hole remained to this day). Nearby there is an immense boulder stone in the bay of Puir (Pakhzyr boulder stone). The hole on the hill is almost overgrown; formerly it was four meters deep and surrounded with stones. The cannon ball made the hole burn for eight nights; a lane was created. The cannon ball was found in Kol' -- four people cannot lift it.

According to a legend, 28 skulls were seen by the lake, appointed starostas. Dua-Tvatnfing (Pan) Ajumka from Tymi-ling.

/286/ Settlement of Pul. Samagil -- two generations from the Gorin. The father of the informant raised reindeer. 2) Tumuli -- from Dzhongli, near the Perm oven: Gold.

Settlement of Ukhta. Tyvi-ling -- inhabitants of Tyvi' -- Ulcha clan (Ulcha khalu). They left for Kol' and formed Tyvi-ling. But now they are called Ulcha (Ulcha khalu). Tymi-ling -- "six fathers since we came back." i.e., six generations ago.

2) Dea -- born their dead; ancestors of the nam, went down to Kol' and stayed there. Gilyak left by sea for Sakhalin and settled in the settlement of Udyli.

said: "These are Korean. Long, long ago there was a war. Formerly Koreans lived here; then the Chinese came and drove them out.

"Long, long ago the Chinese lived in Puir on the Amur. The Chinese burned them and shot at them with a cannon. Nearby there is a hillock near the very village (Lang) they placed a cannon (the hole remained to this day). Nearby there is an immense boulder stone in the bay of Puir (Pakhzyr boulder stone). The hole on the hill is almost overgrown; formerly it was four meters deep and surrounded with stones. The cannon ball made the hole burn for eight nights; a lane was created. The cannon ball was found in Kol' -- four people cannot lift it.

According to a legend, 28 skulls were seen by the lake, appointed starostas. Dua-Tvatnfing (Pan) Ajumka from Tymi-ling.

/286/ Settlement of Pul. Samagil -- two generations from the Gorin. The father of the informant raised reindeer. 2) Tumuli -- from Dzhongli, near the Perm oven: Gold.

Settlement of Ukhta. Tyvi-ling -- inhabitants of Tyvi' -- Ulcha clan (Ulcha khalu). They left for Kol' and formed Tyvi-ling. But now they are called Ulcha (Ulcha khalu). Tymi-ling -- "six fathers since we came back." i.e., six generations ago.

2) Dea -- born their dead; ancestors of the nam, went down to Kol' and stayed there. Gilyak left by sea for Sakhalin and settled in the settlement of Udyli.

/349 cont./

Northern Sakhalin was especially favorable for resettling it or interesting that only the northern part of the island is called Sakhalin. Gilyak, which is adjacent to the mainland or as whence and in what direction the settling of Sakhalin proceeded. In the first place, there were the places closest to the mainland half a day to a day's trip between the shores of the strait. Moreover, in addition to an abundance of tables in northern Sakhalin, the Gilyak have the continental coast from which fishing conditions completely identical with those on the continent; the same abundance and rich variety of fish (liberian salmon, kalugs /Hano-Salmo/, etc. /a species of salmon/, carp, etc.), an abundance of seals and dolphins. The Amur Gilyak were the only ones who found it disadvantageous to leave the basin of their hearths. These people have lived for many centuries in the seven now, crowded into their hunting and fishing reservations by the ancestors of the present-day native hunters did not even have official transportation along the Amur. There were, of course, still other reasons which induced the continental Gilyak to move to Sakhalin, for example, density of population. Contrast between clans, and so forth. One of these reasons may have been the Manchu reign with its mandatory annual tribute of a sable skin, which forced people to transfer the center of hunting activities to the very south of Sakhalin, where the sable is quite poor and where their ancestors had been forced to buy from the Ainu the hunting territories which they now use. /349/ The reason is to be found in the gradual settling of northern Sakhalin by Gilyak from the continental coast. Originally, the ancestors of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the present day, traveled to Sakhalin in companies of kinsmen only in the season for sable hunting. Here they set their camps wherever they pleased, on the banks of the Amur by the Manchu, as free men, with the title of 'hunters,' and we were obliged to pay them one sable per person every hunting year." Moreover, every time they came to the Chinese town of Sungari (Sataing), he was forced to pay one sable and the /350/ starosti of the settlements three sables for the other. In the end, the Amur Gilyak, Chinese and Manchu officials made a census of the population, and every year in the summer they would come to collect the sable tribute. The Sakhalin Gilyak were free from this tribute, but eventually the

/350 cont./
Manchu reached them also and installed elected starosti. There was such a starosta, for example, in Tangak. It was from the Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

I shall not at this time enter into the question of how long the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His fine cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

The Sakhalin Gilyak, like their fellows on the continent, have taken many very basic things from their civilized fellows. They have replaced the bow with the gun, their dishes made of wood and birch bark with metal kettles. They forge iron and artfully work with carpenters' and cabinetmakers' tools. They build yurts in the Manchu style and make stoves and tremendous chimneys of stone. They master Japanese sabers and they preserve expensive spears decorated with silver inlays. They wear robes and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of millet). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

Of all the borrowings made by the Gilyak, the use of iron is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ore, but are even incapable of making tools. Until recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail, though the Gilyak

1:Shternberg--507 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2

/355 cont./ A touching custom among the Gilyak is bound with this steel. When a child is born, the part of it emigrates to another place, the elder in the clan (khal'-geymar) breaks off a half of the steel and hands it over to the elder among the departing classmen. With this steel the new settlers will light the fire on a new hearth at the bear festival, and it will be handed from clan to clan for the same purpose. Hence the expression "to break the fire" came to signify the separation of the clan. This custom reminds us of Greece, where those leaving their native land to found new colonies used to take with them the sacred fire of the home altar.

Another clan festival is held in the spring before the hunting of the seal. On this occasion, too, the elders of the clan and relatives are bone by the /356/ clan. With the approach of evening, when the moon rises, the entire male population of the clan (again the women are excluded) goes to the seashore. Here, in long troughs, they bring all the choicest whale blubber carefully prepared, had been left untouched for the moment of the sacrifice. Then all those present squat down and each throws into the sea a handful from each trough as a sacrifice to the deity, pronouncing the customary formula of prayer: "Kur mongo khal!" ("Gods, please!"), after which they gather in one yurt, where the refreshments begin, in which the women take part.

6. The khal' guarantees life and security to each of its members from encroachment on him by the individuals of another khal'. The means is clan vengeance.

The settling of Russians in the region, it is true, has weakened considerably the efficacy of this institution, but has not destroyed it. Even murder, intentionally premeditated, calls for clan vengeance. The closest clansman of the murdered man -- his father, son, or brother, and in their absence his other clansmen -- must, in the figurative expression of the Gilyak, "raise up the kindred bones" (gun ne yozmedzh), i.e., kill the murderer or at least some person of the male sex of his khal'. And the wrath of vengeance is so great that not even newborn children are spared. I have heard that the unhappy mothers of such children, out of fear of the avenger, have resorted to

1: Shternberg--514 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2

/361 cont./
present frequently, by special agreement with the father-in-law, the son-in-law moves to the clan of the former for joint work with him (more detail about this below).

The khal' has a common cemetery, closed to those of other clans. It is known to all that the Sakhalin Gilyak have the custom of cremating their dead. Before the day of cremation invitations are sent to all the clansmen of the deceased, and only an extraordinary obstacle will keep a Gilyak from the performance of his last duty to a clansman. When the "living" fire, obtained in this solemn instance by means of friction, has destroyed the remains of the deceased, they construct a low, little shed, closed on all sides, over the place where the remains of the deceased's bone of the corpse remain, and at its side, a short distance away, they construct a tiny yurt, or rather a wooden box, an arshin square, with a roof. In this box they place the cup and dish of the deceased, a tobacco pipe, a wooden pot (ordinarily for a woman), and other trifles. Thus there arises a whole row of yurt-tombs of the clan. When the clan lives in various settlements, they bury the deceased in his village. But wherever the Gilyak may die, his ashes must rest side by side with his clansmen. If a man dies in alien territory, they immediately communicate the fact to his kinsmen, who come and bear away the body for cremation in his homeland. If the affair takes place in the summer, they preserve the corpse in a local yurt until wintertime, when they bear it away on sleds to his homeland. But even if /362/ it should prove necessary to cremate a Gilyak in alien territory, nevertheless they carefully pick up one small bone, tie it to a piece of wood, and send it off to his homeland. There they make a shed over it and construct a yurt by its side. The death of a clansman calls for mourning. Men and women undo their braids for a longer or shorter time, depending on the closeness of kinship and love for the deceased. Some wear mourning throughout their lives.

/360 cont./
among the Amur Gilyak, among whom such a mixed assembly imposes a larger or smaller fine. The elder of the clan (khal'-geymar), even comparatively recently (one, two generations ago), was the social leader, the starosta of the clan. His successor was the khal'-geymar next to him in age. The interveration of the Manchu and the appearance of the Russians on the island brought about the disappearance of this institution. But the khal'-geymary never played the role of patriarchs with unlimited and hereditary power. Such power is not exercised among the Gilyak, even by fathers over their sons. At the present time the role of the elders of the clan amounts only to leading them in religious ceremonies, to the deciding voice in questions concerning seniority in the line of kinship, and similar questions where years play a special role in the competence of the judgment. The elders are often dispersed in places very distant from one another. But after division the clansmen continue /361/ to remember one another, to visit one another, and to lend one another assistance in the village. But wherever the Gilyak may die, his ashes must rest side by side with his clansmen. If a man dies in alien territory, they immediately communicate the fact to his kinsmen, who come and bear away the body for cremation in his homeland. If the affair takes place in the summer, they preserve the corpse in a local yurt until wintertime, when they bear it away on sleds to his homeland. But even if /362/ it should prove necessary to cremate a Gilyak in alien territory, nevertheless they carefully pick up one small bone, tie it to a piece of wood, and send it off to his homeland. /317 cont./ Next comes the Orok, who, although only a small number, occupy an Amur region. The Gold, certainly more numerous in their totality, are dispersed over a wide territory and therefore are only sparsely represented everywhere, most sparsely between the mouths of the Amur and Sungari. The southernmost part of the Amur River, between the mouth of the Sungari and the Bureja /Bureya/ Mountains, is a prairie wilderness almost completely without people, and then begins the upper Amur region, which is only temporarily visited by nomadic hunting peoples, except for the part cultivated by the Manchu, Chinese, Daur, and, immediately above the Bureja Mountains, by sedentary Birar.

In general the population situation on Sakhalin is different from that on the island of Hokkaido. Nowhere, except perhaps by Ainu, seems to have a greater population than the northern, Gilyak part of the island. To be sure, the southern part, washed on both sides by the branches of a warm current, is climatically much more favorable than the northern part, which, extending far on its east coast toward the Sea of Okhotsk, has an extremely harsh, almost polar climate, but here again the reason for this phenomenon may lie in historical and political circumstances rather than in geographical conditions. Warred upon and subjugated by the Japanese in the southern part of their area centuries ago, and constantly oppressed and afflicted since then, the Ainu moved northward more and more and found a homeland on Sakhalin, where up to the beginning of the 19th century they led an independent life, unmolested by their enemies (1). It is not surprising, then,

1. See above, pp. 148 ff., 256 ff.

that in the course of time their number there increased considerably. In the northern, Gilyak part of Sakhalin, on the other hand, a decrease in the population has taken place. I believe that I have shown on linguistic grounds that a part of the Sakhalin Gilyak left the island, perhaps as a result of the pressure from the Ainu, and moved to the mainland, to the lower Amur and the coast of the Sea of Okhotsk (2). A more numerous Gilyak

2. See p. 214 above /untranslated/.

Ainu RX6
Orok RX3
Gold RX3

/370 cont./ According to Maack's testimony, the Ainu on Sakhalin only lead a nomadic life, hunting more and more and finally practically gave it up entirely as a result, so he thinks, of being flooded with Japanese ironwork. We must add that this step forward by the Ainu certainly had another, deeper reason, which the Japanese traveler probably would not or could not mention -- the oppressive bondage in which they found themselves in relation to the Japanese, connected with merciless exploitation by the latter, under which they were bound to sink more and more into poverty, misery, and indolence. The Gilyak of Sakhalin, on the other hand, were in a more favorable situation because of the greater distance of their sites from the Japanese. Thanks to these circumstances and, at the same time, their greater energy and intelligence, they were able to remain independent of them. Indeed, fear of the Japanese and the sad fate which had befallen their neighbors, the Ainu, may have chiefly prompted them to retreat more and more northward on Sakhalin and, finally, even to emigrate, or, in consideration of a more distant past, perhaps more correctly said, to migrate back in large part to the opposite mainland (2).

2. Concerning this emigration or migration back by the Gilyak from Sakhalin to the mainland, see pp. 214 and 247 above /untranslated/.

At any rate, the political independence which they were able to maintain on Sakhalin with regard to the Japanese and in the Amur region with regard to the Manchu-Chinese was a powerful lever for the preservation and increase of their well-being, as well as for the further development of already acquired skills, among them the art of metal forging, and all the more so the more abundantly the springs of their subsistence flowed, as was especially the case along the large and fish-rich Amur River.

Like the Ainu and Gilyak, the third people on Sakhalin, the Orok, also owed their knowledge of iron and the working of it to the Japanese, though they did not obtain it directly from

1: Kolarz J-4 (no date) 1954 RR1 Siberia

THE ABORIGINES OF THE SOVIET FAR EAST

The Soviet authorities transferred the Udege from the isolated h which were scattered over a wide area to larger compact settlemen This brought them within the range of medical attention and education facilities. As a result of this contact with Soviet Russian culture, the young generation of the Udege now speak the Russian language 'almo without any accent.'[4] The next step in the development of the Ude Soviet they will forget their own native tongue, and soon 'the la of the Udege' will really have disappeared.

THE NIVKHI

Near the mouth of the Amur is the National District of the Nivkh They number just over 4,000, of whom 1,700 live in Northern Sakhalin and the rest on the Soviet Far Eastern mainland and on three sma islands lying off the mouth of the Amur. These islands, Udd, Langr and Kevon, were ignored by the Soviet authorities until 1956, when the famous Russian pilots Chkalov, Baidukov and Belyakov, landed o Udd Island during their trans-polar flight. From that moment t island became known to the Soviet authorities and, finally, even to and it became almost a Russian patriotic duty to develop and colonis the little archipelago. The Soviet Far Eastern fishing industry establishe a plant there, and Russian workers' settlements were built on the Chkalov and Baidukov Islands, which had previously been inhabit exclusively by Nivkhi.

The Nivkhi of the Asiatic continent are very conscious of the fact that together with the Nivkhi of Northern Sakhalin, they form one gro people. Accordingly, under the pressure of persecution by the Soviet au ities in the late 'twenties', the Shamans of the mainland Nivkhi fled t their kinsmen on Sakhalin. But these Shamans only fell out of the frying pan into the fire, because of the activities of the local anti-religio fanatics. In 1930 the League of Militant Godless in Northern Sakhalin even destroyed the Nivkhi cemetery in an attempt to cure the 'native of their religious prejudices. This action caused considerable tens among the Nivkhi, who lodged a complaint with the authorities. The latter apparently condemned the 'left-wing excesses' of the Sakhalin atheists.[5]

In theory, the Sakhalin Nivkhi live in two National Districts, th 'Western Sakhalin National District', and the 'Eastern Sakhali National District' which, together cover a large part of Northern Sakhalin. In point of fact, both National Districts have been complet fictitious right from the beginning of their existence. The so-call Western Sakhalin National District, for instance, had, in 1933, only few hundred natives among its 17,000 inhabitants.

of the Tungus is completely confirmed by Jakobsen. That is the reason for the wording of the text.

differentiated from the neighboring Goldi with regard to language whereas in biological make-up they are only slightly different from them. According to photographs that the traveller acquired on the spot and has brought with him, the beard growth of the Gilyak seems to be somewhat heavier than that of the Goldi, without however, reaching the thickness of growth of the Ainu on Sakhalin Island. Originally they probably occupied the bank of the Amur up to the Gorin, while nowadays the southern boundary of their territory lies about 100 versts above Nikolayevsk and their former territory is now inhabited by the transitional people that we mentioned repeatedly in number 10 of this volume [see Goldi source 18: Genest--Analyst]. They occupy the northern part of Sakhalin Island but one will also encounter them among the Ainu in the southern part of the island where they probably came as laborers for the Japanese fishers (3) or

3. We will have more to say below about the Japanese fishers on Sakhalin Island. Jakobsen encountered Gilyak even on Aniva Bay.

for the purpose of hunting sable. Formerly their settlements were particularly numerous along the shallow shore of the island across from the mouth of the Amur. But these had [379] disappeared by the time Jakobsen passed along this stretch of shore because the Gilyak who used to live there had fled from the maltreatments of the convicts deported to Sakhalin Island. They had, however, established new settlements near their former residences, for the traveller observed a large number of boats the occupants of which were Gilyak engaged in fishing in the sound (1).

1. In all these boats there were also dogs which were set on land to pull the boats along whenever the wind was against the fishermen as well as whenever they were struggling against the strong north-south current that predominates in the Tatar Strait.

/467 cont./

Moreover, one may safely assume that, like the Daur and Manchu in the Sungari region, the tribal relatives of the Manchu who were formerly distributed from the Sungari along the southern Amur River to far below the mouth of the Ussuri, approximately to the present Goldi village of Dondon, the Djutscheren, who lived in large farming and livestock-raising villages (4), also cultivated

4. See pp. 316 ff. above.

tobacco among other things. Finally, it must have also spread from the Sungari and from Korea to the upper Ussuri and down this river to the Amur. There can be no doubt but that even before the Russian military expeditions in the seventeenth century the Goldi had become acquainted with tobacco and its cultivation from the Manchu (Djutscheren) neighboring them, indeed, in part even living mixed in with them. Even today, tobacco is cultivated not only by individual Chinese living in the area, but also by them themselves, on the Ussuri as well as on the Amur, and on the latter, strangely enough, exactly as far as the dwelling sites of the Djutscheren formerly extended. For, going upstream, we found the first Goldi cultivation of tobacco in the village of Da, which lies on the right bank of the Amur, opposite the above-mentioned Dondon located on an island. Like the Goldi, the Orochi living on the sources and tributaries of the Ussuri also obtained tobacco in this way. Furthermore, the other peoples of the lower Amur region, the Olcha, Samagir, Negda, and Gilyak, in contact with the Goldi as well as with the Manchu and Chinese on the Amur and Sungari, must have also become acquainted with tobacco as early as the seventeenth century even though tobacco could not be cultivated among them because of climatic and other reasons. Finally, through the Gilyak and Olcha of the mainland tobacco also reached their countrymen, the Gilyak and Orok of Sakhalin, whereas the third people of the island, the Ainu, probably received it from /468/ another source, directly from the Japanese (1). Later, after the Manchurian tobacco had

1. The designation for tobacco, as among

/468 cont./

1. (cont.)
the Manchu (dambagu) and Mongols (tamachi), is always the same, with very minor variations, among all the Amur peoples, too; thus, among the Goldi and Olcha damche, tamche, and tamache, among the Gilyak tam(a)ch, among the Ainu tambaku, etc.

Later, after the Manchurian tobacco had already spread among all the Amur peoples and had become an indispensable necessity for them, Russian tobacco entered the Amur region from the west and north, both as a result of the constant intercourse maintained by the Russian Cossacks, hunters, and traders with the Orochon, Manegir, and other tribes of the upper Amur region, and through the Yakut merchants who in part followed these nomads and in part visited certain trading points at which they established relations with them as well as with other peoples of the lower Amur region (2). Nevertheless, up

2. See pp. 160-166 above.

until the Russian occupation of the Amur region in the fifties, Manchurian tobacco was definitely predominant among all the peoples there, and it was only after this event that the Russian (Circassian) tobacco began to replace it very rapidly, first and especially of course, among those peoples who did not cultivate tobacco themselves, hence among the Gilyak, Olcha, etc. What made it especially popular among them is its much greater strength or acridness in comparison with the Manchurian tobacco, as well as its being far cheaper. The great popularity of Russian tobacco and the general and heavy demand for it among the peoples named soon made it the most important and most necessary article of trade in dealing with them.

Like tobacco, the Gilyak and the other peoples of the Amur region also adopted from the Manchu the form of the pipe (Gilyak tai), which is also widespread throughout China and consists of two metal pieces connected by a thin, black-colored,

/569 cont./

be overlooked that the Goldi designations for these things have nothing in common with the Gilyak ones. All this seems to suggest that the Goldi obtained their smith's art from a party, that is to say, from the Manchu-Chinese immediately adjacent to them, other than the Gilyak, but the Olcha through the latter.

On the other hand the following additional facts indicate that the Gilyak owe their knowledge of iron and its treatment to the Japanese. Exactly the same manner of forging iron as among the Gilyak is also found among the Ainu on Sakhalin. Mamia Rinsô devotes a special section to this subject in the description of his journey through Krafto (Sakhalin) and a part of the lower Amur region (2). In his time (1808) iron-forging was

2. Siebold, Nippon, VII, p. 187.

practiced only very little by the Ainu on Sakhalin, indeed, only here and there by a few old people, because the iron tools imported from Japan, which naturally were of much better workmanship, had already been generally disseminated among them. Prior to this, however, they devoted themselves to manufacturing what they needed in iron weapons and utensils themselves, and, to be sure, out of iron which they obtained by barter with the Japanese in Ssiranussi. Mamia Rinsô describes their procedure in forging the iron, and this agrees completely with that described above for the Gilyak; he mentions the two bellows made out of sealskin or fish skins and lying on the ground side by side, the bellows tubes covered or weighted down with earth up to the common opening, the simultaneous participation of two men in the work, etc. Subsequently (3), in speaking of the

3. Ibid., p. 194.

Smerenkur (Gilyak) of Sakhalin, he expressly states that they have the same method of forging iron as the Ainu. To be sure, despite the fact that he further notes that the Ainu make the

A 114 325 17 /569 cont./
cutting edges of their weapons in Japanese fashion and that in general their method of forging is "approximately the same as in Japan," still Mamia-Rinsô does not draw the obvious conclusion that the Ainu have to thank the Japanese for their knowledge of iron and other metals and the working of them, and, indeed, he maintains instead that they did not learn their manner of forging iron from any other people, but rather seem to have invented it themselves. This should not surprise us, however, because the careful traveler gives in his short and sober report only what was seen and experienced by him and stays away from all categorization and conclusions. It therefore even more establishes beyond doubt that the spread of iron and the art of working it took place from Japan to the Ainu of Jesso and Sakhalin and through them to the Gilyak in a very ancient period, a period which is too far back for any accounts or traditions concerning that event to have been preserved among the Ainu at Rinsô's time.

A 325 17

G 325 17 /570/ Finally, the fact, too, that the Gilyak iron utensils and weapons, knives, spears, and the like are for the most part of the same form as those of the Ainu and that the figures engraved or inlaid in other metals on the more elegant weapons are often reminiscent of Japanese patterns -- as was noted above (1)

1. See p. 597.

with reference to the decorations on their clothing and on various wooden and bone implements -- this fact stands in agreement, or at least not in contradiction, with the Japanese origin of the familiarity of the Gilyak with iron and the working of it. There is only one thing that might appear strange at first glance, namely, the fact that the greatest skill of the Gilyak in forging iron is not found on Sakhalin, but on the Amur and therefore in that section of their habitation area which is the farthest from Japan and, on the other hand, is most open to Manchu-Chinese influence. This can be explained, however, on the basis of political conditions. According to Mamia Rinsô's testimony,

K 823 A 439 823 186 /572 cont./
their eyes, of course, were surrounded with the aura of great wealth and esteem, made those knives, swords, and the like which they themselves (the Ainu) prized so highly and paid for so dearly in trade with them. How very much this was the case can be

A 439 435 seen from Steller's information that the Kurile Ainu gladly gave 20 sea beavers for an old Japanese saber and thought that they had made a very good trade, but wore such sabers only on festive days or during festive processions and made "the strangest figures during the welcoming" with them.

For the moment it must remain undecided whether the

G A K 439 17 325 above-mentioned iron needles, which came from Japan to the Kamchadal as their first iron implements, spread from the latter to their neighbors, the Koryak and the Chukchee, before iron was brought these peoples by the Russians. At any rate, three Paleo-Asiatic peoples, the Ainu, the Gilyak, and the Kamchadal, received iron from Japan, and this was a natural consequence of the geographical position of the latter in the vicinity of these peoples, for just to the north of Nippon, the principal island of Japan, is the island of Jesso, the principal region of the Ainu (1),

A [131] [114] [113]

1. The view advanced chiefly by Ph. Siebold that the Ainu formerly also inhabited the north of Nippon (see above, p. 255) has recently been attacked by Brauns ("Die Bewohner des Japanischen Inselreichs /The Inhabitants of the Japanese Island-Realm/" in the Jahresber. des Frankfurter Vereins für Geogr. u. Statist., Years 48 and 49, 1883-1884, 1884-1885, Scientific Part, pp. 5 ff).

which, in turn, on the one hand, leads to the half-Gilyak Sakhalin, and, on the other hand, via the chain of the Kuriles, to Kamchatka. One may therefore draw the further conclusion that at the time when these peoples lived farther in the interior

*174 /203 cont./ The custom of brothers' living together with one wife became ever rarer. In the works of the epos, such passages as "so many brothers were supporting one wife" are almost the usual thing. More than a hundred years ago, Mamio Rinso /Rinzô Mamiya/ described such facts as being ordinary phenomena, while nowadays they are more and more rarely encountered.

174 595 [538]

• 17 [615] Such are the conditions which stood in the way of the inviolable existence of the phratry. But however powerful these conditions appeared, the force of the primordial norms, having become religious imperatives, naturally preserved their power, and the new influences broke a trail for themselves, adapting themselves to the old norms by means of a whole series of correctives and fictions... How this occurred we shall see immediately.

VI.

The Dynamics of the Destructive Conditions

178 *614 615 Of all the conditions mentioned which are destructive to the phratry (emigration, depopulation, wars, destruction of economic equality, seasonal expeditions, the most powerful factor is the depopulation of clans, and besides, as we have said above, catastrophic depopulation which strikes the individual clans unequally. How must this factor have operated on the surviving clans? Let us recall the third table of our four-clan phratry. Let us suppose that clan A has died out or there are only a few persons left in it, and this is the clan from which clan C took women. We shall consider the first case, where clan A has died out without a trace. What happens then? What then is to be done by the orphaned clans C, which used to take wives from A, and B, which gave wives to clan A? Of course, first of all, the members of these clans will search for some solution within the phratry itself, in which only pure marriage is possible.

/449 cont./

323 utensils produced there, some of them of very good quality, which
171 were shipped far away, and, according to Barabash (3), there is

13]

3. Barabash", "Sungar. ekspeditsiia 1872 g. /The Sungari Expedition of 1872/" (Voennyi Sborn., 1874, No. 2, p. 351).

one or several of them in every Sungari town. The pottery that Maack saw in Ssilbi on the Amur probably also came from the Sungari. The fact that it does not go farther down the Amur, however, to the lower Goldi, Olcha, and Gilyak, in spite of their annual trade voyages to the Sungari, attests all too clearly to the aversion that they entertain against such utensils.

323 If, from the statements by Mamia Rinsô given above, one
17 must draw the conclusion that the Gilyak and Olcha, though they do not use pottery in their households today, nevertheless formerly and up to the beginning of this century had it and even manufactured it themselves, it may also be gathered from them that it was by no means an art practiced since ancient times, but rather that they learned it through the Chinese and Japanese in relatively recent times. He found the pieces seen by him on Sakhalin, as was said, similar to those of the Chinese and Japanese, and it is highly probable that the many porcelain factories near Kidsi which he mentions arose under Chinese influence and with Chinese co-operation. And, since it was recent and foreign, this art could so easily again disappear altogether among the Gilyak and Olcha amidst the subsequent unfavorable conditions, without leaving any trace other than the aversion against its products. My view that the making of pottery was originally foreign to the Gilyak and was temporarily picked up by them from the Chinese only in recent times is also supported by the fact that this art, as among the Gilyak, is missing, or was missing up to a short time ago, among all the other Paleo-
000 Asiatic peoples, with one single exception. Mamia Rinsô (4),

4. Op. cit., p. 184.

000 /451 cont./

2. (cont.)
by Jacobsen (op. cit., p. 299).

G without
323 intending to specify more precisely the date and the manner of
171 the origin of the art of pottery among the Eskimo, I feel able to
E draw the conclusion, on the basis of the above considerations
323 concerning the Paleo-Asiatic peoples, that the Eskimo left their
174 Asiatic homeland without any knowledge of the art of pottery and only learned it in America, probably as the result of influences which came to them from the south.

To return to the Amur region, I repeat that the potter's art
G of the Gilyak, Olcha, and Ainu of which Mamia Rinsô spoke was
323 or is only of recent origin and among the first two peoples, after
648 a brief existence, again disappeared as a result of the violent
● 17 measures of the Manchu-Chinese to be discussed later. If, however, contrary to my opinion, one should want to date it even
G further back, it in any case has nothing to do with the potsherds
323 which have recently been found in the earth, together with stone
172 tools, at various points in the Amur region and on Sakhalin, especially along the Patchä River and in Taraika (3). These potsherds,

3. In 1865, while digging up the earth at the bottom of some pits along the Patchä River, about 10 versts from Nikolayevsk and emptying into the Amur only slightly above Cape Tschchyrkrach or Tschnyrrach (as the Russians call it), the pits seeming to be remains of former earth dwellings, potsherds were found at a depth of three feet, along with traces of charcoal, and at another place, at a depth of six feet, various stone tools (Vostochnoe Pomor'e, July 1, 1866, p. 58). Thanks to the good offices of Dr. Pfeiffer in Nikolayevsk, most of these articles were sent to the Kaiserlichen Akademie der Wissenschaften

/xxvii cont./

*114 595 "Furthermore, the whole matter is interesting in that it once again shows how similar or even identical the institutions of such primitive peoples at almost the same level of development are in their basic features. A large part of what is related in this account on Sakhalin is fully applicable to the Dravidian tribes of India, the inhabitants of the Pacific Islands, and, at the time of their discovery, the redskins."

*114 In conclusion Engels gives in full the translation of the newspaper account of Shternberg's article. Regarding the material uncovered from the newspaper account, F. Engels wrote L. IA. Shternberg a letter, as the latter told me in a private conversation. Unfortunately, the search for this letter, undertaken in the archives [113] of Shternberg, has as yet yielded no results. "Sakhalinskie giliaki" appeared in print in full in the journal Etnograficheskoe Obozrenie for 1893. In this work by Shternberg the strong influence of Engels' book, Proiskhozhdenie sem'i, chastnoi sobstvennosti, i gosudarstva, is felt. Engels' influence neutralized to a significant degree the psychological approach of Shternberg, and "Sakhalinskie giliaki" is undoubtedly the most materialistic work to come from his pen.

*114 601 595 Shternberg's discovery among the Gilyak of group marriage and a classificatory system of kinship, which, furthermore, preserved certain terms lost in less primitive systems, strikingly confirmed the views of Engels, who looked on group marriage as an explicit, universal step in the history of marriage, and on the classificatory system as a true indicator of the sexual norms that formerly existed. The classificatory system of kinship among the • [171] Gilyak described by Shternberg turned out to be similar to the Turano-Ganowanian in type. Furthermore, "it is the best example of the Turanian system," says Shternberg himself, "besides being *114 the best preserved and giving the best correlation (1). With this

1. "The Turano-Ganowanian System," p. 323.

/xxviii/ discovery Shternberg filled in the gap in the scientific literature on primitive social relations, for which there were no

/17 cont./

174 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in 174 a colder climate. The most typical proof of this kind is a remnant • 171 connected with their winter abode -- the dugout. The Gilyak dug-342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

342 There are also times when the smoke opening in the Gilyak 796 yurt once again performs the function of a door as among the 178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt; through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu [178] yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited by us is actually a [192] remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

342 /18 cont./
796 178 (kuzind and jugynd), which is fully consistent with the manner of 178 entering and leaving through the smoke opening.

I shall not at this point speak of any other aspect of the • 171 arctic way of life. I shall mention only the remarkable fact that 174 riding on dogs (we encounter it among the Yukagir, the Chukchee, 492 the Eskimo, the Aleut, the Koryak, and the Kamchadal) is undoubtedly a characteristic peculiarity of the purely arctic way of life adopted by the natives of the Amur region, the Ainu, the Goldi, and the Orochi, from the Gilyak. The Gilyak term "tu" -- dog sled -- became the property of both the Ainu and the Tungus tribes. The priority, as it were, of the Gilyak in this respect is clearly revealed in everything. The Ainu and the Tungus tribes (the Goldi and the Orochi) have adopted from the Gilyak not only the term and the principle of conveyance on dogs, but also the details of building the sled, the ways of sitting on the sled (astride, with the feet on ski along the sides of the sled), the harness of the dogs, and driving them. It is remarkable that among the reindeer Chukchee, among whom dog-raising is preserved only in legends, the Gilyak way of sitting on the sled (astride) has been preserved to the present. The same way of sitting was habitual among the Kamchadal as well.

In connection with this hypothesis, it is interesting to compare a very widespread legend.

173 Among the numerous legends that I have collected about 174 the origin of the Gilyak clans, I have frequently encountered a 133 legend about how this or that clan came to Sakhalin on the so-[614] called "hovykh." By "hovykh" the Gilyak mean everything that is carried on the current of a river or sea, for the most part clods of earth or tundra turf broken off from the bank, and also floes of ice which are carried on a sea current. One such hovykh is still pointed out on the eastern shore of Sakhalin in Nyyvo Bay, where it formed a minuscule island opposite the settlement of Takrvo. [614] It is alleged that a part of the clan now living in the settlement of Tangi on the western shore appeared on this hovykh. There is nothing impossible about conveyance on a hovykh. It not infrequently happens that during the spring hunt for seals a sudden

/30 cont./

221 purchase fish, while in many places (for example, on the Tym') the inhabitants set out in whole settlements to travel several hundred kilometers to the seashore for the spring seal-hunting, only to return half a year later for the fall run of fish in their native 574 places. The Gilyak likes to travel, however, even without 517 serious reasons for it. To make visits, receive guests, arrange 484 celebrations, and live gregariously are the greatest pleasures of [157] the Gilyak. Gloomy and stern while alone, he is transformed in society and becomes playful, gay, and garrulous.

342 In the north, in winter, between 30 and 40 people live in 157 the big yurts of the Manchu type. It is here that sociableness, which is inherent anyway in the conditions of the social frame-128 work of the Gilyak, is cultivated. Now, however, we must leave the external aspect of the life of the Gilyak and pass to its internal structure, with whose unique peculiarities I intend mainly to acquaint my readers.

III.

601 • 171 174 Kinship System. Marriage Norms and Their Influence on the Family-Clan Structure.

Of all the peculiarities of the Gilyak way of life nothing so characteristically distinguishes them from the surrounding nationalities as their classificatory system of kinship and the rules that regulate their sexual relations and marriage. In this respect the Gilyak stand equally far from their southern neighbors, the Ainu, and from the Tungus tribes that surround them. The Ainu are the only nationality of the Priamur krai who have preserved features of [611] maternality /materniteta/. The Gilyak family and clan are purely [614] patriarchal institutions. As for the Tungus tribes, although the [595] classificatory system of kinship and certain characteristics of group marriage analogous to those discovered by me in 1891 among the Gilyak were discovered by me among them, a careful comparison of this institution among the Tungus tribes and among the Gilyak leads to the conclusion that they /31/ belong to quite different

/31 cont./

601 • 171 174 periods in the evolution of marriage, and, although they could have influenced one another, they basically belong, speaking in [595] the language of geology, to different formations. It is sufficient [835] to say that among the Tungus tribes sexual intercourse with wives of individuals of ascending generations is allowed, for example, with the wife of the father's younger brother, while among the Gilyak this is regarded as incest.

595 At first sight the Gilyak institution of marriage does not 581 seem to be anything special. A Gilyak will generally buy one or [583] rarely two or three wives, who come over into his clan and are regarded before the world as his personal wives and the mothers of [851] his children. The children belong exclusively to the father and [611] succeed him after his death. When a Gilyak becomes a father, he [551] is no longer called by his former name, but is called the father [684] of the born child. The exclusive possession of his wives expresses [614] itself in the stern custom of blood vengeance against the disturber [582] of marital harmony. The clan is based on the principle of agnation, and marriage is exogamous.

593 One can travel over the entire territory of the Gilyak, live 601 in their yurts, and observe their family life for a long time, and [592] not notice anything peculiar in the structure of their family. In [352] large winter yurts the inhabitants occupy their plank beds by families, each living in relation to its own particular interests. Complete harmony and tender relations prevail among husband, wife, and their children. That is not all. One may frequently [765] encounter instances of striking loyalty and love between spouses. When one of them dies, the other frequently lays hands on himself or dies from grief. In a word, to all appearances we are dealing with the type of family which is generally called patriarchal. Actually, however, it is not. First of all, one is struck by the strange kinship nomenclature. A whole group of women call a whole group of men their husbands (pu, ivn), and the latter call them their wives (an'gej). Likewise, a whole group of men call a group of women their mothers (ymk) and a group of men their fathers (ytk), and these call the former their children.

/32 cont./

601 regular marriage, but preserve the rights to sexual intercourse
835 even when the individuals of these categories are joined in an individual marriage. Being joined in a legitimate, as it were, individual marriage, the wife at the same time enjoys the right privately, i.e., in the absence of her husband, to have intercourse with persons of the group of men whom she calls pu, ivn (husband). Most often, of course, this right is exercised by the brothers of her husband, his own or of further degrees of kinship, living with him in the same village, but even men who have newly arrived, often complete strangers passing through the settlement by chance, if they regard themselves, even by the most distant kinship, as "pu" of the given woman, freely /33/ exercise this right, with, of course, the consent of the woman. During my travels over Sakhalin, my companions from the western shore, appearing with me in a distant settlement on the eastern shore of the island, in which neither they nor their fathers had ever been, but in which, according to their genealogical information, there lived a woman of the an'gej category, freely exercised their rights, when the husband was not in the yurt, of course.
●171 This phenomenon is completely identical with what is said about the Australian kroki and kumiti, who will find a marital bed everywhere, even at the farthest points of their territory, on the condition that the husbands are kumi and the beautiful strangers are kroki.

171 In character, these norms of sexual intercourse most closely
835 resemble the same such norms in the Australian Dieri tribe, among whom the two kinds of sexual intercourse mentioned are clearly registered by the terms noa and piruari (1). Among them each

[113] 1. "Australian Group Relations," by Howitt (Papers relating to Anthropology contrib. to the Smithsonian Institute, 1885), pp. 12 f.

woman is joined in individual, legitimate marriage to a single man, and the spouses call each other noa; but at the same time she is joined in a group marriage with a whole category of men,

/33 cont./

835 who are affirmed to have the right to this by the great council of
●171 the tribe. With regard to this group, she is piruari and vice versa. Thus we find identical institutions of marriage in tribes which are so different from one another! The famous punulua family of the Hawaiian Islands finds full rapprochement with the institution of Gilyak marriage.

835 The legitimacy of group sexual intercourse is clearly ex-
684 pressed in the fact that, while the violation of marital fidelity with a person not included in the group "pu" leads to blood vengeance against the seducer who has been caught in flagrante delicto, or, at best, to a cruel duel and ransom, for the persons of the permitted categories it leads to no retribution whatsoever, causing only some irritation, and in rare cases the moving of the seducer to another yurt. On the other hand, sexual intercourse between persons of forbidden categories is encountered as an extremely rare exception.

835 More than once I observed even cases of the regular cohabi-
tation of brothers with a common wife, and full harmony prevailed
554 between the brothers. My first teacher of the Gilyak language, a
[722] Gilyak from the village of Tangivo, Gibel'ka, the richest and most respected /34/ Gilyak on all Sakhalin, always lived in the same yurt with his younger brother, Pleun, and the relations between the latter and the wife of his elder brother were no secret to anybody. Her children regarded both fathers with identical tenderness and enjoyed equal tendemess from the latter, and, when Pleun died, all his property went to these children, publicly regarded as Gibel'ka's children. Pleun was very rich and could buy himself more than one wife, but he loved the wife of his elder brother, who in no way protested against the reciprocity on the part
[593] of his wife, who had cost him a good deal. When anyone hinted about these relations to Gibel'ka, a momentary cloud of melancholy would pass across his intelligent, handsome face, but I never saw even a trace of bad relations between the brothers.

/44 cont./

614 mother, but it is natural that practically it was inconvenient to
615 extend the prohibitions to the akhmal'ki of all degrees of kin-
178 ship, and it was rarely necessary to go beyond the akhmal'k of the second degree, to which the prohibition was limited. But with the appearance of this prohibition, the tri-clan phratry ceased to satisfy the new conditions of the regulation. Exclusive marriage within three clans became impossible, because in a tri-clan phratry (see the table) clan S is the akhmal'k of the first degree for V and of the second degree for A; consequently, the women of clan A cannot marry into clan S. It was necessary to add to the phratry a fourth clan, D (Dmitri, Dar'ya), let us say. The changes that occurred in our phratry consisted in the fact that Stepan's wife (clan S) would now be Dmitri's (clan D) sister, while the latter would have as his wife a sister of Andrei (clan A). Since in more distant times, the prohibitions undoubtedly spread to the akhmal'ki of more distant degrees, the phratries naturally /45/ had to consist of an ever greater number of clans. At the present time, when, due to the reasons mentioned above, it is necessary in the selection of wives to resort to completely alien clans, the phratry has naturally lost its former, strictly closed position.

It is not hard to imagine how much genealogical information one must have with regard to this complicated, confused system, in order to correctly decide, in each given case, on the right to marry of some member of a clan. And, actually, this constitutes a whole science, to which a Gilyak dedicates himself from his earliest childhood.

IV.

●171 Some Conclusions from the Norms of Gilyak Marriage

601
582

I have already said that Gilyak kinship nomenclature and their norms of marriage in general do not represent an isolated case. An analogous nomenclature and analogous phenomena of group marriage are found among a mass of primitive peoples [ooo] in the most remote parts of the world. But the details that I

/45 cont./ But the details that I

171 have attempted to clarify here and the history of the develop-
582 ment of the institution which I sketched are capable, I think,
601 of shedding light on certain phenomena of primitive marriage which heretofore have been completely isolated and separate.

●171 1) First of all, the clan organization of the Gilyak makes
171 completely clear to us why among many peoples, as, for ex-
582 ample, among the Batak on Sumatra, a wife or a mistress is
601 called "a son of the father's sister" -- ibibere-ri-datang; or
614 among the Gond (Gondy) of the province of Satpūras in central India where a marriage between male cousins and female cousins is almost compulsory when the brother has a daughter and the sister a son. These separate facts remained unexplained up to now and are, therefore, perhaps fragments of a once common clan organization similar to the one that I found among the Gilyak (1).

[114] 1. It is remarkable that up to the present time some scientists are skeptical of even the actual fact of the discovery of marriage norms identical with those of the Gilyak. Thus, quite recently it was discovered that among the Hottentot marriage is permitted between a man and the daughter of his mother's brother and, conversely is forbidden between a woman and a son of her mother's brother (exactly as among the Gilyak), while Kohler, presenting this fact, and the author of the article on Kohler's work in Année Sociologique both doubt the possibility of such norms, even though they were known to McLennan. See J. Köhler, "Das Recht der Hottentots," in Zeitschrift f. vergleich. Rechtswissenschaft, Vol. XVI, No. 3, pp. 341-342, and L'Année Sociologique, 11th year, p. 306.

/46/

● 171 2) The norms of Gilyak marriage explain to us further the
582 strange institution among the Dieri tribe in Australia, where a
[835] great council of the tribe, at appointed periods solemnly declares which men and women of the tribe have the right to group cohabitation.

From what we have said above about the intricacy and difficulty of determining the genealogical rights in matrimonial questions among the Gilyak, questions which for primitive man have an extremely serious religious significance, it is clear that there would gradually have to develop a rule whereby the decisions on these questions ceased to be a matter for the individual person and became the function of a competent institution of elders and specialists on genealogy and marriage law.

3) The Gilyak system of marriage explains to us why among many Australian tribes the women in each clan belong to a single totem. In fact, as among the Gilyak, all the women coming
[614] in must be taken from a single clan, i.e., they are of a single totem.

4) This same system explains to us why, mutatis mutandis, every kumi and kroki among the Australians finds his wife throughout the territory of the distribution of his tribe; in reality he finds her only in that clan from which his clan must take its wives and in which every woman of the corresponding generation is his wife.

5) It explains to us the strange class system among many Australian peoples, for example, among the Kamilaroi, where ascending and descending generations belong to different classes, and only in the third, among some -- in the fourth, or even in the fifth -- sixth generation, do they return to the class of the fathers.

The Gilyak norms, in spite of all the difference in details from those among the Australians, satisfactorily explain this strange phenomenon.

615 Let us recall again the tri-clan phratry and for clarity call
614 clan A -- Andreev, clan V -- Vasil'ev, and clan S -- Stepanov.
582 Consistent with the Gilyak norms, Varvara's daughter from clan A is from birth considered the wife of one of the Stepanovs (of clan S), and, consequently, her sobriquet will be not Andreeva

/46 cont./

615 but Stepanova; her daughter (a granddaughter of Varvara's
614 turn, from birth, as the wife of one of the Vasil'evs (of cl
582 would be called Vasil'eva, but, the daughter of this last,
Varvara's great-granddaughter, would have to be the wife
one of the Andreevs (of clan A) /47/ and thus, in the thie
eration, she would again bear the class sobriquet of her gr
grandmother.

582 6) As we have seen, Gilyak marriage to a considerab
[601] tent simplifies our understanding of the complicated kinsh
nomenclature, for in the Gilyak system of marriage many
gories of the Turanian system of kinship, which at first sig
appear completely independent, are in fact identical, suc
for example, wives of brothers, sisters of the wife, and sis
of the wives of brothers turn out to be the same persons, j
like mothers, wives of the father's brothers, sisters of the
in-law, sisters of the mother, etc.

But these are all facts of a secondary character. It se
to me that the scheme of Gilyak marriage can shed light
certain basic questions about primitive marriage.

1) From an analysis of the norms of Gilyak marriage,
have seen that from the simple, single rule that men mus
marry daughters of their mother's brother, there inevitabl
arise by natural necessity such complex institutions as gro
marriage, the clan, the phratry, and finally marriage pro
tions.

171 2) An analysis of the Gilyak regulations sheds light on
583 genesis of the institution of abduction in general and in pa
614 lar, on the strange institution of mock abduction, an insti
615 which is practiced among such primitive peoples as the A
●171 tralians and the Eskimo, and, furthermore, in such strang
forms that it is quite impossible to consider it a simple re
of actual abduction, as is normally thought. Let us recal
our tri-clan phratry with its norms of marriage. Clan A n
take wives from clan V and give up its women to clan S.
shall remember that in the primitive stages of developme
such obligations are religious imperatives, the violation o

/75 cont./

755 It is evident from the following how realistic the
796 Gilyak's attitude toward the kekhn is. A large piece of new calico (pox) is spread out on the floor of the yurt, inside before the threshold, and the kekhn will rest on it during the seance. A bowl with sarana, sugar, the prized dish "mas," potatoes, and other dainties to which the spirit-healer will be treated in the intermissions of the kamlaniye are placed in a corner on a shelf. Over the bed of the sick man, a thong is hung in a circle, and a kettle with a nail in it is placed near the bed. The kekhn binds the sick man's soul which found its way into the mlyvo (the settlement of the dead)and, clasping it under its arm, brings it back into the yurt, then throws it into the kettle, and fastens it with the nail. It must not be placed on the floor or on a plank bed, because it can run back through the floor.

755 /76/ The third method of curing is at a distance.
When a man suddenly falls sick at a place where there is no shaman or on the road, he goes outside at night when the shamans sleep, throws a sacrifice to the gods, and shouts with all his might: "Chamnay, nikhovlatyngra n'onyuya," i.e., "Shaman! I am sick, help me!" The shaman is then supposed to begin the kamlaniye quickly and sends his kekhn, and the sick man not only hears the sounds of the tambourine, but in the gloom of night even sees the form of the spirit which has been sent. Upon returning to his village, the cured man will tell the shaman, with tender feelings and gratitude, the details of the wonderful night.

756 Although the shamans do not play as big a role among
(171) the Gilyak as among the natives of the banks of the Amur River, the faith in their supernatural powers is boundless even here. I was often shown places from which shamans were lifted into the air like birds by the power of a spirit and flew up to attend to their affairs in the region of the sky dwellers. I was no less frequently told of cases where a shaman resurrected the dead, killed at a distance, created trout, etc.
000 Once I myself became the object of a legend about the

/81 cont./

*614 First of all, the very term that the Gilyak use to express
[192] the concept "clan" is of interest. It is khal', which literally means: scabbard, sheath -- a felicitous symbol for a single womb, for unity of origin. As concerns the features of their clan union, the Gilyak formulate them with surprising terseness, vividly /82/ illustrating their fully conscious attitude toward the basic institution of their social life (1).

● [171] 1. It is extremely interesting that the
[601] similar term khala /see the translitera-
[197] tion system for Tungus-Manchu peoples, p. 36/ also exists among the neighboring Tungus tribes -- the Orok, Orochi, Goldi, Negda, with whom the Gilyak have certain common kinship designations, as, for example, aki (elder brother) = aga (among the Tungus tribes), in spite of the complete dissimilarity of the languages of these peoples lexically and grammatically.

[601] If you ask any Gilyak why he considers some persons
(NN) his kinsmen, you will invariably get one answer: "Of course, we have akhmal'k (father-in-law) -- one (i.e., in common), ymgi /see ymri, p. 82/ (son-in-law /syat'/) -- one, fire -- one, mountain man, sea man, heavenly man, earth man, etc. -- one, bear -- one, devil -- one, khkusind (blood money) -- one, sin -- one."

An analysis of this formula will also lead us to an elucidation of the content of the clan union.

1. Akhmal'k -- one, ymgi -- one; a common father-in-law, a common son-in-law (syat'). The father-in-law of one clansman is father-in-law to the whole clan. Each clan in principle takes its women from one certain clan and in turn gives its women strictly to another certain clan. A common

/86 cont./

*614 with full right call the Ainu their founders. And so it is
599 everywhere.
703
193

Ordinarily, however, the composition of the clan is homogeneous. Cases of /87/ adoption are quite rare, and the earlier phenomena of endosmosis and exosmosis have long effaced themselves behind the mists of legend, and they show no influence on the integrity of the conscious kinship union.

*614 2. One fire. The common clan fire is the symbol of
397 clan unity. As among all primitive peoples, fire is a clan
796 deity for the Gilyak. In each hearth there vie, according to one conception, the old woman of the fire, the ancestress of the given clan; according to others, an old man and woman with their descendants. The role of these "masters of the fire" is not only in the beneficial activity of the benevolent burning element. As the divine ancestors of the clan, they are held in respect not only by their living clansmen, but also by those who, having gone to the other world, have become the clan gods of other elements, the forest, the sea, etc., and through these they can exert a mighty influence in all spheres of human existence.

Thus, the master or mistress of the fire is not only a deity that warms man and protects his domestic hearth from any evil machinations of the spirits, but is also an intermediary (1) between the clansmen and all the numerous deities

● [171] 1. In the Vedas, fire (Agni) also
plays the role of intermediary be-
tween human beings and the gods;
he intercedes for human beings,
he is herald and priest.

who influence the fate of man.

/87 cont./

*614 On all the important occasions of life, in case of sick-
397 ness, on the hunt, before setting out on a dangerous journey,
796 etc. -- the clansman throws an offering (1) as his modest sacri-
782 fices -- a leaf of tobacco, sweet root, a drop of arrack -- and asks the old woman of the fire to fulfill his request. And she shows all the means necessary to insure that a petition to one or another clan deity -- if they are outside the sphere of her immediate influence -- reaches its destination.

*614 In order to understand the real basis of the "clan"
397 attitude toward the master of the fire and his functions, it
796 is necessary to keep in mind the following: 1) the deceased
782 are given to burning, i.e., to the common master of the fire, who can receive his favorite victims in his clan, so that these latter in turn become "masters" of the clan fire; 2) in particular all those who perish by fire and lightning (2)

● [171] 2. It is curious that a similar view
exists among the Buryat: a man
who perishes from lightning becomes
a powerful and favorite spirit to
whom sacrifices are made and prayers
are raised.

become such masters; 3) the concept of /88/ an "old woman" (mistress) of the clan fire, instead of a "master," is a faint echo of the maternal clan; 4) the "universality" of fire (its ability to spread widely), its many tongues (tongues of flame), which all primitive people (compare the Rig-veda) understand in the most realistic sense -- give the "fire" special advantages over the other "masters" -- namely, the rapid and eloquent transmission of messages and petitions; finally, 5) the fire is a warming and purifying substance, i.e., a substance that drives away evil spirits.

/105 cont./

*614 what a man! His right arm was worth so many "syalakhr" (1);
628
537
[126]

1. The syalakhr is a monetary unit which the Gilyak for some reason translate into Russian by the word "tselkovi" /one ruble/ and value in our money at three rubles. -- apparently the Chinese customs duty. It is in these units that the Gilyak evaluate their exchange values -- the shagund (see above).

if he were living, would he be content to take that much? His left arm was worth so much, etc." Then all the other parts of the body are listed, and the amount of the blood money is computed. If the opposing side agrees, it lays in the kettle of the orator as many pieces of wood as it has agreed to pay "tselkovi." But agreement is never reached at once. The orator of the opposing side seeks to find excuses for the slayer and offers a minimum ransom. This angers his opponent, and he wrathfully departs, threatening to break off negotiations. His colleague hastens after him, urging him to make concessions. They sit down, each one lights up a pipe, always with his own fire, they quarrel, again one of them flies into a passion and hastens off, again they come together and return to the settlement...

[576] Etiquette demands that an agreement should not be reached at once, but only after stubborn opposition; therefore sometimes two and three days pass in endless meetings and

● [171] separations. Some khlaj-nivukh on the Amur resort at the
[189] last moment, after the manner of the Tungus tribes, to the aid of their magic rods, which they threaten to break and thereby bring the wrath of the gods upon themselves and their stubborn opponents.

*614 When an agreement has been reached, the religious
628 feature that I mentioned above enters in, the procedure
532 of an imitation of a bloody battle, which is supposed to conceal from the soul of the slain man and the clan gods the peaceful solution of the conflict.

/111 cont./

*614 Thus in the settlement of Kol' there are clans which bear the
[167] designations, Tyvli-fing (inhabitants of the settlement of Tyvlin); M'yekhre-fing (inhabitants of the settlement of M'yekhri), N'yenkhay-fing (inhabitants of the settlement of Nyenkhay), etc., although the representatives of these clans have lived for a long time in the above-mentioned settlement of Kol', having broken all their ties with the primordial abode of their ancestors (1). The only clans

● [171] 1. Similar territorial designations
among the Australians were the reason
that Kunow came to the completely
unfounded conclusion that among
these tribes there is no clan organiza-
tion.

that have true clan names are those founded by emigrants from the neighboring Tungus tribes; thus were formed such clans as the Tsharnung, the Choril, etc. And it is noteworthy that in just these clans,we observe a clear transition to totemism. In the Negda tribe, for example, almost every clan traces its origin from one or another kind of animal (tiger, toad, bear, etc.). Among the Gilyak such phenomena are very rarely encountered.

*614 /112/ Now let us proceed to what for the European is the most
[167] important sign of clan unity -- to the organs of power. However
[168] complex, as we have seen, clan life is, the clan does not know
[202] any established authorities. True, the Chinese, and after them the Russians, sought to establish among the Gilyak the institution of elders, and at that clan but settlement elders, but it had no relation to the life of the clan. This was a nasty episode, but that was all. The elders designated by the Russian authorities were selected, not from among the best or even the wealthiest inhabitants, but from the most officious ones, and these not only did not enjoy any authority, but rather scorn, and in some

*614 instances even hatred. The primordial structure of the clan
knew nothing of the kind. The patriarchal authority which, according to the Biblical examples, is ordinarily associated with the

/118 cont./

*614 But who are these authoritative individuals who appear on
556 one in special cases and either personally or together with
554 "village community" of their clansmen display, as those hav
the power, their initiative and energy? What role do they pl
in ordinary life?

They are the so-called ?? -- the "masters" (1), or other

1. Up to the present, little attention
has been focused on the role of such
persons in the structure of primitive
societies. Their role is obscured by
their being classified only as representa-
tives of wealth. Here is one of the
most recent examples of such a relation.
Separate classes of "nobles" and "com-
moners" do not exist in northwestern
California, but in almost all affairs
of life the rich man plays the most
important role ("Types of Indian Cul-
ture in California," by A.L. Kroeber,
University of California Publications,
June, 1904, Vol. II). One should be
grateful, however, that such facts
have been noted at all.

● [171] [113]

the urdlya-nivukh -- the good, i.e., the rich, outstanding men (good and rich are synonomous among all primitive peoples). These are individuals who enjoy outstanding prosperity, thanks to their exceptional individual talents -- bravery, dexterity, strength, enterprise, and intelligence, which place them in an advantageous position in the business of obtaining the means of subsistence. Such an individual is a valuable man for all around him. For the narrow circle of his own family he is the natural head of the communal economy, which, thanks to his initiative and talents, is run more profitably than if it were conducted haphazardly. /113/ The huge family grouped around him is better provided with

Gilyak RX3

II.

Terms and Forms of Kinship

Before proceeding to the kinship nomenclature of the Gilyak itself, it will not be without interest to dwell on the question: to what degree is this nomenclature independent in the formal sense of the word, what is its relationship to the kinship nomenclature of their neighbors -- the Ainu and Tungus peoples of the Priamur krai, and through the latter to the Ural-Altaic group of peoples in general, or in that ceaseless process of mingling which inevitably took place between the Gilyak and their neighbors, borrowings in this field in particular would be noticeable. We shall give below a special sketch of the nomenclature and terms of marriage among the Ainu, as well as among the Tungus peoples. We shall see that these peoples also have classificatory systems of kinship, although considerably different from that of the Gilyak, and it will be all the more interesting to elucidate to what extent these kinship designations resemble each other.

We shall begin with the Ainu. Taking into account a strict the reckoning of kinship through the mother and other sharp features of maternality, in contrast to the agnatic principle of the Gilyak, one could say that there must be little similarity between the kinship designations of the two peoples. Indeed, the only term which has a complete phonetic resemblance is the term "aki," but in Gilyak, as in the Tungus language, it signifies elder brother, while in Ainu, on the other hand -- younger; thus the correspondence may be completely accidental. Other Ainu terms which sound more or less like the Gilyak, for example, "acha" -- uncle, "nana" -- mother (Kurile Islands) again do not correspond in meaning: the Gilyak "achk" signifies mother-in-law /wife's mother/, aunt, grandmother; "nanaih" -- elder sister. The remaining terms do not have the faintest similarity to each other. One could assume that there would be a much greater

/132 cont./ One could assume that there would be a much greater similarity with Ural-Altaic, especially Tungus idioms, since in both the reckoning of kinship and other peculiarities of their forms, Gilyak marriage is very close to them, and moreover, the intercourse between these peoples has from distant times been more intimate than with the Ainu. Nevertheless, here, too, the isolated Gilyak language to a significant degree remains true to itself. Only a few terms are so close that they give a basis for assuming reciprocal borrowing. First of all, one's attention is drawn to the term designating the class of elder brothers; Gilyak -- "akand, aka, aki," general Tungus -- /133/ "AQA, aki," Olcha -- "aiba, aki," general Turkic -- "aga, akym, akbum." Among the Tungus peoples, in contrast to the Gilyak, this term, in addition to the elder brother, also designates the younger brother of the father, while in Turkic it denotes the brother of the father in general, which in Gilyak has two completely independent names -- "yuk" (father) and "piland", the latter term, incidentally, means the same as "Aqa" in Tungus, i.e., elder.

Furthermore, one may consider as common to all the root "ap, app"; in Gilyak -- "app, appyk," among the Tungus peoples (Olcha, Orochi, Orok) -- "apanga, ypanga," used by both for designating the father-in-law /wife's father/ (by the Gilyak -- also for the brother of the mother), and by the Tungus tribes in many other meanings which do not correspond to the Gilyak terms. Among the Mongols, Turks, and Yakuts this root is also encountered in the forms "abaKya, apaKya" -- elder brother of the father, "ana" (among other Turks) -- elder sister. About this term "app, appyk" among the Gilyak, one can say with great confidence that in their language it is a direct borrowing, since right alongside of it, other, purely Gilyak terms -- "atk, akhmak" -- are used, and even more frequently than "appyk," and it is noteworthy that it is on the Amur, where the Gilyak territory borders directly on Tungus territory, that the term "app" is encountered most frequently. Further, we note the possibility of common roots in the following terms, which, however, do not completely correspond in

/133 cont./
meaning: Gilyak aNih -- younger brother, and Goldi achiha -- younger brother of the father (Birar); Goldi edi -- husband, and Gilyak edi -- wife's father, father-in-law; Gilyak yij -- father, atk -- wife's father, achk -- wife's mother, and northern Tungus atki -- father and older brother of the wife, and atki -- mother and sister of the wife (1), and some others that are more doubtful,

1. Iokhel'son /Jocheison/, Materialy /Materialy/, 240.

such as, for instance, Mongol omok, otok -- clan, and the rare Gilyak form ota -- father, oma -- mother. There is no doubt that the Gilyak term ivy -- brother's wife, has been borrowed from the Tungus, corresponding to yvy among the Olcha, since among the Gilyak this term is found only in the territory bordering on the Olcha; in other places, the indigenous Gilyak word arKej is used exclusively. In the Turkic languages, besides the above-mentioned aga, akym, and akbym, we find similar sounding forms in ay --man, husband, hero (Mongol ere), "er" -- an adult person (Gilyak er -- father); ata, aba, ana -- (Gilyak ata, ata) achchi (old Turkic) -- elder brother, uncle on the father's side (Gilyak yehkh -- old man, husband), and, finally, oglan -- young man, youth, boy, and oil -- son, child. Then /134/ perhaps something of interest is offered by the Gilyak term, phonetically close to Gilyak, achiche, ichhel, ap (Gilyak achik, itch, ap).

Such are the slight similarities reflected in the Gilyak language with those of their close and distant neighbors on the Asiatic mainland.

It is difficult to say with absolute certainty what the origins of these similarities were. As the comparative study of kinship terms among the most widely separated groups of Tungus territory, that the term "ap" is encountered most frequently. Further, we note the possibility of common roots in the following terms, which, however, do not completely correspond in

/134 cont./
In particular, it is not without interest to point out that the most undoubtedly identical term among the Gilyak and the Tungus-Turkic peoples, "aki, aKa" -- older brother, might very well be easily linked with the ancient Hebrew "abh" -- brother, just like the Gilyak "oma" -- mother and the ancient Hebrew "em," but conclusions from such comparisons would, of course, be extremely hazardous. On the other hand, there would be nothing strange if single terms, even such important ones as "aki," turned out to be borrowed. Linguists given us not a little evidence of this. For example, in the Oman language such cardinal terms as father and mother turned out to be borrowed: the designation for father -- "peder" -- was borrowed from the Persian, and the designation for mother -- "valide" -- was taken from Arabic. In another Turkish dialect, namely that of the Taranchi, only one term turns out to have been borrowed from the Persian, "ahvar" -- sister.

Another example is still more interesting. In a tundra clan of the Yukagir (the one most mixed with the Lamut), four of the most cardinal terms of relationship are borrowed: "ama, ana, aka, aka" -- father, mother, older brother, older sister; all the others (the majority) have remained purely Yukagir. Iokhel'son (1), reporting these facts, quite correctly explains

1. Iokhel'son, Materialy, 240.

this strange fact of partial borrowing by noting that the borrowed terms coincide in meaning with the Yukagir terms, but everything else the Yukagir kinship system differs sharply from that of the Tungus.

Be that as it may, whatever may have been the origin of the indicated affinities between the Gilyak and Tungus-Turkic kinship terms, be they the result of chance /135/ coincidence or the result of ethnic interactions, they are so insignificant that the extensive kinship nomenclature of the Gilyak remains completely independent, not only in its content, but also with regard to its lexicon, and, taking into account the incessant

process of mixing between the Gilyak and their neighbors, one can only be surprised that these kinship terminologies turn out to have so little in common.

The peculiarities of the Gilyak kinship terms themselves testify to this uniqueness of the Gilyak terminology with great palpability; the greater part of them can be traced all the way back to their original roots, which points to their firm stability over a long period of time (1).

1. This cannot be said with regard to borrowed terms. For example, for example, as the famous Turkish specialist, V.V.Radlov /W. Radloff/, has reported to me, among the Turks, judging by Orkhon and Uigur monuments, the kinship terminology, starting from the tenth century and with the exception of one or two terms, has changed completely, even in such forms as father and mother, and so forth.

We shall adduce a few examples. Thus, the group "yuk" -- father, "ark" -- grandfather, uncle on the mother's side, "yuk" -- grandmother, "yehkh" -- old man, husband, "achkh" -- aunt, sister of the father, "ul-ch" -- man, (western dialect) have a common root "ul, yl" -- body; the group "ymic" -- mother, "ymgsi" -- son-in-law, son of the sister, "um-ge" -- woman (western dialect) have the common root "um." Further, "ashgyr" -- wife, from "ashk" -- female; "ashmych" -- beloved, husband, man (western dialect), from "ay" -- male and the verb "mych" -- to be, to become. The group "shank, shankh, ranih" -- woman and "ranih" -- sister, etc. is of interest.

Dialectal differences in kinship designations remain to be discussed. These differences are of a minor nature. In the fundamental terms there are either no differences whatever,

which are used the same term for "yuk" (gyuk and syuqyum), not only for his own mother, but also for the following groups of persons: 1) all the "sisters" /140/ (female tuvn) of his mother; 2) all the wives of the "brothers" of his father (1);

1. The sole exception that I found during the time of the centuo in the settlement of Kol' was one case in which the wife of the older brother of the father is called by the Tungus term yvej, which is explained by the presence in the settlement of persons of Tungus origin.

3) all the wives of his father, i.e., his stepmothers; 4) outside the class all the "sisters" of persons of the ashmalk class (concerning this, see below).

The class of "wives" within the clan. The designation most in use for wife in both dialects is arNih, arKej. Within the clan the Gilyak given this name, not only to his official wife, but also to all her "sisters" (i.e., female tuvn), to the wives of all his elder "brothers" (i.e., aki), and, finally, to all the sisters of the wives of these last. To the wives of the class of younger "brothers" (arKih) the Gilyak gives the name of jokhn, jokh /see yokh, p. 76/, the same term which the father-in-law or mother-in-law applies to his or her daughter-in-law /nevertsk, "daughter-in-law" or "sister-in-law" in Russian/. Only an insignificant number of Gilyak on the Amur, due to their proximity to the Olcha, took from the latter the special designation ivy for the wives of all brothers without distinction (2).

2. Among the Olcha, a man calls the wife of his older brother yvy.

It is especially characteristic that "wives" of the tuvn class, no matter who they may be by origin, call one another "sister" (tuvn), and, depending on the age of their husbands, one calls

story says to his wife: "Wife, I am going to look for my fathers and my mothers." When he found them, it was this way: his father was sitting on the left-side plank-bed, his father was sitting behind his mother, his uncle (i.e., father's brother) was sitting on the right plank-bed, and a young woman was also sitting there (probably the "sister" of his mother).

It is curious that on the ancient Turkic monuments, namely, in the inscriptions of Koshko-Zaidam, V.V.Radlov likewise found a trace of a similar plural terminology, although in a very indefinite form. Concerning kinship, except for the term "older brother," have disappeared there entirely. On account of this, when he met in the text the expressions "my mother," "sultana," and "of the mother," he translated the last as stepmother. Having familiarized himself with the classificatory system among the Gilyak, he was inclined to interpret the expression "of the mother" as "of the mothers," a class as distinct from one mother.

On the other hand, the plural sometimes denotes the collective noun for the kinsmen of the related classes, for example: "cher-kyn" (literally, "thy father") is used in the meaning of father and mother, father and clansmen; "ufeorankhhun" (literally, "my wives") -- in the sense of the beloved and her girl-friends; "ymgsi kun" (literally, "sons-in-law /zyat'ya/") -- the son-in-law together with his wives. It is curious that in Yakutia we evidently meet the same phenomenon. I judge this by one case introduced by Iokhel'son, where a man says "my fathers" instead of "my father": although Iokhel'son admits that the plural could be used out of respect for one's father, nevertheless, as it is evident from the context -- "a friend to my fathers will wander" -- the father is being talked about here in his absence, and consequently there is no need for rendering any particular respect.

children. Furthermore, there are marriages which do not pursue domestic aims. By itself alone, however, sexual intercourse between certain individuals of different sex, even though it may be regular, still does not constitute a sign of marriage. In order that sexual intercourse be transformed into a marriage, it is necessary that this be sanctioned in a form or another by a given social environment, that it not provoke a social or religious reaction, in a word, that it be lawful.

The lawfulness of sexual intercourse, then, constitutes the essential sign of marriage. On this point, the concept of marriage is similar among the most diverse peoples in the most diverse stages of development. If there are variations it is only in the forms in which sexual intercourse is realized in marriage. It is just these variations, often so contradictory to the notions of contemporary society, which most of all obscure the idea of marriage when one chances to encounter the forms of sexual intercourse among primitive peoples.

A true understanding of the institution of marriage among primitive peoples is obscured most of all by our habitual notion that marriage invariably presupposes joint cohabitation of the spouses and, consequently, the manifest and regular realization of conjugal rights.

Among many peoples, however, and not only primitive peoples, but even historical ones, this is not required at all. Among the Spartans, for example, the women lived apart from the men, and the men lived in barracks. Only an insignificant number of Gilyak on the Amur, due to their proximity to the Olcha, took from the latter the special designation ivy for the wives of all brothers without distinction (2).

2. Among the Olcha, a man calls the wife of his older brother yvy.

It is especially characteristic that "wives" of the tuvn class, no matter who they may be by origin, call one another "sister" (tuvn), and, depending on the age of their husbands, one calls

pursue domestic aims. By itself alone, however, sexual intercourse between certain individuals of different sex, even though it may be regular, still does not constitute a sign of marriage. In order that sexual intercourse be transformed into a marriage, it is necessary that this be sanctioned in a form or another by a given social environment, that it not provoke a social or religious reaction, in a word, that it be lawful.

The lawfulness of sexual intercourse, then, constitutes the essential sign of marriage. On this point, the concept of marriage is similar among the most diverse peoples in the most diverse stages of development. If there are variations it is only in the forms in which sexual intercourse is realized in marriage. It is just these variations, often so contradictory to the notions of contemporary society, which most of all obscure the idea of marriage when one chances to encounter the forms of sexual intercourse among primitive peoples.

A true understanding of the institution of marriage among primitive peoples is obscured most of all by our habitual notion that marriage invariably presupposes joint cohabitation of the spouses and, consequently, the manifest and regular realization of conjugal rights.

Among many peoples, however, and not only primitive peoples, but even historical ones, this is not required at all. Among the Spartans, for example, the women lived apart from the men, and the men lived in barracks. Only an insignificant

/47 cont./

which brings the punishment of the gods. Now let us suppose that clan V, from which A takes wives, has died out, or that there are too few women in it, which is quite in the order of things. Clan A cannot take wives in other phratries, for there each clan saves its women for the clan of the father's sister; the alien clan, even if it had extra women, cannot decide to deviate from this imperative for fear of bringing on itself the punishment of the gods, of the gods-ancestors, for whom marriages with those of other blood constitute the greatest of insults. And a similar vengeance threatens the clan who would make use of women of other blood. Marriage is indispensable, however. Two alternatives then remain: either to abduct a woman by force, risking bringing on oneself the vengeance of the gods, /48/ to say nothing of the vengeance of the clan of the one stolen, or to circumvent the law, deceiving the gods about the real intentions of one's actions, i.e., a voluntary agreement is reached with the parents of the bride and with her herself, whereby these latter appear to resist the abduction with all their strength, while the bridegroom, in the most conscientious manner, does everything required to give to the marriage act the look of real coercion.

Only with such an explanation of abduction can we understand why, for example, the Australian kurnai, having allowed their daughter to run away with her loved one, set out in pursuit after her and, having caught her, pierce her leg with a spear and beat her half to death. The Australians themselves explain this, not as animosity, but as custom.

This, however, is not all. Among many tribes the bridegroom himself considers it his duty to beat his loved one no less cruelly than her parents: by this he desires to show the gods, and the gods-ancestors in particular, that the capture of the girl was in no way caused by a desire on his part to marry her.

Finally, only with this illumination on the hypothesis of the religious origin of the custom can we explain such a universal occurrence of the institution, which, in the form of mock abduction, is practiced in the marriage ceremony of even civilized peoples.

/58 cont./

a bear's love for her, etc. -- all such persons do not travel to the ordinary kingdom of the shades, but go over into the clan of the gods-masters who took a liking to them, of the mountain, water, fire, etc., and then become the smallest "masters" and protect their clansmen. In this way the clan pal'-nivukh'i -- forest people, tol'-nivukh'i -- sea people, etc. took form. It is to these gods-clansmen that the entire clan offers sacrifices. These are not mythical gods, not the fictional heroes of the Greek clans, but actual persons, authoritatively living in the imagination of their worshipers. The genesis of the clan gods of the Gilyak sheds light on another dark phenomenon of primitive religions -- totemism, the worship of a certain class of animals honored as the clansmen and even the ancestors of their worshipers. In fact, as I said earlier, the master of each element and his clansmen, although they lead the same kind of life as the Gilyak, always appear in the presence of man in the form of this or that animal, the bear (forest people), the beluga or kosatka (sea people), so that the Gilyak as well, having entered after his death the clan of this or that master, also assumes the covering of this or that animal. Therefore, that class of beasts that the chosen person entered is kindred to the clan of the one chosen and therefore becomes its totem. Since in almost every clan there are contemporaries or predecessors who fell in a battle with a bear or drowned in rivers or at sea, a system of separate totems for every clan could not develop among the Gilyak. Unfortunately I cannot consider this vast question in more detail here; I shall say only that the genesis of the clan gods among the Gilyak clearly shows that it is not totemism, i.e., not the belief in descent from this or that /59/ kind of animal, that created the clan gods, as is commonly thought, but, on the contrary, it is the clan gods who created totemism. As we shall see below, we cannot explain the prohibitions of the totemists against using the meat of the totems for food in any way other than the fear of killing some clansman who turned into a totem animal.

The religious system of the Gilyak provides many other interesting facts for the explanation of the origin of totemism.

/59 cont./

614 as well as of the cult of ancestors, but I shall confine myself
●171 here, for the time being, to what has been said, all the more since the institution of totemism has not assumed the same sharply pronounced form among this tribe that it did among other, specifically totemistic tribes, for example, the Australians, the North American Indians, the ancient Egyptians, etc.

614 Sacrifices to the clan gods are offered periodically. All
782 sorts of delicacies of the Gilyak cuisine are prepared by each
796 family prior to the day of the festival, and they are placed in particular vessels reserved especially for this occasion. On the next day the entire male population of the clan sets out in boats or, in case of a disturbance on the sea, on foot in the taiga and stations itself on its clan plot of ground near its clan sign. The elder in the clan takes a handful from each dish and throws it, crying out at the same time, "chukh!" i.e., "This is for you!" After this the feasting, games, wrestling, and other such diversions begin. In the spring, with the appearance of the seals, the sacrifice for the "sea or river" man is arranged, consisting of the solemn throwing of viands into a hole in the ice. On the Amur these sacrifices are made from a boat immediately after the opening of the river; the boats are decorated with sacred shavings, and gay races in them are arranged.

796 The Gilyak have a great number of clan festivals, but
614 the most important of these is the so-called bear festival. This
628 festival plays a tremendous role in the social life of the Gilyak. In fact, it is not even a clan, but an interclan festival. The
[574] clan arranging the festival takes on itself only the expenses and trouble of arranging the festival; the most important role is played by the outside clans invited to participate in it. Since a year does not pass without such festivals occurring in one place or another, assembling representatives of many clans for a number of days, these occasions play the same role in the social intercourse of the Gilyak tribe as the Olympics and other games once played in Greece. The winter bear-festival is called a game (chkhyf-lekhernd -- the bear game).

/69 cont./

796 accident that the death of a relative, i.e., the fact of the
825 extraordinarily malicious designs of an evil spirit, forces him to catch or buy a bear cub, whatever the cost. That a bear
[787] by its mere presence drives away evil spirits may be seen
[755] from the single fact that during the bear festival the shaman
[756] is forbidden to consult in his dreams his kekhn (see below) about curing a sick man, i.e., driving out the evil spirits residing in him, for the bear will be offended; he himself can drive them away with his own strength. Analogies to
●[171] such beliefs in the purifying influence of the bear and of many other animals are to be found in vestiges of our own survivals and ceremonies. As is well known, in Little Russia /Ukraine/ there existed the custom of leading a bear through the village on certain holidays for purification... In our grand stables the custom of keeping goats, who are supposed to protect the horses and the grooms from evil power, has
[614] been preserved up to the present. And so, similarly, the clan that feeds a bear performs an important social function, securing all their own against the evil designs of their strongest, though invisible enemies. Unique religious sanitation, but the only kind available to primitive man!

Let us consider the meaning of those ceremonies that accompany every case of bear killing. First of all we should say that the Gilyak does not consider the killing of a bear a sin. In spite of all his respect for it, he is convinced that in the first place those bears that fall prey to him are sent to him by the "master" of the taiga, for whom the bears play the same role that dogs do for the Gilyak. "The bear is the dog of the master of the mountain," such is the formula of the
[974] Gilyak. In addition, the bear loses nothing by its violent death, for death to it is only leaving its body to the Gilyak, while its soul -- that living duplicate -- then gaily runs to its master as if nothing had happened. Therefore no expiation whatever is required here. But the bear, even though only the dog of a forest man, is nevertheless a creature of a higher order, of a higher rank, than man. From the point of view of primitive man, there is nothing derogatory to the sacred

/71 cont./

796 or the female line; the only kinsmen allowed to kill are the
614 "zyat'ya" /sons-in-law, brothers-in-law/, i.e., persons
married to women from this clan, persons whose blood was
796 never mixed with the celebrating clan. In the second place,
614 the entire carcass of the bear, with the exception of the meat
262 of the head, is given to a different clan, the clan of "narkh'i"
and, on the other hand, forbidden to the clan to whom the
bear belongs. Once perhaps even the head was also prohibited
for the celebrating clan. Are these prohibitions not caused by
the totemistic caution against killing and eating the body of
a clansman? After all, could not the slain bear accidently
turn out to be a clansman of the mountain-man clan and
therefore a clansman of those who are celebrating the holiday?
In such a case killing him and eating his meat would be
criminal and fatal for the given clan.

But for a different clan, i.e., the clan of the "narkh'i"
this is permitted, because /72/ another "master" sends bears
to it, its own clansman, so that it is completely safe for them
to eat the meat of the bear of an alien clan.

614 The coexistence of such norms as, on one hand, the
262 permission to kill a bear, though not personally, and to eat
171 its head and, on the other hand, the prohibition against the
rest of the meat may seem a strange and irresolvable contra-
diction. Among totemistic tribes, however, we often meet
such contradictions. The Samoans, for example, on solemn
occasions kill owls and honor them as their deified ancestors,
while at the same time they do not dare to touch the meat.
In the works by Spencer and Gillen we read that among the
tribes of central Australia, among whom it is normally pro-
hibited, for example, to kill kangeroos and to use them for
food, on a certain solemn day two or three of the forbidden
animals are killed, and pieces of the meat are distributed
among the clansmen. There are many such examples.

/72 cont./

G 796 171 262 G1 796 171 262 773

An indirect confirmation of our hypothesis as to the origin of the above-mentioned prohibition among the Gilyak is to be found in an interesting legend of the Orochi and the Orok, whose religious views are very similar to those of their Gilyak neighbors. According to this legend, a certain Orochi woman was once abducted (in other words, eaten) by a bear and bore two children by him. The woman was subsequently often encountered by the Orochi in the forest in the form of a she-bear who warned them not to shoot her. It happened, however, that she was shot by accident. That it was actually she was clear from the fact that women's ornaments were found in her viscera, a bracelet and so forth. Dying, she requested in her testament to the Orochi who killed her that in the future, upon killing a bear, the ritual that is usually observed now during the festival be observed, for any bear that is killed may turn out to be her descendant and, consequently, a clansman of the Orochi.

G 776

Let us return to the gods. Up until now I have mentioned the gods that are beneficial to the Gilyak. Besides these, however, there are other supernatural beings who are evil and harmful to him. These devils are "mil'k'i" and "kinr'y." These beings appear in all kinds of forms and are classified according to their degree of harmfulness. They appear sometimes in the shape of a Gilyak, sometimes in the shape of animals, from the bear to the toad and lizard. They are encountered on dry land and in the sea, under the ground and in the sky.

/73/ Some of them constitute special clans of insidious creatures, destroyers by their very nature. Others are individual degenerates, "the prodigal sons" of the clans of beneficient beings, who only in exceptional cases become enemies of man. The first, of course, offer the most danger.

G 776 761 753

Some devote themselves exclusively to robbing the Gilyak on the road (the spirits of loss -- ger-nivukh'i); others ravage storehouses, snares, and traps and harm him in all sorts of ways, while still others make attempts on his very

/157 cont./

581 For example, among the Ainu, when women get married,
121 they often remain in their father's house, and the husband,
171 who lives in another settlement, sometimes at a great distance from the settlement of his father-in-law, /158/ visits his wife only at a certain time of the year. Among the Kirgiz, until the final payment of the bride price, the husband, sometimes for years, visits his wife only at night, and then in secret from her parents. We do not find regularity even among polygamists of the Mussulman type. The Turk may have in his harem women with whom he does not have sexual intercourse for years, but they nevertheless are considered wives, joined with him in marriage. The condition of joint cohabitation and regular sexual intercourse is still less possible among peoples where, according to the socially established order, a whole group of men considers a whole group of women their wives, and, conversely, a man exercises his right only as far as possible.

Within the Australian Dieri tribe every "kumi" (a term corresponding to the Gilyak pu -- husband) finds his "kroki" (wife) throughout the whole extent of his territory, in whatever settlement he visits. A kumi may live out his whole life without seeing one or another of his innumerable kroki, but she is nevertheless his wife, for, if he visits her settlement, he can exercise his right without subjecting himself to social censure, punishment of the gods, or a reaction on the part of the individual husband of his kroki, as would a non-kumi who did this (1). The potentiality of lawful sexual intercourse

1. Fison and Howitt, Kamilaroi and Kurnai, 1880, pp. 340 f.

takes various forms among different peoples, but the legal essence of the relations remains the same. In one place, persons bound by such a form of marriage are invested not only with rights, but also with obligations, in other words,

/158 cont./

581 one or another party has no right to refuse sexual relations
121 with a person who is entitled to them. For example, among
171 the Chukchee a woman may not refuse a man joined with her husband in the relationship of a "variable marriage."

Among others, full scope is given to individual sympathies, as, for example, among the aforementioned kumi and kroki, among the Tungus peoples, among the Gilyak, where the agreement of both parties is demanded for sexual intercourse, but once this agreement obtains, intercourse becomes lawful. In essence, what we have here is the same phenomenon as in pure polygamy. A husband may prefer one wife to another, even completely avoid a certain wife, but the marriage is present nevertheless. It is the same also in group marriage: in spite of the separation of the living places of the group spouses and the clear potentiality of conjugal rights, lawfulness of sexual intercourse within the group, and consequently also marriage, is present.

/159/ Of course, joint cohabitation and regular sexual intercourse are the most normal for marriage. We observe the tendency towards this, although in varying degrees, among the most diverse peoples. This tendency, however, must not be confused with the tendency toward individual possession. The instinct for sexual selection and individual sympathies indeed pushes even primitive man toward establishing more or less durable conjugal bonds. But pairing up presupposes neither obligatory individual possession nor, what is more, obligatory joint cohabitation. We have already offered the example of the Ainu, whose wife often remains living in her parents' home, sometimes several days' journey from her husband. Among the Ainu, however, marriage is purely individual. All the more natural is the absence of the aforementioned conditions among those peoples where group forms of marriage exist, for persons to whom the right of sexual relations is extended are many, and for this very reason joint cohabitation and, consequently, the regular exercise of the right of sexual intercourse between all the persons involved in the group marriage rarely take place.

/159 cont./

581 In reality, joint cohabitation and regular intercourse
121 are connected, not with the sexual feature of the marital
171 union, but with the economic aspect. Wherever economic conditions demand the joint collaboration of a whole group of persons and allow living together, group marriage there can turn into a regular, communal marriage. But such conditions are rarely found in primitive society. They are possible -- but even then not often -- in a narrow circle of brothers; in this case group marriage is really accompanied by the elements of joint cohabitation and the regular exercise of marital rights familiar to us. We meet examples of such a clan among the Gilyak, among several Tungus tribes, in Tibet, in India, and in other places. But types of this kind of cohabitation are also rare.

433 In spite of the old opinion, which was accustomed to
121 depicting the life of primitive people in communistic colors,
171 in reality the economy of primitive man, at least the methods of obtaining the means of subsistence, is at the present time mainly individual, and the forms of general collaboration that crop up only at certain times disappear as quickly as they arose with the passing of the necessity for them. We may see a typical specimen of individual economy among the wandering Tungus reindeer-breeders, who /160/ assemble once or twice a year for only a short time and then in small related groups. In normal times they live apart, widely separated from one another, each one selecting for himself his own territory for pasture and hunting.

581 Among peoples who are not herdsmen, who live closer
121 together, the forms of economy are all more or less individ-
[433] ual. Under such circumstances it is quite natural that every man, conducting his own particular economy, should strive to have with him a woman who, in conformity with the natural division of labor between the sexes, might perform with him his economic duties. Thus, joint and regular cohabitation between a man and one or several women arises by itself. In societies where group norms of sexual intercourse exist, such individual alliances change nothing. An

/164 cont./

582 marriage is that with the daughter of the mother's brother.
614 "Pfandfukh an'g:ej gen urdra" -- "from the clan of your pandf (see above), from the clan from which you originated (were born), i.e., from the clan from which your mother came, yo
[533] should take a wife," runs the Gilyak maxim. "I miss the house of my mother's brother" -- such is the motif of the contemporary Gilyak song. And statistics prove the degree to which these principles play a role in reality. From the very first days of my statistical census, when I was not yet conversant with all the subtleties of the kinship nomenclature, I was astounded that in each clan there were so many kinsmen wives who were taken from one and the same clan, who called each other, according to the generation of the husband, sisters and aunts, and who actually seemed to be such. It was necessary to record many Gilyak who were married several times, and most often their wives turned out to be from one and the same clan, specifically, from the clan of the husband's mother. One of my companions on my journeys, Isayka, had been married three times, and always to wives from the very same clan. And in the majority of cases, it turned out that the husbands and wives were not only cognate cousins, but were corresponding children of own sisters and brothers.

582 The preference shown for this form of marriage even today
171 is always the result of the religious imperative; we have seen above that only such a marriage is considered "pure." As to the role of this form of marriage among the Gilyak, one may express it in the same words that have been used to describe the same phenomenon among the Song and Bygar tribes of the province of Satpûras in central India. In these tribes, "marriage between cousins is almost /165/ compulsory when a brother has a daughter and his sister a son" (1).

1. Fison and Howitt, Kamilaroi and Kurnai, p. 154.

/168 cont./

83 or wife that she share her bed with a guest who is her pu, as happens among peoples who practice hospitable hetaerism. Likewise a public display of sexual intimacy is not allowed. No one permits himself to lie down under one covering with his group an'g:ej in the common yurt, even with a preliminary agreement. Moreover, even between individual spouses /169/

833 openness of sexual relations is not allowed (1). Intercourse

*835

● [171]

1. The avoidance of public caresses between individual spouses is not an exclusive peculiarity of the Gilyak. According to the testimony of Radlov /Radloff/, the Altaian in public does not allow himself even a joke with his wife in the presence of strangers, while at the same time the broadest freedom in relations between the sexes prevails among these peoples. -- Radloff, Aus Sibirien /From Siberia/, I, 314.

may not take place publicly or before the eyes of the individual spouse concerned (2). If the act takes place at night in

[171]

2. Compare the similar phenomenon among the Tibetans. -- Westermarck, The Origin of Marriage, p. 141.

the yurt where there are also strangers sleeping, then each one lies down separately, and only when all have gone to sleep does the man or woman (both sides alike take the initiative, but women more rarely) move over to the bed of his group spouse, who may accept or reject the attentions if there has not been any preliminary agreement. In summer the affair most frequently takes place in the open air: in the

/180 cont./

*835 male virtues. Nevertheless, his older tuvn in no way reacted to

578 even this breach of etiquette. Only at the instigation of his associates did he resolve to challenge him to a duel, but Lokhmatka absolutely rejected this flattering proposal. Then his rival hit him with a cudgel, but Lokhmatka did not react even to that, and since, according to Gilyak custom, it is prohibited to beat a man who does not defend himself, his rival had to let the matter rest, while Lokhmatka continued his public relationship with the man's wife just as before.

*835 Never once among the Gilyak did I chance to observe how

578 an individual husband reacted upon finding his wife in flagrante

●171 delicto with one of his brothers. But one may get an idea from a scene which I observed among the Orochi where the same rule operates with respect to the wives of brothers. Once I happened to be spending the night in the tent of the richest and most respected Orochi, Ivan Kuznets. In the tent, besides Ivan and his wife, there chanced to be spending the night a very distant kinsman of Ivan's, the youth Timoshka, who was a very poor and thriftless lad, but a great lover of women, preferring to go visiting and lovemaking to any economic cares. In the evening our host left to look for elks, and Timoshka, without any ceremony, got under the covers of his young hostess. They did not expect the old man until morning. But meanwhile an unfavorable wind had interfered with the hunting, and Ivan returned earlier than might have been expected. Entering the balagan, Ivan lit a splinter and caught sight of Timoshka, taking his place in the conjugal bed. From

[152] the proud and hot-tempered Ivan one might have expected -- especially against poor Timoshka -- the most furious outburst of jealousy, the more so because his wife was considered a prize beauty, and he was already at an age when jealousy shows itself particularly strongly. Nevertheless, Ivan limited himself to swearing a strong Russian curse-word, after which Timoshka, smiling embarrassedly, moved over to his own place, while Ivan, groaning, lay down beside his frivolous wife.

/181/

*835 Such are the relations between the categories of group pu and an'g:ej. Within his own clan, the Gilyak has at his disposal the dozens of wives of his "brothers." In the clan of his akhmalk (and there may be many of these) dozens of daughters of the "brothers" of his mother are at his disposal, and finally, outside of these clans the sisters of the wives of his most distant tuvn, and the wives of the sons of his "mother's" sisters, belong to him. And since, in addition, due to the contemporary conditions of life, his own clansmen and the members of the clans of his akhmalk are scattered throughout the most remote settlements, there is hardly a place where a visiting Gilyak could not find his lawful an'g:ej. One may say the same thing about the Gilyak that is said, mutatis mutandis, about "kumi" and "kroki," who throughout the whole extent of their territory find everywhere a lawful wife for themselves.

*835 Thus, every Gilyak usually is joined in a dual marriage:

595 1) in the customary individual marriage with one or more

58 women either from the class of his an'g:ej (in this case mainly with the daughters of his mother's brother) or with women of alien groups; this form of marriage among brothers sometimes takes on the form of purely communal polyandry; 2) in a group marriage with all the women of the class an'g:ej, where sexual intercourse with some of them is accompanied by joint cohabitation, a common economy with their individual husbands, and takes place more or less regularly (most often within a common economy of brothers); or else this right of sexual intercourse is potential and is exercised only insofar as is possible and not regularly.

*835 Thus, we have to do here with the typical group marriage,

●171 examples of which are known to all among the most diverse peoples of the earth. An extremely curious, typical analogue in the life of other peoples is the marriage system of the Australian Dieri tribe (1), among whom both aspects of sexual

1. "Australian Group Relations," by Howitt (Papers relating to Anthropology

/181 cont./ Contrib. to the Smithsonian Institute, 1885), pp. 12 passim.

intercourse are legalized, in contrast to the Gilyak marriage system, with the differentiated terms noa and piruari. According to this system, every woman is joined in individual marriage to one man, and the spouses call each other noa; but at the same time she is joined in a group marriage to a whole category of men, who mutually call each other piruari, with the characteristic distinction that persons of this category are solemnly affirmed by the high council of the tribe.

/182/ The object which these measures pursue is evidently the following: 1) to strengthen in the social consciousness the lawfulness of sexual relations for a certain group of persons; 2) to make commonly known the names of the persons of this group of spouses. Among the Gilyak the matter has not gone so far -- the tribe is too small, and every person from childhood knows very well from the words of his parents the names of his group pu and an'g:ej, and, consequently, all the rights connected with these names. Under other conditions the Gilyak would probably have developed the procedure practiced among the Dieri. The following characteristic analogies between the marriages of the Gilyak and the Dieri are also curious: 1) "a woman becomes the noa of a man, having been married to him when she was still a child" (1).

1. Howitt, op. cit., p. 811, Table IV.

2) Judging by the kinship terminology, piruari (i.e., group husbands and wives) are not arbitrarily designated by the great council, but from a definite circle of kinsmen, specifically, for the women the brothers of her husband are piruari, while for a man -- the sisters of his wife. So, by one and the same term, apiri waka, the piruari designate

/182 cont./ their mother and their father's brother; in exactly the same way, by one and the same term, andri waka, the piruari designate their father, their mother's sister, and their father's brother's wife (ibid., Table IV). All the children of each noa are one another's brothers and sisters and they are all considered children of the piruari group to which this noa belongs (ibid., 19).

IV.

Moral and Psychic Consequences of the Sexual Norms

The peculiar norms of sexual relations described by us, broadly permissive on the one hand, strictly prohibitive on the other, are reflected in the morals and psychics of the Gilyak in two diametrically opposed trends.

The permissive norms, which give both men and women such an extensive legitimate freedom in sexual relations, naturally must have given rise to general sexual laxity. In fact, the virtues of chastity, sexual moderation, and conjugal fidelity are unknown to the Gilyak. Among married women, and then as a rare exception, one still finds individuals who are more or less faithful to their husbands; among men, by the admission of the Gilyak themselves, even such exceptions are not encountered. In the society of the most respected individuals, tales of the most piquant romantic /183/ adventures are recounted with relish. An extensive amorous experience does not stain the reputation of a gentleman (urdla n'ŋgyvyŋ) at all. In my presence, and that of a gathering of the most honored elders, a young Gilyak, Iarak, to the accompaniment of general noisy approval and merry laughter, related his numerous romantic exploits, about how, by the way, in one settlement he had engendered no less than 20 children... Such an attitude of respected people toward the sexual laxity of youngsters is only possible in a society where

/186 cont./ Psychic prohibitions. But side by side with training and, I would say, the hypnotic influence of the kinship terminology, a still mightier force acts on the development of the abovementioned instincts -- prohibitions of a special kind, prohibitions on psychic intercourse: prohibitions on speech, glances, and familiar address (joking). Corresponding to the two different instincts necessary for the realization of the sexual norms, these prohibitions are of a dual character. Some are created for persons between whom it is necessary to weaken the instinct of jealousy to the last degree, others -- for those who must avoid having sexual relations with each other. Both factors, both the prohibitions of sexual intercourse and the prohibitions of psychic intercourse, act not only as factors of hypnosis and habit, but also as very strict taboos of religion. To violate one or another of these norms, in the eyes of primitive man, is as dangerous as the most dangerous blasphemy. The strength of the taboo on psychic intercourse in particular and what instincts they can develop in the soul of primitive man can be seen even from Iokhel'son's /Iochelson/ tale about a Yukagir who by mistake allowed himself familiarities with respect to his own brother, but when he realized his error, he passed away on the spot out of horror.

This is the way Iokhel'son tells this amazing story, entirely in keeping with Gilyak psychics.

"There were two brothers, and then they lived the husband of an older sister, with whom it is permitted to talk. Therefore, both brothers frequently joked with him and played pranks... The brothers, as usual, had a non-speaking relationship. One time the older brother, upon returning from hunting, found the young people in the settlement playing games and dancing. His younger brother, who happened to be dressed in the fur clothing of his brother-in-law /ŋ'gyr/, was in the chain of dancers with his back to the new arrival. The latter took his younger brother to be his brother-in-law, and, wishing to scare him as a joke, he ran up behind him, put his hand between his legs, and touched his sexual organ.

/186 cont./ The younger brother quickly turned around. The older brother realized his error and fell dead then and there "from shame." As usual, they performed his autopsy in the /187/ learn the cause of his death, and his heart, according to the legend, was found to be broken in two" (1).

1. Iokhel'son, Materialy /Materials/, XIII.

Let us proceed now to the prohibitions themselves. The prohibitions of the first kind, i.e., prohibitions established between individuals of the same sex in order to weaken the instinct of jealousy, naturally cover persons who are joined in one class by group marriage: among the men, the pu classes, i.e., the classes of persons who have the right to sexual relations with a certain class of women; and, among women, the an'g:ej classes, i.e., women having common husbands. All these individuals, all these group husbands or group wives, among whom outbursts of jealousy might so easily flare up every day and every hour, are fenced off from one another by the impassable wall of the strictest prohibition on psychic intercourse, a prohibition beginning at the threshold of life and ending only with the grave, and creating an instinct of restraint which does not yield first place to the strongest instincts of nature.

The prohibitions of the second category, as we have said, have as their aim the hindrance of sexual relations between persons of different sexes of the forbidden categories. For this reason prohibitions between persons who are mutually in the classes of "husbands" and "wives" (pu and an'g:ej), even if not in a state of individual marriage, are superfluous; any man freely converses not only with his individual wives, but with his group wives, for example, with the wives of his brothers without distinction (in some clans) or only with the wives of his older "brothers" (in others), in a word, with those women whom he calls an'g:ej and with whom he has the right

/189 cont./ The prohibitions on speech have had another curious result. The Gilyak have no salutation for greeting or saying farewell. It may seem strange that the Gilyak, returning to his home after a long absence or leaving his family for the long months of hunting and of danger, utters no salutation. Yet the Gilyak are very ceremonious and /190/ always greet and escort their departing guests with solemn forms of address and expressions of good wishes. The neighbors of the Gilyak, the Olcha and Goldi, as well as the Ainu, have salutations for meeting and parting. Their absence among the Gilyak arises precisely from the fact that in the home and settlement of every Gilyak there is a mass of persons with whom speech is a sin, and therefore the customary greetings could easily lead to frequent involuntary violations of the psychic taboos. Prohibitions on conversation, as is well-known, are practiced among many peoples. We shall recall, for the sake of an example, one of the American peoples, the Arapaho, among whom conversations between brothers are forbidden. The prohibitions among the Yukagir are of special interest to us. Of the prohibitions which they have in common with the Gilyak, we find among the Yukagir prohibitions between "brothers" and "sisters," between the husband's father and mother and their daughter-in-law, between older brothers and the wives of younger brothers; and, as among the Gilyak, in cases of necessity, they address each other either in the third person, or in the impersonal form, or in the plural (1).

1. Iokhel'son, Materialy /Materials/, 240.

The Buryat present examples of an interesting analogy with the Gilyak prohibitions. Among them at the present time marriage is exclusively individual, and "brothers" have no sexual rights whatever to each other's wives. Nevertheless, prohibitions with regard to the so-called khadym clearly reveal an earlier stage of group marriage. As a result of this

/190 cont./ As a result of this institution, the prohibitions between a woman and the older brothers of her husband are very strict, and, on the other hand, with respect to the younger brothers of her husband prohibitions are absent. The content of the prohibition (forbidding the man to sit on the bed of his khadym, to see her naked, etc.) is evidence that this prohibition had the exclusive aim of preventing sexual intercourse.

V.

The Genesis of the Gilyak Marriage Norms and the Kinship Terminology

We have examined the norms of sexual intercourse and have seen that they completely correspond to the kinship terminology. Now it is necessary for us to proceed to a consideration of how this complicated system of kinship and marriage was formed, what sort of psychic substratum gave rise to the system. Obviously, such a complicated system could not arise artificially. It must have developed, without a doubt, out of one simple principle, a clear /191/ categorical imperative for the primitive man, out of which there must have grown, as from a seed, that complicated organism of Gilyak institutions which, for example, we examined by us in such great detail. Along with the genesis of this system, however, it is necessary for us to explain also the long evolution of this system, without an understanding of which a whole series of peculiarities of the kinship nomenclature will seem completely inexplicable and, as it were, out of keeping with the general system.

/194 cont./

Thus there was created that type of individual-group marriage which we now find among the Gilyak, and among all other peoples where marriage is founded on this principle of marriage relations which they have in common with the Gilyak. This system of individual group marriage was developed under the influence of the various combinations in the distribution of the /195/ sexes among the descendants of brother and sister. In order to be convinced of this fact, it is enough to consider several such combinations.

1. The simplest one is that of one brother and one sister. Moreover, the brother has as many daughters as the sister has sons. Then of course, individual distribution is entirely possible, if, however, men and women simultaneously reached the marriageable age. But à la longue /in the long run/ such a combination is almost completely impossible, because the descendants of the sister and the descendants of the brother expand into several families, and in such an environment only as an exception can there be cases when the number of men of marriageable age in one group of descendants at any given moment will be equal to the number of women in another group of descendants.

2. Let us take the same instance: one brother and one sister, but at the given moment the brother has only one daughter, while the sister has several sons. Then communal marriage, as it is described among many peoples and appears so typically in the descriptions of the Iroquois, becomes inevitable. This is the situation described in the Gilyak epos in such expressions as this, "two (or more) brothers supported one wife," a situation which, as we have indicated, is often encountered in reality even today. The most customary mode of using wives is the same as in group marriage -- each brother enjoys the communal wife in the absence of the other: "in Tibet, where the brothers very often have only one common wife, it is rare for more than one brother to be in the house at one time" (1). Among the

1. Westermarck, op. cit., p. 116.

/195 cont./
Gilyak this is not required in cases of communal possession;
the wife first sleeps with one brother (the oldest), then moves
over to another. As for the children, either they are not dis-
tinguished at all according to fathers, or, as in the case of
the Toda tribe, the first child is regarded as the offspring of
the oldest brother, the second of the next brother, etc.

3. The same situation in a new variant: the first
brother has reached marriageable age before the second.
The elder brother takes the only daughter of the sister of his
father /xic/ as his individual wife, but then the younger
brother comes of marriageable age. The elder brother re-
mains the individual spouse, but the second brother enjoys
conjugal rights, by the rights of a group spouse. Then
another daughter of the brother grows up to be of marriageable
age. She naturally becomes the individual spouse of the
second brother, but the elder brother obtains the same group
rights to the wife /196/ of the younger brother as the latter
once enjoyed with respect to the wife of the elder brother.

4. At a given moment a brother has several adult
daughters, while the sister as yet has only one adult son.
The latter becomes the husband of all the daughters of the
sister of the brother /xic/. Thus it is at the present time
among the majority of American Indian tribes, where a man
who has married the oldest daughter is for that reason obliged
to take as wives all of her sisters. But now another brother
grows up. One of the wives is yielded up to him as his indi-
vidual wife, the rest remaining with the elder brother as the
most well-to-do, who is better able to support several wives
than the brother who is just beginning to earn his livelihood.
The latter, naturally, is rightfully the group husband of all
the wives of the elder brother; the converse right of the elder
brother is not so indisputable.

An analogous development takes place if the elder broth-
polygamist has several brothers who gradually grow up: then
each one of them will obtain his own individual wife, but
at the same time each of the younger brothers will have

/198 cont./
home of the wife, all the women born into the clan remained
together; their husbands, taken into the clan, were all of the
same clan -- the male cousins of their wives, the sons of the
sisters of their fathers. In the agnatic clan the imported
women were all kin to each other, either sisters or aunts and
nieces (and blood kinswomen -- female cousins of their
husbands), the daughters of the brothers of their mothers.
This common blood kinship of the representatives of both
sexes of both the native and the imported elements of the
clan is a still more important cement of the clan union, a
religious cement binding together all the elements with the
highest ties of the common cult of the ancestors. The
terminology has perpetuated this arrangement by the fact that
the wives in each generation call each other sister and their
husbands' mothers -- aunts, and a man calls the daughter of
his mother's brother wife, while a woman calls the son of her
father's sister husband.

8. Since marriage is obligatory into the group of the
sisters of the father exclusively, once the daughters of a man
belong from birth /199/ to the sons of his sister, and this rule,
naturally, became a religious imperative, then under no
circumstances can either the men or the women marry out-
side of the indicated groups. Hence a twofold levirate, so
often encountered, by the way, among the American Indians.
If the individual husband of a woman should die, she cannot
under any circumstances leave the group of her husband.
Whether young or old, she passes to one of the class of
"brothers" of her deceased husband. Conversely, if a man's
wife dies, he cannot look for a wife anywhere except in the
class of her sisters.

9. Under this arrangement, as long as it maintains its
complete purity, within the marriage groups there can be
no question either of abductions or of bride price.

/199 cont./
There is no need for a man to abduct that which belongs
to him through a religious imperative, so powerfully active
in primitive society. Abduction can only arise under special
circumstances, when there are no women in the marriage
group, while other groups are obligated in turn to give their
women to definite groups. Individual cases of abduction
have led to the institution of mock abduction. For the side
which is giving its women in marriage is violation of the
prohibition, this is a means of deceiving the gods, the gods-
ancestors, to whom marriages with persons of alien blood
are the gravest insult. By this alone can we explain the
wide distribution of this otherwise inexplicable institution
among primitive peoples. Only by this pious deception of the
gods can we explain those frightful cruelties which are
practiced in connection with mock abduction, although both
parties are joined in wedlock with the willing consent of the
kinsmen of the bride and groom. It is sufficient to take the
example of the Kurnai tribe, among whom there exists the
institution of obligatory marriage, analogous to that of the
Gilyak. In this tribe, the kinsmen of the bride, having of
their own free will allowed the bride to run away with her
groom, later start out in pursuit of her, and, when they have
caught her, they pierce her leg with a spear and beat her
half to death. And in many tribes even the abductor con-
siders it his obligation to beat his beloved no less cruelly
than her parents, desiring to show the gods-ancestors that
it was not at all love, the intention to marry, which
prompted him to abduct her.

An insufficiency of males or females can lead also to
another institution; likewise not uncommon among primitive
peoples, namely, the killing of newborn children. Let us
say that clan A, from which clan B takes its women, has
died out; then, in order to avoid the wrath of the gods for
future marriages to aliens, they resort to killing the male
children. /200/ On the other hand, if the clan to which they
customarily give women has died out, then cases of

/200 cont./
murdering the girls are possible. Such examples are well-
known among the Toda tribes, in spite of the fact that the
number of males is greater there than the number of females.

10. Likewise, with this arrangement the institution of
bride price is impossible under normal conditions. Payment
for the bride is not permitted; otherwise the obligation of
marriage would be merely fictitious. This is still to be seen
among the Gilyak today: no matter how avid the Gilyak may
be for bride price, it is not permitted in cases of marriage to
the daughter of the mother's brother.

In order that such an essentially exogamous system might
be preserved and function in all its purity, a whole series of
favorable conditions is necessary. First of all, a whole
complex of favorable economic, social and sanitary condi-
tions is required in order that, on the one hand, in propagating
themselves the various families of the phratry should be able
to maintain themselves on the common territory, and, on
other hand, that the increase should exceed the losses of the
families, and that there should be no cases of extinction of
entire clans constituting links in the phratry. Furthermore,
some degree of isolation of the tribe from alien influences is
necessary, so that the religious imperative of obligatory
marriages within the phratry may be preserved in all its rigor.
Finally, it is necessary that there be preserved economic con-
ditions under which, on the one hand, the social equality of the
members of the phratry would remain, contrary to the usual
phenomenon, and, on the other hand -- that under the in-
fluence of new economic conditions there should not be
engendered one or another temptation to make woman the
object of purchase and sale.

The preservation of all these conditions among primitive
peoples in the course of a long time inevitably encounters a
whole series of obstacles. And so it has been among the
Gilyak. No matter how much the Gilyak prize the primordial
abode of their forefathers, economic conditions force individ-
ual persons, individual families, and sometimes even a whole

/214 cont./
Works of recent times, in particular those of Rivers,
Crawley, and Frazer, in connection with the work of their
predecessors in the field of Australian and Dravidian mar-
riage, such as Fison and Howitt, Spencer and Gillen, Kohler,
and others, revealed not only the picture of the broad dis-
tribution of this form of marriage at the present time (1).

[113]

1. This picture entitled Crawley
to say that "cousin marriage gen-
erally is the favorite form of mar-
riage among primitive peoples"
("Exogamy and the Mating of
Cousins." Anthropological Essays,
Oxford, 1907, p. 57).

but on the basis of examples of Australian marriage they
proved without a doubt that cousin marriage was the first
experience of conscious restriction of marriages between
brother and sister, and that all further evolution of marriage
represented a series of gradual limitations on marriages be-
tween cousins of the first degree. One cardinal question in
this problem still, one might say, remains open. This is
the question of why /215/ cousin marriage demands mar-
riage between the children of brother and sister, but at the
same time prohibits marriage between the children of two
brothers or between the children of two sisters. Only Rivers
directly refuses to find an explanation for this striking fact.
"Cousin marriage," he says; "is, according to all appear-
ances, a surprising one. It is quite difficult to find a straight-
forward psychological basis explaining why marriage between
the children of a brother and a sister is desired, while mar-
riage between the children of two brothers or two sisters is so
strictly prohibited" (1).

[113]

1. "Marriage /of/ Cousins
in India." The Journal of the
Royal Asiatic Society, July,
1907, p. 623.

/217 cont./
other, while marriages between cousins should have been
allowed for the first time only as a necessary evil, malum
necessarium, in order that it might pass completely out of
use as an antisocial institution.

The evolution of marriage among the Australian peoples
can serve as the best example of this strange fact. Among
these peoples, judging from the organization of classes and
from their personal declarations, the consciousness of the
harm of marriage within close degrees of kinship is quite
well developed, and they have manifested great resourceful-
ness in order to block the possibility of close marriages,
excelling other peoples in this respect. Such a complicated
system as the eight-class system of the Arunta tribe has been
specially devised for the abolishment of marriages between
cousins of the first degree. It would seem after this that
marriages between the most remote degrees of relationship
ought to be encouraged, while marriages between cousins
of the second degree ought to be regarded as merely allowable.
Among them, however, even "cousins of the third degree
are thought too remote, and marriages beyond this degree
are prohibited" (1). Thus, marriage with cousins even of

1. Crawley, op. cit., 61.

an impossibly close degree is not only allowed, but obligatory.

Further, if cousin marriage is only the first stage of
exogamy, /218/ then why, in spite of the enormous period of
time which has passed since its inception, does it continue
to survive so stubbornly up to the present time among a
large number of tribes, including such numerous ones as the
Dravidians, in its original, unaltered form. And even there,
as among the tribes of Australia, it underwent limitation in
the sense of the exclusion of marriages between cousins of
the first degree, but still the principle, as we just saw, is
preserved inviolate, and marriages beyond cousins of the
third degree are not permitted. This stubborn invoking of

/218 cont./
the principle, this persistent striving to perpetuate it by m
of obligation, must rest on a serious basis. It seems to us
hat the strength of the cousin marriage rests on two impo
notives. The first motive is the natural striving of every
kinship group, in particular of each mother, to provide he
progeny with wives.

At the primitive stage of human development the ele
ment of struggle in sexual relations undoubtedly played ju
as tremendous a role as in the zoological kingdom in gene
And one of the most important problems of human comm
ties was to limit this struggle as far as possible, by one or
another regulation.

The intention of marriage, obligatory between pers
of a certain group, was that form of sexual regulation whi
was called upon to satisfy the above-mentioned fundamen
dictate of the community. Prior to the establishment of
exogamy, this dictate could be satisfied by the intrabloo
marriages obligatory between brothers and sisters. With t
establishment of the principle of exogamy, cross-cousin
marriage most satisfactorily solved this problem. From
birth, the sons of a woman are the husbands of the daught
of her brother, and the sons of this latter are the husbands
of her daughter. This combination satisfies to an equal
degree the father of the family as well, because his child
marry the children of his sister.

The other motive of cousin marriage is religious: wit
such marriages people not alien by blood, but rather of a
common origin through the father and mother, come tog
at the domestic hearth, with its gods-ancestors. And bot
spouses may to an equal extent count on the favor of the
common gods-ancestors. This is a feature of primary im
portance in the eyes of primitive man, for whom the bles
of the gods and the observance of religious rituals is as es
tremely important matter in life, one of the major mean
in the struggle for existence. That is why this form of m
became not /219/ only favored, but religiously obligator

/222 cont./

582 Kohler's correspondent reports on it from Africa among the
* 194 Hottentot. From Indonesia, such an authoritative investigator
● 171 as Wilken reports on it, writing: "Among the Batak, the Redjang (Rejangs) and the natives of Amboina, it is permissible for the son of a sister to marry the daughter of a brother, but the son of a brother may not marry the daughter of a sister" (2).

[113] 2. Wilken, Bijdranjen /Contributions/, Serie V, V. I, p. 148.

The kinship terminology corresponds to this arrangement; among the Batak on Sumatra, for example, a wife or female sweetheart is called ibibere-re-datang, i.e., daughter of the mother's brother.

This institution was already recorded in still more definite form in the 1870's among the Dravidian tribes of India. Thus, for example, in the Song and Bygar tribes of the province of Satpūras in central India, marriage between cousins is compulsory when /223/ the brother has a daughter and the sister a son. Many data may be found in the most recent literature by Rivers (1).

[113] 1. "Marriage of cousins in India, Jour. Royal Asiat. Society, July, 1907, p. 626 pass.

/226 cont./

* 835 who were not kin to each other, with this difference, that the
* 194 collective of sisters, upon marrying into different clans,
614 would be broken up into several groups, as in the punalua
908 family, while the collective of brothers, always remaining
* 835 in the clan, would be preserved in its entirety. And since
601 the Gilyak family is the most ideal form of the punalua
* 174 family, it is natural that the Gilyak terminology be the most complete form of the Turanian system. Actually, we find in it classificatory groups that must have existed in the Turanian as well, but which were lost with the loss of the
[119] system of marriage. For example, in that Turanian form which Morgan once considered the most complete, namely, the Tamil, the two extremely important classificatory terms -- "husband" and "wife" -- are not found.

* 835 The Tamil system, according to Morgan, developed
601 under conditions where brothers had common wives, and
* 194 sisters had common husbands. Correspondingly, in the
● 171 Tamil system a man calls by the name father, not only his own father, but also all the brothers of his father, and he calls not only his own mother, but also all her sisters his mothers; in like fashion, he calls all the children of the brothers of his father and of the sisters of his mother, brothers and sisters. Corresponding to this, there must have also existed a general term "wife," by which a man would designate not only his own wife, but also her sisters and the wives of his brothers, and likewise a general term "husband," by which each woman would designate both her own husband and his brothers, and the husbands of her sisters.

114 In reality, these general terms do not exist either in the
601 Tamil or in the Iroquois systems. Thus, among the Tamil,
171 a man calls his wife en mainavi, the wife of his brother enanni, en maittuni, the sister of his wife en korlunti, en maittuni; there is the same lack of correspondence with the term "husband" (1).

1. See the table in Morgan.

/226 cont./

601 Among the Gilyak the terms "husband" and "wife" --
* 835 pu and anŋ:ej -- embrace all persons united by group mar-
114 riage, which thus still more confirms the truth of Morgan's interpretation of the kinship terms.

114 /227/ Elucidation of several terms of the Turano-Ganowanian
601 system which appeared inexplicable to Morgan. In the light
● 171 of cousin marriage, several terms of kinship in the Turano-Ganowanian system become understandable to us. For example, Morgan was very confused by, and even regarded as inexplicable, why, among the Tamil, i. e man, call the children of my male cousins (considering as such the children of the sister of my father and of the brother of my mother without distinction) nephews and nieces, but I call the children of my female cousins sons and daughters. At the same time, among the Seneca-Iroquois exactly the reverse of this rule prevails. In his Consanguinity and Affinity he considers this fact inexplicable: "The discrimination of degrees of the cousin relationship," he says "is a remarkable fact in the Tamilian system. It is now found only in some systems of the Turanian family. From the structure and principles of the Turanian system, as I have already shown earlier with regard to the Ganowanian system, it follows inevitably that in its further development this relationship would be applied and restricted to the children of a brother and sister. It was probably unknown in the primitive system... It is the only particular in which it differs materially from the form of the family among the Seneca-Iroquois. In this respect, this last logically agrees more with the principles of the Turanian system than the Tamilian system. It is difficult to find any explanation for this difference" (1).

[113] 1. Morgan, Systems of Consanguinity and Affinity of the Human Family, 1871 p. 391.

/227 cont./

114 Subsequently, in Ancient Society, Morgan found an ex-
601 planation for this fact.
● 171 "This shows," he says, "that among the Tamil, at the time when the Turanian system was introduced, all my female cousins were my wives, while at the same time this did not apply to the wives of my male cousins" (2).

[113] 2. Morgan, Ancient Society, 1877, p. 444 (Russ. trans., Pervobytnoe obshchestvo, p. 427).

114 It did not even occur to Morgan that the whole Turanian
601 system was based on this principle. This peculiarity, how-
* 194 ever, is precisely the result of the primitive system of cross-
171 cousin marriage, from which the Turanian system also de-
* 835 veloped. Under cross-cousin marriage, marriage between the children of brother and sister is the only form of marriage, and such male and female cousins accordingly call themselves "husband" and "wife." That the Turanian system is the result of cousin marriage is evident also from other terms, which /228/ must have been inexplicable to Morgan and which he does not even bring up, not having found an explanation for them. For example, among the Tamil, if "I" am a man, then the wife of my sister's son is my "daughter" (as in the Gilyak and Australian terminology); the husband of my sister's daughter is my "son" (as in the Australian cousin marriage). the husband of my father's sister's daughter is my "brother" (as in the Gilyak and Australian terminology); the father of my wife is my "father-in-law" and "uncle" (father-in-law and brother of the mother among the Gilyak, father-in-law and brother of the father or mother among the Australians); the mother of my wife is my "mother-in-law" and "aunt" (aunt and father's sister among the Gilyak, mother-in-law and father's sister or mother's sister among the Australians); my brother's wife is my "female cousin" (i.e., a daughter of my mother's brother or of my father's sister); and, finally, the "wife" of a son of my father's sister, and

/228 cont./

114 the wife of a son of my mother's brother, is my "sister"
● 171 (typical cross-marriage). A corresponding series of terms
* 194 is met if "I" am a woman.
601 All this is without question evidence that the Turanian
* 835 system was a system of cross-cousin marriage, although the examples introduced by us above (the Batak and the tribes of central India) are evidence that even in the homeland of this system cross-cousin marriage has already begun to change to the unilateral cousin marriage of the Gilyak type.

121 It now remains to explain from this point of view a con-
* 174 tradictory (according to Morgan's opinion) fact in the
601 Ganowanian system, namely, that, in contradistinction to
* 835 the Tamil system, if "I" am a man, then all the children of
615 my male cousins, that is, the children of my father's sister's
[191] son and the children of my mother's brother's son, are my
[114] "sons and daughters." We find the analogue of this in the Gilyak system. Let us recall the four-clan phratry and the case where clan V was short of women, and male cousins of the first clans A and V were obliged to take wives from the corresponding generation of clan S; under the norms of group marriage the children of these cousins are each other's "brothers" and "sisters" and, consequently, are children for both male cousins. The first step in this direction was the formation of that four-clan phratry which we have seen among the Gilyak. This happened quite simply, and we shall see that these four clans in an embryonic state exist also in the Australian system.

121 Let us imagine a society divided, like the Australian
* 194 one, into two phratries, exchanging women in each genera-
* 835 tion, so that the children of a sister marry the children of
615 her brother, and thus the wife of each man is the sister of the husband of his sister.

/228 cont./

121 The general composition of the phratry may be represented
* 174 in the following table (see p. 230 /of the original text/).
615 /230/
* 835

I	II
Group of male cousins	Groups of male cousins
$A^1 + A^2 + A^3 + A^4 + A^5 + A^6 \ldots$	$V^1 + V^2 + V^3 + V^4 + V^5 + V^6 \ldots$
Their sisters:	
$a^1 + a^2 + a^3 + a^4 + a^5 + a^6 \ldots$	$v^1 + v^2 + v^3 + v^4 + v^5 + v^6 \ldots$

Since the groups $A^1 + A^2 + A^3 + A^4$ etc. and their sisters are related to one another in the same way as the members of the second group V^1, V^2, V^3, V^4 and their sisters, according to the norms of cross-cousin marriage, A^1 is married to v^1 (a sister of V^1), A^2 is married to v^2, A^3 to v^3, A^4 to v^4, etc., and, conversely, V^1 is married to a^1, V^2 to a^2, V^3 to a^3, V^4 to a^4, etc., in each generation.

Now let us imagine the moment when society first became aware of the harm of cross marriage between cousins of the first
● [171] degree. From the details of Australian marriage, we know that the first step in this direction was the prohibition of cross marriage between cousins of the first degree and the establishing of cross marriage between cousins of the second degree. As a consequence of this, A^1 no longer marries v^1, but rather his cousin of the second degree, v^2, just as V^1 must now marry a^2, etc.

Marriages under this new arrangement present the following appearance: Division I $(A^1 + V^2) + (A^2 + V^1) + (A^3 + V^4) + (V^4 + a^3) + (V^3 + a^4) + (V^5 + a^6) + (V^6 + a^5)$ etc. /sic; see errata for original p. 230, line 18, on p. 739 of the foreign text/. Division II $(V^1 + a^2) + (V^2 + a^1) + (V^3 + a^4) + (V^4 + a^3) + (V^5 + a^6) + (V^6 + a^5)$ etc.

It is easy to see that under this arrangement each half of the society is in turn separated into two halves, into two matrimonially isolated groups, namely, the odd members of each division make up only one group, while the even members make up another, and in both divisions together four groups are formed.

/230 cont./

This four-group division is expressed in the following form:

Group I $(A^1 + v^2) + (A^3 + v^4) + (A^5 + v^6)$ and other odd members.

Group II $(A^2 + v^1) + (A^4 + v^3) + (A^6 + v^5)$ and other even members.

Group III $(V^1 + a^2) + (V^3 + a^4) + (V^5 + a^6)$ and other odd members.

Group IV $(V^2 + a^1) + (V^4 + a^3) + (V^6 + a^5)$ and other even members.

The first group is nebrakopravomochna (inmarriageable /given in English/) with IV, because in some cases, if families become joined in wedlock in /231/ consecutive order, for example $(A^1 + v^2)$ with $(V^2 + a^1)$, then the children of these families will be bilateral cousins, for their fathers are mutually married to each other's sisters; in other cases, for example in families $(A^1 + v^2)$ and $(V^4 + a^3)$, the children will be not cousins of the second degree, but cousins of the third or fourth degree, which is avoided by the Australian system. For the same reason groups II and III are unmarriageable, while groups I and III and groups II and IV are entirely marriageable in the consecutive order of the families. Thus, for example, in the families $(A^1 + v^2)$ from group I and $(V^1 + a^2)$ from III, as is seen from the indices, the father of the first family is a cousin of the first degree of the mother of the second family, and, conversely, the father of the second family is a cousin of the first degree of the mother of the first family; consequently, their children are second degree cousins on the side of both their fathers and their mothers, which is just what is necessary in Australian marriage.

But these groups in the Australian system could not develop into the present clan units, because each pair of marriageable groups remained marriageable for only one generation; consequently, the following generation, as the offspring of brother and sister, could not marry, being

/231 cont./

cross cousins of the first degree, and for this reason these groups could not become fixed into hereditary unions and therefore formed only class generations, the whole practical significance of which was in the mnemonic fixation of the marriage norms.

The role of the four-group division developed quite differently with the Gilyak type of marriage. Here, too, the initial motive was the realization of the harm of marriages between cousins of the first degree, but while in the Australian system the question was resolved by means of a transition to marriages between cousins of the second degree and the absolute prohibition on marriages between cousins of the first degree, with the preservation, however, of the exchange marriage, in the Gilyak marriage the change of norms was limited merely to a prohibition on marriages between bilateral cousins of the first degree, i.e., marriages where the spouses are cousins of the first degree both on the side of the father and on the side of the mother. Here marriage remained obligatory between cousins of the first degree, but only if they were unilateral, i.e., either on the side of the father or on the side of the mother; through this, mutual marriages between two families became absolutely forbidden: under no condition could two men marry each others' sisters; consequently, marriage even between bilateral cousins of the second degree became impossible.

Now let us see how this regulation led to the Gilyak type of phratry.

/232/ Let us recall again the phratry with two divisions, with marriage between cousins of the first degree. In order to facilitate orientation, we repeat the previously introduced diagram of the composition of each generation of spouses according to degrees of kinship, with cross marriage between cousins of the first degree.

/232 cont./

Division I: men $A^1 + A^2 + A^3 + A^4 \ldots$
their sisters $a^1 + a^2 + a^3 + a^4 \ldots$

Division II: men $V^1 + V^2 + V^3 + V^4 \ldots$
their sisters $v^1 + v^2 + v^3 + v^4 \ldots$

The same letters with identical indices designate a group of own brothers and sisters, while different indices designate the degree of cousin relationship. Persons of different letter-groups with identical indices, for example, A^1, a^1 and V^1, and v^1, or A^2, a^2 and V^2, v^2, are bilateral cousins of the first degree, and they usually join in cross-marriage, i.e., A^1 marries v^1 and V^1 marries a^1. Persons of different letter-groups with different indices are cousins of more remote degrees according to the larger index.

And now let us imagine the moment when the transition from bilateral cousin marriage to unilateral marriage began, and when the exchange of sisters, that is, cross-cousin marriage, became prohibited.

This transition could not be completed all at once. Among individuals of both divisions there were no unilateral cousins at all, because these were all products of cross-cousin marriage. But since marriages between cousins of the first degree became absolutely prohibited, it would doubtless have become necessary for the first time to arrange marriages between cousins of the next closest degrees. The most rational must be, as we have seen among the Australians, marriage between cousins of the second degree, but, in contrast to the Australian regime, where this form could be strictly put into practice in both divisions (1), here, as a

1. See the above table on p. 338.

consequence of the prohibition of the exchange of women, this form could be employed only in one division of society.

/233 cont./

On the other hand, by comparing the odd members of the first division with the odd members of the second division, we see that the men of the odd families of the first row and the women of the even families of the second row, for instance, the members $(A^1 + v^2)$ and $(V^2 + a^4)$, have identical indices, i.e., they are brothers and sisters, and consequently the sons of the second row marry the daughters of the first row. One can easily see that the same relationship will obtain between the even members of the first division and the other two rows of the second division.

Thus, as in Australian marriage, the society, matrimonially, is naturally broken up into four groups:

Division I: Group I: $(A^1 + v^2) + (A^3 + v^4) + (A^5 + v^6) + (A^7 + v^8)$ and other odd members.

Group II: $(A^2 + v^1) + (A^4 + v^3) + (A^6 + v^5) + (A^8 + v^7)$ and other odd members.

Division II: Group III: $(V^1 + a^2) + (V^3 + a^4) + (V^5 + a^7) + (V^7 + a^3)$ and other even members.

Group IV: $(V^2 + a^4) + (V^4 + a^2) + (V^6 + a^5) + (V^8 + a^6)$ and other even members.

The families of the first group take for their sons wives /234/ from the corresponding families of group IV, where the mothers of the first are the sisters of the fathers of the second, but the daughters of the first group enter the third group -- into families where their fathers' own sisters are. In exactly the same way the second group takes women from group IV and gives its women to group III. In a word, we have literally everything that we saw in the Gilyak marriage. Since exchange marriage between the two groups does not exist, and consequently in each following generation the descendants of the espoused clans will be unilateral cousins, marriages will without exception take place between the same groups and in the same order of families, so that, in contrast to the Australian groups, in this case these exogamous groups are converted into real clans. Thus we obtain the Gilyak four-clan phratry. In this phratry each clan is joined

/237 cont./

I shall proceed to the Tungus nationalities who are predominant on the Amur and spread out to the north up to the shores of the Bering Strait. The marriage norms of these nationalities have been studied by me principally among the most isolated tribe, namely, among the northern Orochi, and I had an opportunity to compare and supplement this information with the data collected among other peoples of the Amur region.

In spite of the fact that in their original mode of life as nomadic hunters and reindeer-breeders these nationalities differ considerably from the Gilyak, settled fishermen and dog-breeders, nevertheless we find a great deal essentially similar in their classificatory system and norms of marriage. As among the Gilyak, the clan is based on paternity /paterniteta/. In each generation of a given clan, the men and women are elder and younger brothers and sisters. The children of these classes are common sons and daughters and brothers and sisters to one another. The clansmen-"brothers," own and collateral, live in a group marriage with their wives, just as among the Gilyak of the eastern dialect, i.e., the younger with the wives of the elder. Here, as among the Gilyak, they prefer to take wives from a single clan, from which one may conclude that again, as among the Gilyak, that marriage from a single clan was once obligatory.

Group marriage also exists with the wife's sisters who are married to members of another clan, but, by analogy with the brothers' wives, among some tribes this marriage includes only the younger sisters of the wife. In two respects group marriage among the Tungus tribes is much broader than among the Gilyak. First of all, each man has a right not only to the wives of his elder brothers, but also to the wives of the younger brothers of his father, whom he therefore calls by the same class term as his elder brothers, namely, aki, a'ga. On the other hand, marriage to the daughters of the younger sisters is allowed and thus that category of nieces is drawn into the circle of the class of group wives. It is

/219 cont./

582 That is why up to the present time among a large number of
174 Dravidian tribes marriage is mandatory when a brother has a
171 daughter and his sister a son. That is why, as we saw among
121 the Australian tribes, with all the striving toward limiting cousin marriage, marriages more remote than cousins of the third degree are prohibited; consequently, marriages between cousins of the second degree are obligatory. That is why among the Mongols, whose favored marriages are the marriages between persons alien to each other, marriages between the children of a brother and sister are called "white sin," i.e., considered acceptable, while marriages even between the most remote members of one clan are "black
582 sin," i.e., completely unallowable. In order not to increase
174 the examples, we shall end with the Gilyak, among whom,
121 in spite of all the peripeteia of this small tribe, only the marriage between the son of a sister and the daughter of her brother is considered "pure marriage."

After these preliminary observations, we may proceed to an examination of the question as to what place the Gilyak norm of marriage occupies in the history of the evolution of marriage in general.

Cousin marriage, as we saw, owes its origin to the realization of the harm of marriage between close blood kinsmen. We saw as well that, in accordance with a whole series of motives -- conservatism, religious ideas connected with the cult of ancestors, and, finally, the striving for the peaceful organization of marriage -- primitive man did not proceed immediately from blood marriage between brother and sister to remote degrees of kinship or to marriage between persons alien by blood. In the great revolution in blood-kinship marriage the most scrupulous gradualness was observed. Thus, as we saw, even now among the Australian peoples the first form of exogamy took the form of obligatory marriage between the children of brother and sister. Since these marriages proceed consistently from generation to generation, society, with such an arrangement, is divided into two halves, which mutually, by generations, give each other their women.

/219 cont./

582 When adapted to individual families, this arrangement is
* 174 expressed in the fact that the son of a brother marries the
121 daughter of his sister, and, conversely, the son of a sister marries the daughter of her brother. The spouses are cousins of the first degree, while the wife of each man is, on the one hand, the daughter of the sister of his father, and, on the other hand, the daughter of the brother of his mother, because the fathers of the spouses married each other's sister.

Such was the first stage of the limitation on marriages between persons close by blood. Further limitation occurred
• [171] /220/ differently in different places. In Australia this limitation proceeded very early on the broadest course: from marriages between cousins of the first degree, they proceeded to marriages between cousins of the second degree, and the previous marriages between cousins of the first degree were prohibited.

Nothing in the social structure changed with this arrangement. Society remained divided as before into two halves which exchanged women, with the difference that a man married, not the daughter of the sister of his father, but the daughter of his cousin of the first degree, so that the progeny of a brother and sister could once again be joined in marriage only in the second generation. Spouses became further removed from one another by one generation, both on the side of the father and on the side of the mother. The principle of the exchange of women, which constituted the essence of cross-cousin marriage, was preserved inviolate, while the principle that marriage was obligatory between the children of a brother and sister was basically violated. It turned out to be impossible to preserve both principles in complete purity.

On analogous premises, the evolution proceeded differently among those peoples for whom marriage was built on the Gilyak principle. In the name of conservatism they considered it more important to preserve the second principle, sacrificing the first.

/220 cont./

582 The peoples of this group, for which the Gilyak serve
* 174 most striking representative, began to limit marriages betw
121 cousins of the first degree, considering it necessary to esta lish a more remote degree of kinship between spouses, but they did not wish to sacrifice that principle which seemed them most important, namely, the one according to whic each mother receives for her son the daughter of her broth They actually preserved this principle, but, in order to satisfy the necessity of lessening the closeness of kinship between spouses, they sacrificed the other principle of cro cousin marriage.

As we know, the son of a woman receives the daughte of her brother, but the reverse, i.e., the marriage of the son of a brother and the daughter of his sister, is not allow As a result the limitation on the closeness of kinship obtai spouses are cousins of the first degree only on one side -- the side of the mother of the husband, but not on the side of the mother of the wife, while previously, with cross-cousin marriage, they were cousins of the first degree both on the side of the mothers and on the side of the fathers of both spouses. But at the same time there is preserved here the old basic principle -- marriage to the daughter of the brother of the mother, and the spouses remained cousins of the first degree -- true, on one side only.

/221/ This departure from the peoples of the Australia type in the form of the limitation on marriage between cousins of the first degree brought about a fundamental cha in the organization of society. It brought about the transit from a bipartite division of society with its classes to the organization of a pure clan, and in particular to the four-c phratry that we saw among the Gilyak.

• [171] With the Australian system of limitations on marriages within close degrees of kinship, no matter how far these limitations went (at the present time they do not go further than cousins of the second degree), society remains irrevoc divided from the standpoint of marriage into two exogamou

/221 cont./

582 groups, joined in the constant mutual exchange of women.
* 174 In fact, each division is a real clan, because marriages are
121 prohibited within the division. True, along with these two
● 171 divisions a complex system of marriage classes is established, but these latter change nothing, for no matter what class a man belongs to, he continues to remain in his division, while the classes do not change the position of the person in the clan, but are only mnemonic titles personally limiting a man (but not his offspring) in the choice of women of a particular degree of relationship: in the four-class system -- only cousins of the first degree; in the eight-class system, cousins of the second degree. In reality, classes are not even obligatory appurtenances for the Australian dual division. Among the Dieri tribe, for example, there exists the same prohibition with respect to marriages between cousins of the first degree as among the Arunta, but, while among the latter eight classes have been established as a mnemonic device, among the former this limitation has not been reflected in an extensive class division.

Thus it is clear that in the Australian system, by virtue of its having preserved the principle of the exchange of women, cross-cousin marriage demands only a division into two clans. The society is a two-clan phratry.

582 The Gilyak system was unable to remain in this two-
* 174 clan phratry. From the moment when cross-cousin mar-
121 riages, i.e., exchange marriages between the children of brother and sister, were prohibited, the two-clan phratry was insufficient: one clan took women from a second clan, but the latter was obliged to seek women for itself elsewhere, while, on the other hand, marriages outside of a given ethnic group were not allowed (as we see now in Australia). It remained to transform the two-clan phratry into a multiclan phratry.

/222/

582 This type of one-sided cousin marriage, so simply ex-
* 174 plained in the light of the evolution of more ancient forms
114 of cross-cousin marriage, has attracted no attention at all from the investigators. Many scientists have even regarded this institution with disbelief, considering it implausible. Thus, almost at the same time as my publication on this
● [171] institution among the Gilyak (in 1901), the noted scientist Kohler in his article, "Das Recht der Hottentots /The Law of the Hottentot/" (1), ascertaining, in the words of his

[113]

1. In Zeitschrift für vergleichende Rechtswissenschaft, B. XVI, pp. 341-342.

correspondent, the existence of just such an institution among that tribe, regards this report with distrust. The cause of this distrust is quite simple. Not knowing the genesis of this institution and the place occupied by it in the evolution of cousin marriage, and having no other examples of this institution besides its remnants in the marriage prohibitions, it was difficult to comprehend the cause of the one-sided prohibition by which the son of a sister can marry the daughter of a brother, but the daughter of a sister may not marry the son of her brother, although the degree of closeness of blood kinship in both cases is identical; and therefore the one-sidedness of the prohibition was viewed rather as an anomaly than as a normal sign of a living institution.

582 Due to such disbelief on the part of investigators, this
* 174 institution is completely disregarded in treatises on human
171 marriage and has remained completely misunderstood, while
[114] ethnographic literature gives quite a bit of information on its broad distribution among the most diverse peoples. Especially numerous traces of it are found in Indonesia and among the Dravidian peoples of India, among whom Morgan found the most clearly expressed form of the Turanian system, in which group marriage was preserved. As we just saw,

Aleut NAG

A 595 835 114 171 [113]

Erman (3) relates the same, but he does

/244 cont./

3. A. Erman, "Ethnographische Wahrnehmungen /Ethnographic Observations/," Zeitschr. für Ethnologie, Vol. III, 1871, pp. 162-163, Berlin.

not indicate either the kinship relations between the common husbands or their relationship in the case of the marriage of the second participant. But this in no way allows us to conclude that marriage among the Aleut is confined to the details related above. As we have already stated earlier, Mamio Rinso /Rinzô Mamiya/ described Gilyak marriage in the same terms as Veniaminov used to describe that of the Aleut, whereas we have seen that the Gilyak have the typical group marriage. The description of group marriage as given by Veniaminov and Rinso is quite natural for non-specialist observers, for with group marriage one is most easily struck by that case in which the second husband is not individually married himself, as it is described in Gilyak fairy tales: "two brothers maintained one wife." A non-specialist, however, generally leaves unnoticed group marriages which include several married men. One can therefore say with a great degree of assurance -- especially if one takes into consideration data about the preferred marriage to cousins -- that the polyandry of the Aleut that Veniaminov tells us about was in reality a form of group marriage. In confirmation of my hypothesis I shall permit myself to cite the following example from the life of the Toda, a tribe that lives in the Nilgiri Hills.

G [835] [595] [171]

The old writer Marshall describes marriage among the Toda in the following way (4):

4. W. E. Marshall, A phrenologist among the Todas, London, 1873, p. 213.

"If a husband has brothers or very close kinsmen who all live together, each one of them may, with the consent

Aleut NAG

A 595 171

/245 cont./

The peculiarities of the Aleut marriage norms did not remain isolated on the Aleutian Islands. On the northwestern shore of the American continent, right up to the Columbia River itself, which was regarded by Morgan as the point of departure of the Ganowanian system, observers note them in terms almost analogous to those used by Veniaminov. We find them among the Eskimo tribe of the Koniag, the inhabitants of Kodiak Island, about whom Davydov writes: "Some women have two husbands each: the first is the actual husband, who selects the other one with the consent of the wife. This one at the same time becomes a servant, i.e., he carries firewood and does a number of other chores. He can sleep with the wife only in the absence of her actual husband, and upon his return he is deprived of this right. /246/ The Russians call such husbands partners" (1). This

A [113]

1. Davydov, Dvukratnoe puteshestvie v Ameriku ofitserov Khvostova i Davydova /Two Voyages to America by the Officers Khvostov and Davydov/, Part II, pp. 50-51.

A G 595 171

This description, which almost seems to have been copied from Mamio Rinso and Veniaminov and travelers to Tibet, fails like the others to note the kinship relations between the spouses, but, on the other hand, there is the valuable report of the right of the second husband to exercise his marital rights only in the absence of the first husband, as among the Gilyak, and the obvious subservient position of this second husband. This subservient position is justly noted and strikes the eye also among the Gilyak, but it obtains, not by virtue of a marital agreement, but by virtue of the fact that the elder brother always plays the role of the head of the house and besides because brothers are forbidden to talk to one another, the relationship between the elder and the younger may create the impression of the relationship between master and worker.

A G [592] [593]

/246 cont./

Among the Tlingit (the Kolosh) the institution is described in more definite terms by Veniaminov, who plainly says that "the second husband must always be either a brother or a very close kinsman" (2). Similar phenomena have been ob-

2. Tvoreniia Innokentiia /The Works of Innokentii/, Book 3, p. 619.

served among the Central Eskimo by Ross. We shall not, however, deal with America, a country having the Ganowanian system, which is so close to the Turanian system. Our aim was to fill the hiatus which separates the native land of the Turanian system from the Ganowanian. After the survey we have made, we have the right to say that this hiatus has been filled.

XI.

Sexual Life

The norms of group marriage, presenting the Gilyak with such wide freedom of sexual intercourse, are in themselves a propitious factor for the inordinate development of sexual sensualism. The ordinary mode of life of the Gilyak, in turn, could only aid in the extraordinary development of this factor. The principal Gilyak occupation -- fishing -- leaves him too much leisure. On the other hand, the only pursuit which could provide a significant outlet for the emotional vital energy, namely, hunting, plays a comparatively insignificant role in the life of the Gilyak. The Gilyak does not undertake distant hunting expeditions. The seasonal hunting for sables, squirrels, foxes, and deer, and even the sporadic excursions after the local, rather /247/ timid bear, do not present any special dangers; the sport of hunting, therefore, is very weakly developed.

/247 cont./

amatory experience and art. The Gilyak woman, it is true, conducts herself in an extremely inaccessible manner. Upon the appearance of a strange man, she lowers her eyes, sits all the time with her brows knit, and hardly answers the questions of the stranger. But this is only external inaccessibility, concealing an inner lasciviousness. Unnoticed by those about her, she /248/ casts oblique, curious glances at the new man at a time when he can catch them. And if the guest has made a proper impression, the matter is consummated very quickly. The man follows her to the well, or to the berry patch, or simply catches her in the entrance hall, and then, after a short symbolic dialogue, such as, "Let's smoke together a little (i.e., drawing in turn at the same pipe)," or "let's hear the news," the matter is settled very simply. Sometimes the guest simply remains in the yurt of his beloved and at night moves over to her couch, or vice versa. Sometimes the business is consummated without words, limiting itself to a mute symbolism, touching the breasts, seizing the leg, and if this symbolism does not encounter any rebuff, the consent of the woman is secured. It is curious that the symbolism of amatory proposals recalls the rites of the wedding ceremonies. The proposal to smoke together is a joking imitation of the rite of conferratio /confarreatio/. The snatching of the leg or the breast, although it does not figure at the present time in the wedding ceremonies of the Gilyak, is still to be found among certain peoples of North America, for example among the Lillooet Indians, according to the testimony of Boas and Teit.

Such license in alien villages is practiced not only by the unmarried youth, but by the married, middle-aged Gilyak as well. On one of my first trips there was among my companions an old respectable Gilyak, Gibel'ka, who enjoyed great fame throughout all of Sakhalin by reason of his wealth and outstanding intellect. When we stopped in the settlements, he spoke breathlessly on a par with his young companions about the pretty women of the settlement, and once he became so carried away that he began to ask my

/263 cont./

therefore, the meaning of it is this, that 1) a man take woman into his possession as his lawful wife; 2) he buy wife by means of a payment of bride price; and 3) in b cases in the sense of the Roman term -- uxorem ducere the abducting of a woman into his house, as is usually ticed at the present time.

At first glance the origin of the feminine term javi which in this form is only a marriage term for designati woman's getting married, is not as clear. Its original ing, however, is not difficult to make out from forms are etymologically close to it. First of all we have the closest to it, the reflexive verb p'àvind = pi + avind, s fying -- "to support oneself," "to nourish oneself," and finally, "to live," in the economic sense. Here is a ch teristic example: n'ig:yvyn' n'enyn' pyr:k pavrà -- "a himself alone (i.e., singly) lived" (in the economic se If several persons are concerned, this verb takes the me ing of "to live together," i.e., to nourish themselves c jointly, to have a common economy. From this comes adverb p'avind -- together. Further, we have the deri form of the active voice àjvund -- to support someone one's own expense, to take someone as one's charge, t to nourish -- in the form of the middle voice it signifie nourish oneself, to graze (jaivun ekhan -- a grazing co Finally, javind, javend means also "to warm" someone fire), to shelter.

Thus, the term javind, used by women with respec a man and at the present time signifying to get married must originally have meant literally "to take a man at own expense," "to receive into one's house." If this etymology is true, which one could hardly doubt, then follows from this that originally among the Gilyak the of maternality /materniteta/ prevailed, as it does at t present time among their neighbors, the Ainu, where t husband as a common rule moved into the house of his just as the masculine term g:end -- "to take for onese bears witness to the contemporary form of paternity

/383 cont./

[191] ^yenesitnta/, with the wife moving into the house of her husband. At the present time the original meaning has disappeared from the consciousness of the people to such a degree that often when the expression "to get married" was asked to the verb ^ayind the verb vind, ^avin vind, which would mean literally, "to take a man and support him," but this is an obvious contradictio in adjecto, for it signifies moving into the husband's house and, /384/ consequently, being supported by him. A linguistic remnant of the old form of marriage is shown in the fact that in the old language, as far as the texts indicate, all the terms of joint marital life are expressed by means of forms derived from ^ayind. The reflexive verb ^vayind means -- to live in marriage with someone, the joint marrying of two persons, or, for example, ^ri^ ^ayind^ ^ayind^ ^ayind, i.e., "father ordered us to get married," literally, "father ordered us to support each other." Further, the active verb ^ayind is used in the sense of to be married, to have a wife, for example, ^ayind^ ^yan ^ayind ^ayind^ ^ayind^ -- "two brothers lived in marriage with one wife," literally -- "they supported one wife," etc.

In contemporary life there are likewise preserved several remnants of the former matriarchy. Elopement testimony of this is found in the contemporary formula of common marriage law of which we spoke earlier, namely -^ymgin ^ayind^ ^ayind^ ^ayind^ -- "one must feed the son-in-law," although, according to the general rule, the son-in-law takes his wife to his home and lives apart from the father-in-law.

Clearly, such a formula could only arise in a system where the son-in-law either moved into the wife's house for good, or, as among the Aino of today, he regularly came to live at her house for a certain length of time, and it goes without saying that the wife's family was obliged to feed the son-in-law on the same bases as those on which at the present time the husband's family is obligated to feed his wife.

/384 cont./

This formula has preserved its vital significance even today. One is supposed to send regularly to the son-in-law gifts of game and a share of every catch. Moreover, the young men of the category ^ymgi during the course of several months out of the year are unfailing guests in the settlement of their father-in-law and are indispensable participants in the more important hunting expeditions.

In particular, this relation is clearly attested to at the time of distant sea excursions for the hunting of sea animals. The master of the boat -- he is the head of the expedition -- at such cases especially summons his ^ymgi to take part in the hunt (1).

(1) 1. We find an analogous phenomenon among the Haida Indians, a purely maternal tribe. Here, so reports Swanton (Haida, p. 68), when a man undertakes a military campaign, he calls together his tribesmen who are his potential or final son-in-law.

All this time the ^ymgi are not only fed for nothing, but when they carry away with them a small share of the catch and various /385/ gifts besides. One's relations with the young men are often much more tender than with one's own children. And this is entirely understandable, for a man's ^ymgi are the sons of his sisters or daughters, his tribesman, who under a maternal system must live with him, while his own sons and grandsons will move to the settlement of their wives and will be completely estranged from him.

Taking into the "nourishment" of the tribesman through the female line, however, is a customary intention in matriarchy. Among several peoples, as, for example, among the Polynesians, the right of tribesmen to the fruits of their uncle on the mother's side has taken on completely improbable forms, where a tribesman has the right to switch with impunity the possessions of his uncle. This right is

/385 cont./

preserved in the form of remnants even among peoples who by now have shifted to patemity, for example, the peoples of the Caucasus, where a tribesman has the right to steal his uncle's horse, if he refuses to give it as a gift. Among the Altaians the saying that "a tribesman is worse than seven wolves" has been preserved to this day.

Moreover, the role of the brother in giving his sister in marriage is quite characteristic. In many cases, it is not the father, but the brother who plays the main role in this affair. An element to the marriage deposit is also, and the bride price is handed over to him.

Now for other matriarchal relative traces which may be considered remnants of maternality have been preserved in the language and customs. Thus, if a Gilyak wishes to say that a man is married, that he has a wife at home, he says ^n^-umgavo ^vrp^, literally "I have a wife's village" (^n^ -- I, umgar -- wife's, ^vo -- village, ^vra -- there is), an expression completely corresponding to the present-day way of life of the Ainu, among whom to this day maternality has been preserved, and when husband and wife live in different settlements, and the former shows up to live with her for several months, and then he returns to his own settlement, so that a man has, besides his own native settlement, still another settlement with his wife and children.

Another example: the term for designating a person's origin is the expression ^pandov^, literally "root of birth." This term indicates not the clan of a man, as would naturally be expected under the contemporary agnatic system, nor the settlement in which he was born, but the place of his mother's clan. It is interesting to note in this case the reverence with which the Gilyak regards the homeland of not only his mother, but also her brothers and sisters. No matter how distant such a settlement might be, every man tries to find an occasion to visit, and more than once my /386/ Gilyak companions during the time of my travels amazed me by the reverence and

/386 cont./

To a certain degree one may admit the influence on the matriarchal psychology of the Gilyak from the Ainu, who, judging from legends, were constantly infiltrating the Gilyak settlements in the form of individual immigrants, and they exerted their influence on it in many respects, as we shall see particularly clearly in our examination of religious institutions. But this influence in the sphere of marriage was in general quite limited, for it is impossible to find a similarity between the two systems in their kinship terms or their norms of marriage.

/387/

XIV.

Forms of Concluding Marriage

We have already had occasion to introduce in another place, as a clear illustration of the former obligation to marry women of the clan of the mother, from the ^ad^ga^ the episode from the Gilyak poem, when the Gilyak ^Ytlng^ from a wound inflicted on him by a man who has the right to his daughter, leaves his home-land and says to the people who are present: "Although this man has slain me, give him my daughter; do not fail to carry out my will for any reason." The epic poem at a clearly portrays for us the form of concluding marriage, corresponding completely to the norms of obligatory marriage.

Once a marriage is obligatory, there can be no question of complicated procedures in concluding the marriage, such as betrothal and negotiations concerning property obligations, and, of course, there can be no question of payment for the bride. There can be no question of religious rites connected with a move into an alien clan. The bride and the groom simply take to each other on their personal and on the maternal side. Therefore, in all the works of the epos

/387 cont./

origin from a common mother). The favored and most frequent form of such an orthodox marriage is a marriage between the son of a brother and the daughter of a sister /ibi/. The bride and the groom, who have no "negotiations" take place /389/ between the mothers soon after the birth of the children, and from the agreement a public ceremony is organized, in which, besides the father, the grandfathers of the children who are being married take part. The father of the groom brings a male dog, and the mother gives two threads out the fur of this dog and a nettle, with which the bind the hand of the little girl, while with the other the father of the groom ties the son's little hand (1). All this is

(1) 1. It is curious that among the Gilyak there is no ceremony of binding the marriage of infants, which among them is expressed by the giving of a blanket instead of a belt. Has been the technical designation, "nakladyanie peneyvaldo" (Eng). "putting the string on". Nevertheless, the ceremony, among the Gilyak, was formerly carried out by means of a binding up with string or thread, just as there is in such cases up to the present day among the Tamil in India.

performed in the presence of the elder members of the clan, and the marriage is considered inviolable.

The idea of the orthodox marriage up to the present is thought of not merely as being desirable, but as a right of the Gilyak. Marriages of this type are still quite widely arranged on Sakhalin (although that clan may have only recently attained such a position by virtue of the fact that some surrounds took his wife from that clan), negotiations are usually begun with words like this: "You are my ^ikhmali^, let

/388 cont./

The bride is customarily represented by the father and mother, but for the final decision the attendance of representatives of the clan is required. The latter, both those of the bride and of the groom, have no special negotiations, but their participation is rather passive. In resolving the question, aside from the consent of the father and mother, the wishes of the brothers play a part. Frequently the wishes of the latter are decisive. Here is a remnant of maternality, in the epos the role of the brothers stands out in sharp relief. In the epos there is a which wrote down, a father, when he in his terms him of his intention to give his sister in marriage, replies: "Do thou but think upon it only after healing the wounds of your younger brothers!" In Gilyak law also, that the role of the mother, despite the fact that women marriage is not participate in community affairs, is so smaller in matriarchal affairs than that of the father. This, however, is the case only on Sakhalin; on the Amur the wishes of the bride are not considered, although the negotiations are conducted in the presence of the maiden, who sits identity in her accustomed place among the trusts with a whole number of the people, in contrast to the bride. Ordinarily her role begins when the matter has already been decided, and it only remains for her to submit. And if she does not have a lover to whom she is betrothed, and if the bridegroom is more or less attractive in appearance, she ordinarily comes off the laconic phrase: "Since you with this, it is for me to contradict" But it may happen that the maiden, upon the appearance of the matchmakers with the bridegroom, immediately runs away and does not return until the departure of the matchmakers, and then the matter (marriage) ends in naught (1). The bride, however, appears on the scene at the

(1) 1. It is interesting to note that among the Negiks, whose customs, as a result of extreme matriarchal ties, are so rule similar to those of the Gilyak, considerable differences were noticed by me.

/389 cont./

The bride is not present during the betrothal, the mother has the wishes of the groom, interest, and the kinsmen play no role.

last moment, when the bridegroom arrives to take her home with him. The disregarding of wishes of the daughter is not at all, I believe, the result of the newer stage of marriage accompanied by bride price, where the parents have no motives of self-interest in the choosing of a bridegroom; it is rather a remnant of matriarchal relations, where from her very childhood a girl was destined by obligation for one definite person or limited group of persons, and there could be no question of her freedom of choice, all the more because the marriages were actually concluded soon after birth.

The procedure of betrothal. In the procedure of betrothal among the Gilyaks we find features which are repeated with remarkable similarity among the most diverse peoples. The procedure of betrothal is a true diplomatic war surrounded by a whole number of ceremonies and formalities. In some cases the matter involves a very wealthy and renowned girl, the matchmakers try to catch the other side unawares and at first conceal the object of their coming. Arriving at a house, they say that they are passing by. Casually they bring out vodka from their travel provisions. The unsuspecting hosts readily accept the tea and, when they have drunk their fill of vodka, the matchmakers begin to recall that they are old friends of the host, that he has never refused their requests, and they hope that in the future they shall not meet with refusals. The host, suspecting nothing, promises zealously to assist them with everything at his disposal. And here they take him at his word and come to the point: "Your daughter is no longer decline, for he has given his word. In order that the matter may not repudiate his promise, the matchmakers have taken timely, precautionary measures to invite witnesses.

/390 cont./

him curtly: "That is not your business. We will take care of that. If she is bad, we will teach her!" This unconditional approval of the bride is all the more clear, for that he will know how to set the most advantageous conditions, to which the matchmakers are compelled to agree (1).

(1) 1. This is exactly the way the Gilyak explain the motives for the harsh, depreciatory opinions of his daughter. I think, therefore, that Kohler's was wrong in explaining this custom among the Koryak as a preventive against possible future complaints (The Koryak, 73b).

/391/ But it may happen that the father will not give any sign that he is gratified by the attitude of the matchmakers towards the inadequacies of his daughter. When all the objections are exhausted, he suddenly fires the phrase which the Gilyak commonly utters when he wishes to cut short a disagreeable conversation: "I know nothing," he says through the pipe clenched in his teeth. And after a short pause he angrily declares: "Ask my wife what she wants, it is not my business." Then they begin to regale the mother of the bride, who, after long ceremony, in turn finishes with the laconic phrase: "Why do you ask me? Let the men decide!" Finally, the negotiations move to the business basis of the bride price and dowry. In this connection the customs are different on Sakhalin and the Amur. On the Amur, where the people are more mercantile, the bride's side usually enumerates down to the slightest detail the objects of the bride price.

On Sakhalin they are more modest; at first they name only two or three objects, the most valuable and rare of the expected bride price, and after that they only haggle over secondary valuables. But in both places the procedure of the negotiations is carried on in an elevated atmosphere.

/391 cont./

years regularly rent him tiles, tobacco, and tea, and divided with him that which he obtained in the way of objects of consumption. Besides this, he had given a large dowry of clothing, furs, and ornaments.

(1) 1. It is exactly the way the Gilyak explain the motives for the harsh, depreciatory opinions of his daughter. I think, therefore, that Kohler's was wrong in explaining this custom among the Koryak as a preventive against possible future complaints (The Koryak, 73b).

/392/ But it may happen that the father will not give any sign that he is gratified by the attitude of the matchmakers towards the inadequacies of his daughter. /392 cont./

(1) 1. Incidentally, among the Tamil people and the Nahind Indian, the proper marriage actually has the character of buying-selling, giving presents to the groom is just as obligatory as it is among the Gilyaks.

price is not at all a replacement for marriage by abduction, as has been asserted up to now by many and considered to be a systematic error very recently. In the legal consciousness of the Gilyak, marriage accompanied by bride price is not an act of buying and selling, either; evidence for /393/ this is the fact that it is prohibited and not allowed to buy women for wives.

It remains for us to answer the question, why it came to bride price in the orthodox marriage? The fact is that in that law are marriages are concluded between persons not bound by common blood both on the side of the father and on the side of the mother; the marriage is sanctioned both socially and religiously. But when marriages are concluded between clan clans, the exchange of gifts plays a role both magical (a mutual guarantee

/719 cont./ **Ainu with the distribution of the bride**

within the family, the relationship of a (singularly exceptional character are preserved, clearly testifying to the old orthodox form of marriage. Namely, part of the bride price is given to the "old animals," i.e., to the shamans with whom a given family has concluded orthodox matrimonial unions. Thus, for example, if in the course of several generations family A has taken wives from family B, i.e., the sons of sisters in each generation have married the daughters of their own brothers, then every time the family gives in marriage any one of its women, who, at we see, are forbidden to the men of family B by virtue of the unilaterality of the custom marriage, and receives bride price, then a part of it is given to the eldest one in family B, usually to the header of the mother of the woman who has been given in marriage, rarely to the father of the latter, if he is alive. It is custom that the family of the groom presents this gift to the old shaman as part of the bride price. This custom is practiced in a still more striking form. They give their infant sister to the brother of their mother, or their daughter to the brother of their wife, in order that these persons may afterwards receive the bride price for them, but participation in the distribution of the latter may not be demanded. "It is better to propose one's daughter or sister to the old shaman, mother," the Gilyak usually add when they are talking about this custom, "than to wait for a request about the matter." And this is not all. If a medical man, a brother and a nephew has several sisters, then one /of the sisters/ is supposed to be given to each /of the brothers/. What is the explanation of this strange custom? We have a completely analogous case among the Tamil, where the mother's brother also receives a part of the bride price when the woman is given /739/ in marriage. But among the Tamil cousin marriage is bilateral, so that if a man's sister does not give her daughter in marriage to the son of her brother, she thereby breaks the law; but among the Gilyak cousin marriage is unilateral, and the son of the brother of the mother-in-law daughter of this last is forbidden. But why then does the mother's brother have such preference? Here a double explanation is possible:

/720 cont./ **Ainu with the distribution of the bride**

It is noteworthy that such a ceremony of "stamping the bottle" takes place among the Tungus tribe of the "Gilyak", who since olden times have concluded marriages with the Gilyak, from whom they have undoubtedly borrowed the custom.

A year after the wedding the newlyweds, usually already with a child, come to stay a little while with the wife's family, and when they again depart they once more go through the ceremony of "stamping the bottle," only this time, instead of bottles, a stick (*kyr*) -- about an arshin in length with a human chibbalugin.

If the matter reaches the point of breaking the stick, then they pay more -- double. Both big and little amenities in the language of the Gilyak-Tungus tribe are: Marriage, Kinship, Women, Childbirth, and Children. A maiden who has reached sexual maturity makes two breasts. Women pierce both ears in order to put in earrings (*pur-kyr*); formerly men also pierced their ears. A wife who is a minor can be slept with only after she begins to menstruate. During menstruation the woman puts on her oldest clothes and does not sleep with her husband. Women wash themselves, but not with hot water, for otherwise the *tagurman* (the matrons of the tribe) takes offense.

Among the Gilyak (Orok) a man who has two wives accommodates a guest under one blanket.

A pregnant woman must not look at the Amur when it begins to break up; in order not to slow up the coming of the river. They give birth in the balagan (midwife -- *langsy-mam*). In winter the mother spends one and a half days in it, in summer -- three days.

One must not cry out during delivery -- a sin. The husband at this time does not go anywhere. If a child has died during birth, the woman must not travel on the river or sea for a whole year -- there would not be any fish. For a month before childbirth, it is not permissible to bind anything tightly or to drive in a nail; it is also permissible to repair anything for an alien. During difficult deliveries they open up boxes, tear off patches, and unscrew their trifles. The newborn baby is washed with cold water. The midwife is not paid. Until the umbilical break, she

/804 cont./

for your master?" And thus /805/ they go around the entire village, meanwhile pulling on the tendon. Then the thief begins to confess, and the master forgives. A shout goes up: it happens that the thief dies from it.

As oath is taken also in controversial matters. Before the court, in a hearing where the plaintiff-side sits, nothing is allowed to be boiled; they eat raw yukola.

A stick (*kyr*) -- about an arshin in length with a human chibbalugin.

/809 cont./ baptism exclusively for the purpose of obtaining a certificate of legal marriage in such and such a Gilyak woman, certificates which give the right and opportunity to secure Government assistance for the return of the wife in case of her abduction. I have, moreover, met a great number of Russian Gilyaks from the mainland, and from my conversations with them I have been convinced that they do not have the slightest idea of even the ritual side of Christianity, let alone its substance. Nevertheless, the Gilyak is capable of grasping the idea of the one God with His attributes as taught by the Christian religion. I could say a great many things about the methods used on the Amur to convert the natives to Christianity, but this /370/ is not the appropriate place for it. As for the Sakhalin Gilyak, an especially talented missionary could perhaps make some progress; many generations will have to pass, however, before the Gilyak breaks his ties with the gods which provide him with fish, seals, and sable. The baptized Goldi and the Amur Orok are now quite indifferent in their attitude toward religion in general, but they continue to make sacrificial offerings as before. It must further be added that the Sakhalin Gilyak have no idols.

IV.

Juridical Life

/810 Marriage. Despite all the remains and remnants of the old order of life of which I have spoken, the modern marriage of the Gilyak, from a juridical point of view, has a completely individualistic form. One cannot call it, in the strict sense of the word, either monogamy or polygamy, but one cannot call it communal, either. In the eyes of the world every married woman is the wife of a given individual, and her children are the children of that individual. Violations of fidelity on the part of the wife bring bloody retribution from the husband. The Gilyak who catches his wife in flagrante delicto with a stranger kills the seducer and beats

/731 cont./

II.

Family-Clan Relations

When one observes the family among the Gilyak, one at first does not notice anything special about it. As among many of our other natives, the Gilyak buys one or two, formerly three, wives, who are hierarchically recognized wives, as are his children who work with him, are supported by him, and to whom his property passes after his death. The marital fidelity of a wife is guarded with an armed hand, as we shall see below. In a word, the form of marriage is, by all appearances, completely individual /individual marriage as opposed to group marriage/. But on closer acquaintance with the family relations of the Gilyak /732/ one encounters a whole series of phenomena which are at variance with this form of marriage. First of all, it becomes apparent that the wives are not all on the same footing; one wife is the actually recognized (own) father, but also all the brothers of his father, not only own, i.e., of the first degree of kinship, but also of all the remaining degrees, and the brothers of the brothers of his father he calls mothers (*yma*), like his own mother. In the same way, a Gilyak calls all the sisters of his mother by the name of mother (*yma*), and their husbands father (*yik*). The children of brother, as well as the children of sisters, of all degrees of kinship call one another "*nevi*" (= brother and also correspondes to the German word "*Geschwister*" = brother and sister). And, what is still more remarkable, just as the husbands of sisters and the wives of brothers in the Punalua family called one another *punalua* (companion, one's half, comrade, friend) -- the word which gave the name to the institution itself, so among the Gilyak these categories of people call one another "*nayth*" (the word signifying literally what *punalua* means among the inhabitants of the Sandwich Islands). Such, down to the smallest detail, is the astounding similarity of primitive institutions of peoples living in different parts of the world and separated by oceans.

/731 cont./ but among them it has long since ceased to correspond to reality; among the Gilyak, however, although the terminology does not fully correspond to reality, it does so all but fully. Even now, every Gilyak has married three wives, who considered a sin to the wives of his brothers of all degrees of kinship and to all the sisters of his wife. Only the elder brother is deprived of this right with regard to the wives of his younger brothers. This limitation is of recent origin, and its very existence seems to emphasize the legality of the collective marital rights of the younger brothers to the wives of their elder brothers and to all the sisters of their wives. Even at the present time these rights are not always exercised by the Gilyak, and in many cases it is not without displeasure and even forcible protests that the interested parties look upon the realization of these rights, as we shall eventually see; but legally, so to speak, they exist, the realization of these rights is not contemplated, and, if it does occur, it is only when it even carried on openly with the consent of the brothers and of the husbands of the wife's sisters. Thus, the contemporary individual form of marriage is a new phenomenon among the Gilyak, and the powerful remnants of the old /733/ order of clan marriage preserved up to the present make it similar to the famous so-called Punalua family," which still existed in the first half of the century on the Sandwich Islands (Hawaii) where, as among the Gilyak, such mutual rights to the wives of brothers and to the wives of sisters were observed without jealousy. And, what is still more remarkable, just as the husbands of sisters and the wives of brothers in the Punalua family called one another *punalua* (companion, one's half, comrade, friend) -- the word which gave the name to the institution itself, so among the Gilyak these categories of people call one another "*nayth*" (the word signifying literally what *punalua* means among the inhabitants of the Sandwich Islands). Such, down to the smallest detail, is the astounding similarity of primitive institutions of peoples living in different parts of the world and separated by oceans.

Section 3 "Ethnographie, auf Grund des von Dr. Karl von Scherzer gesammelt. Materials bearb. von Friedrich Müller /Ethnography, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller/," Vienna, 1868, p. 158. In the last-named work the heating by pipes is called "Russian type," though this is by no means a national Russian arangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur peoples.

352 354 517 171 513 [197]

Finally, the fact that the heated sleeping benches are used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-tschen, the Chinese always lie crosswise on the kang (1), with their feet

1. Cf. Wassilijef's translation of U-tschen's writing, op. cit., p. 98.

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleeps in the opposite position, with the head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "uftsch, uftsch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason why the Chinese always assume this position on the kang is said to be that the part of the sleeping bench that joins the wall is especially warm because of the pipe

[123] [984] [997]

G 359 354 517 516 ●171 [136] G [984] [998]

/353 cont./
running under it and therefore is better suited for the feet than for the head. There is another justification for this custom in the winter houses of the Amur peoples. If one lies with his head against the wall, he exposes himself so that the rats, which are exceedingly abundant in these houses and which always run along the walls, would be constantly running over the face. This alone, however, would not make the Gilyak refuse to allow even a stranger to assume this position on their kang, if superstition did not demand strict observance of the traditional custom, and afraid of any violation of it, no matter by whom, as misfortune for all the inhabitants of the house.

G 342 171

Due to the lack of historical data, it cannot be determined when the Chinese winter-yurt reached the Gilyak on the Amur and, gradually spreading downstream, supplanting the earth yurt, reached the Amur-Liman, the coast of the Sea of

G [195]

Okhotsk, and the Liman coast of Sakhalin. In the reports of Pojarkof and Nagiba, who spent the winter among the Gilyak at the mouth of the Amur and along the Sea of Okhotsk in 1644-45 and 1652 (3), there are, unfortunately, no hints which would

3. See pp. 216, 219 ff. above.

K 342 197 195

permit conclusions about the nature of the Gilyak houses at that time. In the case of another Paleo-Asiatic people, the Kamchadal, we see the original earth-yurt completely disappear before an imported, foreign type of house construction within the short space of about 50 years. At the time of Krascheninnikof and Steller (in the forties of the previous century), all the Kamchadal still lived in earth yurts of the type described above. Even in 1779, when Clerke, the successor of Cook on the latter's third voyage, visited Kamchatka, at least the south of the peninsula, between Peter-and-Paul's Harbor and Bolscherezk (4).

343 [251]

/358 cont./ For the storing of the supplies prepared in summer, there are special storehouses, which, however, since consumption takes place in winter, are always located beside the winter dwellings, and the supplies are carried to them as they accumulate.

The storehouses of the Gilyak (njö, in the Tro and Tymy dialect njo) /illustration appears here/ appear at first glance to be very similar to the summer dwellings in that, like them, they rest on piles (on which the above-mentioned pieces of birch bark may not be absent) (2) and have the same kind of walls and roofs, indeed,

[113] ●[171]

2. Pallas (Reise durch versch. Prov. des Russ. Reiches, Vol. III, p. 482) mentions that the Cheremis along the Kama and Wjatka, like most of the Kasan Tatars, put their sheaves of stored grain in round, pointed heaps above four piles connected by beams and covered

merely an approximately square hole which is just big enough so that a person can go through it in a stooped position, and whose cover is a board that fits it exactly, before which a crosspiece of wood is advanced instead of a bolt (3). The interior of the store-

3. An illustration of the front side of such a storehouse, among other things, will be found below on a plate showing a funeral procession of the Gilyak.

house is usually divided by a partition into two sections, which are connected by a door, so that in it, as the accompanying plan indicates, there are eleven separate, larger or smaller wall surfaces, along which the supplies of fish are stacked.

G 342 343 ●171 K [175] [342] ooo

/359/ Like the earth yurt, all the pile buildings mentioned above, the summer yurt, the storehouse, etc., are original, peculiarly Gilyak structures which the neighbors of the Gilyak, the Tungusic Amur-peoples, lack, but which recur among many other Paleo-Asiatic tribes. For example, according to Krascheninnikof's and Steller's descriptions and an illustration given by the latter, the summer dwellings of the Kamchadal are pyramidal huts built on high piles, which are called balagan by the Russians (1). The Eskimo of the American Northwest along

K [113]

1. Krasheninnikov", "Opis. zemli Kamchatki" (Poln. sobr. uchen. putesh. po Rossii, Vol. II, St. Petersburg, 1819, p. 37). Steller, Beschreib. von dem Lande Kamtschatka, Frankfort and Leipzig, 1774, p. 215. Steller also gives the dampness of the air and the ground as the compelling reason for the construction of such "airy dwellings" on Kamchatka. This explains why these peculiar dwellings continued to be retained after the earth yurts, as mentioned above, had already been forced out by Russian-type dwellings.

K [132]

/359 cont./ The Eskimo of the American Northwest along the Kwichpak, Norton Sound, and the Arctic Ocean erect their storehouses on high piles above the ground in order to safeguard the supplies of fish, skins, furs, and the like stored in them during the summer both against the humidity and against attacks by mice, foxes, wolves, and especially the dogs, which are always hungry during the summer (2).

E [192]

2. Zagoskin", Peshekhodn. opis' chasti russk. vlad. v" Amerikie, St. Petersburg, 1847, Pt. I, p. 56. Dall, Alaska and its resources, Boston, 1870, p. 27. Jacobsen, Reise an der Nordwestküste Amerikas, Leipzig, 1884, p. 173. Seemann, Reise um die Welt, Vol. II, Hannover, 1858, p. 62. In Dall (op. cit., pp. 13 and 65) there are also illustrations of such "dovecote-like" buildings, as Seemann aptly calls them. The designation barabora for them (Sagoskin, op. cit.), which Dall also uses for the summer and winter dwellings of the Eskimo (op. cit., pp. 39, 65), arose according to Steller (op. cit., p. 218; for him, "barabara"), through the corruption on the part of the Russian Cossacks in Kamchatka of the word "pasapar," by which, however, the Kamchadal refer to a hut made out of long grass for an overnight stay.

G 342 194

Thus, the Gilyak, where they have kept their original dwellings and constructions, and many another Paleo-Asiatic people can to a certain extent be called cave-dwellers or troglodytes in winter and pilework-dwellers in summer. In this respect they stand at a point which on European soil belongs to a far distant, prehistoric period. From this point of view, too, the designation of Paleo-Asiatic peoples, which I have proposed for these remnants of an ancient population formerly more widespread on Asiatic soil, is in a certain sense justified.

Tungus RU5
Mamegix
Orochon
Goldi RX3

/383 cont./
essential for food, clothing, or housing; on the other hand, everything in the way of provisions, clothing, and the like not needed at the moment is deposited and stored for future use at certain points which they always touch on their migrations. For this purpose the most primitive storage-places (dêlkan) are erected. Boards or plaited switches are put in a horizontal position at a height of 5-7 feet on a few piles driven into the ground. All the property to be stored is put on this stand, covered with a birch-bark mat, and weighted from above with poles and stones (2).

2. Maack, op. cit., p. 71. Gerstfeldt, op. cit., p. 302.

It thus remains protected against both dampness from above and below and animal attacks. Plunder by human hands is not to be feared, however, not merely because of the solitude devoid of human beings, but also because the idea of the inviolability of such deposits, and perhaps a superstitious fear of touching them, is widespread generally and to a wide extent even among the neighboring peoples on the same childlike cultural level.

In casting a general glance at the dwellings of the indigenous peoples of the Amur region, that is, excluding the Chinese and the Manchu, Daur, Solon, etc., who are becoming more and more assimilated by them, one reaches the conclusion that they most have the character of permanent, stable, solid, and at the same time characteristic housing among the Gilyak, while among the Tungusic peoples living all around they ordinarily seem to be merely tent-like, easily set up and transportable, and suitable for an unsettled, more or less nomadic or roving life. On Sakhalin, for instance, besides the Gilyak staying in stable, permanent dwellings in summer as well as in winter, one also sees, even within part of their territory, the traveling tents of the Orok roaming with their reindeer. On the continent the difference is all the greater the farther one goes upstream from the mouth of the Amur and from the seacoast into the interior. This becomes especially evident from the summer

Tungus RU5
Goldi RX3

/383 cont./
dwellings of the successive peoples in this direction. One need only compare the Gilyak summer-house, made of beams and resting on piles, with the dauro of the adjacent Tungusic peoples. Moreover, if the dauro of the Olcha, Negda, and Samagir, even though only made out of light /384/ materials, wooden poles, some of them perhaps of somewhat greater thickness, birch bark, etc., are nevertheless rather spacious and resemble a house on the outside, those of the Goldi shrink to small tents made of willow switches and birch bark and easily transported from place to place, and the dauro of the Orochi do not even go beyond the roof shape, the simplest of all tent forms. In the upper Amur region, among the nomadic Birar, Manegir, and Orochon, tents of conical form again appear, to be sure, but these are wholly adapted for a nomadic life, and often, for a temporary stay at a place, are limited to merely a few poles and a bark mat wrapped around them. Moreover the winter dwelling constructed on the Chinese pattern has not penetrated to these peoples or to the Orok on Sakhalin at the diametrically opposite end of the Amur region, though it has spread throughout the area in between and is customary among the Gilyak on the Sea of Okhotsk and on the northern tip of Sakhalin, and the tent with only a hide covering, in spite of the severe climate, is also their winter dwelling.

In these housing conditions of the indigenous Amur peoples it is evident that there is a feature fundamentally different between the anciently sedentary, Paleo-Asiatic Gilyak and the Tungusic peoples surrounding them, who wandered in later, indeed, in part even at a time not very long ago, and remained inclined toward the wandering, nomadic life. The differences in dwellings discussed above are closely linked to the total way of life and subsistence of the peoples mentioned. The Gilyak are predominantly fishermen and, along the seacoast, also seal hunters; correspondingly, they are almost exclusively ichthyophagous, as is their only domestic animal, the dog. Now, in order to support themselves and their many dogs, required both for making the many winter trips and trade journeys and for procuring the customary winter clothing, during the period when fish are scarce, they need a considerable supply of fish, and this is

/389 cont./ the reasons why the Gilyak have such a strong preference for dog fur for their own use may, in part, be the same ones that, according to Steller (1), made the ancient

1. Steller, Beschreibung von dem Lande Kamtschatka /Description of the Country of Kamchatka/, Frankf. and Leipzig, 1774, p. 137.

Italmen on Kamchatka prefer to use dog fur for their clothing, even preferring it to fox and sable. Of course, in view of the conservate tendencies of every primitive people, the usage once customary, the custom handed down for generations, may also play an important role. Besides this, however, the advantages of this fur, learned from experience, come into consideration, its "warmth," durability, and the firmness of its hair, even if it has been exposed to wetness -- characteristics which must make it especially prized by the common man almost always exposed to bad weather. And finally, in addition to all that, there is still another circumstance -- and in this may lie the chief reason /390/ for the universal use of dog fur among the Gilyak -- it is the ease and cheapness of obtaining it, since the Gilyak keep dogs in great numbers as indispensable draft animals, and the fur cannot be used profitably in trade with either the Chinese, Japanese, or Russians.

Nevertheless fur coats made out of the fur of other animals are found among some Gilyak. They do not serve for use, however, but are carefully stored as valued and rare objects. A lynx coat (Gilyak tschlyghi-okch) in particular plays such a role among them. A person who owns a lynx coat is regarded among the Gilyak as a rich and distinguished man, and at the time of my stay in the Amur region they could name for me only three of their countrymen and one Olcha who enjoyed such a possession. The Gilyak were: Nenjdan in the village of Allof on the Amur, Mesgun in Patt, each having one coat of this type, and Pawgun in Tamla-wo on Sakhalin, who had two of them; and the Olcha Todo in Tschilwi, who likewise had one such fur coat in his possession.

/390 cont./
possession. I believe that the reason that a lynx skin, and all the more a coat made of six skins of this kind, has so high a conventional value must be sought in the influence of Chinese conceptions. In any case the lynx skin also has considerable real worth for the Gilyak, since in trade with the Chinese it is regarded as the equivalent of two otter skins or 10 sable skins (1), but

1. Merely two leg-pieces from a lynx skin and the tail are worth as much as two sables.

there are even more expensive furs, such as black fox, for example, which in trade is equal to 15 to 20 sables, and yet it is not used by the Gilyak like lynx skins for fur coats of imaginary value. As a table to be presented below on the values given by the Gilyak to various objects will show, there are also a number of things in the household which they value even more than a lynx coat and which nevertheless do not impart to their possessor such an aura of wealth and distinction as the latter does. Conceptions of another kind must therefore come into play here. In view of the active, centuries old trade relations of the Gilyak with the Chinese, they could not fail to know in what high honor the skin of the tiger, as the mightiest, most ferocious, and most dangerous of all animals, as well as that of its related species, the panther, stands in China, up to the throne: for example, the seats of high Chinese officials, governors, mandarins, generals, etc. are draped with tiger and panther skins for solemn occasions or processions, and the chair cushions carried behind them have just such fur coverings (2); the hunting tents of the emperor are

covered with tiger skins on the outside (3); long tiger and panther

3. Marco Polo (Reisen, German by Aug. Bürck, with annotations and emendations by Fr. Neumann, Leipzig, 1845, pp. 318-319) relates that the pavilion borne by four elephants in which the Chinese emperor (Kublai Khan) stayed when hunting in the province of Liao-tong, as well as the hunting tents erected for him there, were covered on the outside with tiger, or, as he says, "lion," skins.

tails hang down from the halberds and lances of the officers forming the bodyguard of the emperor and /391/ walking in his retinue during public processions (1), etc. (2). Under Chinese

1. Ysbrants Ides, op. cit., p. 90. Gerbillon, in Du Halde, op. cit., Vol. IV, p. 235.

2. Many more examples of the high esteem for the tiger and its skin in China could be given. I shall content myself, however, with referring here only to some of the older testimony of this kind. On account of its predatory nature, evoking fear and terror, its likeness is put on the garments of officers and and other persons in military service in China, as Barrow (Reise durch China im Gefolge der Grossbritann. Gesandtschaft in den Jahren 1793 und 1794 /Journey Through China in the Suite of the Embassy of Great Britain in the Years 1793 and 1794, translated from the English by Hüttner, Vienna, 1805, Vol. II, p. 31), Staunton (Des Grafen Macartney Gesandtschaftsreise nach China in den J.

/391 cont./

2. (cont.)
1792-1794, nebst Nachr. über China und einen kleinen Theil der chines. Tartarey /Ambassadorial Voyage of the Earl of Macartney to China in the Years 1792-1794, with Reports on China and a Small Part of Chinese Tartary/, translated from the English, Frankf. and Leipzig, 1798, Vol. I, p. 341), and others have reported. Ellis (Journal of the Proceed. of the late Embassy to China, etc., second edit., London, 1818, Vol. I, p. 130) also saw several companies of soldiers who were wrapped from head to foot in long, yellow and black striped garments which were supposed to make them look like tigers to terrify the enemy. On the other hand, the tiger also seems to be the object of religious veneration in China. For example, Van-Braam (Voyage de l'ambassade de la Compagnie des Indes orientales Hollandaises vers l'Empereur de la Chine en 1794 et 1795, publ. by Moreau de St. Mery, Paris, year VI (1798), Vol. I, p. 270) reports that four stuffed tigers in a sitting position were set before the altar in the pagoda Huinon-tsu in Peking. In a similar manner, the Chinese (Man-dse) in the Ussuri region erect chapels for the tiger, in which they offer sacrifices to it and hang pictures of it (Arkhim. Palladii, "Usur. Man'tszy /The Ussuri Man-dse/," Izviest. Geogr. Obshch., Vol. VII, 1871, Sec. II, p. 376). I shall come back on another occasion to the value that the Chinese in their superstitious beliefs attach to the meat, gall, tendons, bones, and claws, besides the skin of the tiger.

556 with a feeling that is strange for people with a primitive mode of life. There is fear and respect and even reverence in this feeling. That a rich man should inspire fear and respect is a thing easy to understand, but the feeling of some sort of reverence has its own peculiar source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence the respect for him. But since all human success is at the same time a gift from the gods, the rich man also stands out as their favorite, their chosen one. The degree to which the Gilyak are inclined to attribute supernatural origin to wealth can be seen from a widely diffused legend among them concerning a certain Tungus, still living today, who amassed his wealth by unscrupulous exploitation and robbery, a legend which affirmed that this virtuous man /380/ had secured his wealth thanks to a golden rain which showered down upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

556 538 171

675 432 437 427 426

Since the Gilyak have notions of property, there naturally exist among them contracts of purchase and sale, barter, loans, etc., but most frequently of all, of course, these contracts have the character of barter.

Two words about debt obligations. The Sakhalin Gilyak

426 does not borrow money; his debts arise principally from the nonfulfillment of one side of the property obligations of a contract. No interest is charged for waiting for repayment. Interest is known

[184] only to the Amur Gilyak, who borrowed it from the Manchu, but

[177] even among the Amur Gilyak interest is extorted only for the loan of money or sable skins, but never for loans of any other nature. The

[164] popularity of debt obligations among the Sakhalin Gilyak con-

[692] sists, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the insolvency of a debtor and his closest relatives or after the death of these persons, the clan, in the person of the clansmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

[The western Coast]

166 /386 cont./ To make some money,

164 115 individuals, i.e., one-sixth of the adult population, make

183 the trip to Nikolayevsk. The settlements richest in seals and

433 dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is

[244] also richer in sables than the others. Potatoes are raised by the

Gilyak in Khoe and Tangi. In the settlement of Tyki, the

[162] Gilyak have made a request concerning the settlement among

177 them of at least one Russian with whose help they could raise

[244] potatoes. The settlement of Tyki should be mentioned for sev-

224 eral other reasons. In the first place, starting from this point

433 the Gilyak are ceasing to hunt sables because of the overwhelming

198 competition from the Tungus who have killed off the sables in the

648 vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, be-

342 ginning at this settlement one notices a progressive improvement

178 in the construction of the winter yurts. In Tyki the dugout rises

354 a little above the ground, it has windows made of fish skin, and

[237] in one yurt even of glass; in the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially

[184] adapted for this purpose. A similar system of heating is used by

171 the Amur Gilyak and in the fanza /houses/ of the Manchu, from

177 whom it may have been borrowed.

As to the character of the region, the maritime sections

133 of the western coast are mostly tundra-like, with sparse vegeta-

[137] tion. The road runs partly along the sea, partly through the

[491] taiga, and occasionally over the mountain ridges. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Muz'vo, it strikingly

2: Schenck--440 E-3 (1854-1856) 1881-1890 RX2 Gilyak RX2

/327 cont./

000 reduced as much as possible. The house is provided with windows

342 (d) on all four or at least three sides, and, to be sure, the two

354 longitudinal walls and the rear transverse wall each have two, the front transverse wall one. Even in the most spacious Gilyak houses I never saw more than these seven windows (1); very often,

[171] 1. I did encounter this among other Amur peoples, but I shall speak about that later.

however, the window in the front transverse wall is absent, as, for example, in the Tebach house standing in the foreground on Plate XI, and not infrequently the other transverse wall and the rear longitudinal wall have only one window each, which is then always placed unsymmetrically closer to one or the other corner of the house; in fact, in the smaller houses even the window in the rear longitudinal wall is absent, so that the number of windows in them is reduced to three. Nevertheless, even these, because of their considerable size, light the interior of the house sufficiently. The windows are sometimes square, three to four feet in size,

342 sometimes somewhat wider than high, or vice versa. They have no

357 crossbars, but instead only a number of vertical little sticks equi-

232 distant from one another, and fish skins take the place of glass

[281] between them. In particular these are skins from Salmo iagocephalus (Gilyak: lyghi-tscho, or, on Sakhalin, laghi-tscho) (2),

[192] 2. Known by the Russians throughout Siberia under the name ketá.

the most common kind of salmon in the Amur River, made as thin and transparent as possible by scraping and pounding, and then sewed together in such a way that the seams form many longitudinal lines and a few transverse lines running in a zigzag.

342 The windows do not open, but are only lifted out with the whole

354 frame. The floor inside the house consists of stamped clayey earth. To the right and left of the entrance are the two hearths (e, Gilyak: tschenk) made of clay. They are fed through square

/332 cont./

342 there are certainly no longer any earth yurts. Along the bays

184 of Tugur and Ulban, where Middendorff became acquainted with

[361] the Gilyak, they live in the winter, as I gather from his handwritten notes (1), in exactly the same type of houses as on the

[113] 1. In his travel report, too (see Beitr. zur Kenntn.

[354] des Russ. Reichs, Vol. IX, Part 2, p. 619), he mentions the "functional pipes carrying heat under the sleeping benches in the houses" of the Gilyak there.

Liman and Amur. It therefore cannot be assumed that matters are different in the area between Kulj and Ulban Bay, the only stretch for which we do not have eyewitness accounts. The Gilyak, too, though I often asked them about it, knew of no earth yurt on the mainland to report to me other than the above-mentioned one of Pättach.

342 In brief, therefore, among the Gilyak on the mainland, as

184 far as their distribution extends, the Chinese yurt at present repre-

174 sents the only form of winter dwelling; on the island of Sakhalin, however, it occurs only on the west coast opposite the mainland, along the Liman, and on the Sea of Okhotsk, interspersed with earth yurts, while in all the other Gilyak parts of the island, only this latter form is found. From this distribution of the two types of winter dwellings one may conclude that the earth yurt is the original dwelling peculiar to the Gilyak, which was formerly also used generally on the mainland, but later was driven out, little by little and finally entirely on the mainland and in large part on the coast of Sakhalin adjacent to it, by a foreign form that came down the Amur, and /333/ has been preserved only among the more remote insular Gilyak. Finally, arguing in favor of

[171] this view that the earth yurt is in fact the original winter dwelling of the Gilyak, apart from its above-mentioned exceedingly simple and primitive construction in imitation of a tent, is the fact that with only slight modifications it is also found among all the other Paleo-Asiatic peoples.

A 175 345 /351 cont./
in more ancient times (1).

1. Weniaminof, op. cit., p. 201.

G 342 171 After this digression, which acquainted us with the earth yurt in its various modifications as the original winter dwelling of all the Paleo-Asiatic peoples as far as Greenland and the extreme northern part of America, let us again return to our point of departure, the Amur region and the Gilyak. While the earth G 342 yurt, the toryf, is the original, national winter-dwelling of the 171 Gilyak, the tschadryf, erected on level ground and equipped [354] with pipe heating, must be designated as a later form of winter dwelling brought to them from the outside, from contact with other peoples, chiefly through Chinese influence. I have there- G [114] fore called it above simply the Chinese winter-yurt. Glehn (2),

yurt," but, if this is not merely another one of those frequent confusions of the Chinese in the Amur region with the Manchu, as was discussed above (5), as I believe it to be, then it can be

5. See, p. 144, and note 2, in this work.

argued that the Manchu borrowed this way of constructing their winter houses from the Chinese.

/351 cont./
000 342 171 [174] winter houses from the Chinese. That it reached the Gilyak from the south, down the Amur, is shown, as was mentioned above, by the distribution of the earth yurts and the Chinese winter-yurts in their area, in particular by the fact that on Sakhalin the latter are found only along the west coast of the island facing the mouth of the Amur. Actually, this type of construction of the winter house can be followed continuously among all the peoples of the lower Amur region living upstream from the Gilyak, up to the Chinese along the Ussuri and Sungari. There it is prevalent everywhere among the 342 Manchu, Chinese and Daur (6). For example, the Chinese 352 354 171

6. The latter will be dealt with separately below.

U-tschen, in the description of his birthplace, Ninguta, written by him in 1722, mentions that the houses there have three kang, i.e., sitting and sleeping benches or plank beds running along the walls and heated by pipes running under them (7).

7. According to U-tschen, the kang, about six feet wide and two fathoms, five to six feet long, were put along the north, west, and south walls of the houses; along the east wall, separated by a partition from the rest of the room, was the women's room, which had two kang, along the north and along the south wall. The kang are covered with reed or straw mats, over which a red felt carpet is frequently spread. Cf. U-tschen's writing in the translation by Wassiljef: "Zapiski o Ningutie" (Zap. Imp. Russk. Geogr. Obshch., Bk. XII, 1857, p. 98).

use along the Sungari, Nonni, Churcha or Mutuan-ho, etc. (3).

3. In the middle of the house, where among the Gilyak the dogs' table stands, there is an elevation made of clay or bricks with a cavity the size of an ordinary tub. Wood and charcoal are kept burning in it, so that it is always full of hot ashes; kettles with hot water stand there for replenishing the tea cups, brandy and beer are warmed there in tin containers, etc. Williamson, op. cit.

/352 cont./
342 354 171 352 Nevertheless, this type of house construction, with a system of pipes going out from the hearth, running under the sleeping benches, and opening into a chimney standing outside the house, is by no means of an indigenous Manchurian origin, but rather of undoubtedly Chinese origin, introduced by the Chinese from the motherland to Manchuria as well as to their other colonies. For the same type of house construction is found everywhere in North China (4) and in other countries which, like Manchuria, are

113 4. Though there is hardly a work about China in which there is not also mention of the kang as a characteristic peculiarity of the Chinese dwelling, I want to mention here a few, in part older, in part more detailed discussions or descriptions of it: for example, in Du Halde (Descript. géogr., hist., chronol., polit. et litér. de l'Empire de la Chine et de la Tart. Chinoise, Paris, 1735, Vol. II, p. 87), Van Braam (Voyage de l'Ambassade de la Comp. des Indes orientales Hollandaises vers l'Empereur de la Chine en 1794 et 1795, publ. by Moreau de St. Mery, Paris, year VI (1798), Vol. I, p. 346), Davis (La Chine ou descript. génér. des moeurs et des coutumes etc. de l'empire Chinois, transl. from Eng. by Richard, Paris, 1837, Vol. I, p. 331), Huc (L'Empire Chinois, Paris, 1854, Vol. II, p. 380), Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 192-194 and 251 among others), Poussielgue (Voyage en Chine et en Mongolie de M. et de Mme. de Bourboulon, Paris, 1866, p. 24), and Girard (France et Chine, vie publ. et privée des Chinois, Paris, 1869, Vol. II, p. 384), among others.

291 flapp through which the hand may be stuck outside of its covering if necessary (1).

● [191] 1. On the hand coverings of the Tungus and of the Russians in Siberia the slit for sticking the hand out has no protective flap; on the other hand, it is present on the dog-fur coverings of the Orochi of Hadshi Bay.

[191] The Gilyak never have a hood hanging down the back between the shoulders on their fur coats for protection for the head, as is customary among all the more or less far northern peoples, Kamchadal, Koryak, Chukchee, Eskimo, even Tungus, and others. Instead, the neck and head have special articles of
[239] clothing. For protection of the former a boa made of the tail-fur of squirrels (Gilyak tolp; Pl. XIX) is used and is sometimes worn around the head, in mild weather instead of the cap, in cold weather over it, to protect the forehead (Pl. XVIII). About 30-40 squirrel tails go into a tolp of inferior quality, 50 and more into a handsomely bushy and good one. The Gilyak do not use any other fur for this purpose.

First of all, on their heads, on long journeys, in severe cold, or in biting winds, the Gilyak wear ear muffs (Gilyak tapais), which consist of two flaps connected in front and back by a strap or band. These are either made singly out of sealskin
[239] or are lined with fox or otter fur and provided on the outside with a piece of material on which differently colored arabesques are stitched (Pl. XX, Figs. 5, and Pl. XXII, Figs. 1 and 2). Over them there is a large fur cap enveloping the entire head (Gilyak ton-hak) (2). It is of simple cut, straight at the bottom,

[104] 2. The ŋ is soft in pronunciation here.

and at the front corners has either two bands (as in the pertinent illustration, Pl. XXI, Fig. 1) for tying it under the chin, or only a single band connecting the inner sides of the two corners,
2 2 2 2 2 [See category 116, p. 999, 998, 1000, 1002 and 1001 respectively -- Analyst]

/393 cont./

291 and in this latter, more common case, to put the cap on, the band mentioned is first brought under the chin, and then the cap
291 is pushed over the head. The cap is always lined with fox fur,
239 which, standing out in front and on the outside, also forms the edging. The outside consists of either the same kind of sealskin throughout or various pieces of fur not infrequently put together artistically and tastefully. /394/ For example, the ton-hak of a Tschomi Gilyak who visited me in Nikolayevsk, which is illustrated on Pl. XXI, Fig. 1, was of this type. The upper middle piece of this cap, brown in color, was of reindeer skin; the white arabesques on it are of short-haired dog-skin; the edging, separated from the middle piece by a blue band, is made up of pieces of dappled sealskin; the front edge, as always, consists of the fox fur emerging from the inside, but at the bottom the cap is trimmed all around with long-haired, white dog-fur. This trimming, by the way, is not lacking on the less elegant, indeed even on the simplest fur-caps of the Gilyak and gives them all a special, peculiar stamp. The longer the white or gray hair
● 191 of the cap reaching down toward the neck, the more beautiful it appears in the eyes of the Gilyak, just as among the ancient Italians on Kamtchatka trimming the fur coats, which might have been reindeer or fox skin, all around with long dog-hair, was always regarded, as Steller puts it (1), as the "greatest

1. Steller, Beschr. von dem Lande Kamtschatka, p. 138.

ornament" on them. This trimming on the caps, by the way, may offer some protection for the neck against wind and snow.

291 On long trips and in severe cold the Gilyak wear several undergarments under the fur coat. In particular, immediately
191 next to it, for example, there is a short, quilted robe or jacket of cotton material or of cloth, the so-called sukky in Gilyak, a garment undeniably of Chinese cut, which they wear in mild weather or on walks without a fur coat, with only the tolp around

/394 cont./

291 the neck or head, or with the fur cap (see Pl. XIX), and in which
191 they continue to sit, even after throwing off the fur coat, inside the yurt. Furthermore, in order to keep the chest and abdomen in the area of the pit of the stomach especially warm, a flap lined with fur, the so-called koch-passj, is worn there under the shirt, on the naked body, hung round the neck with a small band and at the bottom knotted around the body by two others. The example of
191 the type pictured on Plate XXII, Fig. 3 which I saw in the possession of the Gilyak Judin in Tebach, was of Goldi workmanship. It was of pentagonal shape, rounded off at the bottom, lined with fox fur, and trimmed all around with otter fur, but provided on the outside with multicolored and part artistic embroidery on black cotton material, which I shall come back to below. Here there must still be mentioned a peculiar undergarment that I noticed in particular among the Tro Gilyak in Nyi, both among adults and on a boy about seven years old; this is a pouch tied around the loins and of use to the male sex only. For the Gilyak sitting astride their sleds it is especially important to protect the knees against wind and weather, and a knee sheath (Gilyak panj) made of sealskin and tied around the leg below or above the knee serves for this purpose.

291 /395/ The footgear has already been mentioned above. In
191 winter, for warmth, the Gilyak put some dry grass in their boots,
192 as more or less all the northern primitive peoples do (1). Accord-
824

1. Thus, besides the Siberian peoples, the Eskimo of northwestern America and Greenland, for example (Rob. Brown, "Das Innere von Grönland /The Interior of Greenland/," in Petermann's Geogr. Mittheil., 1871, p. 384).

ing to the statements of the Chinese U-tschen, who wrote a description of the town of Ninguta in 1722, it is also customary among the Manchu there, and for this they use a soft, fine, longish grass growing in the vicinity of water, which they call

/395 cont./

291 824 191 [113] ula (2), and which is regarded in popular tradition, along with

2. According to Maximowicz /Maksimovich/ ("Primitiae florae amurensis," in Mém. prés. à l'Acad. des sc. de St.-Pétersb., Vol. IX, 1859, p. 500), probably a Cyperaceae. According to R. Brown, the Eskimo of northwestern America and Greenland use Hierochloë alpina and similar types of grass for this purpose.

ginseng and the sable, as one of the three treasures of Ninguta (3).

[113] 3. U-tschen, in the translation by Wassiljef /Vasil'ev/: "Zapiski o Ningutie /Notes on Ningutie/" (Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 95). The translator adds in a note that boots whose soles are stuffed with this type of grass are also sold in Peking.

291 I am unable to state whether the Gilyak use the same type or
824 any specific type of grass for the purpose mentioned, but this much seems to me to be beyond doubt, that they do not act in this without making some sort of selection, for when, in the winter of 1855, I asked the owner of the yurt of Poghobi on Sakhalin to give me some of this grass, he refused my request with the remark that he himself had very little of it.

292 412 291 Finally, an important piece of Gilyak clothing is the belt, in particular as a holder for some of the implements always accompanying the Gilyak. First and foremost among them is a large knife, the so-called ngawla-dshakko, which is used both in eating and, if necessary, as a defensive or offensive
531 weapon. Like almost all of the iron implements, it is always of Gilyak workmanship and usually simple, with a large blade and a short, wooden handle diagonally striped as a rule (Pl. XXXI, Fig. 1) (4), or sometimes wholly of iron with inlaid silver

[104] 4. The caption concerned, "ngawla-dshakko," should be corrected to ngawla-dshakko.
2 [See category 116, p. 101 -- Analyst]

/396 cont./

291 which runs around the neck and throat and from which two long
237 tips, with beads sewed on them, hang down from the shoulders over the breast.

291 /397/ The winter headgear of the Gilyak women is peculiar
191 and manifold in nature. The everyday cap, in which one sees
531 them even at their domestic chores, when they fetch supplies from the storehouses, carry water from the river or firewood into the yurt, care for the dogs, etc., is the so-called tuly-hak, i.e., simply "winter cap" (Pl. XXI, Fig. 3). It has a peculiar shape, with the high crown, usually provided with a cord clasp, and the extensions running down at the back and sides for the protection of the neck and ears, not unlike a helmet, a similarity to which the concentric or scalloped quilting on the outside, corresponding to the shape, to some extent contributes. This latter consists of single Chinese material, usually black or dark-blue cloth.
[239] On the inside the cap is lined with fox fur and trimmed on the
292 edge with otter skin. The tscharp-hak, i.e., "silk cap" (Pl.
191 XXI, Fig. 3), used on longer trips and on festive occasions, is
531 more elegant. It is similar in shape to the fur cap of the men, but with a somewhat higher crown and extending down farther over the ears and the neck. Corresponding to the designation, it is made out of Chinese silk, on which gay-colored dragons and other figures, worked in here and there with gold thread, are
[239] represented (1). On the inside this cap is likewise lined with fox

● [191] [113] 1. It is well known that the dragon design on fabrics, furniture, and other articles is very popular among the Chinese, but only the emperor is said to be entitled to have five-clawed dragons on his clothing and utensils, whereas all other persons, from imperial princes and mandarins down, must content themselves with four-clawed dragons (Van-Braam, Voyage de l'Ambassade de la Comp. des vers l'Empr. de la Chine

2 [See category 116, p. 1001 -- Analyst]

/397 cont./

292 1. (cont.)
194 en 1794 et 1795, publ. by Moreau de St.
53 Méry, Paris, year VI, Vol. II, p. 237 [editor's
191 note]. Girard, France et Chine, vie publ. et
[113] privée des Chinois anc. et modernes /Paris, 1869, Vol. I, p. 59). The dragons on the above-illustrated tscharp-hak belonging to a Gilyak woman from the village of Allof was of the latter type.

292 fur, which in a broad strip also goes around the front edge of the
53 cap, trimmed at the bottom and in back with otter fur. The
191 tscharp-hak, however, is still not the peak of elegance among the
239 Gilyak women. The most elegant and distinguished piece of their entire winter wardrobe is the lynx cap (tschlyghi-hak, Pl. XXI, Fig. 4). It is made out of the head and tail pieces of a lynx skin. The former, with the upright, tufted ears of the animal, forms the crown of the cap. The shells of the ears are lined with red Chinese silk and on the edges are provided with small bunches or tufts of blue silk threads or of black sheep's wool (2). A row

2. The Gilyak designated the material of the black tufts to me as such, which, since the Gilyak themselves have no sheep, must likewise be of Chinese origin.

of such tufts also runs along the center of the headpiece, from the forehead to the tip of the snout. The fur of the lynx head is trimmed all around with a wide band of sable fur, which ends in an elongated tip at the bottom on either side to protect the
[301] ears. In the rear the lynx tail hangs down from the trimming to the back, like a braid, and at its tip it is provided with a small ring or one of the pierced brass disks with which the women
292 customarily adorn the edging of their robes. Through such use
237 of the lynx-head /398/ fur and of the tail the tschlyghi-hak

/398 cont./

292 is given the character of an imitation of the whole animal. The
237 inner lining of the lynx cap again consists of fox fur. Although with respect to elegance and distinction the lynx cap of the women is, so to speak, a counterpart of the lynx coat of the men, it is not just stored away, but is actually worn, thanks to feminine vanity and love of finery. On the occasion of a bear festival in Tebach I saw them on two women, and the above illustration
[394] was made from one of these specimens (1). The lynx cap,

[126] 1. And, to be sure, like the other two women's caps on the same plate, by my colleague, Maximowicz, during our stay of several days in this village.

however, always marks the wife of a rich Gilyak, who either already has a lynx coat or has a good chance of getting one.

● 191 A similar use of the head fur of an especially esteemed
292 animal as headgear and to a certain degree also the imitation
237 of the whole animal may occur among many primitive peoples.
292 I cannot refrain from pointing out a few instances of this kind
825 among other Paleo-Asiatic peoples. The nomadic Koryak on Penshinster /Penzhina/ Bay, for instance, for whom the wolf is the most dangerous enemy of their reindeer herds, in winter wear caps of wolf fur, on which the ears of this animal stand in an erect position (2). According to Sagoskin, something similar

[113] 2. G. Kennan, Tent Life in Siberia and adventures among the Koraks and other tribes in Kamtschatka and Northern Asia, London, 1871, p. 117.

also takes place among many Eskimo tribes of northwestern America. The men of the Kan-julit people, from the northernmost Maleig-mlit down to the Ugaschenzen, wear caps made out of the head-skin of the wolf and, in back on the belt, the tail of a wolf or wolverine, to which the tip of the snout of this latter animal is attached. The wives of the Kuskokwim Eskimo

/398 cont./

let a wolf or wolverine tail hang down at the neck from their elegant reindeer-fur caps, trimmed with otter or wolverine skin, to their backs (9). One would not err, I believe, if he assumed

3. Lagoskin", Peshekhodnaia opis' chasti russk. vladieniì v" Amerikie /Description of a Journey on Foot through Part of the Russian Possessions in America/, St. Petersburg, 1847 and 1848, Pt. II, pp. 21, 22.

that such articles of clothing based on the imitation of animals are of ancient national origins among those people for whom they are customary and in whose lives the animals in question are of special importance, bringing harm or advantages. It certainly seemed obvious to primitive man to pursue and carry out in detail the similarity with a given animal that he acquired by clothing himself in its fur. Here and there superstitious beliefs of the kind, say, that by imitating an animal in one's clothing, he might gain its good will or render it harmless, might also have given rise to garments copying animals. It is, therefore, not surprising that the idea of special elegance and high distinction becomes attached to such ancient national garments. This also explains why the tschlyghi-hak of the Gilyak /399/ women, though made out of purely native materials, is regarded as more elegant than the tschrap-hak made out of expensive Chinese silk with dragon designs.

I cannot leave this subject without permitting myself yet another pertinent and general remark. Since the customary practice among all primitive peoples clothing themselves in animal skins is to wear the skin with the hair on the outside, might not the thought of using the skin for protection against the inclemencies of the climate in the same way as it is given to the animal as natural clothing have arisen out of the imitation of animals, until experience taught that this is in fact the way of using animal skins for clothing that gives the most protection? Without any other covering as nearly air- and water-tight as possible, which primitive people were not familiar with, animal

/399 cont./

skin undoubtedly afforded better protection against cold, wind, and rain when the hair is on the outside than when it is turned to the inside, and if others first tested in this practical way, it would be natural to add another layer of it or of another skin in the opposite position, with the hair on the inside, and thus, avoiding a foreign covering, to obtain that double fur undoubtedly giving the best protection, as one finds among all the northern and polar peoples.

The above-described or illustrated garments are sufficient to show that the Gilyak like to provide their clothing with all kinds of variously shaped, gay-colored embroidery and other ornamentation. I have sometimes seen among them whole collections of embroidery designs, and I brought back some of them. These consist of fabric or fish-skin patches on which the designs are embroidered or on which various figures cut out of thin birch-bark and symmetrically arranged are pasted (Pl. XXIII and XXIV). Among them, however, are also found larger pieces of fabric sometimes made up of several imitation patches and not used for embroidery, but on which arabesques and animal figures of the most varied kinds are colorfully, but always symmetrically arranged beside or intertwined with one another (Pl. XXV-XXVIII). If for the moment, we disregard the latter, to which I shall come back later, particularly in connection with the animal figures, and if we consider only the design to be embroidered on the articles of clothing previously discussed, we find in them a peculiar character and taste which fundamentally distinguishes them from those of the Siberian peoples. Whereas among the Siberian Tungus, for instance, who likewise adorn their clothing with embroidery, the simplest patterns and motifs recur with great uniformity and often, for example, only rows of the same simple figures, small triangles, squares, circles, crude curlicues, and the like, running over or beside one another, are to be found (as the Tungusic specimen illustrated on Pl. XXIII, Fig. 1, and Pl. XXIV, Figs. 5 and 6 show), in the Gilyak designs and ornamentation beautiful, curved and interlaced lines, diverse arabesques artistically overlapping.

[See Category 116, pp. 1003-1004 -- Analysis]
[See Category 116, p. 1005-1007 -- Analysis]

/400 cont./

artistic interlacing of bands, tapering ornamental borders with multiple points, and the like, can also be recognized on ancient Chinese articles, costly garments and porcelain and ivory objects inside, as our museum has. Furthermore, quite similar ornamentation is found on some old Japanese objects, for example, on the brass mountings of half decayed wooden scabbards in our possession, which we obtained through Mr. Poljakof from ancient Aino graves on southern Sakhalin and which undoubtedly are of Japanese origin. I therefore feel justified in concluding that the Gilyak ornamentation has developed largely under the influence of ancient Chinese and, in part, ancient Japanese models, since in view of the ancently established and constant trade relations of the Gilyak on the mainland up the Amur and Sungari with the Chinese and on Sakhalin with the Japanese, and the Aino completely subject to their influence, it could scarcely be otherwise (2).

2. The role that the Gilyak play as middlemen in trade between the Chinese and the Japanese will be discussed below.

/401/ Thus, as in other things, so also with regard to ornamentation, Chinese cultural influence spread along the natural route of trade, down the Sungari and Amur to the Gilyak. If, in addition to what has been presented above, more direct proof were needed, it is provided by the fact that the same type of ornamentation on clothing and other objects is found among all the other peoples of the lower Amur region, from the Gilyak upstream along the main river, as well as along its tributaries up to the Sungari. Though these peoples are from Tungusic tribes, they nevertheless have nothing in common with the Russian-Siberian Tungus with regard to the ornamentation customary among them, but rather are linked to the Chinese and Gilyak. In this connection, however, we are met by the strange phenomenon that the feeling for ornamentation and the development of the latter in the Amur region do not decrease but increase with greater distance from the civilized people concerned,

/401 cont./

the Chinese, and reach their climax among the people farthest from the latter, the Gilyak. I think that the reason for this is not, say, in the natural disposition of the peoples concerned, but in political conditions. The Gilyak were able to keep themselves independent of Manchu-Chinese domination and to prevent direct visits and settlements of the latter in their territory (1).

1. See p. 144 above.

Since in this manner they escaped continuous exploitation by the Manchu officials and the Chinese merchants, they could attain greater affluence than the Tungusic Amur peoples subject to the Manchu-Chinese, and, secure in their possessions, they must have found greater joy in them and along with this felt a desire and an incentive to concern themselves, beyond acquiring the mere necessities, with decorating and beautifying their clothing and other equipment, in which they were furthermore lent a helping hand by the trade with the Chinese, conducted on their part with innate cunning and circumspection.

Middendorff saw it among the latter, and the illustration provided by him (4) shows exactly the same decorations on the bone

4. Reise in den äuss. Norden und Osten Sibiriens /A Journey in the Extreme Northern and Eastern Parts of Siberia/, Vol. IV, p. 1529.

2. Steller's statement that the Kamchadal obtained steel needles from the Japanese and the erroneous explanation of their designation for them linked with it are discussed above (pp. 407 ff.) in detail.

from nug, "the needle"; see Pl. XXXX, Fig. 2), worn by the women at the belt, is peculiar. It consists of a bone tube through which a strap provided with two stopper-knots is run and into which the needles are stuck: whereas the lower stopper is tied fast to the strap, the upper one can be moved upwards or down. If one lifts the

[See Category 116, p. 1009 -- Analysis]

/401 cont./

on an object the influence of any evil spirit involved will be removed and the use of the tool will be accompanied by success -- a belief that I shall discuss in another place.

The thread with which garments are sewed varies according to the variety of material in them. Fish-skin robes, for example, and birch-bark hats are sewed with fish-skin yarn, that is, fine thread out of fish skin, which the Gilyak call mydisk and distinguish, according to the type of fish from which it was taken, as gilyak-mydisk, mimk-myd., kyc-h-myd., etc. (8), fur coats and similar articles of clothing with the thread

5. Pilengat h Cyprinus Carpio L.; mimk -- Hypophalmichthys Dybowskii Herz.: I do not know what type of fish the name kych refers to.

(Gil. kuba) that the Gilyak know how to make from the ordinary stinging nettle, and which is also used for making cord and fishing nets (6). The garments made out of cotton or cloth are sewed

6. As is also known for the Siberian peoples, the ancient Kamchadal (Steller, op. cit., p. 83; Krascheninnikof, op. cit., Vol. I, p. 302), and also the Aleuts, the Gilyak method of making thread and cord from nettle fibers will be discussed in this work in a later section dealing with fishing.

with Chinese cotton thread, and for the various quiltings and embroideries the Gilyak use either the latter or the silk thread likewise obtained from the Chinese, depending on the delicacy of the work and the elegance aimed for. I have never seen a Gilyak woman use scissors during her sewing and embroidering, although they know of them, thanks to the Chinese and have a special term (chasa) for them: instead they only use a knife. For smoothing the fabric they use a smoothed piece of wood (nam), which is

/402 cont./

beveled at one end and, needless to say, is provided with some decoration on the upper side and on the handle, as well as at the tip (Pl. XXIX, Fig. 3).

/403/ At first glance it seems very surprising that the Gilyak, who are so skilled in all kinds of handicrafts and achievements and despite the fact that they know how to make thread out of the fibers of a native plant and to make string and fishing nets out of it, do not know how to use this material to make a fabric for clothing. In other words, that the art of weaving seems to be so completely unknown to them. This is all the more strange as their nearest Paleo-Asiatic neighbors, the Aino on Jesso /Yesso/, Sakhalin, and the Kuriles, are dressed in materials that in part they weave themselves out of the fibers of the nettle and the bast of trees (1), and one comes across this art, and, to be sure,

that the natives of the Ussuri region (Goldi and Orochi or Ta-dse) always answered his questions about the character and way of life of the lynx: "igajan Lau-masa," which means, "like the tiger."

ized and dearly paid for by the Chinese (3). I am referring

3. Radde (Reisen im Süden von Ost. Sibirien in den J. 1855-1859 /Journeys in the Southern Part of Eastern Siberia in the Years 1855-1859/, Vol. I, "Die Säugethier-Fauna /The Mammalian Fauna/," St. Petersburg, 1862, p. 93) was unable to buy a lynx skin among the Manchu and Daur, even for silver coins, and heard the latter say that it, like a tiger skin, could be acquired only by high Chinese officials. Gerbillon (in Du Halde, Descr. de l'Emp. de la Chine, Vol. IV, p. 295) reported that the animal schulon (French "choulon"), a specimen of which Emperor Kang-hi killed during a hunt in 1692 and which he regarded as a lynx ("loup cervier"), which seems in fact to be wholly correct according to the description, provided one of the most highly prized pelts, which cost 15-20 ducats each in Peking. Elsewhere in Du Halde (op. cit., p. 29) this animal is called "chelason."

he lynx. Therefore, the Gilyak transfer to it some of their ceptions about the tiger as a particularly noble, princely, or yal beast.

/392 cont./

825 291 554 royal beast. Hence it is no wonder that, in accordance with the proverb, "Clothes make the man," which is especially apt among primitive peoples, the Gilyak who can occasionally parade around in a whole coat of lynx skins, and who can thus scorn the profit that would accrue to him from the sale of these skins, is surrounded with an aura of extraordinary distinction and wealth in the eyes of his countrymen.

291 But let us return to the ordinary winter-clothing of the Gilyak. Like the shirt, the fur coat, too, is always buttoned by [177] the Gilyak from left to right over the chest, sometimes with several metal buttons of Chinese or Russian origin, sometimes with a large wooden button of Gilyak workmanship (Pl. XXIX, Figs. 4, 5),[1] and the skirts of the coats likewise overlap. To hold them together, however, the complete winter outfit includes, besides the belt, which will be discussed later, a special piece of clothing, the so-called kossjkha, that is, a short apron-skirt of sealskin extending around the body, which, for a better fit at the waist and in order not to hinder the movement of the body, is provided, at the top with a wide edging of fish skin, through which run the straps for tying it (see Pl. XVIII[2] and XIX).[3] [171] The kossjkha seems to be an article of clothing that is genuinely Gilyak in origin, though it may also be found among some of the Tungusic peoples neighboring the Gilyak and living as they do, the Olcha, Negda, etc. For /393/ the Gilyak always traveling astride his low dog-sled, the kossjkha gives the lower body excellent protection against the oncoming wind and snow or rain, and on many other occasions particularly conditioned by the practices of the Gilyak as we shall see below, it performs excellent service for him. To prevent wind and snow from entering the sleeves, they are wrapped in a swathing fashion and tied at the wrists by means of a wide sleeve-band of of fabric or leather (Gilyak torknbas; see Pl. XXII,[4] Figs. 4, 5). The hand coverings (Gilyak wom(a)ch) are tied to the ends of the sleeves. As a rule, they are mittens lined with fox fur (Plate XX,[5] Figs. 3, 4) and distinguished in cut by the fact that at the wrist, close to the thumb, there is a slit protected by a

1 2 3 4 5 [See Category 116, pp. 1009, 998, 999, 1002 and 1000 respectively--Analyst]

All the other peoples of the lower Amur region in general have the same clothing as the Gilyak. Nevertheless, to the extent that the natural conditions of the regions, the means of subsistence, and the principal occupations of the people differ, mo or less conspicuous differences and peculiarities show up among them, in that other clothing materials gradually gain the upper hand, many an article of clothing no longer corresponding to the changed requirements will be modified or disappear, and, on the other hand, many a new one appear, etc.

The greatest, and in fact virtually complete, corresponde with the Gilyak in their clothing is shown by their nearest neigh bors on the Amur River, the Olcha, who live under the same phy conditions and in the same manner as they do, chiefly by fishing and, in de Castries Bay, also by seal hunting, and, like the Gilyak, keep many dogs, as their sole domestic animal, for winter trade and intercourse with the neighboring peoples. During the long period of living beside and in part among the Gilya the Olcha adopted, among other things, the clothing of the latter completely, and every one of the garments described abo not excepting even the lynx cap so peculiarly Gilyak, as well as the implements customarily used for making them, is found identically among the Olcha and has an Olcha-Tungusic designa tion. Nevertheless, among the Olcha, especially in the upper part of their area of distribution, closer to the Samagir and Goldi borders, one sometimes comes across an article of clothin that came from the last-named peoples and is foreign to the Gil such as a deer-leather or elk-leather robe, a boa made of musk deer skins instead of squirrel tails, etc.

The situation is the same with regard to the clothing of th Negda on the Amgunj /Amgun/. When Middendorff, coming from the Tugur Tungus, visited them, everything gave him the impression, despite their language, differing only dialectally from the Siberian Tungus, "that he had come upon a new peop the shape and cut of the individual articles of clothing, the

der Gross-brit. Gesandtsch. in den J. 1793 und 1794, transl. from the English by Hüttner, Vienna, 1805, Vol. I, p. 88. Bazin, Chine moderne, ou descr. hist., geogr. et littér. de ce vaste Emp., Part II, Paris, 1843 (L'Univers), p. 610. Huc, L'Emp. Chinois, Paris, 1854, Vol. I, p. 317. Itier, Journ. d'un voyage en Chine en 1843-1846, Paris, 1848, Vol. III, p. 389. The latter tried to acclimate Urtica nivea along with other, similar plants in France and stated that it has the advantage over all of them in that it needed the least care. According to Richthofen (Zeitschr. der Berl. Gesellsch. für Erdkunde, Vol. V, p. 321), the Koreans also have clothing materials which, judging by their lustre, seem to have been woven out of the fiber of a nettle-like plant.

286 I therefore conjecture that formerly the Gilyak, like the Ainu,
194 knew how to weave crude clothing fabric out of the fibers of the
191 nettle, and an old specimen plaited out of cords and interlaced
[126] whalebone fibers, a sort of mail shirt (Pl. XLIV, Fig. 1), which I
[714] acquired from them in the village of Ssabach and which will be discussed later, corroborates me in this conjecture. But whereas
[177] the Ainu, generally held back and hurt by pressure and exploitation on the part of the Japanese, persisted, often out of poverty and necessity, in wearing their locally made, crude garments, the independent Gilyak, in contact with the Chinese, very soon learned how to obtain their finer clothing material through barter, and since /404/ there was no lack of material for such trade, in view of the wealth of their region in precious furs, they naturally gave up entirely the manufacture of their own, more laboriously made and nevertheless cruder and poorer, weaving

/404 cont./
patterns and figures embroidered on them, the pendent metallic ornaments, the implements customarily used in making the clothing and other small hand-tools, everything revealed itself "as an emanation from another center of fashion" (1).

1. Middendorff, Reise, etc., Vol. IV, pp. 1526 ff.

Middendorff realized quite correctly that this center was to be sought among the Gilyak on the Amur and had developed under Chinese influence spreading down this river. In fact, /405/ the illustrations of Negda or "Nigidaler" clothing and utensils shown in his travel account look as though they were made by copying Gilyak articles, as I have already mentioned above in connection with individual ones. Like the clothing of the Olcha, that of the Negda shows the greater distance of their habitation area from the seacoast as compared to the Gilyak, because, instead of the sealskin robes customary among the latter, they wear robes of elkskin (1).

1. Middendorff, op. cit., p. 1531.

A situation quite different from that among the Amur Olcha, who have been completely assimilated with the Gilyak in their way of life, behavior, and clothing, prevails among the Olcha who migrated to Sakhalin -- the Orok. They remained reindeer nomads and therefore preserved an essential difference in their clothing, in that the reindeer also furnish them their chief clothing material. The Orok whom I met on their winter migration through the Tymy Valley and near Nyi on the east coast of Sakhalin were dressed completely in reindeer skins, in that fur coats, caps, and boots were made out of it. The former were of the same cut as the dog-fur coat of the Gilyak, without the hood in the back, but the boots did not have the above-mentioned form of the Gilyak boots, reminiscent of the Chinese, but rather appeared more uniformly wide and clumsier, and the caps differed from those of the Gilyak in that they always were

/407 cont./
is required. The full fur cap becomes a fur hood tightly fitting the head. The legs must not be impeded in their movements, and as good a service as the stiff apron-skirt of sealskin, the Gilyak kossjkha, performs for the Gilyak and Olcha usually skimming along on their dog-drawn sleds, it would be useless, in fact, an impediment, to the hunter on his own graceful advance through the forest thickets. Thus, whereas the Gilyak and Olcha are almost never seen in winter without this apron-skirt, I never once encountered it among the Samagir on the Gorin, which is not to say that they do not use it on long trips to the Goldi, Olcha, or Chinese traders on the Amur.

As strikingly different as the clothing of the Samagir on the Gorin is from that of the Olcha, as the result of a different way of life, the difference in the clothing going from the Olcha up the Amur to the Goldi is not very marked. Apart from their hair style, to be discussed later, one would imagine himself to be among the same people. In particular, among the Goldi, perhaps even more than among the Olcha, the fish-skin clothing is generally in use among the women and children. The Goldi women are especially skilled at preparing the fish skins nicely and neatly and providing the robes with multicolored and diverse embroidery of exactly the nature of the forms and figures discussed above. One sees the children, however, and especially the boys, go around in summer as a rule in quite simple short, fish-skin robes, torn or patched here and there (Pl. XXX);* Fish skins (always from Salmo lagocephalus) have this importance as the principal clothing material throughout the Goldi territory on the Amur as well as on the Ussuri, and not until one goes beyond the mouth of the Sungari, where the Birar, living by hunting, appear along the spurs of the Bureja /Bureya/ Mountains, do they disappear and give way to the leather of game animals. Thus, /408/ the Goldi were the first people clad in fish-skins whom the Chinese, advancing northward and eastward from the Sungari region, met on the Amur and on the Ussuri, and undoubtedly they are meant first and foremost among the people whom the Chinese designated with the name "Jupi-tatse," i.e., Fish-skin Barbarians,

* [See category 116, p. 1010 -- Analyst]

/408 cont./
and whom the Jesuit missionaries sent to the lower Amur region in the previous century by the Peking government mention by this name (1). Only with greater distance up the Amur from the

1. Cf. Du Halde, Descr. de l'Empire de la Chiné et de la Tartarie Chinoise, Vol. IV, pp. 10 ff. Grosier, Descr. génér. de la Chine, Vol. I, pp. 142 ff.

Olcha does one notice more and more the difference in the total appearance and character of the clothing of the Goldi in comparison with the Olcha. The great, ever-increasing distance from the sea upstream more and more eliminates sealskin from use (2): the Gilyak kossjkha, still quite general among the Olcha

2. The extreme limit to which seals go up the Amur still lies within Olcha territory (at Yrri; see my Reis. und Forsch. im Amur-Lande, Vol. I, p. 180), still a good stretch to the north of the Goldi boundary.

disappears among the Goldi, and the fewer dogs in their economy make the dog-skin coat likewise less general. On the other hand, however, one more and more sees different furs appear among them, such as red deer, roe deer, musk deer, Canis procyonoides, etc., which they obtain in abundance and inexpensively in part through their own hunting and in part through trade with their hunting neighbors along the tributaries of the Amur and Ussuri, the Samagir, the Kile along the Kur, and the Orochi. At the same time, the farther one goes upstream, the more the direct influence of the Chinese appears in the clothing of the natives, in that plainly Chinese garments come into use. Among the Goldi, for instance, I occasionally found black, Chinese sheepskins with a cotton covering; in the Geong Mountains, among the upper Goldi, the use of the above-described birch-bark hats ceases, and, on the other hand, broad-brimmed, Chinese straw-hats and, even more, black or gray felt hats likewise coming

/409 cont./
As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak artificially lengthen the braid, as the Chinese do, by plaiting in black silk. Baldness, on the other hand, is subject to ridicule. In order to promote the growth of hair, children are shorn from time to time, and occasionally, especially in the case of boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

/410 cont./

1. I later saw something similar among the Daur in the village of Chormoldin: the hair was shaved off the boys and a tuft of hair was left standing only here and there, quite unsymmetrically, either on the crown or on one side, which gave them a very comical appearance. The Chinese presumably also do this.

Adults, however, never have their head or beard hair cut; indeed, among the Gilyak there prevails the belief that if an adult among them had his braid cut and his hair shorn, it would bring him sickness and death. After death, however, the braid may be cut off and preserved by the relatives of the deceased. For instance, the Gilyak Kimrkan in Kalm showed me the braids that he had removed from his first wife and his daughter after their deaths, and which he carefully stored, wrapped in birch bark, in the small hut erected for the manes of the deceased, the so-called rakk,* which

*/HRAF note: According to the list of errata on p. 777 of the foreign text, rakk should be raff. An asterisk on the latter word refers to a footnote which reads "Noted later"; see note * on p.1236./

will be discussed later. In caring for their hair, the Gilyak are just as untidy as in their clothing. Hence one often sees them hit their heads with the palms of their hands in order to check the annoying vermin, or scratch their heads, which characteristically is always done with the thumb while the other /411/ fingers rest on the head. Indeed, the Gilyak even regard the presence of vermin in the head hair as a sign of good health. Thus, during my stay at the Nikolayev post, it happened that a Gilyak boy was taken by a Russian for rearing in his house, but when the father visited the boy after a time and missed the vermin in his hair, he explained that he was worried about his health and took him back again. In connection with this, the bad habit of cracking vermin from the head or clothing in the mouth prevails among the Gilyak, as among so many primitive peoples. My disgust at this, occasionally expressed to them, seemed ridiculous to them, and to my question as to why they did it, since it could be neither for food nor for a delicacy, I was given the answer that they were paying back the little

/411 cont./
animals for what the latter were doing to them.

Exactly the same hair style as the Gilyak have is found among their nearest neighbors, the Negda, Olcha, and their fellow tribesmen -- the Orok on Sakhalin (1). It may be pre-

1. Mamia Rinsô ("Tôtats-ki ko," in Siebold's Nippon, VII, p. 189) has already noted for the Orok that they do not cut their hair, but let it hang down over the shoulders or wear it wound into a thick plait at the neck.

It may be presumed that formerly the Ainu, too, had the same or a similar, more or less natural hair style, until they fell under the rule of the Japanese, and under pressure from them, as a sign of submission, adopted their present hair style, essentially similar to the one of the Japanese. As is known, the Japanese shave the hair on the forehead and crown, and at the back of the head they do not let it grow as long as do the Chinese nor plait it in a braid, but cut it to a certain length all around and gather it into a lock which, tied with a ribbon, rests on the crown in the direction of the forehead. Now, with the exception of this last point, which for a primitive people would be too elaborate and inconvenient and also require too much attention and care (2),

2. For example, in order not to disarrange their hairdo when sleeping, the Japanese, instead of a pillow, use a small wooden bench that is hollowed out to conform to the shape of the head.

the Ainu imitate their rulers. As early as 1622, Father Hieronymus de Angelis reported that the natives of Jesso /Yesso/ shear their hair in front so that there is no hair at the temples, but in the back wear it as long as the Japanese (that is, without a braid hanging down) (3), and Vries added that the women

171 the great Chingan Mountains, around the tributaries of the Nonni,
177 along the Nomin, Ganj, Gujuli, etc., where they live in com-
[131] plete dependence on the Daur and indirectly on the Chinese (4).

4. See p. 94 above.

they also certainly share the hair style of the latter, it gradually disappears going northward, and along the upper Amur and its northern tributaries, where, /416/ in spite of the Treaty of Nerchinsk, they have actually always remained under Russian influence and Russian rule, they have also retained their original and natural hair style, with the hair completely unshorn and either simply hanging down or tied up in a bunch on the crown (1).

Thus, the way of wearing the hair among all the indigenous peoples of the Amur region is a sign of their dependence on or independence of the Manchu-Chinese, or, on Sakhalin, the Japanese. The boundary up to which the Chinese, among the Amur peoples, or on Sakhalin the Japanese, hair style extends designates at the same time the boundary of the effective rule of the Manchu-Chinese or Japanese over these peoples. It is a political, not an ethnographic border line: in the western part as well as in the eastern part of the Amur region and Sakhalin it runs across the habitation area of the peoples concerned (Orochon, Orochi, and Ainu), only at certain points separates closely related tribes (for example, the Olcha from the Samagir

A
G /416 cont./
SS and Goldi), and nowhere coincides with the boundary of such
T fundamentally different peoples as the Gilyak on the one hand
302 and the Amur Tungus or Ainu on the other. Inasmuch as the
171 degree of the dependence of the Amur peoples on the Manchu-
177 Chinese or Japanese is of the greatest importance with regard
648 to their whole existence and lives, however, this border line is also of great ethnographic interest.

G
301 Like the hair style, there is another aspect of the external
171 appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the lower end (small earring, Pl. XXIX, Fig. 7), or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair worn at the ear lobe, which may serve as protection against the
Gi cold as well as adornment. It is noteworthy that, aside from
[301] the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or
Gi facial part. Among the Samagir on the Gorin, the Goldi, and
301 the Orochi, however, there is a second and similar ornament, which, to be sure, is limited to the female sex (1), among

1. Only once, quite as an exception, did Maack (Putesh. na Amur", p. 224) see this

Gi /417 cont./
301 1. (cont.)
ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from
Gi those of the Olcha and Gilyak. This is a nose ring shaped exactly
[304] like the small earring described above, but still smaller, which
[515] hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway.
Gi Finally, among the Orochi the same situation is found with re-
171 gard to the kinds of ornaments discussed as with regard to the hair
[184] style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-dse, along the seacoast at least from Olga Bay downward (2) and along the right Ussuri tributaries, corre-

2. Olympiada Wassiljewa, op. cit., p. 67.

spond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the
ooo right or the left nostril (3). From what has been said, it is readily

Gi
[114] 3. According to Przewalski (op. cit., p. 105) in the right nostril; according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

G From what has been said, it is readily
SS seen that the custom of wearing nose rings, strangely enough, has
301 spread among the peoples of the lower Amur region only as far as
302 the Manchu-Chinese hair style has been accepted by them; where
171 this has not been taken up by them, there are likewise no nose
177 rings in either the nostrils or the nasal septum. I would not know,

Gi
SS /417 cont./
302 however, how to explain such a coincidence of the Chinese hair
301 style and the unusual use of nose rings among the natives of the
171 lower Amur region, for, as is well known, the Chinese do not
177 wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the
T Manchu-Chinese hair style has also spread into the latter, and
302 even far more than in the former, and yet none of the tribes there
301 wears nose rings, neither the Birar, the Manegir, nor the Orochon.
171 Thus the custom is limited, on the whole, to only a few of the many Tungus tribes of the Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

G A more common customary ornament among all the peoples
301 of the Amur region, in particular for the female sex, are silver
171 or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyisj) made out of the same material or out of bone, /418/ which are worn above the wrist. On
G Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak work-
[531] manship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XLV, Fig. 5 /in the original work; the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop securely soldered and overlapping on the outside. This
Gi ring, by the way, is not merely adornment, but has a definite
[301] practical purpose. La Pérouse, who saw it among the Orochi
[462] (or Olcha) on de Castries Bay, was of the opinion that it serves them as a prop in skinning and cutting up fish (1). This work,
Gi however, is not done by the men, but by the women.
[113] 1. La Pérouse, Voyage aut. du monde, ed. by Milet-Mureau, Paris, year V (1797), Vol. III, p. 64.
[See Category 116, P. 1025--Analyst]

/418 cont./
ooo however, is not done by the men, but by the women. As I my-
301 self have seen among the Gilyak and as is reported from other
171 Amur peoples (Olcha, Manegir, Orochon) (2), the thumb ring
411

[113] 2. Maak", Putesh. na Amur", pp. 75, 207. Gerstfel'd", "O pribrezhn. zhit. Amura" (Viestn. Imp. Russk. Geogr. Obshch., Part 20, 1857, Sec. on Res. and Mat., p. 296).

is used to draw the bow, to grasp the string better, and, in case of a strong pull on it, to protect the skin of the finger from
[554] injury as a result of severe abrasion (3). Aside from this practical

[113] 3. According to Anutschin /Anuchin/ (Luk" i striely. Arkheologo-etnograf. ocherk" /Bow and Arrows, an Archeological-ethnographic Essay/, Moscow, 1887, p. 35), this is the bow pull especially characteristic for the peoples of the Mongolian race, and, according to Morse, in his work, "Ancient and modern Methods of Arrow-Release" (Bullet. of the Essex Instit.), the so-called "Mongolian" method of drawing the bow.

purpose, however, the thumb ring is also a special ornament, since it is regarded as a sign of manliness and is associated with skill with the bow and arrow. No halfway adult Gilyak therefore lacks the aam, and it is the same among the other peoples.
[177] Indeed, even where the bow has in large part already been pushed out by firearms, Chinese matchlock guns, or Russian-Yakut rifles, as among the Manegir and Orochon, the thumb ring is still
[574] generally worn (4). Here, then, apart from its use in an occasiona

4. Gerstfeldt, loc. cit., and Maack, loc. cit.

301 fist-fight, it is gradually becoming a mere ornament. And this
171

/418 cont./

is even more the case in China, where one sometimes sees it made with beautiful workmanship out of ivory, jasper, agate, etc. on the hands of high officials and mandarins (5). Undoubtedly

5. Davis, La Chine, trans. from the English by Pichard, Paris, 1837, Vol. I, p. 222. According to Neuhof (Die Gesandtschaft der Ost-Indisch.-Gesellsch. in den verein. Niederländern an den Tartar. Cham und nunmehr auch Sinischen Kaiser, Amsterdam, 1666, p. 64), the viceroy of Canton, at the time the Dutch embassy was there (1655), wore a thumb ring made of ivory. Fleming (Travels on horseback in Mantchu Tartary, London, 1863, pp. 303, 317) saw thumb rings of greenish-white jasper on two mandarins, one of whom belonged to the military forces in the city of Shanhai-Kuan on the seacoast close to the Great Wall. Freiherr von Hübner (Ein Spaziergang um die Welt /A Walk around the World/, second edition, Leipzig, 1875, Vol. III, p. 96) remarks that highly placed men in China always wear a large ring of white or green jade on the thumb.

/419/ the explanation for such regard and high esteem for the thumb ring may be found in its original purpose discussed above.

In concluding this section I must still raise the question as to whether and to what extent the custom of coloring, painting or tattooing, certain parts of the body is found among the peoples of the Amur region?

G 302 304 191 /419 cont./

First, as far as the Gilyak are concerned, I believe I can state with certainty that nothing of the kind occurs among them today. At least no trace of such a custom among them was encountered by me, despite frequent contact with them for several years. This is noteworthy inasmuch as this custom is found among their immediate neighbors on Sakhalin, the Ainu, and more or less among all the other Paleo-Asiatic peoples, even though it may be gradually disappearing. In the Ainu area, the coloring or tattooing of certain parts of the body is practiced chiefly on Jesso /Yesso/. In the Japanese descriptions of this island, the Jeso-ki of Kannemon (1652) and Arai Tsikugo-no-Kami (1720), it is said that the Ainu women color their lips with the juice of the kudsi-gusa (or mouth-plant) and produce various flower- and cloud-like figures all around the mouth, as well as on the forehead, face, hands and feet, by means of needle pricks and rubbing in a black substance (1). These tattooings are applied

A 302 304 [105]

A [105] [184] to the girls in childhood by their mothers. They are also more or less discussed by the European or North American travelers who visited Jesso (2). To be sure, the same custom prevails

A [113]

2. For instance, by Vries (Siebold, Aardr. en volkenkund. toelicht. /Geographical and Ethnographical Explanations/, p. 100) and later by Broughton (A Voyage of discov. to the North Pacific Ocean, pp. 99, 105),

G K 304 191 /421 cont./

In the whole series of Paleo-Asiatic peoples from Jesso to Greenland we find only two small tribes who lack the custom of tattooing -- the Italmen on Kamchatka and the Gilyak on the Amur and on Sakhalin. Under these circumstances one might think that the custom of tattooing was formerly indigenous among these two peoples, too, but had disappeared in the course of time. Such an assumption, however, is not permissible. Steller's and Krascheninnikof's reports on the Italmen come from a time when the latter had by no means lost their national characteristics to such an extent that such a prominent and, if it existed among them, ancient custom as tattooing could have already completely disappeared without any remnants or traces and even without having left behind any accounts in the traditions. And, as was pointed out at the very beginning of this work, I became fully acquainted with the Gilyak at a time when they were still in full possession of their individuality. The complete lack of tattooing among the former as well as among the latter must therefore be regarded as part of their individuality in contrast to the other Paleo-Asiatic peoples.

G 304 191 At first glance it might seem that this individuality of the Gilyak in the Amur region was also shared by other peoples, in particular those living adjacent to the Gilyak, for the Olcha, the Orok on Sakhalin, the Negda, and Samagir do not have the custom of tattooing. But the situation is essentially different among them. I think I can say with certainty that tattooing is not at all customary at present among the Olcha, /422/ for I became acquainted with them on several voyages throughout their habitation area. I became acquainted with the Samagir on the Gorin only in Ngagha, the largest of their villages, to be sure, and concerning the Orok on Sakhalin and the Negda, I met only isolated individuals, but other travelers, too, who had more contact with them, did not observe any kind of tattooing among them, for example, neither Middendorff and Schmidt among the Negda nor Poljakof, after a stay of several weeks on the east coast of Sakhalin, among the Orok there. This is very noteworthy

/426 cont./

* 262 252 825 of these and on occasion many other fish is so inferior both qualitatively and especially quantitatively to that obtained from the two first-named kinds of salmon that it is not very important next to that one, and therefore by "ma" the Gilyak simply refer as a rule only to the former one and differentiate it, according to the kind of fish from which it comes, as lyghi-ma and tengi-ma, always giving preference to the former over the latter. Ma, then, * 262 is the chief food of the Gilyak, their bread, so to speak (3) --

[113]

3. Steller (Beschr. von dem Lande Kamtschatka /Description of the Country of Kamchatka/, p. 157) designated the jukola, and likewise chiefly the one obtained from Salmo lagocephalus, as the "true Kamchadal bread."

the basis /427/ of their households and the red thread running through their entire dietary system. When a newly arrived Gilyak 574 enters a yurt and has taken a seat on one of the sleeping benches, 264 a small tray (Gilyak chach-tschitsch, Pl. XXXIV, Fig. 4) with * 262 several strips of ma and a bowl of fish oil (Gilyak tom), as well as 412 a small wooden spoon (Pl. XXXIV, Fig. 7), is immediately given to him by one of the women. With the small tray on his lap, he cuts up the jukola on it with his belt-knife and eats it in such a way that he first dips each piece into the oil, or alternatively spoons up the latter, or he dips the end of the strip of jukola in the oil, seizes it with his teeth and cuts the bite off from below upward, immediately in front of the mouth, with his knife close to the lips and passing by the tip of the nose, as has been observed among so many other primitive peoples (1). When a Gilyak

unter den Eskimos /As an Eskimo among the Eskimo/, p. 232), the Buryat (Radde, "Ozero Baikal" /Lake Baikal/," Viestn. Geogr. Obshch., Part 21, 1857, Sec. on Res. and Mat., p. 140; Raev", "Buriaty /The Buryat/," Viestn. Geogr. Obshch., Pt. 24, 1858, Sec. on Res. and Mat., p. 10), the Ostyak (Pallas, Reise durch versch. Prov. des Russ. Reichs /Travels through Various Provinces of the Russian Empire/, Vol. III, p. 46), the Samoyed (A. G. Schrenck, Reise nach dem Nordost. des europ. Russlands /Travels to the Northeastern Part of European Russia/, Dorpat, 1848, Vol. I, p. 311; Islavin", Samoiédy /The Samoyed/, St. Petersburg, 1847, p. 35; Abramov", "Opis. Berezovsk. kraia /Description of the Berezov Region/," Zap. Russk. Geogr. Obshch., Pt. XII, 1857, p. 354; Middendorff, Reise, etc., Vol. IV, 1453), and others. The Tungusic tribes of the Amur region do the same thing. The Nertscha /Nercha/ Tungus call it "to eat from the knife" and maintain that meat so eaten is much tastier than if it is first cut in pieces (Usol-tsev", "Putesh. po dolinie rieki Nerchi /Journey along the Valley of the Nercha River/," Viestn. Imp. Russk. Geogr. Obshch., 1857, I, p. 76).

* 262 484 584 When a Gilyak undertakes a long trip, though he can be sure of finding a hospitable reception for himself and his dogs in every village of his country men, he nevertheless takes along a bundle of jukola just in case bad weather should force him to spend the night under the open sky, in which case the ma, warmed or slightly roasted over the campfire, will serve him very well.

/431 cont./

*262 [113] 1. (cont.) topograf. Sbom., St. Petersburg, 1870, p. 13).

[114] [231] the main use that they make of it, but on the Liman I have seen them eat seal meat, and I also tasted it on this occasion. Like *262 the meat of all mammals, it is only eaten cooked, not raw, 252 whereas the latter, as we have seen, is often and sometimes even preferably done with fish. On the other hand, the Gilyak have a general, superstitious aversion against the frying of fish or meat, a superstition I often had to fight during a stay in their yurts, for whenever a piece of meat was being fried for me, with the first sizzle of the butter or fat in the pan, the cry "uftsch, uftsch" (unlucky) could be heard from all sides and it was often difficult to [251] finish the cooking (2). As little as the Gilyak like seal meat, they

• [191] 2. Steller (op. cit., p. 323) also points out with regard to the Italmen and Koryak that they do not like frying, in contrast to the Tungus and Yakut.

nevertheless greatly relish seal fat or blubber, which they eat cut in slices, and, finally, most popular is the train oil obtained from it, which is in general use among them and is kept among their supplies in seal bladders and stomachs to be utilized, apart from its use to illuminate the yurts, sometimes in the preparation of many kinds of dishes and sometimes simply eaten with a spoon as fish oil along with jukola or enjoyed in other ways. It is by this ingredient, which becomes more general and more essential the closer one comes to the Amur-Liman and the seacoast, that the food of the Gilyak is principally distinguished from that of the other Amur peoples living farther upstream and inland.

*262 136 Besides seals, Nature offers the Gilyak another important and precious foodstuff to almost the same extent. It is the white whale, Delphinapterus leucas Pall. (Gilyak pomi-tscho), which, with the sole exception of the coast along the northern part of the

/431 cont./

*262 [136] Sea of Japan, likewise occurs throughout the habitation area of the Gilyak and goes up the Amur River just as far as the seal (3). I

*262 225 [231] 3. See Vol. I, p. 191, of the present work.

learned this much about it, that though, like the latter, it, too, is used by the Gilyak as food for people and dogs (4), nevertheless

[113] 4. According to Steller (Beschr. von dem Lande Kamtschatka, p. 106), the fat of the white whale is not at all like train oil and the meat, too, has quite a good taste.

it comes after the seal, because hunting it, which will be discussed later, is much more difficult and dangerous and can be done for only a shorter period in the year, only as long as the river is open, and furthermore because it is not nearly as useful as the seal, which, besides food, also yields valuable clothing materials. Nevertheless, the numerous white-whale skulls which one sees hanging on trees and branches at many places along the banks of the Amur River indicate that /432/ the white whale is not infrequently captured by the Gilyak and, in conformity with its significance, is treated in traditional, superstitious ways.

*262 • 191 [136] The Gilyak behave quite differently toward another cetacean, the so-called keng (Balaenoptera longimana Rud.), which is occasionally stranded within the range of their dwelling sites on the coasts of the Sea of Okhotsk and the northern part of the Sea of [231] Japan. To be sure, they acquire these animals in order to feed their dogs with the fat and meat, but they themselves do not eat any of it. In fact, their physical and moral abhorrence of it is such that keng fat or meat is not brought into the yurt, but may be kept only in the storerooms. I could not learn from them what this abhorrence was based on. It is all the more striking, however, since among all the other Paleo-Asiatic peoples whale meat and blubber are among the most popular foods. The Ainu, for instance, do not leave a stranded whale until all the meat and fat on it have

*262 • 191 /432 cont./ been consumed (1). Steller (2) and Krascheninnikof (3) describe

[113] 1. According to a written communication from Rudanofskij. Cf. also Dobrotworskij /Dobrotvorskii/, Ainsko-russk. slovar' /Ainu-Russian Dictionary/, supplement to Uchen. Zap. Kaz. Univers., 1875, p. 37.

2. Op. cit., pp. 98-105.

3. (cont.)
the English by Pichard, Paris, 1837, Vol. I, p. 312. John Bowring, "Die Chinesen, ihre Sitten und Gebräuche /The Chinese, Their Usages and Customs/" (Petermann's, Geogr. Mittheil., 1855, p. 319). Girard, France et Chine, vie publ. et privée des Chinois anc. et mod., Paris, 1869, Vol. II, p. 32. Others, like the English missionary Milne (Petermann's Geogr. Mittheil., 1857, p. 436) and Poussielgue (Voyage en Chine et en Mongolie de Mr. et de Mme. de Bourboulon, Paris, 1866, p. 272), deny the use of rats for food among the Chinese.

Gilyak were taught better by experience, perhaps as a result of painful or even fatal cases of trichinosis? Among all the land mammals there are only two that are of special significance as food for the Gilyak, and, to be sure, both on account of their general and frequent use and the great importance that they place upon them. These are the bear and the dog.

Bear meat and bear fat are the greatest delicacies that there are for a Gilyak. For the purpose of eating it, the bear is taken from its lair and kept in captivity for a long time and fed. But, according to Gilyak custom, it may not be eaten except at certain times and with the observance of a number of ceremonies and practices that are undertaken in large ad hoc festive gatherings. I have had an opportunity, as an eyewitness, to become acquainted with these bear festivals, which play a most important role in the life of the Gilyak, in all their individual acts from beginning to end, and therefore I am obliged to discuss them in a special, later section of this work. Besides that, however, they gave me considerable insight into the food and cooking of the Gilyak in general, for to entertain the large festive company assembled many dishes must be prepared in a way to suit the palates of the Gilyak. And so most of what is presented below concerning their culinary achievments was observed by me on such occasions.

/435 cont./

231 shavings, the so-called zach, whose significance will be discussed
252 in the following. The bundles containing the meat and bones of
262 the dogs were now brought into the yurt and arranged on the rear sleeping bench, whereupon the women went to kindle the fire under the kettles on the hearth in order to cook the meat and to make a broth out of the bones. These preparations, however, took so much time that the meal could not take place until late in the evening. Meanwhile the flames leaping on the hearth, the steam and smoke rising from the kettles, and the crowd of people, who not only occupied all the sleeping benches, but had also settled down on the floor of the small earth-yurt, soon made any further stay in it so unbearable that I found it necessary to leave before the actual meal and to seek another shelter for the night.

114 If one wished as a conjecture to grant for the northern peo-
171 ples the discovery made in the south among various Negro tribes,
231 namely, that the enjoyment of dog meat is generally the first step
262 toward anthropophagy and accompanies it (2), he would look quite

2. Schweinfurth, "Das Volk der Monbuttu in Central-Afrika /The Monbutto People in Central Africa/" (Zeitschr. für Ethnologie, Berlin, Vol. V, 1873, p. 10). Peschel, Völkerkunde /Ethnology/, Leipzig, 1874, p. 168.

in vain for evidence of it among them. I have never come across anything among the so generally and markedly cynophagous Gilyak that would even distantly support such a conjecture. On
171 the other hand, I believe it can be said as a general rule for these
231 peoples with respect to the custom of eating dogs that it is com-
262 mon only in the case of those among them who keep the dog as the only domestic and draft animal, for only in this case can it be considered quantitatively as a food and morally nothing stands in the way of its use as such since the draft dog does not at all stand in the close, individual, and to a certain degree personal

/435 cont./

ship to his master as does the hunting or house dog, who, through loyalty, personal attachment, and other characteristics lacking in the draft dog, makes himself the constant companion and friend of man. Accordingly, just as among the Gilyak, one also finds cynophagy among other Paleo-Asiatic peoples, for example, among the Aino of Sakhalin (3) and of

3. Dobrotvorskii, Ainsko-russk. slovar' (Supplement to Uchen. Zap. Imp. Kaz. Univers., 1875, p. 37). Cf. also Siebold, Nippon, VII, p. 204.

mio /Yesoof, the latter of which supposedly even fatten dogs for eating them later (4). The Eskimo, too, eat dogs (5), but at

/436 cont./

dog must be still a rare delicacy because of its naturally very high price. The ancient Itelmen on Kamchatka seem to be a striking and completely unique exception to the rule, for though they had dogs in plenty and the dog had no other domestic animal besides them, nevertheless among all the animals of their country "only dogs, mice, and lizards were excluded from their menu" (2),

2. Steller, op. cit., p. 323. Krasheninikov does not mention this.

as Steller expressly states. Or had they perhaps already given up eating dogs in Steller's time, as a result of their well-known, exceedingly eager imitation of the Russians (3), for whom it was a

3. Steller, op. cit., p. 285 and elsewhere.

particular abomination? And all the more since it could not have been difficult for them in material respects in view of Kamchatka's great wealth of fish (4). On the other hand, those peo-

4. According to the observations made by the Vega Expedition, the Chukchee of Pitlekai and Jinretlen refused to eat the meat of a stain dog (Nordenskiöld, Die Umsegelung Asiens und Europas /A Voyage around Asia and Europe/, Vol. II, p. 98). Whether this is general among the Chukchee has not yet been ascertained.

ples -- as I should like to formulate the above rule further -- who keep the dog only for hunting or to guard house and grounds, but use another domestic animal, the reindeer or the horse, for traveling, riding, or burden-carrying, such as the Orok, the Siberian Reindeer-Tungus, Orochon, Manegir, etc., not only eat no dog meat, but even have a more or less marked aversion to it. From this point of view it is noteworthy that the Olcha, who at

/437 cont./

Gilyak and in other Paleo-Asiatic peoples, the Gilyak and Aino, and must be regarded as a custom peculiar to them since ancient times. Merely the circumstance that it is absent among all the peoples living in the Amur region (after subject, towards the Urusi and Sogoni, it makes it certain that any possible influence from the Chinese, who, as is well known, eat everything possible, including dogs, cats, rats, and the like (1), is not remotely conceivable. On the other hand,

1. And, to be sure, in China dog meat is eaten not merely by the poorer people out of lack of any other food, but generally, and even at the best and most elegant tables. Among the many older and more recent reports on this, only the following are to be referred to here: Neuhof, Die Gesandtschaft der Ost-Ind. Gesellschaft, in den verein. Niederland. an den Tart. Chan /The Embassy of the East India Company in the Territories of the Netherlands to the Khan of Tartary/, Amsterdam, 1666, p. 275. traced back to Chinese influence.

Birds furnish the Gilyak much less food than do mammals, merely be the reason that they are much very much smaller in account of their little use otherwise and, as a rule, they are much more difficult to catch. Whatever the Gilyak do catch, however, is consumed indiscriminately, and some birds which are periodically more easily caught make a somewhat larger contribution, though always a minor one, to their diet here and there. At several places, for instance, the ptarmigan (Lagopus alba Gm., Gilyak parzl, on Sakhalin tschleola-nga) is caught by them in large numbers by means of simple snares. Along the west coast of Sakhalin, from Tyk to Dal', I saw them commonly with great relish the Phalaris cristatella Pall. (Gilyak nochla-nga), which easily falls prey to them in winter because they slight individually or in small flocks on the ice, and, moreover, in the end, the rest of the meat of the sea eagle, which the Gilyak lift out of its nest and raise with fish in order to sell the tail to the Japanese, as

carry with them on trips a crow's head on top of the sleds laden with provision and trade articles as a means, as they themselves told me, of bringing good luck. Incidentally, ideas quite similar to those concerning the crow prevail among the above-named peoples, the Chukchee, the Eskimo from Kadjak, the Kenai, and the Koljuschen in connection with the raven, and the latter therefore do not eat it (3). In view of the great similarity between the

/438 cont./

(2. Cont.)

II, p. 96), on the other hand, the Chukchee of Pitlekai and Jinretlen had no objection to eating a raven that had been killed by them in the vicinity of their villages and hun in order to benefit from the scraps from the catch of fish or the preparation of jukola, and appear at the midday or overnight campsites of travelling Gilyak even before the fire has gone out, in order to eat any possible remains from the meal; in fact, they not infrequently steal a match on them in consuming /438/ a raven vega frozen fast to the sea ice or an animal caught in a trap. Perhaps the Gilyak are also governed in this by some kind of superstitious belief concerning this bird, like, say, the Chukchee (1) and the

1. Kibel', "Chukchi /The Chukchee/" (Sibirsk. Vestn., 1824, Pt. II, Ethnography, p. 119).

Finally, among the animal foods of the Gilyak a few other creatures must be mentioned, for the coastal Gilyak do not scorn gathering and eating some of the crustaceans and mollusks tossed up by the sea or left behind by the ebb. Frequently, but not the west coast of Sakhalin they also eat the Tellina vestalosa (Gilyak kîr wub) (1), Macrra sachalinensis (Gilyak

5. See Vol. II, pp. 556-558, of this work.

moghomi-wellach) (6), and a third mussel, which they called

joxang-wellach and which remains unknown to me, as the species whose "sweets are sought after" at the same time praised them as being "sweets as sugar."

/439 cont./

ge a popular ingredient in many dishes of the Gilyak, for example, among others, one of the most important of these, the so-called mosmi. This is a mixture of ground fish-skin, or, lacking them, of chopped jukola, with fish oil and berries. For the preparation of mosmi, the fish skin, from lyghi-nscho or tengi-nscho, are cut up in small pieces, well cooked, ground, and stirred with fish oil to a mush of a white color, to which, finally, bilberries are added (2). This gives a thick substance, like thick cream (our

2. A quite similar dish, made out of cooked and ground fish-skins with an admixture of pounded cedar-nuts, was used by the Kurilies on the southern tip of Kamchatka, according to Steller (op. cit., p. 325).

cream). I saw mosmi prepared for the bear festival in Tebach, for it is an essential part of it and is both eaten by the participants and given to the bear. At other times, however, I saw it made out of finely cut jukola that was cooked and mixed with little oil and bilberries. If the substance is cooled sufficiently or freezes a little, it can be cut into slices with a knife. Depending on the kind of fish used, the Gilyak distinguish between very many kinds of mosmi, giving preference to the former. They like to take a small supply of it along on winter journeys. For the midday meal around the blazing fire I have seen them perfectly satisfied with a few strips of jukola warmed or slightly roasted at the flames, several slices of mosmi, and a drink of snow-water. Next to the bilberry, Empetrum nigrum L. (Gilyak yghrch) is the most commonly used and favorite berry among the Gilyak just like the former, indeed often in place of it, it is used both as an accompaniment and as an ingredient for mosmi and other dishes, /440/ and is like-wise collected and stored in great quantities. In the Tymy Valley on Sakhalin it is even more common and more frequently used than the bilberry. Elsewhere, for instance, in Tymi on the Lima, the cranberry, Vaccinium oxycoccus L.

/441 cont./

prepared, but with the difference that, instead of the fish roe, finely chopped seal-blubber was mixed in with the berries. The Gilyak also use various lichens in quite similar ways, especially reindeer moss, Cetraria islandica L. (Gilyak chlewyth) (8), and

3. Among the Olcha: chity,

a tree moss, Usnea (Gilyak tschwalch, and, to be sure, distinguished as kana (white) and pluta (blue) tschwalch), for food by making soups out of them with the addition of fish roe or seal oil. Finally, the sea, like the forest, yields a quite popular edible food for the Gilyak, especially an edible alga, which they call tschollach (4), and the Laminaria esculenta (Gilyak punch).

4. Glehn, op. cit., p. 214.

I have seen the latter consumed in the village of Tyk in much the same fashion as the above-mentioned tree moss and other plants, in that, mixed with chopped jukola it was cooked in water, where upon, when fully cooked, it made a sticky, viscous mass of a white color in the soup. The Gilyak collect and dry the Laminaria in small stacks for the winter, which they then store of Sakhalin (1) the Aino, /442/ who, according to Schmidt (1), for their part

1. Op. cit., p. 98.

leached it from the Japanese, who keep the Aino busy at it and annually send whole shiploads of dried and artifically rolled up Laminaria from Sakhalin to Hakodate and Matmai.

While the natural vegetable products discussed above are of great importance for the Gilyak inasmuch as they are available to everyone, with a little trouble and care, and, though not very nutritious in themselves, contribute essentially to the greater tastiness and variety of their diet, and in times of scarcity when no fish and no animals are caught and the supplies of animal food run low, they may even prevent starvation,

[113] animal food, and especially fish food, on the whole, continues the basis and mainary of the existence of the Gilyak.

A noteworthy circumstance in connection with the diet of the Gilyak must still be considered here. It is the fact that they do not use any salt at all with their food and, indeed, even have a certain aversion to it. I am taking the liberty of repeating here what I wrote several years ago in a letter to Dr. Gustav Bunge (1),

1. At that time a docent in Dorpat, now a
professor in Basel.

which has also been published by him (2). Despite my long stay

[114] 2. In his article "Ethnologischer Nachtrag zur Abhandlung über die Bedeutung des Kochsalzes und des Verbrauches der Kalisalze im menschlichen Organismus (Ethnological Supplement to the Discussion on the Significance of Cooking Salt and the Effect of Potassium Salts on the Human Organism" (Zeitschrift für Biologie, Vol. X, Munich, 1874, p. 116).

among the Gilyak and many an observation of their food and the preparation of dishes, I never saw them add salt to any dish or eat it in any other way. I was never asked for any by them and do not know /444/ that they ever asked for it in Nikolayevsk, where it was sold. The following experience gave me further evidence of

[115] how little it is required by them: since toward the end of my journey in the winter of 1856 my salt was exhausted, I asked for some in every Gilyak village that I passed on the road to the west coast of Sakhalin and along the Amur-Limans, but always in vain, until Fenrge, on the mouth of the Amur, a bachelor-sized lump of salt wrapped in a dirty rag, which its owner had once happened to get and had kept as a worthless curiosity, was finally brought to me. The Gilyak repeatedly expressed their regretance for it when they saw the eat salt. There the numerous similar reports on the use of

[116] non-use of salt by various people Dr. Bunge draws the conclusion,

induced by the above-mentioned explanations by Dr. Bunge to make a few remarks concerning the use, or rather the non-use, of salt among them. The Gilyak and Orochi are the only occasions [117] at which the Gilyak, as is to be seen from the above statements, eat plant food, very, to be sure, rarely and sparingly, in large quantities. It is therefore not surprising that at time the [118] plant distance he ate no food at all (or, more correctly, he ate, the contrary), is especially noticeable, for during a long festival it is regarded as unfitch (unlucky) merely to add salt to the dishes? Yet, this does not mean that he is not considerably affected by the [119] tion and its chemico-physiological proof. For, first of all, the bear festival takes place for only a short time here or there, which does not alter the very predominantly animal character of the Gilyak diet on the whole; secondly, the amount of plant food eaten at them is considerable, and, finally, the bear is a very polygamous man who trades with Chinese, Russians, or Japanese, and otherwise, and in general, it likely to fall below the amount of animal food, especially bear meat and fat; thirdly, and finally, the bear festivals are an ancient national custom preserved, as we shall see, with a number of deep-rooted superstitions for the Gilyak, among whom any innovation would meet especially stubborn [120] resistance.

[121] similar shape to that of the Chinese and Japanese (2). /448/

2. Mamia Rinō, "Tokeiz kiho" (Siebold, Nippon, VII, p. 194).

[122] One might suppose that the traveler was concerned with, not originally Gilyak, but only with imported Chinese and Japanese pottery which he saw among the Gilyak, but this would still not remove the contradiction with my above statement, because Mamia Rinō goes on to say that there were especially many porcelain factories along the Amur (Hasshū near Kidi (3). This,

1. Op. cit., p. 172.

however, no longer refers to the Gilyak, whose territory does not begin until somewhat below Kidzi, but even among the Olcha, to whom it must refer, the Gilyak, who live on the Amur along the Olcha at least as far as the Umut, I never saw such factories or any of their products. And Mamia had the same experience, except that in the Gilyki village of Sulibi he saw some earthenware pots among the household utensils of the native (3). This village, however,

[123] 3. Staak", Putesh. za Amur" (A Journey through the Amur Region),

is in the vicinity of the Sungari, where, as we shall presently see, totally different conditions prevail in this respect. If, therefore, one is to believe Mamia Rinō's report, and, according to my experience, they find merit, one is forced to assume that the Olcha, and presumably also the lower Gilyk, at the beginning of 19th century produced pots and bowls for the Chinese and sold the products even among the Gilyak as far as Sakhalin, and that the latter were little unfamiliar with this industry — an industry which had been completely lost fifty years later when I explored the Amur region. How this happened will be illuminated as much as possible in one of the following chapters in the discussion

[124] of the trade relations of the Amur peoples, and especially of the Gilyak, with the neighboring civilized peoples. For the moment, it will suffice to make the general remark that the Gilyak probably was brought about by violent seizure and devastation plotted by the Manchu-Chinese government itself for political reasons and to which Mamia Rinō's voyage may even have given rise. Through the devastating blow that the government, feared by the natives, exercised, among other things, against the pottery and porcelain manufacturing of the Olcha on the Amur, they were forced back, into their neighborhood, upper and downstream, the lower Gilyk and Gilyak, to their traditional woodworking industry and were so strongly and lastingly prejudiced against all pottery and porcelain that from then on even articles of the sort known as Chinese Ware could not find approval and acceptance among them. The [125] manufacture of the pottery industry, flourishing in the lower Amur region, on the other hand, may have prompted the Gold to take up the [126] production of wooden implements, so that these large bowls and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kora, respectively.

Whereas the pots and porcelain bowls were transported along the lower Amur by the Manchu, it made equal and unimpeded [127] headway in the opposite direction along the Sungari and Ussuri Rivers. /447/ According to the notes of the Chinese U-tschen in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). With the increasing

[128] Gilyak produced them, some of them of very good quality, which were shipped far away, and according to Barabash (3), there in

3. Barabash, "Sungar. eksperdisia 1872 g." (Zap. Imp. russk. geogr. Obshch., Vol. VII/2" (Ussuri Shore, 1874, Nos. 2, 3, 5, 7).

one or several of them in every Sungari town. The pottery that Black saw in Sulibi on the Amur probably also came from the Sungari. The fact that it does not go further down the Amur, however, to the lower Gokds, Olcha, and Gilyak, in spite of their annual trade voyages to the Sungari, seems all too clearly to the [129] conclusion that they entertain a special aversion to such utensils.

If, from the statements by Mamia Rinō given above, one [130] conclusion of the pottery industry, flourishing in the lower Amur region, on the other hand, may have prompted the Gold to take up the [131] production of wooden implements, so can these large bowls and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kora, respectively.

Whereas the pots and porcelain bowls were transported along the lower Amur by the Manchu, it made equal and unimpeded [132] headway in the opposite direction along the Sungari and Ussuri Rivers. /447/ According to the notes of the Chinese U-tschen in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). Possessions in America), St. Petersburg, 1867, Part II, p. 34; Idem, Alaska and its resources, Boston, 1870, p. 216.

[139] Dawson and Kotzebue Sounds (8), and, in the Unwegotting, among

8. Nelsh, Cap. Jacobsen's Reise an der Nordwestküste Amerika's /Capt. Jacobsen's Travels on the Northwest Coast of America/, Leipzig, 1884, pp. 214, 215, 296.

among the earthenware vessels made by the Eskimo which he saw on the Yukon (Kwichpak), a few of which are illustrated in his book on Alaska, that Dawson mentions, he discovered after a Russian model. This may have been the case, for since the Russian settled in this country some Russian dishes and cooking utensils undoubtedly reached the natives there. Nevertheless, the making of pottery by the American Eskimo in no way came from the Russians. [140] Dawson found it there already, and Dawydof, like Sagoskin, remarks that acquaintance with iron and copper kettles and other [141] utensils, made Eskimo unable to do without them, cannot consider the Eskimo, who, in the formerly general distribution of pottery vessels of the Russian-American Company, with which [142] agrees. Finally, also arguing for the great antiquity of the art of pottery among the Eskimo of northwestern America /450/ is the simple and primitive manner in which it is practiced: the vessels are shaped freehandedly, and therefore are not quite circular or even symmetrical, but are smoothed and decorated by means

1. As can be seen from the illustrations given in Jacobsen's travel account (pp. 214 and 215).

of peculiar and likewise very simple instruments (2). Without

2. These instruments are likewise illustrated by Jacobsen (Op. cit., P. 296).

[143] 2. (cont.)
by Jacobsen (op. cit., p. 296).

[144] interesting to specify more precisely the date and the manner of the origin of the pottery industry among the Eskimo, I think it is [145] draw the conclusion, on the basis of the above considerations concerning the Paleo-Asiatic peoples, that the Diomps left their inhabitated without any knowledge of the art of pottery, and only learned it in America, probably as the result of influences which came to them from the south.

To return to the Amur region, I repeat that the potter's art of the Gilyak, Olcha, and Ainu of which Mamia Rinō spoke was lost for a time and, in the Gilyak and Olcha, only revived, after a brief existence, again disappeared as a result of the violent measures of the Manchu-Chinese government. It seems, however, contrary to my opinion, one should want to date it even further back. I mean the pots and porcelain and wooden utensils which have recently been found in the earth, together with stone [146] tools, a few points in the Amur region and on Sakhalin, especially along the Ussuri and Sungari and Yantsze (3). These potsherd

3. In 1865, while digging up the earth at the bottom of some pits along the Pauchi River, in the vicinity of Nikolayevsk and emptying into the Amur only slightly above Cape Tschelyuskin or Tschirynzh (as the Russian call it), the pits seeming to be remains of former earth dwellings, potsherds were found at a depth of three feet, along with traces of charcoal, and at another place, at a depth of six feet, were found a bronze vessel (Comptes Rendus, Vol. I, 1866, p. 58). Thanks to the good offices of Prof. Steffle in Nikolayevsk, most of these articles were sent to the Kaiserlichen Akademie der Wissenschaften

/452 cont./

2. (cont.)
from the glossaries and dictionaries of the Ainu language (Klaproth, Asia polyglotta, pp. 305, 313; Dobrotvorskij, op. cit., pp. 326, 327), it seems to me that the possibility of a misunderstanding in the above information by Lopatin, caused by insufficient knowledge of the Ainu language, is not to be excluded.

After this digression, upon returning to the discussion of the food of the Amur peoples and passing from the Gilyak to their closer and more distant neighbors, I must first state that with reference to them I shall confine myself chiefly to pointing out the deviations and differences among them, in contrast to the food of the Gilyak, as such are caused by different natural conditions, a different way of life, and by different relations with the neighboring civilized peoples.

The closest neighbors of the Gilyak on Sakhalin, the Ainu, are in general no less pronounced ichthyophagi than they, but the significant circumstance with regard to food, which is conditioned by the nature of their region, is that they do not have a single large river in their area on which the population could concentrate in the interior of the region, but rather they only dwell more or less directly on the coast everywhere. In point of fact, of the two largest rivers of Sakhalin, the one, the often mentioned, fish-rich Tymy River, belongs wholly to the Gilyak, and of the other, the Piyi or Poronai (i.e., in Ainu, Great River), the Ainu occupy only the mouth, and this only in common with the Orok and Gilyak. Apart from a couple of somewhat larger rivers that empty into Aniwa Bay, such as the Susuya and Tuotaga, there are only small coastal rivers in the whole Ainu territory of Sakhalin. /453/ The actual habitation area of the Ainu on Sakhalin consists

/462 cont./
salt with their food than do those of the lower Amur. We found a pronounced aversion to it among the Gilyak. The Goldi and the Orochi only use very little of it (1). Of the Manegir, however,

1. Nadarov*, "Siev.-Ussur. kraĭ" (Zap. Imp. Russ. Geogr. Obshch., po obshch. Geogr., Vol. XVII, No. 1, p. 80).

Maack (2) reports that every well-to-do person among them has

2. Op. cit., p. 79.

salt in his household. They buy it from the Daur and have a designation borrowed from the Daur ("katā") for it: katachan. Presumably therefore, they first became acquainted with it through the Daur, and at a time when the latter, prior to the Russian invasion, lived all along the upper Amur and its source rivers, the Schilka and Argun), engaged in agriculture and livestock-raising, and had barter-trade relations with the hunting tribes in the north (3). Therefore, even at that time the tribes

3. See p. 339 ff above.

of the upper Amur region may already have obtained a number of cereals for food from the Daur.

/463/ There should be added to a consideration of the diet of the Amur peoples a few remarks concerning the luxuries used among them, especially liquor and tobacco.

The Gilyak do not know how to make any beverage for pleasure, either by an infusion of water upon the leaves, stems, barks, or other parts of certain species of plants or from the juice of berries and other fruits of their region, as is understood so well by the Italmen of Kamchatka, according to the testimony of

/463 cont./
Steller (1) and Krashenninikof (2). I came across just as little of

1. Beschreib. von dem Lande Kamschatka, pp. 76-89.

2. "Opis. Kamchatki /Description of Kamchatka/" (Poln. sobr. uchen. putesh. po Rossi, Vol. I, pp. 308 ff.).

I came across just as little of anything of the kind among the Olcha and Goldi (3). Even tea,

3. I am thinking here only of beverages for pleasure, but not medicinal potions. Among the Manegir on the upper Amur I saw a moss that they gather in the forest and call mogo drying in the sun on birch-bark mats. As far as I could learn from them, they take it to the city of Aigun, where they are paid well by the inhabitants, to be drunk in an infusion, like tea. Presumably, however, this infusion is used only as medicine for some ailment.

Even tea which these peoples must have known for a long time through their association with the Chinese (4) and which they were able

4. The Gilyak have the designation pyncht for it.

to buy in Nikolayevsk as well as in Mariinsk since the Russian occupation of the region (in the fifties), had not found acceptance among them at the time of my stay in the Amur region (5).

5. Pel'nikof (Putesh. na ostr. Sakhalin", pp. 38-40) reported that in 1881 the Orok on Sakhalin prized tea highly and, if there was any, drank it regularly toward evening. But this could have appeared only since the

/463 cont./

5. (cont.)
Russian colonization of the island, therefore only quite recently -- was by no means the case at the time of my travels on it, or Schmidt's and Glehn's.

They did not know coffee at all and considered it, when they saw me drink some, "very strong tea." On the other hand, liquor was, of course, generally known in the Amur region, and, to be sure, to the Gilyak as well as to the other peoples of the mainland, under the name (of Malayan-Chinese origin) araki or arki, also customary among the Manchu and among all the Tungusic, Mongolian, and Turko-Tartaric peoples of Siberia (6). Undoubtedly

6. See the glossaries for the above-named peoples in Klaproth's Asia polyglotta. There are, for course, many modifications of this general designation applied to grain and to milk spirits, such as araka, araku, airaki, etc.

Undoubtedly acquaintance with liquor among the Amur peoples dates from the time of their earliest contact with the Chinese and has spread rapidly since then. Through the trading trips of the Goldi, Olcha, and especially the Amur-Gilyak to Sakhalin, Chinese liquor must have soon been introduced to the Gilyak there. The latter, to be sure, had an opportunity to become acquainted with liquor from another direction, from the Japanese, from whom the Ainu obtained their liquor, the so-called saki, and even learned how to make a weak saki themselves (7); but the stronger and presumably cheaper

7. Mitsui', Ocherk" ostr. Sakhalina, p. 132. Dobrotvorskiĭ, Ainsko-russk. slovar', Preface, p. 38.

Chinese liquor already adopted by them left no space for the spread of the Japanese beverage among them. Mamia Rinō (8) reported

8. "Tō-tats kiko" (Siebold, Nippon, VII, p. 192).

/464 cont./ This is how the Chinese
merchant on the Amur does it as he deals with his customers and offers them an occasional sip from his little bowl; this is how he is imitated by all well-to-do Goldi, Samagir, Olcha, or Gilyak who are able to provide themselves with the precious beverage and the utensils required for drinking it, and this is precisely how Mamia Rinō describes the manner in which the Smerenkur on /465/ Sakhalin drink their "arka" brought from the Amur. I also saw the libation preceding the drinking, which consists of first moistening the tips of the thumb and forefinger with liquor and a few drops are sprinkled to the right and to the left, up and down, and toward one's own chest, more or less carefully executed, just as by the Manchu and Chinese on the Amur, also by the Gilyak, Olcha, Goldi, and even Orochi in Hadshi Bay. Thus, the enjoyment of liquor among these peoples is done in a definite way sanctioned by usage, from peculiar foreign utensils required for it, and with the observance of certain formalities prompted by superstition. Undoubtedly this circumstance, besides the others mentioned above, the procurement of the liquor from a great distance and its high price in the retail business of the Chinese merchants on the Amur, must have had a beneficial effect on the consumption of liquor among the Amur peoples in impeding and limiting ways and trained them to moderation in the enjoyment of it. In fact, I must testify to such moderation among them, and especially among the Gilyak, whom I knew best, during the time of my stay in the Amur region. Despite the fact that with the settlement of the Russians along the lower Amur, in Nikolayevsk and Mariinsk, a new and very close source for this prized and popular drink opened up for them, there was nevertheless so little drunkenness among them during the first few years afterwards that I never came across a single case of it, despite my many contacts with them, not even during the numerous bear festivals which I attended. This fact seems especially striking to me, but is explained by the fact that, according to their own statements, the drinking of spirits during the bear festival is regarded by them as utich (unlucky) -- a conception which may owe its origin to the feeling for the

/469 cont./

1. (cont.)
de St. Pétersb., VIIth series, Vol. XII, No. 2, p. 99).

Among the Gilyak, the tobacco, chopped fine on a special board (Pl. XXXIV, Fig. 8), and, when dry, disintegrating almost to powder, is kept in a pouch, which, adopted everywhere in the Amur region, seems to be of one and the same Manchu-Chinese form: long and narrow and provided with a lateral slit close to the upper edge, into the pouch of which the pipe is stuck in, in order to be filled with tobacco inside the pouch. It is always carried in this position, together with the pouch, which as a rule is fastened to one of the top buttons of the fur coat or the shirt and hangs down from there over the chest. Usually it is ordinarily made of fish skin, leather, or a piece of fur, bordered with Chinese cotton or silk along the edges, decorated at the top with some embroidered or painted arabesques, and occasionally made out of one of these fabrics.

The Gilyak likes to share the pleasure of smoking tobacco with others. This is never done, however, by passing the pipe around among all the persons sitting around the hearth or a fire burning outdoors. This is prohibited simply by the small size of the pipe, as well as by the social or moral differences usually existing between those present. As a rule, however, one sees the pipe go back and forth between two persons sitting side by side. In particular, if a newcomer appears in the yurt, the host, after he has taken a seat beside him, hands him his newly lighted pipe, which the latter, after he takes a puff from it, returns again to the former, receives it from him again, and so forth, until the pipe is finished, whereupon the guest pays him back in the same way. This is always a sign of friendly welcome and of good understanding, or of a certain esteem and equal footing. I often saw the Chinese merchants on the Amur do this with the natives who entered the yurt and approached them, which undoubtedly was for the purpose of winning them over by such advances, very flattering to them, and putting them in a more favorable mood for the business dealings.

(See category 116, p. 1014 - Analyst)

/469 cont./

If the Gilyak run out of tobacco, they seize upon various substitutes for it. The most common of these makeshifts is fine dry wood shavings from any kind of wood, but always from a soft type, presumably willow by preference. Such shavings are even mixed with the tobacco when it is beginning to get low. When it is all gone, the wood shavings mixed with tobacco oil are smoked in place of it. For this purpose the tobacco oil is scraped out of the pipe, poured into a tube and stored in a special small pouch (Gilyak niryghis), which /470/ is made of a few scraps of leather fastened between two pieces of sealskin (Pl. XXVIII, Fig. 6), upon which the tobacco oil is smeared and, when required, is scraped off, mixed with the wood shavings, and again returned to the pipe (1). Moreover, the Gilyak use some of their native herbs as

1. The very same tobacco substitutes is also used by the Chukchee, who, however, obtain it by putting the wood shavings in the tube, much wider on their pipes, above the pipe bowl, where it is gradually saturated with nicotine from the smoke passing through it (Bush, Reindeer, dogs and snowshoes, London, 1872, p. 429; Dall,

tobacco substitutes, for example, an herb that they named for me in Allof on the Amur as tschomr, in Tyk on Sakhalin as wurpi, and which, judging by the dried fragments that I saw, seemed to be a fern. Among the Goldi in Kōurmi on the Amur I likewise saw hanging bundles of an herb which they called toina and used as a substitute for tobacco. For the present the taxonomic names of these plants must remain unknown.

The taking of snuff and tobacco-chewing are not found at all among the Amur peoples, at least in the lower Amur region (2).

2. Among the Aleut, who became acquainted with tobacco through the Russians, it is mostly chewed, taken as snuff very little, and not

basis of tales told by the Hollanders who had been prisoners in Korea in the middle of the seventeenth century, that in winter there one binds small boards under the feet in order to be able to walk over the snow without sinking into it.

Of the greatest importance for the economy and the whole life of primitive peoples is the manner in which they undertake their greater moves from place to place by land, and in this respect we find in the Amur region very different, and for the individual peoples characteristic, phenomena.

Of all the peoples of the Amur region the Gilyak are the ones who use the dog for traveling to the greatest extent and among whom the dog plays more important role in the economy and whole life than among any other of these peoples. For, aside from its principal purpose as dog's animal, it furnishes the Gilyak, as we have seen, with the generally most popular and most used fur for clothing, and even serves them as food, which, aside from the Ainu, does not occur among any other people in the Amur region. Nowhere is the keeping of dogs for winter travel required by natural conditions and by the way of life and needs of the people to such an extent as among the Gilyak. If the dog is to serve as a draft animal, it must, because of its little strength, be kept in large numbers, and for that, in view of its predatory nature, large, never-failing stores of animal food are required, such as, not the roaming hunters, but fishermen settled along a river-rich in fish or along the seacoast are in a position to provide for them. These requisites, as discussed above (D), are best met among the

2. See pp. 645 ff. above.

Gilyak, who occupy the part of the Amur region richest in fish and are the most sedentary of its peoples and the one most devoted to fishing, and who, in addition, are impelled by their lively commercial spirit to undertake winter trips and voyages more than the others.

/480 cont./

long troughs are placed along the edge of the dogs' table or the hearth platform, the door of the yurt is opened, and the dogs lying outside and held by straps or chains are released. As soon as this is done, the dogs, already impatient, dash straight into the yurt, often jumping on and over one another, and stand on the kyll or on the ground in front of the trough. Meanwhile, the women, with the help of large ladles (3), have filled several

2. See p. 683 and the illustration above.

buckets with the soup, bubbling and steaming in the kettle, and now pour it into the troughs. Since the whole pack ravenously and greedily pounces on the food, each animal trying to outdo the other and to snatch everything for himself, fierce struggles and fights usually break out between neighboring dogs, but are stilled by blows on the heads of the animals delivered with sticks by the women and children standing by and holding the dogs by leashes or chains. Plate XII /seq. 992/ illustrates the feeding of the dogs in one of the large, Chinese winter-yurts of the Gilyak. In the earth yurt, where the low sitting and sleeping benches are separated from the hearth platform by only a narrow passage, this takes place so close to one that he finds himself almost surrounded by the wild pack. If one now imagines the cold streaming in over the floor through the open door and the steam rising from the hot fish-soup, he will readily understand why the whole procedure does not exactly contribute to the comfort of a stay in the earth yurt. Beyond this meal the Gilyak dogs get nothing to eat when they are at home resting. In times of scarcity, however, even this meal is very meager, for instance, in the village of Tyň on Sakhalin, I noticed that the dogs received only a soup made of a little jukola, reindeer moss, and a small amount of seal oil, and if times become even more difficult, the feedings become more infrequent, only every other day. On long journeys, however, the Gilyak, if about noontime they do not reach a village in which the dogs are given their usual meal, throw them some chark or ma twice a day, around noon and at night, whereas the Russians at such times

/480 cont./

feed their dogs only once, only at the overnight campsite and always only dry jukola. The Russian dogs, therefore, are perhaps never more exclusively ichthyophagous than the Gilyak dogs. Lacking jukola, I once had them given elk meat, and they left it untouched. Only severe hunger makes the dogs omnivorous, and in summer along the Amur one cannot adequately protect his belongings /481/ against the starving dogs of the natives, seizing everything that is of animal nature, such as fish-skin and fur covers, boots, etc.

Like the grown animals, the whelps, too, are fed in the yurt. To be sure, on Sakhalin they are often kept inside the house the rest of the time, too, and on the sleeping benches at the very rear where they come up against the roof. The greater care of the whelps on Sakhalin may be the reason why the dogs there, and especially those of the Tymy Gilyak, are said to be the largest and finest in the whole region.

Since the actual master and owner of the dogs, as soon as he has returned from a trip, no longer pays any attention to them and their entire care and feeding has passed into the female occupants of the yurt, with the assistance of the children, they are actually as good as masterless and they do not have the usual characteristics of the dog which is kept more or less singly as the follower and companion of man, such as personal attachment, faithfulness, and vigilance, or they are not developed in them. The situation is the same, incidentally, with respect to the Russo-Siberian draft-dogs so that one may probably say in general that dogs kept in large numbers for harnessing and treated more or less as a pack, in comparison with hunting or watchdogs, have remained on a lower level of culture, so to speak, or have again sunk to one. But a certain attachment to the place and house where they get their food may be found among them, too, so that, even unleashed, they do not readily leave it, and if, in harness, they get free from their driver as the result of an overturned sled, they go home as a rule, or to the nearest village (1). The dogs

On Oroyak on the lower Olekma also keep
their draft-dogs outside, but always
feed them in the yurt.

2. The dogs

of the Tungus on the Amur, bought from the Gilyak, to be sure, but, as was mentioned above, treated differently and in particular only fed outside, may fall short of the Gilyak dogs in this respect.

The Gilyak sled (sq) has a peculiar form and nature. In comparison with the Russo-Siberian nartes, as the sled used for traveling with dogs is called by the Russians, the Gilyak sled is very light, delicately and gracefully built, and, as a result of its flexibility, so too durable. Its form and construction is always the same, even if the size varies, so that in making it it seems that a certain proportion with regard to the individual dimensions and parts is always observed. I had many opportunities to become familiar with the construction and measurements of these sleds because the Gilyak used my house in Nikolayevsk as temporary quarters and even had permission to put their sleds in a corridor of it, after the dogs had been unharnessed, while they tended to their affairs in the village. As an example, I measured, illustrated on Plate XXXVI, /see p.1016/, Fig. 1, had the following /482/ principal dimensions: the length from one end to the other was 7 feet and 8 inches (Russian or English), the width 1' 4", the height in the middle (including the protective soles to be discussed forthwith) 11". Thus, the sled was precisely 11 times longer than wide and 16 times longer than high. Regarded as a whole and with respect to the individual parts, its construction is the following: the narrow and thin soles / runners/Gilyak tunkej, a in the illustration/ are horizontal only in the middle section, but toward the ends gradually and gently slope upward. Because of their thinness, they would wear out easily; to protect them from this and at the same time to give them the proper upward curve towards the ends, they are provided on the underside

/482 cont./

all along the horizontal middle piece, with mountings, or rather, with blocks of the considerable length of the latter, with a second pair of soles, the protective soles (Gilyak motanj, b in the illustration), which are fastened by means of wooden pegs and, at their sharply reduced ends, also by means of leather straps to the main soles. The sole-mountings are usually likewise of wood and can easily be replaced when worn out. In the spring, however, when the snow melting in the sun sticks to the wooden sole and makes travel very difficult, instead of the wooden mountings, some made of whalebone are fastened to the sled, or the wooden protective soles are covered with a whalebone plate, as I have seen on several occasions, especially on Sakhalin, where this material is more readily available (1). A very characteristic feature of the

1. As was discussed in the first volume of this work (p. 193), the main sole-and whalebone plates come from a kind of whale which the Gilyak call kalm and which presumably is Balaena australis Desmoul, but as a rule the bone plates are taken from the lower jaw or the ribs of Balaenoptera longimana Rud. (Gilyak keng), the one most frequently stranded along the coasts of the Sea of Okhotsk. Even among the Russians in Siberia bone or whalebone mountings are often used on the sled, especially for travel over sea ice which is covered with salt water, for instance, on Kamchatka (Vrangel', Puteshv. po sev. ber. Sib. i po Levod. moriu /Journey along the Northern Coasts of Siberia and through the Arctic Sea/, Vol. II, p. 28). According to information given by A. Schrook in the Leipziger Tageblatt, bone sled-mountings (sled-runners), as well as bone skates, were formerly used in many regions of Germany, for instance, in the province of Brandenburg, in several Bavarian lake districts, in Salzkammergut,

/482 cont./

1. (cont.)
etc., and such bones have been found a
number of times in excavations in
Scandinavia, on Iceland, on the Zealand
Islands, in Friesland, Pomerania, in the
March, in Moravia, and even in the pile
dwellings of the Swiss lakes (Sr. Petersb.
Zeit., 1880, No. 58).

Gilyak sled is that when it is equipped with the protective soles and is placed on firm level ground, the latter is touched by only a small part of the sole, equivalent to about one-quarter of the total length of the sled, while the two end rise to a considerable height above it. For example, in the case of the specimen measured by me, their distance from the ground amounted to one foot, ten inches. Between the ends of the thin shallowly arched soles run, as sinews, the two longitudinal side-bars (Gilyak higi, c in the illustration) of the sled, which form the frame of the very shallow sled-basket serving as a seat and for holding effects. They rest on several thin little supports (Gilyak ich, d in the illustration) set into the soles from above, and their ends, moreover, are connected with the soles by means of a perforating wooden crosspiece (Gilyak kerngh, h in the illustration). The ich, of which /483/ Gilyak sled of regular size, like the one illustrated, has five on either side, a smaller one only four, are rather wide and solid at their ends, somewhat reduced toward the middle, and their position and shape, as well as the number and from the ends of the sled likewise seem to be standardized by quite definite proportions. If there are five of them, the middle one is exactly in the center of the entire length of the sled, all the others are at a distance of 1' 10" from one another, that is, at precisely one-eighth of the sled's length, and the distance of the two outermost ones (the front and the back ich) on either side from the sled-ends is double that, therefore 3' 8" or two-quarters of the length of the sled each. The sled touches level and firm ground only with the part of the soles which is found between the two supports standing next to the

/485 cont./

The Gilyak stop and set their sleds with not one but with two simple, iron-tipped sticks (Gilyak kaur, Russo-Siberian pachtoli), which are thrust into the snow on either side of the sled. To put little stress on the use of such a stick, as the Russians do on Kamchatka and in other /486/ parts of Siberia, is not customary among them, and therefore the spur of the training bells is unfamiliar to their dogs, which is why it has been abandoned in the Amur region by the Russians who get their dogs from the Gilyak and other natives. These Russians, however, spur their dogs at the first sign of fatigue in many another way than it is likewise unfamiliar to the Gilyak. For instance, they sometimes hurl the braking stick at one or another of the animals appearing too lazy, which the Gilyak cannot do because, riding astride the sled, he cannot jump off during the journey, as the Russian does, to retrieve the stick and hoist himself back on the sled (1). And he just as little permits the Russian practice of

A dog's head adorned with the clank.

the front one, do not run singly, but in pairs, and each animal is fastened by two straps to the long guide-line running between them: by means of the front one the dog pulls the sled, but the front one prevents him from running sideways. With so complicated a harness, confusion arises all too easily as a result of the temper of the dogs: sometimes the two dogs of a pair run toward the same side, sometimes an animal jumps over his harness strap, which then gets caught between his legs, etc. And when two sleds meet, especially a Russian one and a Gilyak one, without stopping in time, the one another and from the ends of the sled one another, forming a cluster of perhaps twenty or more biting dogs, which can be disentangled only by a violent tugging and pulling apart of the fighting animals amid a rain of blows from both sides, and causing great confusion and damage in the harness, especially of the Russian dogs. The Gilyak, as well as the Russians, therefore carefully try to avoid such encounters by turning aside promptly, stopping and setting the sled, and holding fast to the pack, especially the lead dog.

1. The Russian dog-drivers, or "Kajuren," as they are called along the Amur, in Kamchatka, and elsewhere in Siberia, always sit sidewise (on the right) on their sleds and can easily jump off, which they are often obliged to do in order to give the sled a push toward one side or the other to prevent the soles /runners/ from passing over the fresh excrement of the dogs and thereby lose their smoothness. If this is ever neglected, one must stop after a brief time and turn the sled over on one side, in order to scrape off the soles and, if possible, apply a new ice-coating.

spurring on the dogs in extreme exhaustion by throwing small pieces of jukola ahead of them. He cares too much for his dogs to strain them excessively. If the shouts of "kach, tach" are no

G 492 484 /487 cont./ Just as the Gilyak on trips tries to lighten the work for his dogs during the traveling, so does he always see to it that they have the necessary relaxation and rest at night. If no village can be reached and the night must be spent in the open, he prepares a resting place for his dogs similar to the one for himself. The guide-line, detached from the sled, is tied to a tree trunk, and for each of the dogs a depression is made in the snow at suitable intervals and lined with fir branches. From these traces one can immediately see how many Gilyak sleds have stopped at a campsite and how many dogs were harnessed to each of them.

G 492 171 174 Undoubtedly the present practice of keeping dogs to harness to the sled, which is so deeply entrenched in the life of the Gilyak, is not a relatively new custom, borrowed from one of the other Amur peoples, but, on the contrary, is a custom originally peculiar to them, in contrast to the latter, reaching back into the most distant past. The situation is similar for the other Paleo-Asiatic peoples in contrast to their respective neighboring tribes: all of them, since ancient times, are or were fishermen who used their only domestic animal, the dog, chiefly for locomotion, with there being no proof of the borrowing of this custom from one of the neighboring peoples nor any reason for assuming it probable.

A 492 493 [648] Among the Ainu on Sakhalin the dog in general plays exactly the same role as among the Gilyak, even the construction of the sled, the harnessing of the dogs, and the manner in which they are treated and driven are said to be the same (1). But the Ainu do not

A [113] 1. N. Busse, Ostr. Sakhalin" i Eksped. 1853 i 1854 gg. /Sakhalin Island and the Expedition of 1853 and 1854/, St. Petersburg, 1872, p. 54. As I learned from Rudanofskij's manuscript diary, the above-described use of the poles /Pfiemerstangen/ on especially difficult routes is also quite common among the Ainu on Sakhalin.

G [492] [171] A [171]

use this method of locomotion nearly as often and as extensively as the Gilyak do, the reason for which, as we shall see in the following, lies not only in the less favorable position of their country for journeys and travels by sled, but particularly in the

NS 492 484 /488 cont./ development, also by the Russians, of the greatest and fullest use of them and for the longest journeys, for instance, to the New Siberian Islands, etc., were found there along the Jana and Indigirka.

K 231 [361] [492] To the north of Kamchatka we find another Paleo-Asiatic people, the Koryak living in permanent sites along Penshinsker /Penzhinskaya/ Gulf and along the Bering Sea, who likewise have only the dog as a domestic and, at the same time, draft animal. I believe that I have already proved above (7) that

K 174 231 361

7. See pp. 481 ff.

formerly the ancestors of the now nomadic Koryak and the closely related Chukchee (the Onkilon) had permanent habitation sites and, in fact, earth yurts, just as they did, and, correspondingly, as fishermen, seal-hunters, etc., like them, they, too, may have had only the dog as a companion until they became acquainted with the domesticated reindeer, probably through the Tungus pressing in on them from the south and the west, and with it took up their present nomadic life.

G Gi NS K 231 171 /489/ Thus, we must designate the dog, this oldest of all animals domesticated by man, as the only domestic animal and therefore, especially in its position as draft animal, as, so to speak, a characteristic form of the Paleo-Asiatic peoples, this oldest formation of peoples in northeastern Asia. Where, subsequently, another domestic animal appears among them, such as the reindeer among the nomadic Koryak and Chukchee in the case mentioned above, it is always a gift brought to them at a later period by a younger family of peoples with whom they came in contact.

E 231 171 174 Without doubt it may be assumed that the Eskimo, like other Paleo-Asiatic peoples, had the dog as their only domestic animal and used it in harness when they were still on their original Asiatic soil. With this domestic animal they crossed over to America, and there, continuing to live in the same way by fishing, seal-hunting, etc., they spread across the entire northern

E 231 171 174 E [492] /490 cont./ Eskimo reached the fullest development of their individuality. The poorer and more difficult their life is in the east and /491/ the north of their habitation area, amidst unfavorable natural conditions, the more man must share the labor that falls to the dog as a draft animal. It also sometimes happens that when the use of sleds becomes too difficult or impossible there (1), the dog

1. In Greenland, to be sure, the dog goes as far north as man, but is not used for driving by the Eskimo farther south than Holsteinborg, because the sea is not sufficiently frozen in winter for one to be able to travel over it in sleds (R. Brown, op. cit., p. 463).

is used as a beast of burden, as Klutschak, for instance, found on his trip with Schwatka to King William's Land (2) -- a use which is

2. H. W. Klutschak, Als Eskimo unter den Eskimos /As an Eskimo among the Eskimo/, Vienna, Pest, Leipzig, 1881, p. 23 and the illustrations on pp. 22 and 109.

certainly not in accord with the nature of the animal and does not occur in the Old World either among the Gilyak or, as far as I know, among any other people.

G Gi A 492 174 171 Gi 171 After this digression, as we again return to the Amur region, the contrast that we find between the two Paleo-Asiatic tribes, the Ainu and Gilyak, and the other peoples of the lower Amur region, all belonging to the Tungusic tribe, with regard to the use of the dog for harnessing should be pointed out first of all; whereas among the former it extends back to the most distant times, belonged to them originally, so to speak, the latter adopted it only in later, relatively recent times, and, to be sure, through the direct or indirect agency of the Gilyak.

/506 cont./

501 184 [192] trunk. I saw such a boat (Gilyak mlo-mu) (1) in the winter in the

1. Mu in Gilyak means "boat" in general.

village of Ytkyrn, standing on a trestle next to the yurt and with the snow carefully removed from it. It was about 20 feet long, widest in the middle, and narrowing toward the two ends -- the rear end, finally, blunted vertically and board-shaped, the front end provided with a small tip. On the edge on either side a strip as thick as the side walls was added, to which, from edge to edge at a distance of about two feet apart, cross-strips were fastened, which undoubtedly, like the knee timbers at several places in the interior of the boat between the bottom and the side walls, served to give the side walls more stability and power of resistance. Perhaps the boat was not quite new anymore and needed such supplementary bracing. It did not have any oar-prongs on the edges, such as the Amur boats had, and, accordingly, the oars lying nearby lacked the holes for setting them on such, but otherwise they were of the same form as on the Amur, except that the blade was not as wide. These boats are certainly also propelled, especially over shallow [171] places in the river, merely with the help of poles, as the Kamchadal do with their similarly shaped so-called batt, and as is done also among the Tungusic peoples of the Amur region with like vessels. Finally, just as is done there, here, too, /507/ 396 824 171 only trees with soft wood, namely, poplar, are used for making such boats (1). The Tymy Gilyak use the balsam poplar

1. Cf. Steller, op. cit., p. 56, 75; Krascheninnikof, op. cit., Vol. I, p. 257.

(Populus suaveolens Fisch., Gilyak musskrj), which they specifically designated to me as "mu-tschchar," i.e., boat wood. According to Schmidt, the Ainu of Sakhalin hollow out of the trunks of the same tree canoes which they use for communication on the rivers and short voyages along the seacoast, while for

G /507 cont./

396 824 171 longer voyages they use the commonly built Japanese boats (2).

2. Fr. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, p. 99).

G. Gi 501 Exactly the same type of boat as among the Gilyak is also in general use among their closest neighbors along the Amur River, the Olcha and Goldi. In appearance it exhibits no differences in shape or construction from those of the former. The Gilyak, however, asserted that their boats curved upward less at the prow end and therefore were better able to travel against the current than those of their neighbors -- an assertion whose accuracy I must leave undecided, though it agrees with some G of my own experiences. They are completely different from Gi one another, however, in the kind of wood from which they are 396 824 made. Whereas the Gilyak make their boats out of the wood of the fir tree (Picea ajanensis, Gilyak twissjk, Olcha and Goldi Gi chassjchta), the Olcha and Goldi always use cedar (Pinus cembra, 184 var. excelsa, Pinus mandshurica Rupr., among the Olcha and Gi Goldi koldong). When, during our summer voyage of 1855, we 114 landed near the Olcha village of Adi, the approaching inhabit- 501 ants of the place, who, among other things, occupy themselves principally with boat-building and who therefore closely examined ours, immediately recognized from the wood in them that one of them (mine) was of Gilyak origin, and the other (Maximowicz's) was of Olcha origin, as was in fact the case. Gi But whereas among the Gilyak on the Amur one sees only 501 boats of this one kind, the Olcha and Goldi have some of quite 184 different shape and construction. This is simply the result of the circumstance that, besides the Amur, they also navigate many of its torrential and, in spots, shallow tributaries along

Olcha, etc., by means of a special adze which is illustrated in the accompanying woodcut from a specimen which Mr. Poljak acquired for our museum from the Sakhalin Orok, and which is Gi made in the following manner. At the upper end of a forked 412 branch forming a more or less acute angle, an iron blade, 171 ground sharp, is fastened in place of the one prong, and by means of its upper part, which is all that remains of it, while the other prong serves as a handle for wielding the adze. This

/512 cont./
like the dsai in form and nature, but twice as long, while the width remains about the same. Thus, among the latter I saw such a boat that was 35 1/2 feet long and only 2 feet and 2 inches wide. Such a boat, like the multiple-seated Aleutian bidar and, incidentally, also like the large mango, if the latter are not propelled, say, by poles, is propelled by two or three persons equipped with double oars and rowing uniformly on one side and then the other, and thus shooting forward with great speed.

It is very noteworthy that the above-described boat made out of boards, which is distributed throughout the lower Amur region, among the Goldi, Olcha, Gilyak, and Orochi, is completely absent in the upper Amur region. At least, I never saw any there, and Maack, traveling down the Amur from the Schilka, did not meet the first boat of this kind until at the mouth of the Ussuri (1). And, correspondingly, the form of

1. Maak", Putesh. na Amur", p. 178.

the hollowed-out boat that is patterned after this boat, the unjmagda or awarpe, also seems to be absent in the upper Amur region. I must therefore designate this boat made out of boards in a specific fashion as solely and exclusively peculiar to the lower Amur region and characteristic of it. And yet, I believe, one may not regard it altogether as an invention of those peoples or one of them. Whereas the hollowed-out or birch-bark boats bear the stamp of originality, the Amur boat, or, as I would prefer to call it in accordance with the above, the Goldi-Gilyak boat, reveals in its more ingenious form and construction a certain cultural influence, and I believe that I do not err if I trace this back to the Manchu-Chinese on the Sungari. For centuries Chinese traders and sometimes also Manchu officials have traveled from the Sungari into the lower Amur region, the former in order to engage in trade with its peoples, the latter in order to collect from them the tribute owed to the Chinese government. The boats in which they made these trips are, to be sure, much larger and more.

the boat. For this purpose a long and strong switch is stuck into the continuation of the bottom board there, bent toward the rear over the prow, and likewise provided with wickerwork made out of semicircular and horizontal switches, over which reed or birch-bark mats are spread. Furthermore, unlike the Goldi-Gilyak boat, the Manchu-Chinese boat has fixed rowing benches resting on the edges of the lower side-boards and a like mast-bench, through which the square lower end of the mast is inserted into the mast bearers put on the bottom board underneath it and, superfluously, tied with a cord to the nearest rear cross-piece connecting the lower side-boards to each other. Finally, on the Manchu-Chinese boat the arrangement of the oars is different, in that they are not stuck on prongs, and, accordingly, are not bored, but are set into correspondingly deep indentations in a board attached to the upper edge. They have only relatively narrow blades and on the upper end a transverse handle which is seized with both hands for rowing, always done at only one side. The rudder, provided with a blade that bulges toward the bottom, likewise has such a transverse handle. It is heavy and, when traveling under ordinary circumstances, seems to rest almost immovably, but a slight turn to the right or to the left is sufficient to give the boat the required direction.

This description will suffice to show that the boat of the dwellers along the lower Amur River and that of the Manchu and Chinese along the Sungari completely correspond in their basic features and their construction, and that the former is, so to speak, only the husked and pared down kernel taken, I might say, from the latter. It can hardly be assumed that the Chinese, clinging to their ancient customs, shaped their boat after a pattern borrowed from the Amur peoples standing far below them and provided improvements and additions only in accordance with their needs. And so /514/ there remains only [177] the conclusion, which in fact is much more probable, that, conversely, the natives of the lower Amur region, first the Goldi living next to the Manchu-Chinese and then, through them, also the sedentary Olcha and Gilyak farther downstream, after they had become acquainted with the Manchu-Chinese

/314 cont./

boat on the Sungari as well as on the Amur, began to build their vessels on the same principle and in the same form in that they borrowed from that boat only the basic and fundamental parts satisfying their needs and gave them the small dimensions appropriate to their means and power. Indeed, this situation is all the more probable inasmuch as the Sungari Chinese, always intent on exploiting the labor power of the natives for their own advantage,had probably long since arrived at the idea of not building their boats themselves, but of having them built by the latter according to a given pattern and in return for small pay, as it does to this day. In particular the lower Goldi and the Olcha living next to them (for instance, those of Adi), in whose regions the wood required, just like the iron, is abundant, provide the most and the most highly skilled builders of both the Manchu-Chinese boats and those for their own people and the other people of the lower region. Maximowicz saw a Manchu-Chinese boat made to order by the lower Goldi, with an over-all length of eight fathoms and at its greatest width an opening of one and a quarter fathoms, for which the Chinese merchant had paid a jug of liquor two feet tall and a foot wide, three fathoms of cotton cloth, and four sacks of millet grain. Only in this point, as it seem from the above, is there an important difference between the Goldi-Gilyak boat and the Manchu-Chinese one, though in part it is due to the necessities of the Amur, the lack of arranging the oars, since the former has bored oars stuck on pegs, while the latter has ordinary oars resting in appropriate indentations on the sides. I am not aware that the first mode occurs among the Chinese or any of the neighboring Siberian peoples; on the other hand, it recurs generally among the Aino of Sakhalin and Jesso (1) and

1. Siebold, Nippon, VII, Plate XXIII.

therefore may perhaps be an Aino-Gilyak or general Paleo-Asiatic invention or peculiarity, which was imparted by the Gilyak to their Tungusic neighbors along the Amur, the Olcha and Goldi, and, on account of its usefulness, was also

/314 cont./

transferred to the boat copied from the Manchu-Chinese. The usually idealized boat in the country the lower Amur peoples on their boat is not nearly as large as it might seem at first glance -- rather, we see that, with respect to the nature of the river vessels, and in the construction of the winter houses and in so many other things, Chinese influence has spread from the Sungari over the whole lower Amur region.

How could it have happened, however, that the so practical and useful boat copied from the Manchu-Chinese pattern and distributed throughout the lower Amur region /315/ nevertheless remained wholly foreign to the upper Amur region which was under its dominance and inhabited by peoples of related tribes? The explanation for this must undoubtedly be sought in the political and other circumstances above, which the Chinese government observed in this region after the departure of the Russians from the Amur in the seventeenth century and which continued of always its upper action as depopulated as possible and of isolating it by vast, uninhabited stretches from the Sungari region which was especially important to them (1). For

1. See above, pp. 325, 369.

this purpose the natives of the lower Amur region and, so it seem, also the Chinese traders on the Sungari, were forbidden by them to go beyond the mouth of the latter up the Amur, and, in order to enforce this prohibition, a permanent guard-station was established at the mouth of the Sungari (2). In this

2. See above, pp. 7, 110.

manner communications between the upper and lower Amur peoples were made difficult by blocking them, and this also a compromise in the means used for it, was perceived by the measures of the Chinese government. But all the circumstances indicate the independent imitation of the Manchu-Chinese boat on the part of the native were lacking in the upper

/315 cont./

Amur region. To be sure, there are Manchu-Chinese boats there, which are used by the Manchu officials and their Manchu, and, indeed, a number of large boats of this kind constantly lies before the city of Aigun -- I myself counted 37 of them, divided into three groups -- but these old boats, painted black and red and decorated at the stern with crudely carved and likewise colorfully painted dragons, which represent the military might of China and are supposed to inspire the Amur peoples with respect for it, are of course, quite inaccessible to the latter. Moreover, these hunting nomads, depending more on the tributaries, are, as was said, completely satisfied with their primitive canoes, and, finally, also lacking there are the avaricious Chinese traders acting as intermediaries as they do along the Sungari and the lower Amur.

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it is perfectly plausible to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development than the whole state in the former -- a fact that in itself shows that here the aims and purposes served by them must be much more far-reaching, and, in particular, that the trade maintained by the natives themselves and with the neighboring civilized-peoples is far more active and extensive here than there, for which, in fact, many examples and counterparts will be given in the following, with a more detailed consideration of these conditions.

/316/

Section 8

Fishing, and in particular Sturgeon, Hausen, and Salmon: Fishing. Fishing Equipment. Marine-animal Fishing: Seal, White whale.

In the preceding chapters it has been repeatedly stressed that fishing plays a more or less important role among all the peoples of the Amur region, and that in particular its importance increases all the more the farther you goes downstream, until finally, in the region of the mouth of the Amur River, it becomes among the Gilyak the conditio sine qua non for their entire existence. The intermingling of various conditions and aspects of life made it necessary for us in the above description of the housing, clothing, and locomotion of the Amur peoples to make many references to fishing and to the importance of it. For example, one must consider the influence that fishing exerts upon the lesser or greater sedentariness of the various peoples in the Amur region, in that, to be sure, in contrast to hunting, it gives them in general a more sedentary life, but even so requires a change of locality and dwelling twice a year, and commonly during the winter repeated moves along the water. Furthermore, the more or less predominant part that fishing has in the procurement of their food, clothing, and other necessities of life was discussed. In this connection the kind of fish most important to the Amur peoples were named, and both the way they are eaten and the preparation of provisions out of them for the use of people and dogs were described. (1)

above how greatly the Gilyak prize sturgeon and hausen. The situation is the same among the other Amur peoples. There is eager pursuit of them everywhere, and the methods of fishing are

/318 cont./

in general the same everywhere. But the individual peoples vary in the number of such methods of fishing, according to their nature and the local conditions in their part of the river. The Gilyak chiefly catch them with nets, which are stretched across large rivers and very strongly now to set in not to be torn by the resistance of the large animals. The shape of these nets and the way they are handled differ, however, and in this the season of the year in particular is also a definite factor, for it depends, for example, on whether the fish are present in larger or smaller quantities, whether they stay close to the surface or at greater depths, whether the river is open or covered with ice, and so forth.

Toward the end of May and in June, when the sturgeon and hausen coming from the sea are most abundant around the mouth of the river and stay near the surface, especially in calm weather, the Gilyak get single nets, or, rather, a longish quadrangular net, on the upper edge of which are fastened a few wooden floats and on the lower edge occasional small stones. In two boats the Gilyak go out to the place, see /319/ river with the net, cast it across it, and, holding the upper end of the net, let themselves be driven downstream by the current and paddle ashore. Meanwhile, on the surface of the river calm, they recognize with a sharp and practiced eye the approach of a large fish from afar, by a gentle swiling movement of the water, and guide their boats with the net between them toward the fish. When it has reached the net and has become entangled in it, the wooden float affected given notice of it, and the men both boats go to the spot where the fish is, the net is lifted, and the fish entangled in it is pulled into the boat by means of an iron hook attached to a pole (Gilyak nhab-tcharanch, Pl. XI Amr /pole/ hook), and killed by a blow on the head with a club. If the fish is very large and the boat small, it is towed by means of a hook and a stout rope and takes to land to be killed. Hence, the proper club for the fish is made out of a branched tree-root and equipped with an end piece of stone -- a circumstance which undoubtedly shows the

/320 cont./

upper corners of the net, or, in the case of the bag net, one of the corners of the bag opening equipped with the rings and cords, is hooked onto the prongs of the odn-tschengr, while the other corner of the net, or the place on the bag opening diametrically opposite the first one, is fastened to a pole placed across the hole, and the rest of the net, weighted with stones at the lower edge, is let down into the water. Now the odn is withdrawn, and the corner of the net coming out with it at the other hole is fastened, like the first one, to a pole. In this position the net is set up, like a wall directly under the ice, between the two holes. From these also emerge the cords by which it can be raised, and, finally, to one of them run the signal cords of the fishers, who, in all of the net, see the catch of fish in the net must be watched for here. From the foregoing it is to be seen that the length of the odn, determined by the size of the net and the distance between the holes in the ice from each other, is very considerable. It may therefore consist of several pieces. The representation of a face on the odn-tschengr is always indemnity for the sacrifice of a bear, which, however, is essential for success in catching sturgeon or hausen. In this connection another /321/ Gilyak superstition should be noted, one specifically referring to the catching of sturgeon and hausen with nets. It is that a cuckoo feather attached to the net will make the fishing successful -- a superstition to which I did not notice any trace in the other Amur peoples.

Another way of catching sturgeon and hausen among the Gilyak, though far less common, is to set out fishhooks. This is the same method of fishing that is known among the Siberia as: namolowy (automatic fishing) and has been described by Pallas in the various modifications with which it is practiced along the lower Obi, on the Irtysch, Jaik, and along the Volga (1).

1. Pallas, Reise durch versch. Prov. des Russ. Reichs, Vol. II, pp. 339, 446; Vol. III, p. 88.

/320 cont./

fall of fish, he lets the signal cord fall and draws together the ends of the net, and, in the case of a large catch, he calls the boats. Needless to say, besides the salmon going upstream at the time, other fish, sometimes even sturgeon and hausen, are caught in these bag nets. Since some labor and trouble is connected with making a anur, the Gilyak usually erect them only to catch the species of salmon most important to them and at the same time ascending in the greatest multitudes, the hghi-tscho. They cannot have enough of this fish, and therefore at the time of its ascent the anur are not infrequently seen throughout the Gilyak area of the Amur River.

The Gilyak pursue salmon fishing in the Tymy River on Sakhalin in the same manner and with no less zeal. But this is less suitable for the catching of pop on account of its considerable size and, in places, its shallowness. They are nevertheless in use in its lower course and at the point where it empties into Nyi Bay. It is here that at the time of the migration of S. lagocephalus, in addition to the Gilyak, the Orok, too, zealously engage in fishing and the preparation of fish supplies. Indeed, during the last decades, the Japanese, too, after they have applied themselves, with the help of the Ainu, to the herring fishing on the coasts of southern Sakhalin and the catching of S. proteus at the mouth of the Poronai, generally appear at the end of the month of the Tymy at the time of the migration of S. lagocephalus and engage in catching it with great energy and ruthlessness. Poljakof, who met them there at this occasion in August, 1881, reports, among other things (1), that they had fint erected a weir of the

1. Op. cit., pp. 70-79 and p. 99.

kind described above reaching across the entire river and opened one-twelfth of the width of the river for the passage of the migrating threatening demand, but then immediately above the first erected a second weir blocking no less than nine-tenths of the river. Under these circumstances it is understandable that they annually take large quantities of this species of salmon out of the

/320 cont./

Tymy River; no less understandable, however, is the harm that they do through this to the Orok and especially to the Gilyak of the entire Tymy Valley who rely on the abundance of fish of their river.

Nothing special is to be said about the catching of the fish living permanently in the sea, namely, the sea-bass, sheatfish, pike, etc. for it is carried on with ordinary nets during the /323/ periods when there is no more important fishing, therefore especially in winter, and the methods are the same, way as sturgeon is then caught. In the calm, lake-like wide places with a muddy bottom, of which there are many along the Gilyak area of the Amur River, sea-bass are caught in winter by a more or less swampy branch of the river or a small water-course, I have seen the Gilyak set up bag-shaped nets on poles in order to catch crucians and similar fish, which are abundant in these small basins.

One type of fishing must be given special consideration, both on account of its great importance for some of the Gilyak, and also on account of the characteristic, original way in which it is carried out. This is the hangi fishing along the east and coasts of Sakhalin. The importance of the hangi for the Gilyak watchna Pall.) for the Gilyak and the way it is used have been discussed above (p. 653 ff.). The vast quantities in which they appear directly under the ice at the mouth of the Tymy and they employ the simplest means to catch them in abundance. All they need for this is a span-long iron hook (Gilyak katch-lou), Pl. XI Amr /pole/ /323/, fig. 1), and a long line, which, in fact, is long which can be moved up and down by means of a wooden handle. The Gilyak sitting beside the hole in the ice casts with this short fishing-rod without any bait, so that he jerks down into the water and immediately draws it up again, pulling one fish after another into the ice. In the few minutes that I stood by -- it was on February 27 (March 10), 1881, I saw Gilyak in the west coast of Sakhalin -- my Gilyak pulled out several dozen fish, which the hook had sometimes caught at the gill flaps and sometimes at the lower jaw or the mouth. Some fir branches

/546/ Needles to say, there are a number of superstitions connected with seal-hunting among the Gilyak. Thus, the lynh, like the above-mentioned odn-tschongr (1), always bears on its

1. See p. 808 above.

/548 cont./

225 In view of this distribution of the white whale in the
[171] Amur region, the Gilyak are practically the only one of its peo-
ples that occupies itself with catching it. To be sure, the Aino
along the east coast of Sakhalin would have the opportunity for
it, but there is no mention of such an occupation by any of the
travelers who became acquainted with them. Little inclined
toward bolder hunting ventures, they presumably are satisfied,
so far as the white whale is concerned, to capture the individuals
stranded on the shore, just as they do in the case of the larger
species of whales. With regard to the latter the Gilyak do no differently,
but they pursue the white whale with weapons, and, to be sure,
for this they use a harpoon intended specifically for this purpose,
their so-called *pur* (Pl. XLII /see p.1022/, Fig. 3 and 4). This
consists of a thick and short bone tube into which a dagger-
shaped, double-edged and pointed iron lamella provided with
a barb on either side in the back is inserted. This piece is
mounted on a wooden shaft (Gilyak *wrij*) for hurling it and, in
addition, a rope made of a long, most strap by which, after the
wounded animal is pulled in, either to the boat or directly on
land, depending on where the hunter may be. In order finally
to kill the animal, there, too, as in seal-hunting, superstition, and presumably as the result of a similar idea, demands
that, first of all, the head of the stain animal be cut off; it is
not thrown away, however, but hung up a tree standing
on the bank, after all the muscle meat and the lake have first
been removed from it. At various places along the right bank
of the Amur I saw such trees with many skulls of white whales
hanging in them, which at the same time showed the necessity
of the Gilyak in hunting /549/ the white whale. I cannot say
whether the Olcha, in white territory the white whale is much
rarer, likewise hunt them, but, if this should be the case, only
the Gilyak would be capable of teaching them. Thus, the hunting
of the white whale is a characteristic feature in the way of life
of the Gilyak in contrast to the other Amur peoples and brings
them closer, in view of the similar nature of fish animal, to the
polar peoples. And, strangely enough, the custom of sticking

Use of the lynh for seal-hunting among the Gilyak.

upper side, near the point, a crudely carved face, whose presence
is regarded as essential for the successful use of the weapon.
Furthermore, superstition requires that, first of all, and before any
use is made of a stain seal, its eyes be gouged out with a knife,
whereupon the eye fluid, caught in the hollow of the hand, is thrown
into the water, and, furthermore, the mous, or, to achieve both
things at the same time, the whole head, is chopped off and put
into the water. The guiding thought in this is to leave the stain
animal in ignorance about its murderer and thus to prevent any
possible revenge by its manes causing ill-luck in seal-hunting in
the future. The same conception is evidently the basis for the
above-mentioned similar procedure of the Mangrgi with their stain
Kamjakan and Kasuser. The Gilyak, however, prize these fish too
much to sacrifice the heads each time and may therefore come to
terms with that superstition in another and less costly way. Per-
haps they content themselves with gouging out the eyes, though I
did not see this myself. Their above-described procedure with the

Section 9

Hunting the Animals of the Forest. Hunting Equipment. Iron Hunting-weapons and Other Iron Weapons and their Manufacture. Protective Armor and Arms of Honor.

As we now turn to the second main source of subsistence
[172] of the Amur peoples, hunting the animals of the forests, I must
first point out, recapitulating briefly and summarily the remarks
in the preceding parts above, that it, in direct contrast to fishing,
increases the more in immediate importance and significance
the farther upstream one goes from the mouth of the Amur and
into its own territory in a certain area, larger or smaller according to the locality, around their winter dwellings. For this
purpose the latter are often erected separately, and sometimes even
quite far from the summer dwellings, at such places which have
an especially favorable location for hunting.

The most important fur-bearing animals for the Gilyak,
because they are generally highly valued in trade and are present
in great numbers in the Amur region, are the sable (Gilyak
ngrgi, Russian *Tymyj* and *Tro Gilyak* *ngrgi* and *nygkr-ngrgi*,
i.e., [illegible] animal), the otter (Gilyak *tgry*, among the Tymy and
Tro Gilyak *pelchyh*), and the fox (Gilyak *kkech*, among the Tymy

/550 cont./

only indirectly inasmuch as it furnishes them with those articles
[173] by means of which they can acquire through trade with the neighboring civilized peoples the foreign clothing, food, and utensils
lacking which have become necessities for them. Hence, among
them hunting is principally directed toward those animals for
whose furs there is a sure and good market among their principal
trade-lords, the Chinese, and since, merely in order to preserve
the pelts as intact as possible, it is practiced for the most part by
means of various kinds of traps, snares, poison pellets, etc., one
can designate it, in accordance with its greatly predominant
purpose and character, as the catching of fur-bearing animals.

Among the Gilyak engage in hunting only in
[174] the winter, for they are then occupied with fishing only a little,
while in summer for it, and, on the other hand, the animals
are in their full, valuable winter-fur. In addition, the deep
snow then covering the dense underbrush in the forest facilitates
to a great extent movement through it, so that, as experience
has taught, the Gilyak, too, know without any doubt that the
heavier the snow is in winter, the more rewarding and successful
the hunting will be. Nevertheless the Gilyak do not devote
themselves to hunting in winter nearly as much as their Tungusic
neighbors do. Whereas the latter, as we shall see, frequently
move from their winter habitations into distant forest and
mountain wildernesses, in order to live there for weeks entirely
by hunting, the Gilyak content themselves with practicing it
only in the vicinity of their winter dwellings. Hence, they
[175] also hunt only in a certain area, large or small, according to the
locality, around their winter dwellings. For this
purpose the latter are often erected separately, and sometimes even
quite far from the summer dwellings, at such places which have
an especially favorable location for hunting.

The most important fur-bearing animals for the Gilyak,

Manegii smear their arrows with a putrid fat acting as a poison, but I am not familiar with anything of this kind among the Tungusic tribes of the Amur region.

The quiver (Gilyak pg) used for throwing away the arrows among the Gilyak is as a rule made of wood, decorated with carvings, or covering figures, and is provided at the top with a fur edging or a fur flap for the protection of the arrow points (Pl. XLV /See p.102/, Figs. 6 and 7). Characteristically it is made of heavy wood and clumsy, and therefore is not very suitable for being carried on the hunter's back, which probably happens only rarely and to a very limited extent. If, on the other hand, (see, for instance, Ethnol. Atlas, Gilyak, Tungusic, Vol. I, Year 1877, p. 58). Dobrotvorskii, Amkoyunt. Slovar' /Ainu-Russian Dictionary/, Preface supplement to Uchen. Zap. animal, he reached for a fur cap and hung it over it and then, after a while, the took it from the wall, wrapped it in birch bark, and put it with the other possessions of the house. My efforts to buy it were entirely in vain, despite the high price that I offered. I was told categorically that it was already "ulbich" (unlucky) that I, a stranger, had seen the animal unskinned, but the consequences for sable-hunting in the future would be even worse if the were to sell it to me in an intact state (1). The Gilyak in all probability behave in the same

1. This superstition, which I also found among the Goldi, is no less prevalent among the Siberian Tungut and was confirmed by them to the Russian hunters in Siberia. Grisebin (Reise durch Sibirien /Journey through Siberia/, Gotha, 1752, Vol. II, p. 278) for example, wrote of the Russian hunters from Kiensksi Ostrog setting out in troop to hunt sable: "as soon as a sable is caught, it must be put away properly without anyone's having seen it, for they believe that if anything good is said about the captured sable the rest of the catch will be spoiled."

way toward the other precious fur-bearing animals, in connection with which they are evidently governed by the same superstitious belief which I have already discussed above (p. 881) in speaking about seal-hunting. The utilitarian standpoint with regard to this superstition is also evident in the fact that it does not extend to worthless animals whose capture means nothing to the Gilyak, for fresh specimens of squirrels and Mustela sibirica are taken from the trap were relinquished to me by the Gilyak without further ado. If, on the whole, the traveler comes across far fewer Gilyak superstitions concerning hunting and the individual animals hunted than is the case with regard

/573 cont./

that it is known under the name of "bemi," in which can be recognized without difficulty the above-mentioned Gilyak designation "bemi" (/ bemi), and they handle them (/ bemi) much more skilfully than the shooting weapon. The bear pike usually used among them (Gilyak lachich), Pl. XLVI /see p.102/, Fig. 7) is of the same nature as among the Tungusic and other Siberian peoples -- a large, broad, single-edged, pointed blade which is attached to a sturdy wooden shaft five to six feet long. emperor himself (3). Also of interest for our purpose is the

3. Gerbillon in Du Halde, Descript. de l'Empire de la Chine et de la Tartarie Chinoise, Paris, 1735, Vol. IV, p. 273.

statement by Iakinf, the well-known member of the Russian mission to Peking in the years 1807-1820, according to which, among the gifts presented by him to which the Chinese emperor /574/ had to give to the father of his bride and young wife upon his engagement and marriage was to be found a certain number of pieces of armor and helmets (1). Under these circumstances it is

1. Iakinf, Kitai, ego zhiteli, nravy, obychai, pochitanie bogov /China, Its Inhabitants, Morals, Customs, Enlightenment/, St. Petersburg, 1840, p. 144.

quite understandable that these objects would also appear as most valuable and honorable possessions in the eyes of the peoples of the Amur Ussuri region standing under the rule or at least under the influence of the Manchu-Chinese, down to the Gilyak, and, accordingly, would be used by them in their most important social transactions, the purchase of a wife.

The art of making iron armor was also passed from the Manchu-Chinese to the Goldi immediately neighboring them in the Sungari and lower Amur region, and Mamia Rinsō specifically mentions the latter, distorting their national name in Japanese fashion as "Kōrdeike" (2), as makers of the iron armor. Needless

2. See p. 315 above.

to say, these were not the first and only object that the Goldi learned how to make from their southern neighbors. Here, therefore, we see the art of forging iron advancing along another route from the Manchu-Chinese, down the Sungari and Amur,

/574 cont./

to the peoples of the lower Amur region, but it does not seem to have gone beyond the Goldi on this route, while the peoples living farther downstream along the mouth of the Amur and Sakhalin, the Ainu, Gilyak, and Olcha, had already received it earlier, as discussed above, from the Japanese. During the past decades, finally, the people of the lower Amur region have had the opportunity to become acquainted with the Russian manner of forging iron.

The net armor (Gilyak kā-petrch) is entirely different in nature from the iron armor. It consists of a sleeveless camisole and short skirt (Pl. XLIV /see p.102/, Fig. 1), which is plated (2) with multiple strands of nettle-fiber cord, such as is also used for knotting fish nets, and with individual strips of whalebone sewed into them. The net opening is trimmed with nettle-fiber cord and has a button and a loop for buttoning it, otherwise the armor, pulled over the ordinary dog-fur coat, remains open in the front. The net armor is worn on account of the crows plaiting containing a great quantity of material; the specimen illustrated, which I bought from the Gilyak magistrate in Sabach, is 2' 4" high, and weighs 28 1/2 pounds (Russian). Whereas the iron armor is of Manchu-Chinese origin, the net armor is genuinely Gilyak. According to the Gilyak, the net armor was formerly used by them in place of bear hide cloak, as the result of a murder, wife-stealing, or the like, a village took to the field against another one. In my time, however, it was no longer used and, it was said, was to be found in only a few specimens. In fact, the piece acquired by me bore the signs of great age, and its aged former owner was of the opinion that neither his father nor his grandfather had seen it nor. Nevertheless, the Gilyak attribute little value to this armor because it was made of worthless material and by them /575/ themselves and is not to be compared with the former, often fragmentary and ruined Manchurian armor (1).

1. The armor of two other peripheral peoples of East Asia living to the south and to the north of the Gilyak is also made in part

/575 cont./

1. (cont.)
out of the same material as the Gilyak kāpetrch or similar armor. During the bloody fights which the North Americans had with the Koreans in 1871, they saw them clad in armor which consisted of forty layers of stout cotton material and was almost impenetrable for saber or bayonet (Neudeische Presse, 1871, No. 314, according to a report sent to the Times by its reporter in Shanghai). On the other hand, Dinter ("Ueber die Korēne und Tungusen /The Koryak and Chukchee/," -- Bull. de la Cl. hist.-phil. de l'Acad. Imp. des sc. de St. Pétersbourg, Vol. XIX, Bull. suppl., Col. III, p. 41) relates that the Chukchee have a armor made of whalebone and thick animal-skins.

To conclude the remarks concerning the weapon of the Gilyak, I must consider a piece which, to be sure, is harmless in nature, but is nevertheless interesting and characteristic. It is the so-called mangache (Pl. XLVI /see p.102/, Fig. 9). A roundish or slightly angled stick of hard wood about five feet long, which from top to bottom bears the characteristic, barely indented spiral design which is found on all the shafts of their lances, spears, and harpoons, and which, despite the smoothness of the latter, nevertheless offers a certain resistance against the palm of the hand pressed on it. The upper end of the mangache is rounded off to the shape of a knob, or, more correctly, an acorn. In the lower third it is either merely tapered gradually or flattened somewhat like a saber and is always provided with a deep groove on the back. Tracing the origin of this curious object has also advanced to the Negda along the Amgunj, among whom it is called mukeschi, evidently a distortion of the Gilyak designation for it, and is generally widespread. Middendorff became acquainted with it among them. In his travel account

/576 cont./

In contrast to the hunting practised by the Gilyak as described above, that of the other peoples of the lower Amur region shows very characteristic differences in details, as well as in regard to its scope and its importance for their life as a whole.

In almost goes without saying that the greater correspondence in hunting practices prevails between the two Paleo-Asiatic peoples directly neighboring each other on Sakhalin, the Gilyak and the Ainu. Even in Mamia Rinō's travel account (1) one finds

1. "Tō-sats'kko" (Siebold, Nippon, VII, p. 183).

briefly mentioned for the "Kraiber," or Ainu of Sakhalin, almost all the methods of catching animals that we have become acquainted with in detail in connection with the Gilyak, with the exception of the Gilyak: for instance, the snares set on a tree trunk put across a brook like a bridge in order to trap sables and river otters; the clamp-forks (Gilyak hairma) designed for foxes and wolves, the bows which shoot an arrow automatically when a taut string is struck, etc. Concerning the latter, the Japanese traveler reports that the Ainu also use them for the killing of sea otters, with a fish as bait -- a statement that is somewhat doubtful in itself and in any case can only be of historical interest today since the sea otter (Enhydra marina Schreb., Pallas rasko) according to information collected by me and later travelers (2),

2. See the first volume of this work, p. 44. Also Nikol'skii, Ostrov Sakhalin" i ego fauna pozvonochn. zhivotnych /Sakhalin Island and its Fauna of Vertebrate Animals/ (supplement to Vol. LX of Zap. Imp. Akad. Nauk", No. 5, p. 147).

now hardly appears anymore along the shores of Sakhalin and is known to the inhabitants of it only by name. More trustworthy

Section 10

Trade. Value of the Principal Items Occurring in Trade, the Household, and the Rent of Life. Trade Relations of the Amur Natives with One Another and with the Manchu-Chinese, Japanese, and Russians. A Look at the Recent History of Trade and the Rule of the Manchu-Chinese in the Lower Amur Region.

As essential as fishing and hunting may be for the existence of the Amur peoples, they nevertheless cannot directly satisfy all of their needs: they cannot procure some of their requirements in food and clothing, as well as the luxury items that have become no less essential to them, except by selling part of their hunting and fishing products to the neighboring civilized peoples, that is, by trading. Thus, in this latter, a third source of substistence is opened to them, by means of which the first two are essentially supplemented and brought to their full significance.

The chief motive which impels the Gilyak toward monogamy is the custom of buying their wives which prevails among them, as among more primitive peoples and in particular among all the indigenous peoples of Siberia (2). The Gilyak expression for "to

/632 cont.)

certain conditions, as, on the whole, a rare exception. According to the statement of the Gilyak, the latter is practically not found at all on Sakhalin, along the Liman, and along the coast of the Sea of Okhotsk, where among the Gilyak it occurs more frequently. An explanation for this will appear from the information in the following. In polygamous marriage the number of wives is usually limited to two. Among the Amur Gilyak I discovered several such marriages (1). Marriages with three

1. For example, the Gilyak Sogun in Kuĉh (Mäo) had two wives, Keĉguk and Malguk; similarly, the Gilyak Tschegun had two, Chumuk and Tyinuk, etc.

to five wives are very rare, and, according to the statements of the Gilyak, there are at all among them with more than five wives. In addition to voluntary polygamy, however, there is among the Gilyak a form of polygamy brought about by the law of inheritance or, more accurately, by hereditary obligations, which will be discussed later.

It is clear that even more than in the earlier sections the observations on the trade of the Amur peoples should begin with the Gilyak. None of the indigenous peoples of the lower Amur region has as much interest in and talent for trade and such extensive trade relations as the Gilyak. It is typical for them that all the first information which the Russian received about them — I mean the above-mentioned account that the Cossack leader Perfilief heard from the Witim /Vitim/ Tungus in the year 1639 and 1640 (1) — they were already designated as a people living

1. See p. 203 above.

at the mouth of the Amur (Schilka) and having trade connections with the Chinese. In fact, they do trade with the Chinese and Japanese than all the other peoples of the lower Amur region, although they /591/ live farthest from them, and often act as middlemen in the trade of the latter with the former as well as in that of the Tungus, Goldi, Orochi, Negidal, Nivkh, and Ainu with each other.

/633 cont.)

5 pieces of Chinese silk at 4 ja each, together . . . . 20 ja

1 large bear . . . . . 30 "
5 especially good dogs (kyla-kan) at 4 ja each . . . . 20 "
Total . . . . 133 ja = about 266 rubles.

583 The bride price is therefore very high among the Gilyak, which indicates the relative prosperity of the people (1). Custom

1. For the sake of comparison I shall cite here the bride price of several Siberian peoples in older and more recent times. At the time of Adam Brand (Neuvermehrte, bestätigte und vermehrte Chinesische Reise, welche er anno 1692 etc. /Newly Enlarged Description of His Great Chinese Journey which He in 1692, etc./, Lübeck, 1734, p. 99), it amounted to 10-15 reindeer among the Tungus on the Wechnaja Tunguska. A rich Ostyak girl on the Obj at the time of Pallas was not often given in marriage for less than 100 reindeer and a quantity of all kinds of furs (Sujef, in Pallas, Reise durch versch. Prov. des Russ. Reichs /Travels through Various Provinces of the Russian Empire/, St. Petersb., Vol. III, 1776, p. 98). According to Castren (Reiseber. und Briefe aus d. J. 1845-1849 /Travel Report and Letters from the Years 1845-49/, St. Petersb., 1856, p. 56), the current price for an ordinary girl in marriage among the Ostyak on the Irtysch amounted to 200-300 rubles in

/633 cont.)

1. (cont.)
money, one horse, a cow, and an ox, 7-10 different pieces of clothing, a pood of flour, a pail of liquor, and some hops for the preparation of the wedding celebration. The high bride-prices which Middendorff (Reise in d. Nord- und Ost-Sibirien /Travels in the North and East of Siberia/, Vol. IV, p. 1459) gives for the Angara-Yenisei women are somewhat reduced by the dowry which the bride brings, so that under some circumstances it almost only amounts to an exchange, which is never the case among the Gilyak. On the other hand, the bride price was very low among the Votyak, Cheremis, and Chuvash: among the former, who were the poorest, it amounted to only 5-15 rubles, among the latter two 10-30 rubles, and among the Kungur Chuvash, who were the wealthiest, 100 rubles and more (Müller, Samml. Russ. Gesch. /A Collection on Russian History/, Vol. III, p. 369).

583 requires that it be paid at one time and not in installments. In view of the circumstances and thrifty nature of this people, constantly thinking in terms of augmenting its possessions, as has been pointed out in my previous descriptions, even a well-to-do man will not find it easy to buy a second or a third wife, in addition to the one. Only a particularly intense desire to have his wealth duly appreciated by his countrymen and thus to gain special esteem among them would prompt him to do so. Therefore, polygamy is more frequent among the generally wealthier Amur Gilyak living together more densely than it is among their countrymen along the Liman, on Sakhalin, and along the coast of the Sea of Okhotsk.

/635 cont.)

wife-abduction, it needs no further special refutation after what has been said above. But in view of everything that I heard from other sources, I must also deny that the Gilyak ever undertake the mock abduction of the bride or maiden in concluding a marriage, which seems to be regarded as a form of a fictitious obligatory wife-abduction among them. The abduction of a woman is never a /636/ trifling affair among them, but, as has been said, is damage to property, always a deadly serious business.

Let us now return to the regular conclusion of marriage among the Gilyak. Only to a very limited extent is blood relationship an obstacle to marriage, in that only siblings and the children of brothers are not permitted to marry each other. Even in the language they are not differentiated, in that "ykyn" and "ntschek" mean also brother and sister, and "ykyn" also means a brother-in-law, "ntschek" also means sister and "nauh" means sister as well as female cousin on the father's side, and, accordingly, the brother and the sister of the father are designated with the same word as father and mother, namely, "nyk" and "nyuk." But beyond that, the membership of both partners in the same paternal kin group, which, as we shall see later, is also taken into account in other connections by the Gilyak, constitutes no obstacle to marriage among them as it does among some Siberian peoples (1) and,

1. As, for instance, among the Ostyak, Samoyed, Lapp (Ahlqvist, Beiträge zur über die Urgeschichte der Mensch. und die Entwick. der Civilis. /Researches into the Early History of Mankind and the Development of Civilization/, transl. from the English by H. Miller, p. 309).

on the other hand, among the Chinese (2) and through them, in

2. Du Halde, Descr. de l'Emp. de la Chine et de la Tart. Chinoise, Paris, 1735, Vol. III, p. 133. /Further,

/636 cont.)

585 As soon as the bride price is paid, the marriage is regarded as concluded, and the man may take his wife and bring her to his home. This is often done without further ado. Wealthier

586 people, however, usually arrange a feast to celebrate the wedding of their daughter or sister, at which, aside from relatives, villagers and friends also /587/ take part. Similarly, a supply of various foods, fish, meat, berries, millet, etc., are given to the departing married couple, so that the young wife, having reached the home of her husband, is also able to give a feast for the relatives, there, as well as members of the household and village.

As a rule the young couple moves to the place where the husband has his home, that is, where his parents or relatives live. And take up residence with one or the other of them, according to circumstances, since the Gilyak dwellings, as has been described above, are not of a type that can accommodate several families. The house, however, is by no means always inhabited only by relatives, but often also by other villagers who perhaps helped in building it or have some other connection with the owner. The members of the household remain together until, through the increase in the families, the space becomes too crowded and the young people have the means to build a house for themselves either in the same village or elsewhere. Besides the central room used by all the members of the household, with the hearth in the earth floor and the sleeping benches built in Chinese fashion, each family has in particular share of the sleeping benches running all around and each household has its distinguished place on them. But these individual sections are never separated from one another in any way by screens, curtains, or the like, and the whole interior of the house always gives the impression of a room used by everyone in common.

At little as such living together by all the members of the household in one room can be conducive to morality, generally speaking, I must nevertheless give the Gilyak a good rating in this respect. In fact, I do not hesitate to call them a morally intense people, in contrast to their neighbors, the Goldi, Orochi, Ainu, and even more than the other Paleo-Asiatic peoples. There is

/643 cont.)

when young, strike one another and the cradle producing noise and a clanking sound. The same purpose is in part served by a second bundle of similar knickknacks which is hung in front of the cradle so that the child can reach for it. Underneath I also saw in the village of Wanaj a bundle of fine shavings, a so-called zach, which, if I understand the matter correctly, serves the purpose of keeping the child against the influence of evil spirits. Finally, in a spot visible to the child in the cradle, a tschinscha-tschagal, or, more precisely, manicurbelge (chinscha=tschinscha-tschagal, that is, a wooden figure with human joints throughout (Pl. LV, Fig. 1 /see p. 1285/), carved at the time of its birth, is hung so that the child, by looking at it, may remain sound of limb and agile.

The great prevalibity of the cradle enables the mother to give the child the breast without lifting it out of the cradle. Gilyak mothers suckle their children a very long time, up to four or five, and even longer, and then do not stop at all even when the children, even after they have become accustomed to a different diet, to come back to the mother's breast from time to time, whenever it strikes their fancy. In Nyi I saw a boy, who allegedly was five years old, but who, judging by his size and behavior, /644/ could have been almost seven, and wore bedpants and the pouch underneath contrary to the usual sex among the Gilyak, suddenly stop his activities and run to his mother. She was sitting on the sleeping bench and was sewing; the rascal remained standing on the floor in front of her and, as his imperious demands succeeded in having her give him the breast. This reminded me of what La Pérouse experienced among the Orochi in de Castries bay: there he saw a boy draw a bow, shoot an arrow very well, hit a dog with the stick, and then throw himself at his mother's breast and behave like a child of five or six months (1).

1. La Pérouse, Voyage aut. du monde /Voyage around the World/, Vol. III, p. 68. The Siberian peoples, too, suckle their children up to the age of four or five; the Ostyak, for instance (Sujef, in Pallas' Reise durch versch.

/649 cont.)

the statement by Rinsö, could express the conjecture that the bojaktschutschi or bojaktschitschi of the Kamchadal known through Steller and Kraschenninikof (6), that is, men being used

4. Steller, op. cit., p. 301, note.
5. Kraschenninikof, op. cit., p. 40. See also p. 479, note 2, above.

in the place of women, were also to be found among the Gilyak. Suffice it to state that neither I nor, as far as I know, any other traveler in the Amur region ever encountered any trace of this deplorable custom among the Gilyak, and that Steller's conjecture is therefore wholly unfounded. At first glance there seems to be more justification for his conclusion, drawn from the same source, that the custom of transvestism among the Kamtschadal or Kraftu (Gilyak of Sakhalin). "The northwest coast of Kraftu," he adds, "would accordingly be the only land in the world where polyandry is practiced in accordance with law or custom at the present time." But, as may be seen from the above descriptions, this conclusion, too, is by no means correct: nowhere, neither on Sakhalin nor on the mainland, does polyandry prevail among the Gilyak. But how then can the Japanese traveler's report quoted above, which speaks of the "vest" and the "other men" of the Gilyak "mistress of the house" in Noteĉto, be explained? The truitworthiness of Mamia Rinsö, often stressed in these pages, does not permit simply rejecting a report under discussion as fiction. In his discussion of the domestic situation of the Gilyak which occupies us at the moment, he gives further proof of his credibility, in that he accurately describes the peculiar cradle used by them (3), as

5. Op. cit., p. 191.

has also been done here (6). Yet I cannot but assume that in the

/556 cont./

by the native tribes, Tungus, Yakut, Ostyak, Samoyed, and by the Russians for slaying all the animals possible, from the largest, such as bear and elk, down to the sable and squirrel, is used much less among the Gilyak and is limited to only the most important fur-bearing animals -- a circumstance which is likewise evidence of their slight inclination for hunting and, at the same time, their predominant and decisive interest in trade.

The great benefit that the Gilyak derive from fox fur both in trade and for their own use induces them to hunt this animal, not only with the self-firer, but also in other ways. For example, they likewise use for catching it a clamp-trap, which, constructed in the same way and only somewhat larger, /557/ is also used for wolves. This is their so-called kasma (1). It consists of a peg

1. The s is pronounced softly here, like the French z.

stuck into the ground and running up into a two-pronged fork at the top. The two prongs, only very gradually diverging from each other from their common base, are of unequal lengths. The shorter one (called wa in Gilyak) is sharpened on its inner side, side, the longer one rounded off. On the latter, not far from its tip, there is a cross-stick (Gilyak tabs-tigrsch) (2), on which

2. The s again pronounced softly. Tigrsch means "wood" in general.

the bait, a piece of jukola or meat, a dead crow, or the like, is put. The fox or wolf jumps against the peg in order to reach the bait with its paw, whereby its foot slides off the cross-stick and remains clamped between the two prongs. The height of the kasma is different for the fox and the wolf: for the former it must rise to about three and a half feet above the snow; for the latter, four and a half feet.

8 cont. /

1. (cont.)
of this event had spread from Ulban Bay to the Amur and Liman, and the Gilyak were afraid that I might have a similar magic wand.

In my time the only shooting weapons of the Gilyak were the and arrow, which they used on occasion against large as l as small animals. The bow (Gilyak puntsch, on Sakhalin) is of the same nature as among the Tungus and other erian peoples. It is made of the wood of young ash trees lacking them, of good birch wood. In the Tymy Valley Sakhalin the Gilyak designated to me the kind of wood ed per by them, i.e., according to Schmidt and Glehn, nymus macropterus Rupr., /559/ as their "punt-tschchar" v wood) (1); as is also the case among the Ainu (2).

1. Or, as they said as a rule, "punt-lytynt-tschchar," that is, bow-making wood.

2. Schmidt, "Reisen im Amur-Lande und auf der Insel Sachalin, Botanischer Theil /Travels in the Amur Region and on Sakhalin Island, Botanical Section/" (Mém. de l'Acad. Imp. des sc., seventh series, Vol. XII, No. 2, pp. 99, 213, 215).

rder to protect the wood from dampness and to retain its ibility, the bow has fine birch bark pasted on it, or, as I e seen on especially fine specimens, for example, on the from Tebach shown on Plate XLIV /see p.1024/, Figs. 4 and 5, overed with fine elk skin on the inside, i.e. on the side ed away from the marksman when shooting, but on the outer turned toward the hunter, with whalebone (Gilyak asm) (3),

3. The s is soft here, like the French z.

/559 cont./

yghli or orkai by the Gilyak (Pl. XLVI /see p.1026/, Fig. 1), is used to kill wild fowl, ducks, geese, and the like. It consists almost wholly of wood, in that at the top the shaft runs out into a knob crowned with a point and in which are found three iron points, but blunt ones, turned in different directions (5). I have

5. There is mention of similar, knob-shaped arrows among various peoples of Siberia in some of the oldest reports on it. For example, Georg Adam Schleissing in his work, Neuentdecktes Sieweria, worinnen die Zobel gefangen werden /Newly Discovered Siberia, Where the Sables Are Caught/, etc. (Danzig, 1692, p. 49), reports that the people there do not shoot pointed arrows but rather "in order that the rare hide not be damaged, the arrow, instead of a point, has a thick iron knob with which they shoot the sable down from the tree, so that it is dizzy and then they run up and beat it to death." Pallas (Reise durch versch. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. I, p. 323) mentions wooden arrows with knob-shaped points which the Kalmyk use to kill birds and small animals. Sujef (in Pallas, op. cit., Vol. III, p. 49) reports on the arrows with a blunt bone knob used among the Ostyak along the Obj for shooting smaller animals, and in Middendorff's travel work (Vol. IV, p. 1276, woodcuts e and d), there is an illustration of such a knob-shaped Ostyak arrow point.

/630 cont./

and widows, unmarried people, orphans, and the needy: 3-4, [illegible] 6-7 [illegible] of gold cloth are paid per head, but young and [illegible] people, however, who cannot be used for any services, are exchanged for crude goods.[illegible] According to him, even the Aino from Jezo (Yezo) and from the island of Hiroto come over to Sakhalin in order to buy there human beings in the situation described. He adds: "This is why one finds tattooed women in the country of the Smerenkur" -- a perfectly correct conclusion, for, as has already been pointed out (2), tattooing is by no means

2. See pp. 63 ff. above.

customary among the Gilyak. Rinck's observation concerning the Ainu trade of the Aino has correspondingly with one above and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin kept slaves, at any rate female slaves, among them, whom the latter obtain probably exclusively from the Aino. Inside purchase, however, the Samovar, as Rinck reports, also get their slaves in another, more brutal manner by taking to their country an security the brother, sisters, and children of these Aino who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say, they become slaves there. The Japanese government, which had absolute domination over southern Sakhalin and its main trade center, Nikonsai, did not /631/ feel bound to check this scandalous practice, which ceased only after the island passed into Russian possession.

Before I go further in describing the family relations of the Gilyak, I should like to insert some data concerning slavery among other Paleo-Asiatic peoples for comparison. As diagnostic for as the Ainu practiced the selling fellow tribesmen as slaves to the Gilyak and Olcha (s. yet nothing is reported, either by Rinck or by other travelers, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it was their own kindheartedness and weakness or a prohibition of the Japanese acting as absolute rulers, may be left undecided.

/631 cont./

peoples slavery obligated, as a rule, when prisoners of war, in other words, individuals from a foreign tribe, were made slaves and, in particular, women and girls were captured by the enemy in raids or as a result of conquest. This was the case among the Ainu, Koryak (4), and Aleuts before they were

4. Steller, op. cit., p. 326.

subjugated by the Russians. The Aleuts in particular were distinguished by their cruelty to their slaves, in that on festive occasions they sometimes slaughtered a great number of them (5).

5. Veniaminov, Zap. off. ost. Unalashk. Otd. Imp. Russk. Geogr. Obshch., 1840, Part II, Section I, Pt. II, pp. 83-89.

Wrangel (6) even reported of the Chukcher, who retained their

6. Pitesh. po sev. Ben. Sib. i gr. Ilouseny in the Region of the Northern Coast of Siberia, Pt. II, pp. 320, 324.

independence and individuality the longest, that among them, and, to be sure, the nomadic as well as the sedentary ones on the sea coast, there is a kind of serfdom or slavery, in that once ancient times the well-to-do have owned whole serf families who are not permitted to move away, have no property, and are wholly subject to the whims of their master, who use them for the heaviest services and labor and in return feed and clothe them. Wrangel was unable to find out anything definite about the origin of these slaves, but he thinks it probable that they are the descendants of former prisoners of war, and therefore from foreign tribes. The fact, however, that they have existed since ancient times and in whole families /632/ allows one to conclude that, in contrast with the Gilyak, they kept and bred slaves, given to the next brother of her deceased husband, and, to be sure, as wife, regardless of whether the latter is still unmarried or already

/634 cont./

mentioned (1), and differently than among a number of other

1. See p. 1030, above.

people, members of one and the same kali may marry each other. The description of the Gilyak kin system (2) mentioned above evident how greatly the male sex is favored over the female sex among them and given preference over it. According to this description the women not only has no rights to an inheritance, but is herself inherited, first, as a girl, from the father to the brother, and then, as a woman, from the last brother of her deceased husband, so that she can never make arrangements for herself. The only thing she can do is to establish for herself, as a wife and mother and through the means and talents given her by nature, an influential and recognized position in the home, and among the Gilyak she succeeds in this to a not inconsiderable degree.

2. See the information very similar to the one among the Gilyak is found in the case of another Paleo-Asiatic people, the nomadic Koryak, whose chief possession consist of their reindeer herds. According to Dittmar (3), among them, too, only the sons

3. Beitr. zur Ethn. d. Bew. Kamtsch. d. Ethnol. Mus. zu St. Petersburg, Bull. Acad. Imp. Sci., St. Petersburg, 1862, p. 159; Mél. russes tirés du Bull., Vol. VI, p. 1.

inherit the property of the father, and, to be sure, in equal shares, but the daughters receive only those reindeer which have come from the animals presented to them when they were born. Furthermore, among them, too, upon the death of an unmarried brother, the surviving brothers share equally what he left. But if the deceased brother was married and leaves a widow, she goes to the next brother as a wife, if he is unmarried or a widower, and, if this is not the case, to the second younger, the third younger, and so forth, if she is unmarried, with them and lives. On the other hand, she may never become the wife of an older or already married brother of her deceased husband. Hence, if among her

/635 cont./

husband, the widow may not marry any of the younger brothers, but must remain a widow. Thus, the marriage of the widow of the older brother goes to the younger brother, but the widow of the younger brother becomes free. Therefore, in the language of the Turkhanch region (Kirovskaipka), "Eniesai, ulu /The Yenisei District/", Zap. Imp. Russk. Geogr. Obshch., 1863, I, Ser. and Stat., p. 75. Turkhanch, "Turukhansk" (Turukhansk), Zap. Russk. Geogr. Obshch., 1863, I, Ser. and Stat., p. 75. Turukhansk,

/680 cont./

/Sometimes/ when it lasts too long for me, I, or more often my mate, put a stop to it. The Gilyak, however, are perfectly accustomed to this disturbance of the night's rest, and I never heard them raise an objection to it. In this among the other natives of the lower Amur region, (Tscha, Samagir, Goldi (1), only among them the call of an urging

1. On the other hand, the Siberian Tungus who accompanied Erman on his voyage from Yakutsk to Okhotsk liked to sing in the daytime, but when he once asked them to repeat their songs in the evening by the fire, they explained unanimiously and with a sort of religious awe that it was sinful to sing at night (Erman, Reise um die Erde, Hinor. Berichte /Journey around the World, Historical Report/, Vol. II, p. 354). Perhaps the Russians taught them that so as not to be disturbed during their night's rest.

/680 cont./

/684 cont./

The gut string is fastened to the short end and from there runs over a bridge set on the thin Gilyak /tema/, as in the case of the bow) to the other end of the stick, where there is a device for keeping the string taut. The fiddle bow (Gilyak /ymg-panetch/) is sharply curved and strong with horsehair (Gilyak /ymg/). The string, of course, is played between the bridge and the long end of the stick much though the cylinder-casing. The instrument seems to me, judging also by its name, to be of Ochka, Goldi, or at any rate Tungusic origin. I saw it and heard it played only in Kidsi, and the monotonous and melancholy melody was very similar to the purpose of it.

Since I rarely heard the Gilyaks sing in the daytime, for the material of this chapter, a statement by Middendorff about this, which I found among his handwritten notes left for me to use, is all the more interesting to me. My predecessor in the northern Amur region (3) became acquainted with the Gilyak at the Tugur

3. It is well known that Middendorff

/684 cont./

cards, the game being played with 120 cards, is in use among the Goldi of Tiling.

The latter have only the expression pej, that is, gratis or free, for card-playing, proof of the harmless fashion in which it has been practiced up to now. In fact, in my time the Gilyak only played for tobacco, which, in view of the common enjoyment of each pipe of tobacco as a rule, seem more lawful to us an entirely harmless pleasure. But they knew that the "Manchu" (Chinese) made a quite different use of it and played for much higher stakes. Przewalski describes how widespread the card game is among the Chinese in the upper Ussuri and the adjacent coastal area, especially along the Zymu-che and Suntuchan, where during the winter unemployed riffraff spend entire days and nights playing cards and cause the ruin of many a formerly rich houseowner (3). Under

3. Prshevalski, Puteshi. v" Ussur. kraie /Journey to the Ussuri Region/, St. Petersburg, 1870, p. 90.

these circumstances it is surprising that it has not spread more rapidly among the Gilyak. A mat and that it has not become liked and in particular among the greedy and acquisitive Gilyak. It is undoubtedly because of the energy with which the latter have been able to keep the Chinese away. In the meantime it may also have been carried to them by the Russians.

Before I start the description of the bear festival of the Gilyak, I must cast a brief comparative glance at the peoples immediately adjacent to them, the Olcha and Goldi, with regard to the social and co-operative relations touched on above /686/ In my time, after the official Manchu-Chinese trade center of Deren was abandoned sometime in the twenties the Olcha, like the Gilyak, were not tributary to either China or Russia. Only if one or the other went to the Sungari to trade did they have to pay, as has been mentioned above (1), to the

1. Cf. p. 960.

/686 cont./

But wealth does come into consideration to the extent that it does among the Gilyak, and those blessed with it do not enjoy nearly the respect enjoyed by the poorer people, and especially by the latter. But the reason for this, too, in large part is again the greater industriousness and gain-seeking of the Gilyak. If one of them acquires a certain amount of wealth, he continues to increase it by lending out to interest, or by buying new furs in the neighborhood and trade voyages, through which his name and reputation /687/ will become known far and wide in the country. The Olcha, on the other hand, are decidedly of a more indolent and more easily satisfied nature in this respect.

Another social trait that distinguishes the Olcha from the Gilyak is that their communism does not work merely within the boundaries of the village community, where during the winter and the later. And this is explained by the fact that, while, to be sure, they are most like the Gilyak in their way of life, their customs and practices, on the other hand they are surrounded by closely related Tungusic tribes with whom they have many character traits in common and whose dialects are readily intelligible to them. Thanks to this considerably lessened national consciousness, the individual man, to be sure, finds among them, in case of need, no help support by his more prosperous countrymen as among the Gilyak, but, on the other hand, a more peaceful, milder and more humane spirit than among the latter prevails over the whole.

Evidence that the Olcha, and likewise the Goldi, Samagir, etc., do not limit their communism to such narrow tribal boundaries as the Gilyak is given by the hunting customs already discussed above (1). On the Gorin, for instance, the Olcha,

1. See p. 910.

Goldi, and Samagir have their hunting tents, but these stand open, with their household and hunting equipment, to all hunters, regardless of what nationality they are, with the tacit presupposition that no pilfering of the hunting booty or implements

/686 cont./

/701 cont./

traffic within the yurt, for now with every step one has to stay close to the edge of the sleeping benches in order not to be unexpectedly trodden by the paw of a bear.

Only two of the bears, a very large animal of the female sex and a considerably smaller, yet fully grown, seven-year-old male bear, belonged to Dulin, who had bought them in the villages of Tschiwi and Arse, inhabited entirely and half by Olcha, respectively; the third and likewise male bear of medium size came from Kalin and was the property of another Tobach Gilyak. As in size, the animals also differed in coloring: the small bear was light brown, the large one dark brown, and the medium-sized one almost black. Moreover, the large bear differed from the other two in that it had a whitish-gray band on the lower part of its neck, but not enough to be called a collared bear (Gilyak /mik/) by the Gilyak. What happens only if the white is quite pure and extends over a large part of the throat. Finally, the three bears also differed in their behavior, especially in the way they defended themselves, as we shall presently see.

Immediately after we followed by the throng, had taken seats on one of the sleeping benches, another game was begun and XLVII /p. 1347/, as well as in the woodcuts on pages 1150 and 1151 of this work, after having been technically improved, with the strictest regard for all details, the former here on the spot by Mr. Dmitrijef-Orenburgki, the latter by Mr. Fr. Ruauw, custodian of our museum.

On the evening of January 18 we were again in Nikolajevsk, where I immediately began the preparations for my second trip to Sakhalin. The day for my departure had already been set when Julin again appeared at my place. He had put the question bodhaftigkeit, whether it would be more favorable to resume the previously begun bear festival before or after his planned trading trip before some of the older members of the village, among whom there was also a shaman, and they were of the opinion that the festival should first be brought to a conclusion. He had therefore come to Nikolajevsk again in order to make a few purchases. In reply to his repeated invitation to come also, I

/713 cont./

long, and the cut-up pieces of meat and fat are kept in the storage chambers until it has been decided to resume the festival. But Julin did not seem to be in any hurry about that -- he was thinking instead of first going on a trading trip to Sakhalin. I regretted this delay, but I had the consolation of having seen the further course of the bear festival the previous year in the village of Uda. This village, to be sure, is no longer in the territory of the Gilyak. But in that of the Olcha, but since the entire custom of the bear festival was undoubtedly transmitted from the former to the latter, it is not likely, in view of the conservatism nature of primitive peoples, that there are any essential differences between them in the main features of the festival. The bear, which quiet had been restored: the many guests had departed, the dogs' table was set up again, and /714/ ulbach-feasts had given way to a greater freedom of movement inside the house. We stayed there for another day: I in order to organize and complete the many notes in my journal made during the past days, and Mr. Maximowicz in order to add the landscape background of the bear sketches drawn from life. These sketches of my friend, now unfortunately deceased, are reproduced on Plates XI /p. 991/, XLVII /p.1347/, and XLVIII /p. 1348/, as well as in the woodcuts on pages 1150 and 1151 of this work, after having been technically improved, with the strictest regard for all details. the former here on the spot by Mr. Dmitrijef-Orenburgki, the latter by Mr. Fr. Ruauw, custodian of our museum.

/761 cont./

heaven. My informant remarked that Mlygh-wo must be a large village, considering the number of persons who die "peacefully" or from sickness, but he could not say anything more about it. The various things put over the ashes of the deceased, such as eagle wings, food provisions, etc. (***), serve for a rapid and safe

*** See Appendix 47 /p. 1227 /, 53 /p. 1233/.

journey to it.

The surprising answer to my further question as to what happened to the soul of a person killed by a bear ran: Such a soul assumes the shape of a bear and wanders in the forest and in the mountains.

/762/ Undoubtedly among the Gilyak (as well as among the Olcha (*) this is the conception of a transmigration of souls, for

* See Appendix 45, p. 1224.

they put the body of a person killed by a bear into a special little burial house (tschchyf-ngych) and bring it berries, supplies of fish, and the like (**). Nevertheless, the dead person himself, i.e.,

** See Appendix 57, p. 1237.

his soul, is said to go into the forest in the shape of a bear, with the skin and fur, etc.

Only the difficulty, with an inadequate knowledge of the language, of reaching an understanding about abstract concepts with a primitive people little inclined toward abstraction has kept me from learning the Gilyak expression for "soul." The above-mentioned views concerning the consequences of death among the Gilyak make it clear beyond any doubt that they are familiar with the concept of the "soul" as a spiritual force innate in the human being. The above-mentioned concept of the metempsychosis of a person killed by a bear also explains to a certain extent why food provisions are brought to his corpse. His soul still wanders about

/762 cont./

on the earth, while the soul of a murdered person has flown to heaven and therefore no longer needs earthly food. Furthermore, this idea may in part also give rise to the reverence, devotion, and often very anthropomorphic treatment of the bear by the Gilyak. (Bm. II, 57-59.)

44. Gilyak. Among the Gilyak, as among the Olcha (***),

*** See Appendix 45, below.

the soul of a person drowned in the river or in the sea (according to Jutschin's report) does not go to heaven or to Mlygh-wo, but goes into a seal dog, and, to be sure, into a kighitsch or pyghilangr, i.e., the adult Phoca vitulina or nautica. A number of uitsch are therefore connected with the catching of a sea dog. For example, when the sea dog is caught and before any use is made of it, a cut with the knife must always be made through each eye so that the liquid can flow out. This is caught in the hollow of the hand and thrown back into the river. Only then may the sea dog be used as needed (†).

†. See p. 851.

It is difficult to say how the Gilyak conceive of heaven (tlö), where the souls of the murdered are said to go. As an answer to my question as to whether these souls go to one of the stars, which are also earths, I was told that they also went beyond these, kikr, i.e., "inland" from the stars (††). (Bm. II, pp. 62, 63.)

†† Therefore beyond them; see the star-dwellers, p. 1101.

45. Olcha. From Chossiambo I learned the following about the views of the Olcha with regard to the fate of the dying and the metempsychosis into aquatic animals and bears:

/772 cont./

1. (cont.)

members of a village -- or -- as in the case of a suicide -- it is automatically omitted.

Since the soul of a murdered person flies to heaven, it does not need any of the articles such as are placed in the raff for the wandering soul of a person who died a natural death. (Bm. I, pp. 52-54.)

62. Gilyak. As the Gilyak (on the west coast of Sakhalin) told me, they burn their corpses and erect wagn over the ashes of murdered persons. (2 W.R. I, p. 8.)

63. Gilyak. The Tymy Gilyak assembled in Ngachd-wo (on the left bank of the Tymy on Sakhalin) said that they likewise usually burn their corpses, as is done along the Amur, in the Liman, and on the west coast of Sakhalin up to Arkai (excl.). A raff is erected over the ashes of the cremated corpse and, as along the Amur, has a kakk, pyk or tutut, and pyk-ngit or tututngit in it. The pittyssj is present in the raff and among the Tymy Gilyak bears the designation raff-njo, that is, burial-house storage-chamber, which wholly corresponds to its significance. Only the tscham-ngar is missing (*). (2. W.R.I, p. 45.)

* See Appendix 53 /p. 1233/, 55 /p. 1234/.

64. Gilyak. From Arkai on, along the west coast of Sakhalin, south to Pilja-wo, the last Gilyak village, the Gilyak are said not to cremate their corpses which is regarded as uitsch, but to deposit them in wooden coffins in small houses, just as among the Tungusic tribes of Manchuria and Sakhalin and the Ainu (2 W. R. I, pp. 8, 45.)

/773/ According to another report, the corpses are interred south of Arkai (2 W.R. II, p. 25).

65. Olcha. In the forest not far from the Russian village of Bogorodskoye in the vicinity of the Olcha village of Pullj (Pulu on the map, on the right bank of the Amur), there were two very gracefully worked Olcha tombs ornamented with various paintings

with the Chinese. After the appearance of the Russians in the Amur region, the Nivkhi began to use small quantities of bread, sugar and salt.

The immemorial, and until recently the only, domestic animal of the Nivkhi was the dog. It served as a draught animal and provided for fur clothing and meat for food; it was widely used as a medium of exchange and played an important part in religious ideas and rituals. The number of dogs in a household was an index of wealth. As a rule, every household kept 30-40 dogs, which demanded considerable care. They were fed chiefly fish and seal-fat; feed had to be stocked for the whole winter, when dogs were used most as draught animals.

The old sled of the Nivkhi, which was still found in use by Shrenk in the middle of the last century, was so narrow that the driver sat astride it, resting his feet on small skis; sometimes he raised himself and ran in this position on skis. The runners of this sled were curved both in the back and in front. The dogs were harnessed to the towing strap alternately on either side, rather than in pairs. The harness was a simple collar, so that the dog pulled with the neck.

Until quite recently, dog races were still a part of the bear festival; in these, the Nivkhi used the old sled and the old type of harness. The harness and the sled which appeared among the Nivkhi in the beginning of the 20th century were considerably different from the old type. They were of the so-called Eastern Siberian type; the sled was of greater capacity and equipped with a vertical shaft-bow and paired harness, not in collars but in yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled. Its greater size and stability permitted the transportation of up to 200 kg of goods. It was usually drawn by 9 to 11 dogs. The best trained and most valuable dog was the leader. The driver—kayur—usually called out his directions to this dog. The dogs were stopped with a shouted order and a brake pole. Dogs were sometimes also harnessed to a boat on a longer tow strap.

The horse as a draught animal appeared among the Nivkhi relatively recently.

In addition to dog transportation, winter travel on land was done by skis—bare skis without fur lining, or skis lined with seal fur. The former were used for short trips; the latter, for distant expeditions during the fur-hunting season. The Nivkhi skis were distinguished by the wooden strips nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed boats made of poplar. These dugouts were so light that they were carried by hand across barriers (shallows and isthmuses). They were propelled with oars or poles (usually employed for upstream travel). For long-distance travel, the Nivkhi had a large boat similar to that of the Ul'chi, Nanays and Orochi. It was made of three wide cedar boards, of which the bottom one was bent upward in front, projecting like a spade. It was rowed with 2 to 4 pairs of oars, by lifting alternately the right and the left ones.

The Nivkhi villages were usually situated near the mouths of spawning-rivers, and seldom exceeded 20 dwellings. Until recently, the dwellings of kinsmen were set side by side. Some 40 to 50 years ago, the Sakhalin Nivkhi still widely used the dugout house. It was made by digging a pit some 1.25 meters deep, over which a wooden framework was built of thin logs, and covered on the outside with earth. The smoke vent served as a window as well; the hearth was built in the center, and plank beds were set around the walls. At the end of the 19th century,

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

342

Mud hut.

342 175 the entrance to the hut was no longer from the roof, but through a long low corridor.

From about the period of the Ming dynasty, the Nivkhi dugouts began to give way to Manchu fanzas of the frame type, which spread over the entire Nanay territory and were taken over by the Nivkhi. The structure and layout of the winter dwelling were similar to those of the Ul'chi. In summer-time, the Nivkhi usually lived in summer dwellings built on piles some 1.5 m high. They usually consisted of two parts: the rear part, which served as living quarters and was lighted by an opening in the roof, and the front part, which served as a warehouse. The summer house was usually surrounded by racks for jerking fish and storehouses on piles for storing various products. The general appearance of the Nivkhi summer dwelling was similar to the Ul'chi summer storehouse.

[171] [171]

291 The old summer dress of the Nivkhi men was similar in many features to that of the Nanays. It consisted of trousers (varsh), a robe, reaching to the knees and closing from left to right, footwear of sealskin, and a conical birchbark hat (kh'ifkh'akk). The trousers and robe were made of blue or gray cotton cloth. The women's summer robe of fishskin or fabric was longer, and was decorated along the edge with copper disks. In winter, an outer garment of dark fur, with the fur outside, was worn above the robe. During sled trips, the men wore a kilt of sealskin above the fur garment, to save it from wear (sealskin was not used for dressing the dead). The head was protected by earmuffs and a fur hat. Men's and women's clothing differed only in that the latter had more embroidery and appliqués, and was made of a greater variety of materials (silk, cloth, lynx-fur on the hat).

[531] [439]

Formerly, the Nivkhi obtained material for their clothes from Chinese and Russian merchants. Footwear, robes and overcoats were made of

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

534 291 342

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ul'chi and Nanay. The figurines of bears on dippers and spoons used in the bear festival were finely made and realistic in style. The bear dippers were often remarkable in their craftsmanship. Some of them were carved with pictographs, relating the history of the hunt or rearing of a given bear. The carvings on the dipper handles were also symbolic; they indicated by a variety of symbols whether the bear was killed in a hunt or reared in captivity, whether it was killed in the summer; and so forth.

532 322 [171]

The musical culture of the Nivkhi was very poor. They played a primitive one-string instrument (t'yngryng) and a lip jew's-harp (kkangga). During the bear festivals they used, instead of musical instruments, an ordinary log, which the women struck with sticks.

534 [596]

Education was entirely lacking among the Nivkhi before the Revolution. The Nivkhi-Nanay alphabet written in the 1880's by the missionary, Protod'yakonov, was not used by the Nivkhi.

871 [212]

In 1895 an elementary school was opened in the city of Mariinsk; two others were opened in 1899. By 1905 they were closed for lack of funds. Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

175 648

In 1918, soon after the establishment of the Soviet government in the Far East, this area, and especially the Amur Basin and Sakhalin, became the scene of civil war and intervention. Guerrilla units were organized to fight the White Guards and interventionists. The bitter fighting lasted several years.

9: Hawes--207 T-3 (1901) 1903 Gilyak

116, 171, 251, 262

"However unpleasant to the stranger . . . smoke-curing of fish by the Orochons whi it lasts may be, it is one of the few advantages that they can claim over the Gilyaks. The latter is entirely dependent on a sunny season for the drying of his catch, and if should be rainy, then he will be in danger of starvation before winter is over, from insufficient accumulation of stores; for dried fish is bread and meat to these tribes during the long winter. The Orochon, on the other hand, after hanging his fish to dra . . . . . slices and cuts them up and cures them in the shelter of his hut over his fire

*796 /722 cont./
504 in the snow on either side of the path in front of the house for the
562 departing guests, to be taken along by those driving by -- only
876 bear meat and fat were missing, for they had already received this
596 in their mōos as provisions for the trip.

Because of the feast, the feeding of the dogs and the dog
*796 53 races did not take place until shortly before noon. In the afternoon,
562 however, for the first and only time the women actively partici-
171 pated in the festive entertainments, in that they executed a dance
to the drum music which resounded in a very strange and wild
rhythm. At any one time only one dancer was in motion, holding
in her hands either fir branches or castanet-like wooden clappers,
and the dance actually consisted of only the craziest postures and
contortions of the upper body in relation to the lower part. It
vividly reminded Ditmar of the bear dance of the Kamchatka
women, and even the music was similar, except that here it was
drummed, likewise by women, on a swinging beam with cudgels
and sticks, whereas in Kamchatka the dancers and the spectators
796 jointly sing. Incidentally, I must note that such an outburst of
562 merriment among the Gilyak women is probably very rare, because
[157] in general they are even more serious and sedate than the men
and are always much busier than the latter at all sorts of work and
activities. And it could by no means have been the result of high
[203] spirits induced by liquor, for this is, or was at the time of my visit
among the Gilyak, absolutely prohibited during the bear festivals,
a measure, as has been mentioned (2), prompted by cool reasoning

2 See p. 719 above.

*796 and evidence of their great strength of character. Another fact is
756 much more surprising and much more difficult to explain, namely,
that no shamanistic activities are permitted in a house where a
bear festival is being celebrated. The reason for this may be that
in the eyes of the Gilyak the uncanny art of the shaman would
disturb the festive mood and, through the power that it exerts over
the spirit world as well as over the human spirit, would cause
bewilderment and misfortune among the participants in the festival.

G *796 /722 cont./
562 It would therefore also be prohibited for the women, however, /723/
756 who are likewise able to practice this art, because they might
easily misuse it simply out of revenge for their exclusion from the
festive meals as a matter of principle.

G The bear festivals have no definite duration: the feasting
*796 goes on, with a constant rotation of the participants, relatives,
504 friends, villagers, and other guests as long as the quantity of bear
114 meat and fat lasts; in Tebach, Judin told his guests, Ditmar and
Brevern, that it would last for many days since three bears had been
killed. When, therefore, on the following day (February 1/13)
the proceedings of the festival in fact began to be repeated in
exactly the same way, they left this village and returned to
Nikolavevsk.

G As was mentioned above, I had an opportunity in the previ-
*796 ous year (1855) to witness this second part of the bear festival, con-
171 cluding with the eating of the bear, among the Olcha in the village
114 of Uda. My conjecture that their customs would not differ essenti-
ally from those of the Gilyak was in large part confirmed by Ditmar's
report. As proof of this and at the same time as evidence of the
adoption of Gilyak customs among the Olcha, I shall here insert a
brief description of what I saw among them on this occasion, with
reference to the above information about the Gilyak.

When I arrived in the village of Uda, located only five
Gi verst below Kidsi, on March 22 (April 3) at about 10 o'clock in
796 the morning and stepped into one of its five houses, I found it
[114] decorated in the interior in the same manner as is done among the
Gilyak for an imminent bear-festival feast. Here, however,
Gi opposite the étagère decorated with the bear's head and skin and
[198] with numerous fir branches and wood shavings (Gilyak zach = Olcha
gjamsassá), a second rack quite similar to the first one but some-
what smaller stood at the other central-post of the house and on its
shelves likewise held meat and pieces of the fat of the dismembered
bear, along with all kinds of other articles. Moreover, the passage-
way between the bear rack and the bench of honor was blocked off
by a pole laid across it, and by means of it this bench, as well as the
whole yurt, was divided into halves. The floor throughout the

Gi /727 cont./
796 upon the rack in the central section of the yurt, decorated with
504 fir branches, numerous wood shavings (gjamsassa), and the bear-
[354] skin hanging down from the top, while the other lamps shed a
gloomy light upon the long row of totally befurred fellow-diners
sitting along its walls and, with legs crossed, waiting for the meal.
Gi There was /728/ something orderly and yet savage and uncivilized
796 about this strange picture. Now one of the servers stepped up to the
504 guests who had received the two head-pieces of the bear, cut from
596 these, as well as from the portions of those sitting next to them, a
small piece of meat into his bear-bowl, and went off with it.
Only now did the two guests in the middle draw up their portions
and begin to eat, and all the others followed their example forth-
with. Immediately smaller and larger fellow-guests presented them-
selves here and there, and a few young men passed along the whole
row of diners and collected from them contributions in special bear-
bowls for those who did not participate in the meal, and a few bites
were also given to the women and girls.

Gi By now it was 7:30 in the evening; the feast had therefore
796 lasted seven and a half hours and, judging by the size of the still
unconsumed portions, would not be over for a long time. Unfortu-
Gi nately I was obliged to depart, since the night had to be utilized for
[114] traveling on account of the great amount of surface water that had
already formed over the ice covering of the river at this time of
year.

G Let us now compare this second act of the bear festival as it
796 proceeds, on the one hand, among the Gilyak and, on the other,
171 among the Olcha. In spite of the great similarity in the principal
Gi and secondary features of this festive performance, a very different
796 spirit in the way it is carried out among the Gilyak and among the
171 Olcha is apparent to us. Among the former the character of the
festival is altogether original; among the latter, that of having been
transmitted. While the object of the whole is exactly the same,
purely utilitarian, in both cases -- the ultimate consumption of the
bear -- very different ways are used by the one and by the other to
G try to attain it. Among the Gilyak the bear festival proceeds from
796 the idea of the bear cult, or at least is tied up with it; it is
825
171
G
796
825

G *796 /728 cont./
825 produced in part by veneration for the mighty beast, in part by
171 superstitious fear of it and its spirits of revenge. It is given the
Gi place of honor in the house, the people appear to act only with
796 its permission, reluctantly and out of sheer necessity, as it were,
825 and, finally, all guilt and responsibility are shifted from them.
171 On the other hand, scarcely anything of the sort is noted among
Gi the Olcha: the only superstitious conceptions referring to the bear
[123] and the bear festival which I found among them consisted in the
[392] fact that they did not want to sell me any bear meat and that they
[197] regarded it as uñsch (an idea which they have likewise received
[784] from the Gilyak) to go outside with fire taken from the hearth
during the bear festival, which, they said, was by no means for-
bidden at any other time. In contrast to the fearful, superstitious,
and, as it were, religiously colored conception of the Gilyak, the
second and most important part of the bear festival has degenerated
into mere ceremonial among the Olcha, a series of pedantically
observed formalities, such as one might expect from the millennium-
old Chinese, but not from a primitive people. Perhaps this degenera-
Gi [197] tion of a custom originally foreign to the Olcha, which does not
have its roots in the people, has indeed come about under Manchu-
G Chinese influence. Among them, too, all the foods served at the
*796 festival, with almost the sole exception of bear meat and fat, are
762 of Manchu-Chinese /729/ origin, whereas among the Gilyak, in
197 accordance with ancient tradition, sturgeon and hausen meat and
Gi mossj prepared from species of salmon play a prominent role at the
796 festival. It can be observed, incidentally, that the eating of for-
762 eign, Manchu-Chinese foods is always done with greater formality
197 even among the Gilyak, which can be explained by the fact that it
automatically lifts primitive man out of his everyday routine and
Gi puts him in an elevated festive mood. The greater number of Manchu-
[439] Chinese foods at the bear festival of the Olcha in comparison with
the Gilyak is undoubtedly due to the fact that their sources for these
products are closer and more numerous as a result of both the
permanent residence of Chinese traders in the habitation areas of the
Olcha and Goldi and the more frequent and active intercourse be-
tween these peoples and the Chinese on the Sungari.

G /730 cont./
*796 sometimes the right, sometimes the left parietal bone. In the
766 habitation area of the Gilyak I saw trees hung with dolphin skulls
825 to be sure, but I never came across any with bear skulls, though the
number of bears killed or captured and eaten there annually is
probably much larger than among the Goldi. This definitely indi-
cates that, unlike the Goldi, the Gilyak, aside from breaking
open or splitting the bear skull, do something else to it which is
scarcely less suitable than the covering of the bones for removing
it from the sight of human beings. In fact at various places in the
forest near Gilyak dwellings I have came across spots which, upon
close inspection, proved to be sites of bear skulls: trunks of young
trees were cut off several inches above the ground, the remaining
piece of trunk was split into two prongs, and the bear skull, split
down to its base was wedged into the split in such a way that the
two prongs projected out of the zygomatic arches and held it
clamped between them close to the ground; in addition, on either
side a short wooden peg was driven from above through the zygoma
arches and into the ground. /731/ If grass grows over the spot,
Gi nothing is recognizable to the casual glance. This method of deal-
796 ing with the bear skulls was transmitted from the Gilyak to the
766 Olcha and from them to the Samagir, who are closely related to
825 them and also directly adjacent to them on Lake Udyl and else-
[171] where. In the immediate vicinity of the village of Ngagha on the
G Gorin I found such bear-skull sites in two directions and in one of
[171] them, which lay in an open birch grove, counted within a circle of
30 paces, no less than nine bear skulls treated in exactly the same
way as among the Gilyak. Since the rest of the bear bones pre-
sumably also lie buried in the same places, they are not merely
bear-skull sites, but general bear-bone grounds.

The Goldi, who hang their bear skulls on trees, do some-
thing similar with other bear bones that are suitable for it. Near
Gi Bitschu, at the mouth of the Gorin, for example, I saw a decayed
[782] or split bear-skull lying on the stump of a broken tree a few feet
high, but below it in the underbrush hung various bones of the ani-
mal, among them a shoulder blade and a number of dorsal vertebra

/733 cont./

*796 out obliquely from the smoke vent and with a bundle of curled
342 wood-shavings hanging from its tip, such as I saw in the village
184 of Tyk. Here, the toad carved out of birch bark probably also remains on the smoke vent, while the bear's head and skin is lowered through the smoke vent directly onto the platform of the hearth.

*796 In the meantime, in the interior of the yurt there, the rack
184 for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench of honor, thus, in a place which corresponds exactly to the one which it occupies in the Gilyak houses built in Chinese fashion.

*796 Since the hearth platform in a large earth yurt is quite spacious,
184 two separate fires can be kindled on it, corresponding to the two
364 hearths in the tschadryf, over which the kettles used to cook the
252 bear meat as well as for preparing the other dishes hang from the yurt beams. The fire closer to the bear rack is the kotr -- or
[824] tschchyf (1) -- tur, the bear fire, in which fresh branches of fir

[192] 1. As the bear is usually called on Sakhalin.

trees, and especially of the cedar shrubs so common in northern Sakhalin, are burned during the preparation of the bear meat and also at other times during the bear festival on account of the popular fragrance.

*796 The wooden curls (zach), being regarded as a symbol of
798 holiness, purity, and inviolability, are an essential ornament in the
333 interior of the earth yurt. They always hang down in a long bundle
184 from the center of each of the four crossbeams supporting the conical roof, and at the time of the bear festival there number is increased by four new ones, which /734/ are put in the four corners of the yurt.

[177] In the Gilyak houses, on the mainland one usually sees only two of them, and not always even these, suspended from the two supporting posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau.

/739 cont./ But they

796 insisted on it and went on to say that the god of the Manchu was
124 called Mäll and that the Manchu have idols carved in wood, human
798 figures in various positions, with a pipe in the mouth, the arms
171 akimbo, and the like. The Manchu bowed before these idols, but the Gilyak did not do this when they went to the Manchu.

I inquired further as to whether and how the Gilyak pray,
124 but always received the answer that they do not pray. My next
782 question therefore was whether they had an evil god (or spirit) be-
771 side and beyond the good god, a question which seemed to surprise
771 them, and I realized that the placing together of my words "god" and "evil" seemed absurd and contradictory to them. Hence they replied in the negative. But since the Gilyak /740/ are full of

174 superstition, I can only explain as follows the contradiction be-
771 tween their idea of "God" described here and the evidence for various idols and their shamanism that I found:

Among the Gilyak there is an obscure and hazy conception
771 of "God," of a supreme being, who has the attribute of the "Good
776 One" in full measure and without any admixture of evil and who is revered by human beings. But this conception is a wholly ab-

[182] stract, completely empty one and does not at all fit into the life, into the customs and practices of the Gilyak; there is nothing concrete about it for them, and therefore they only know the word "pray," but not the act itself. Also, they know nothing about "God," in view of the complete emptiness of the concept, except that he is "kängulätsch, the Good One." In the real, concrete life,

799 however, the Gilyak experience much that is bad and evil, and there are many forces of Nature which, especially in hunting and in fishing, are often obstructive, menacing, and even fatal for them, such as the often unfettered power of the elements themselves, the often fatal strength of beasts of prey, the occasional and to them inexplicable absence of fish, and the like -- forces against which man, and all the more a primitive people completely dependent upon Nature, must feel his powerlessness. He cannot always escape such forces of Nature and they do him harm; to him, therefore, they are so many evil events which he views (from the general, egoistic-teleological, primitive viewpoint of man) as

/741 cont./

771 and monstrous contradiction in the religious conceptions of the
812 Gilyak; on the hand, the idea of a single supreme and benevolent being, even though so completely empty that it precludes the worship of it, and, on the other hand, the purification of countless evil powers, along with a crude cult to ward them off and keep them away; many representations of animal and human forms in the yurts, and yet the Gilyak say that they have no representations of God; countless superstitious and shamanistic acts, and yet they deny that they pray. And, on the other hand, they speak of a supreme, wholly good being and have the word "pray"

174 (mäkgratsch) and yet do not worship this god. How is this to be ex-
771 plained? It seems to be that there is not a dualism of conceptions here, but rather a matter of two completely separate concepts with

812 connection with each other and also historically distinct. --
The former is a thoroughly attenuated, obscure, and now only traditional deism which among the Gilyak consists of no more than merely a few traditional words -- God, the Good One, pray; and exerts no influence upon the rest of their so-called religious conceptions and acts (superstition, shamanism, idols) other than that those words are not carried over to these conceptions and acts. The second religious conception is probably basically identical with that of many primitive Siberian peoples and aims at keeping evil spirits and powers away from human beings by means of various superstitious observances and performances. The former deistic belief is probably the echo of an ancient conception perhaps

[171] commemorative of the cradle of the Gilyak. In fact, in the attribute of "God," kängulätsch, and in the abstract, nihilistic character of the conception there is accord with the Central Asiatic religious systems, but the second conception may have originated at a much later time, after the Gilyak tribe had moved downstream into the wilderness of the eastern forests of the Asiatic continent (?) and therefore shows many points of contact and similarities with the religious conceptions of the neighboring Siberian peoples, and even of the Ainu. The first conception was completely lost, except for a few words, and another, a cruder and more concrete one developed, without, however, on account of the persistence of

/743 cont./

798 down to the forehead in front, but over the entire wooden piece in
532 black and seem to represent hair. Below the face the hair is fastened to the wooden piece by similar little bands of bark. Plate LIII /p.1253/, Fig. 2, shows such an idol. Several such idols stood in a little house made out of boards and covered with loose grass, which is shown on Plate LIII /p.1253/, Fig. 3. These idols were named for me by the Allof Gilyak as tybys. The Gilyak Surgin, however, did not know this name and used the expression tyf-ščigy, i.e., house god. This was the first time that I heard the word ščigy used in connection with the idols of the Gilyak, and I believe that this was done only in order to make me understand. I was likewise unable to find out whether by tyf, that is, house, the yurt of the Gilyak or the little idol-house was meant. Since the latter bears the name känigs, I must relate it to the yurt of the Gilyak, and it therefore seems that these idols mainly play the part of lares or guardians of the house. (Bm. I, pp. 58, 59.)

798 5. Gilyak. In the Gilyak village of Patt (on the right bank
184 of the Amur) I saw three idols standing outside a storage chamber,
532 human figures hewn out of blocks of wood, very similar to those
171 of the Olcha, though not with the particular expression which seems to be characteristic of all the idols of the latter. When I inquired, the Gilyak informed me that they revere these kägn like gods. In Patt, they said, they are also kept in the yurts, but not among other Gilyak. I then had the idols in the yurt showed to me: three large, wooden human-figures with old, smoky zach around their necks, as is also the custom among the Olcha, stood there on the beams of the yurt above the rear sleeping-bench. --

798 In the village of Kulk, too, I saw idols in the yurts, standing in the
532 same place as in Patt. This is a very dark spot in the yurt, con-
184 cealed from sight, and anyone who does not know that the Gilyak
[353] keep their idols there will not easily find them. Many a yurt may therefore have contained idols, while seeming to me not to have any. But many a one actually does not have any, as I discovered in Wait. -- It seems to me that /744/ the farther downstream one goes on the Amur the less esteemed or at least less obviously revered the idols are. (1 W.R. II, pp. 119, 137, note 5.)

798 /746 cont./ A /746/ fact which speaks very much in
791 favor of the religious conceptions of the Tungusic Amur peoples,
171 whoever they are, in comparison with the Gilyak, is that the former are not nearly as apprehensively superstitious as the latter (1 W.R. II, pp. 85, 86).

Animal Idols

798 10. Gilyak. The bear plays the primary role among the
532 animals that are represented in wood as idols by the Gilyak. The
825 reason for this is the danger to which they are exposed in their fights with this beast of prey, for they are particularly fond of pursuing the bear (as was mentioned in connection with the bear festivals). The bear kägn or tschngai serve to prevent the injuries and fatalities which can be expected on these occasions. I have mentioned above the superstitious beliefs associated with the death of a man killed by a bear among the Gilyak (1). Hence one rarely enters a village

1. See p. 1127.

near which, upon closer inspection, one does not come across a few
[171] bear idols. And this is common to both the Gilyak and the Tungusic Amur peoples.

The bear idols are usually very crudely fashioned. The animal ordinarily appears to be sitting, sometimes standing. The idol pictured on Plate LVIII /p.1258/, Figs. 1 and 2, from the village of Kulk, is one of the best that I have seen. It is further distinguished by the fact that a raised band runs around its body, upon which other animals sacred to the Gilyak, or, more accurately, uncanny and portentous, are represented (these are most of the reptiles produced in Gilyak country): the toad -- mipitsch (2) on

[126] 2. Besides this representation I obtained two individual toad-idols of the Gilyak, carved in wood, which are illustrated on Plate LIX /p.1259/, Figs. 7, 8.

Gi 798 /752 cont./
825 the disaster. Since then the once large village of Chala has had
173 only a few inhabitants. (2 S.R. I, p. 39.)

Gi 25. Olcha. Among the Olcha I saw an idol-belt, a säwuchsa
798 provided with various säwa or representations of idols, to be worn
825 around the body as an amulet against sicknesses (Plate LX /p.1260/,
751 Fig. 3). On either side of the leather belt two snakes (dshalda), likewise of leather, were sewed on lengthwise, and between them on either side a fox carved out of wood was attached in the same direction. In front, in the middle, there was a toad of leather and on it a human figure in wood. The most interesting thing on the belt, however, was the representation of the khasj (chaž of the Gilyak) in wood hanging below the toad and the human figure, the imaginary animal with which I became acquainted among the Gilyak

G in Chiare and which is also carved by the Olcha as protection
G1 against sickness. The great similarity between the Gilyak kägn
798 and the säwa of the Olcha is very striking and leads to the con-
791 clusion that there is a similar correspondence in the religious con-
171 cepts and ideas of these peoples. (2 S.R. I, pp. 32-33.)

Shamans

G 756 26. Gilyak. Among the Gilyak the shaman is employed much
184 less than among the Tungusic Amur peoples, the Olcha, Goldi,
[171] Kile, and others, and therefore the shaman's implements are much less frequently found among them. Just as among the Amur peoples in general, so also among the Gilyak in particular, shamanism is found more and more rarely downstream toward the Liman or toward Sakhalin. One scarcely comes across shamans and shaman implements from Wassj on and anywhere along the Liman. After repeated inquiries about them, I did not see any or hear of any. Thus shamanism seems to have moved downstream and to have had its origin farther inland. (Bm. I, p. 75.)

G 756 /753/ 27. Gilyak. In the whole area of the Amur Gilyak there
are only a few shamans who have a reputation among their country-
men. I was told that the most famous of them "a great shaman,"

Hawes--208 T-3 (1901) 1903

mer for hunting only. The Gilyak name on Sakhali
latter calls himself Orumada."

f the Orochons and Gilyaks. The
tter dogs. The last are kept by the
in for the Orochon is Or'nish, and

These were deciphered by Klaproth and the Archimandrite Avvakum. One inscription reads: "Temple of eternal peace", the other is a Tibetan translation of the Sanskrit sacred formula: "Om mani padme hum", i. e., "O jewel in the lotos! Amen!" The temple was supposed to have existed in the time of Genghis Kahn. Neighboring Gilyak come to these pillars and offer sacrifices, that is, they decorate them with wood chips, pour millet or spirits on the earth, etc. Thereupon they promise themselves an abundant yield of fish.

Near the village of Vaida high above the water is to be seen a thin, dry tree trunk parallel to the water level and jutting out of the steep rock wall, with branches radiating out in a circle. This tree trunk is held to be sacred by the Vaida-Gilyak. It is also often decorated with wood chips and above its roots, on the edge of the river bank, the bear festival is held. The above-mentioned church bells also belong to the sacred objects. [RCH: see category 116, p. 237] [242]

Almost all Gilyak believe in a future life, which may be gathered from the customs relating to the burial ceremony. Life in the hereafter is pictured exactly like the present life, except that it has neither age nor death. A deceased aged person regains his youth there, a married couple is united anew. There is neither hell nor paradise. (1) The

1. A similar belief is said to exist among the natives of Kamchatka.

fate of evil persons differs from that of good ones only in the fact that the souls of the former do not immediately reach that world, but must roam about on the earth for a while, usually in the form of an animal, particularly a dog. This is the Gilyak purgatory which certainly cannot be called the most absurd idea of purgatory. "The beyond" is put not below, but above somewhere in heaven.

However, even among these savages there are sceptics, or rather unbelievers. Thus a Sakhalin-Gilyak, after a pause, told a visiting Russian priest who sounded him out on religious matters: "What business of ours is God! If we have enough sable and fish we shall live, if not, we must go hungry." Another Gilyak in the vicinity of Sofiyskoye positively denied immortality in speaking to Russian peasants, pointing to a fish and saying: "just as this fish will disappear if I put it to death, so also man disappears."

161 It is as impossible to estimate with any certainty the number
of Gilyak, as it is the number of Goldi. Rittich estimates
their number to be about 3000. On the Amur Jakobsen found
quite a large number of villages; on Sakhalin Island, on the
other hand, there were far fewer villages.
439 Like their neighbors, the Gilyak are fishermen and hunters;
433 only now and then do they engage in trading. For instance, in
221 case there is among them a scarcity of food--something which
342 happens quite often--they import from the mainland fish and
flour for the inhabitants of Sakhalin. In accordance with their
primary occupations they spend their summers on the river
banks while in winter they move into the mountains and roam
through the woods. I am unable to say with certainty whether
they have summer and winter dwellings like the Goldi, but I
think such may be assumed from the indications Jakobsen
342 gives. On his return from Sakhalin in January 1885, Jakobsen
352 found Gilyak villages near the mouth of the Amur River that
354 consisted of houses quite similar to those I described as the
171 winter houses of the Goldi. The typical, enormous clay-
brick ovens and the benches, warmed by the pipes, along the
342 walls are also to be found in these houses. On the other hand,
361 the traveller found in September 1884 above Nikolayevsk a
whole number of Gilyak villages that were at a considerable
distance from the river bank, while the summer settlements
of the Goldi by their nature as fishing villages used to be
situated right by the river. One might conclude from this,
perhaps, that these Gilyak villages were not simply fishing
villages for the summer, but served as dwellings for the
whole year; unless one wanted to assume that the Gilyak were
forced to withdraw from the immediate neighborhood of the
river in summer because of the partically marshy and there-
fore unhealthy river bank. In Sakhalin, moreover, there was
not a trace of the larger houses of the Gilyak such as those
mentioned above; rather, the huts were only small and half
under-ground, so that they had a certain similarity to the
511 dwellings of the Eskimos in Labrador and in Alaska. They
515 offer a very unenviable abode for the European traveller,
for with their confined space one can hardly avoid close con-
tact with the inhabitants and the dangers connected with that,
in short, being tormented by a multitude of vermin. In addition
the atmosphere created by the crowd of people present, by
the presence of the dogs, by the manifold provisions hung up
for drying or smoking, and by the smoke which can only
511 escape with difficulty, is hardly bearable. The large houses
136 on the main land are in better condition, but they, too, have

511 grave drawbacks. For one thing they have an astounding number
136 of mice which attain the size of rats, almost, and which are so bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

171 among the Goldi, are in use throughout the Gilyak people
751 and are essentially the same as those discussed earlier
301 (Number XIII, p. 207) [see Goldi source 18: Genest--Analyst]. The Gilyak on Sakhalin Island whose houses
372 Jakobsen entered were likewise highly indignant whenever
462 he left the house with a lighted pipe or when his companions
776 extinguished the fire burning in a hut by pouring water on it. For in their opinion such things tended to conjure up destruction not only over the inhabitants of the one hut but over the whole tribe. The inhabitants of one house in the village of Varki below Nikolayevsk predicted the same result when Jakobsen was about to light a fire for making the tea, and they forced him to wait till the house-wife saw to this task, since, in their opinion, this was a job only to be performed by her. Plainly this conduct has its basis in the sacred position of fire. [380] Though this no longer leads to a personification of a fire god among the Goldi and the Gilyak, it no doubt existed among them at one time as it still does today among the Buryat.

776 The system of gods of the Gilyak is in no way behind that
171 of the Goldi in variety. Human and animal figures in color-
825 ful diversity serve as representations of celestial beings.
796 Here, too, there is a great similarity to the religious conceptions of the Goldi; the most important difference seems to me the one that was touched upon earlier (XIV, p. 223), [see Goldi source 18: Genest--Analyst] the fact that the Goldi pay zealous homage to the tiger while the Gilyak do honor to
796 the bear. It is true, though, that this homage is disastrous
415 to the bears since it means keeping a number of these
531 animals imprisoned in the cages in every village and killing
231 them at a bear festival. Before the festival the bears are fed plentifully for an extended time by means of large wooden spoons prepared especially for the purpose and decorated
796 with ingenious carvings. These bear festivals are usually held late in autumn and in winter and they are affairs of the greatest importance to their celebrators. I will now give the description of the festival that Jakobsen had the opportunity of observing in person.

796 On the 7th of February, 1885, the traveller arrived in
622 the early morning at the Gilyak village Vaida about 30 versts
574 above Nikolayevsk, where, as he had been informed, a festival was to take place on that day. From several other villages, some of which were considerable distances away large numbers of guests had come in already, and the whole place was astir in anticipation of the festival at hand. The opening of the bear festival is in the hands of the village

/15 cont./

174 114 types of animals mentioned are actually encountered only very rarely in the territory of the Gilyak on the Amur and, on the other hand, very frequently in the territory of their Tungus neighbors, the Goldi, Olcha, Orochi, and Samagir, and therefore there is nothing surprising in the fact that the Tungus names spread among the Gilyak, but even if in Schrenck's time the animals mentioned were encountered there somewhat more frequently, this could be a matter of pure accident. It often happens that extraordinary reasons, such as the appearance of a new and strong enemy, compel this or that animal to save itself by flight from its normal territory to distant places, but such phenomena do not prove that the new territory in which these animals accidentally appeared was their primordial habitat. In general, how convincing Schrenck's conclusion is may be seen from the fact that the tiger is absolutely not encountered on Sakhalin and very rarely enters the territory of the Gilyak on the Amur, but nevertheless both the Sakhalin and the Amur Gilyak have their own name for it, "klund."

● 172 174 192 On the contrary, everything speaks for the fact that on Sakhalin it is the Gilyak who are the newcomers, having replaced or driven out their predecessors -- the Ainu. Let us start with the linguistic /16/ data. The Gilyak still call trees and some sea animals that are absent on the continent by Ainu terms, such as nistan' (maple), tarman' (yew tree), nuguchep (sea pig?), and others. Furthermore, we have even more objective proof that in any case it was not the Gilyak who were the most ancient aborigines of the island. Throughout the entire territory of Gilyak settlement on Sakhalin Island, right up to its northernmost extremities, one encounters the remnants of ancient dugouts, in the form of round and more or less large pits, and, upon excavating them, I found pot fragments and some implements of the Stone Age. The Gilyak call these pits nothing other than kugi-tul'kch (Ainu pits), a name which quite clearly indicates that the Gilyak regard the Ainu as 172 the original inhabitants. The Stone Age implements and the pot fragments found in these pits are regarded by the Gilyak as the handiwork of the gods (the pot fragments, for example, are regarded by them as the pots of a heavenly man who dropped them

/16 cont./

● 172 by accident), while it is known that the Stone Age on the extreme northeast of Asia is not so far removed from the present epoch that the Gilyak, unless they were very late arrivals, would not have preserved some independent traditions about this period. It is interesting that even the Ainu, in turn, stubbornly repudiate these ancient pits found in their own territory on southern Sakhalin, ascribing them to another people, the mythical Ton'chi. Like the Gilyak, they regard the pot fragments found in these dugouts as in some way sacred and excellent medicine, for example, for toothache. As a matter of fact, these pits could hardly belong to either the Ainu or the Gilyak, for, if either of them had ever been familiar with pottery, they would never have lost it. If they had ever known this art, it would have been reflected in their legends, which have preserved an even more ancient recollection of a primitive way of boiling water by means of burning-hot stones.

In their shape, their large size, their unusual location, and their suitability for self-defense, these pits resemble the large pits of the Eskimo more than the contemporary pits of the Gilyak and the Ainu. Whatever the case was, the Gilyak, finding the Ainu on Sakhalin, naturally had to suppose that these ancient pits belonged to the Ainu, and the Gilyak term kugi-tul'kch (Ainu pits) speaks convincingly enough for the fact that the Gilyak were not the aborigines of Sakhalin.

173 /17/ These objective data on the aboriginal inhabitants of the island are confirmed by numerous legends about the bloody wars of the newcomers with the Ainu, who, in the graphic expression of the Gilyak, at the time of the arrival of the latter on the island, even on the shore of the Sea of Okhotsk, were as numerous "as mosquitoes."

Finally, many clans of the Gilyak in the extreme north regard the Ainu as their ancestors, about whom they have preserved the most clear and numerous legends, which have been carefully recorded by me.

/24 cont./

157 for whom the outward severity is only a mask concealing a nature that is acquainted with passions.

291 /25/ The winter clothing of the Gilyak, of both men and women, consists of a fur coat of dog skins, the fur outward, and fur leg coverings and boots of sealskin in the Chinese fashion. Besides this, the men wear skirts of sealskin descending from the belt to the knees, not for the sake of adornment, but to protect the fur coat from wear and damage while sitting on the ice, in the snow, etc. The winter costume is very imposing. In a black coat of dog fur fitted at the waist, against whose dark background the pale-gray skirt made of the skins of young seals stands out in gentle contrast, in finely sewed boots with narrow toes, in a hat of fox paws and with earlaps, in fur gloves covering the sleeves -- the Gilyak makes a fine, dashing impression.

[178] In summer the national costume of the Gilyak (now falling completely out of use) consists of a peasant's cloth coat, armyak, made out of fish skins and trimmed on the edges with designs. In recent times a summer garment of colored daba or American drel' has come into style. The women's summer garment is much more imposing: light and flowing dresses made of colored imported materials, mostly red in color, with beautiful decorations along the edges, cockle shells sewed on, and all sorts of rattles which sound at the least movement. Only the large boots completely disproportionate to the length and size of the legs and tightly stuffed with hay, which replaces stockings, spoil the lightness of the figure of the woman, giving her a heavy, awkward look.

136 Now a few words about the material conditions of life of the Gilyak. A remarkable affair. The very condition that has such a [133] fatal influence on the nature of Sakhalin, namely, the cold northern current, this ruinous condition has made human existence [226] possible in this rugged country. It is this that in certain seasons and with astronomical precision brings masses of salmon and other fish that travel in masses upstream to spawn, filling the rivers and streams to such a degree that one can obtain the fish in any amount by means of a simple, sharpened stick, a method to which I myself resorted during hungry intervals in my travels. This ● [172] abundance of fish and the ease of obtaining them explains the strange fact that -- as the marks of the excavations made eloquently show -- in this rugged country the existence of primitive man was possible at a very remote time.

Eskimo 1

000 /451 cont./

2. (cont.)
by Jacobsen (op. cit., p. 299).

G 323 17 without intending to specify more precisely the date and the manner of the origin of the art of pottery among the Eskimo, I feel able to E 323 194 draw the conclusion, on the basis of the above considerations concerning the Paleo-Asiatic peoples, that the Eskimo left their Asiatic homeland without any knowledge of the art of pottery and only learned it in America, probably as the result of influences which came to them from the south.

To return to the Amur region, I repeat that the potter's art G 323 648 17 of the Gilyak, Olcha, and Ainu of which Mamia Rinsô spoke was or is only of recent origin and among the first two peoples, after a brief existence, again disappeared as a result of the violent measures of the Manchu-Chinese to be discussed later. If, how- G 323 ever, contrary to my opinion, one should want to date it even further back, it in any case has nothing to do with the potsherds ● 172 which have recently been found in the earth, together with stone tools, at various points in the Amur region and on Sakhalin, especially along the Patchä River and in Taraika (3). These potsherds

3. In 1865, while digging up the earth at the bottom of some pits along the Patchä River, about 10 versts from Nikolayevsk and emptying into the Amur only slightly above Cape Tschchyrkrach or Tschnyrrach (as the Russians call it), the pits seeming to be remains of former earth dwellings, potsherds were found at a depth of three feet, along with traces of charcoal, and at another place, at a depth of six feet, various stone tools (Vostochnoe Pomor'e, July 1, 1866, p. 58). Thanks to the good offices of Dr. Pfeiffer in Nikolayevsk, most of these articles were sent to the Kaiserlichen Akademie der Wissenschaften

/451 cont./

172

3. (cont.)
/Imperial Academy of Sciences/ and are in our museum. Three years later, near the village of Taraika on Sakhalin and likewise at the bottom of pits which looked like the remains of earth huts, Lopatin found numerous stone tools and fragments of pottery vessels (Kropotkin, according to information from Lopatin in Izviest. Imp. Russk. Geogr. Obshch., Vol. V, 1869, Sec. II, pp. 307, 308). Subsequently similar finds were made repeatedly at the southern tip of Sakhalin. Finally, in 1881, Poljakof succeeded in obtaining at the site of the Russian outpost near Duĭ on the west coast of Sakhalin a rich collection of stone tools and old potsherds. The latter were not infrequently marked with patterns which were reminiscent of those that he had found in the Olonez District and in the Oka Valley in European Russia (Poliakov", Putesh. na ostr. Sakhalin" v" 1881-1882 gg. /Journey to Sakhalin Island in 1881-1882/. Supplement to Vol. XIX of Izv. Russk. Geogr. Obshch., p. 19).

[113]

[113]

some of which have been available to me (4) and which were

4. The potsherds, in part from the Patchä River and in part from Naiputschi on southern Sakhalin, that were available to me were made of a coarse, reddish-yellow to blackish clay, which in places contained fine gravel, small pieces of quartz, and sometimes little pea-sized pieces of rubble. They were sometimes provided with fine impressions arranged in rows, sometimes with crisscrossed stripes or

G /451 cont./
323

bands either straight, wavy, and zigzag in form or in a kind of braided work.

essentially wholly similar to pieces of this type found in other regions under similar conditions, here, too, belonged to an early period so far back that it cannot be put into any ethnological relationship with the present. Nevertheless I must add here that the articles found along the Patchä River (see /452/ note 3 on p. 692) were shown to many Gilyak (1) to find out from them

1. As is expressly pointed out in the above-mentioned periodical (Vostochnoe Pomor'e) and elsewhere.

whether they still had similar tools, or any traditions referring to them -- they were completely unfamiliar to them, however. Lopatin questioned the Ainu and Orok in Taraika about the stone tools and potsherds found there. The latter, to be sure, declared that during the wars the Ainu had gone into hiding in the earth huts that were formerly on the sites of the present pits, but the Ainu themselves were totally unfamiliar with the stone tools. On the other hand, they told him of a legend which ascribes those objects to a people called Toissi who formerly inhabited these regions but later moved to the north. The remains of the earth huts found near Mogunkotan on the Gulf of Patience, near Cape Ssiraroro, and at other places on Sakhalin are also ascribed to them. Lopatin found this legend throughout part of southern Sakhalin through which he traveled (2).

the skull and the rest of the gnawed and assembled bones of the bear, together with the skin, are carried out of the house to a place not far from it in the forest -- an act which, according to the Gilyak, is likewise carried out with a certain solemnity by the oldest people of the village. All the bones, with the exception of the skull, are buried in the ground there or simply covered with earth. The skull of the bear, however, is treated differently, in a manner about which I had no accurate knowledge until after I had had some experiences with the neighboring peoples. The above-mentioned pickax, apparently from the Stone Age, is also used for a similar purpose by the Goldi, to judge from traces of blows. They do not, however, split the skull of the bear, but content themselves, forgoing eating the brain, with beating a hole through the crown and hang it by one of the zygomatic arches on a specially selected tree. Near Buri, in the vicinity of the mouth of the Ussuri, I saw such a tree with numerous bear skulls hanging on it. When I climbed it in order to bring down the best preserved specimens (2), I noticed that each of them had a large hole piercing

out somewhere in the taiga for a whole year, the consensus usually favors them and the first husband must abandon his claims. In recent years many Gilyak have resorted to a special ruse in order to make sure of their wives. Such chaps who are probably not of the best and who may thus be faced with the prospect of eventually being deserted by their wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

Child training. Toward the end of her pregnancy, a woman is taken out of the house for 10 (1) days and brought to

1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman returns to her house she undergoes no "purifying" ritual.

The bathing of the newly-born is also done in the improvised lying-in establishment, and it is given its other baths there.

/16 cont./

172 by accident), while it is known that the Stone Age on the extreme northeast of Asia is not so far removed from the present epoch tha the Gilyak, unless they were very late arrivals, would not have pr served some independent traditions about this period. entering and leaving through the smoke opening.

I shall not at this point speak of any other aspect of th
171 174 492 arctic way of life. I shall mention only the remarkable fact
riding on dogs (we encounter it among the Yukagir, the Chuk
the Eskimo, the Aleut, the Koryak, and the Kamchadal) is u
doubtedly a characteristic peculiarity of the purely arctic wa
life adopted by the natives of the Amur region, the Ainu, the
and the Orochi, from the Gilyak. The Gilyak term "tu" -- c
sled -- became the property of both the Ainu and the Tungus
The priority, as it were, of the Gilyak in this respect is clear
vealed in everything. The Ainu and the Tungus tribes (the G
and the Orochi) have adopted from the Gilyak not only the te
and the principle of conveyance on dogs, but also the details
building the sled, the ways of sitting on the sled (astride, wit
feet on ski along the sides of the sled), the harness of the dog
driving them. It is remarkable that among the reindeer Chuk
among whom dog-raising is preserved only in legends, the Gi
way of sitting on the sled (astride) has been preserved to the p
ent. The same way of sitting was habitual among the Kamch
as well.

In connection with this hypothesis, it is interesting to
compare a very widespread legend.

173 174 133 [614] Among the numerous legends that I have collected ab
the origin of the Gilyak clans, I have frequently encountered
legend about how this or that clan came to Sakhalin on the so
called "hovykh." By "hovykh" the Gilyak mean everything t
carried on the current of a river or sea, for the most part cloc
earth or tundra turf broken off from the bank, and also floes o
ice which are carried on a sea current. One such hovykh is s
pointed out on the eastern shore of Sakhalin in Nyyvo Bay, w
it formed a minuscule island opposite the settlement of Takr
[614] It is alleged that a part of the clan now living in the settleme
of Tangi on the western shore appeared on this hovykh. Ther
nothing impossible about conveyance on a hovykh. It not inf
quently happens that during the spring hunt for seals a sudden

they masters. It is very strange that among these people who live on and along the water there are few good swimmers, and a goodly number, especially of the women, cannot swim at all. In general, the Gilyak is somewhat indolent and clumsy, and for this reason the energetic and nimble Tungus regards him with some disdain.

I did not conduct any particular experiments to test the sight and hearing of these people, but in general these senses may be said to be very keen. They distinguish colors well. The fact that their sense of touch is duller than that of the European could be deducted from a number of experiments. When I was taking their head measurements, I occasionally pulled a hair so violently that, according to our conception, it must have been painful; but the Gilyak did not mind it.

The characteristics here described apply also to the Sofiysk-Gilyak (Mangun), for they are more closely related to the pure-blooded Gilyak than they are to the Goldi. They have broader faces, coarser features and flatter noses than the Goldi, and they never shave their heads, whereas the Goldi shave a narrow strip of hair above the forehead. Furthermore, as we said, the Goldi women wear nose-rings. Also, the clothing of the Goldi is less primitive, more like that of the Manchurians.

IV. Clothing

In summer the clothing of the Gilyak consists mostly of a linen or cotton shirt, pants of the same material, and a wide, pyramid-shaped hat made of birch bark, which may be fastened under the chin with a little string. This hat is made of a single piece of bark. It is white and on it are sewed or pasted dark curlicues. Their feet are bare, or else they wear shoes or half-boots made of fish-or seal-skin. For this they use the skin of various fish, especially the kita, a species of of salmon. For this purpose the skin is beaten with a wooden clapper, in order to make it more flexible. They also have shirts and coats of fish skin, but these are no longer worn much. The shoes made of seal-skin are heavier and more durable. To make these, they use sharp iron instruments to scrape the fur from the skin; but the upper part of the boot often consists of unscraped [108] skin. Elkskin is also used, but more often by the Goldi.

In winter their foot covering (the torbassa) consists of longer boots made of unscraped seal-skin; between the boots and the upper part of the thighs their legs are stuck into

till the end of May. South of the lower Amoor are the Shanalin mountains, which arrest the progress of birds. On the upper Amoor and in Trans-Baikal very little snow falls, and there are no mountains of great height.

The day after leaving Sofyesk I observed a native propelling a boat by pulling both oars together. On my expressing surprise my companion said:

"We have passed the country of the Gilyaks who pull their oars alternately, and entered that of the Mangoons and Goldees. The manner of rowing distinguishes the Gilyaks from all others."

The Mangoons, Goldees, and Gilyaks differ in much the same way that the tribes of American Indians are different. They are all of Tungusian or Mongolian stock, and have many traits and words in common. Their features have the same general characteristics and their languages are as much alike as those of a Cheyenne and Comanche. Each people has its peculiar customs, such as the style of dress, the mode of constructing a house, or rowing a boat. All are pagans and indulge in Shamanism, but each tribe has forms of its own. All are fishers and hunters, their principal support being derived from the river.

The Goldee boat was so much like a Gilyak one that I could see no difference. There was no opportunity to examine it closely, as we passed at a distance of two or three hundred feet.

Besides their boats of wood the Goldees make canoes of birch bark, quite broad in the middle and coming to a point at both ends. In general appearance these canoes resemble those of the Penobscot and Canadian Indians. The native sits in the middle of his canoe and propels himself with a double-bladed oar, which he dips into the water with regular alternations from one side to the other. The canoes are flat bottomed and very easy to overturn. A canoe is designed to carry but one man, though two can be taken in an emergency. When a native sitting in one of them spears a fish he moves only his arm and keeps his body motionless.

Mr. W. Joest observed a bear feast
e Gilyaken, the description of which,
by Dr. Scheube in a later communi-
substantially as follows. The mother
ot and the young one is caught and
t not suckled in the village. When
l is large enough he is bound with a
und the neck and another on one of
egs, and then led in triumph through
e. He must enter every house, where he receives food, while
er of entrance and conduct are observed as omens. The bear
r a time provoked, tormented, and annoyed until he is en-
l furious. The animal is then secured to a stake and shot
arrows. The head is then cut off and decorated with shavings
ding to the inao of the Ainos, and placed upon the table upon
feast is spread. The people then beg his forgiveness and offer
o him. They then eat the flesh roasted (not raw, as do the
r do they drink the blood) with schnapps, but without any
s. Finally the brain is eaten and the skull is placed with the
in a tree near the houses. Then follows dancing by both
nitation of bears.

/18 cont./

73 hurricane breaks up the joined ice-floes and carries separate floes
74 together with the hunters caught on them, into the /19/ open sea,
33 often throwing them on the shore far from their place of residence. One can also not infrequently see tremendous pieces of turf, on which dozens of people could be placed, being carried on the waves of the sea, having been torn from the coastal tundra by storms. During the civil wars among the Ainu, when someone urgently needed to escape from persecution, there existed a practice according to which the persecuted one fearlessly transferred his family and his boat to a "hovykh" which happened to be passing by fixed on it the sacred pole with the sharpened wooden tongues, and entrusted his fate to the caprice of the wind and the current.

Now, if we consider that the currents pass from the north along both shores of Sakhalin Island and the continental coast, currents which carry ice floes almost until the month of July, one can allow with more or less probability that the legendary hovykh served as that natural means by which individual seekers of adventure or exiles moved from the north to the south, and furthermore it is not difficult to imagine how, step by step, such migrations reached the extreme southern limits of the present-day Gilyak area of settlement. Almost before our eyes, since the time of Middendorf, the northern boundary of the permanent area of settlement of the Gilyak has descended from the mouth of the Tugur to the mouth of the Kol' River.

74 We should not imagine, however, that the migration of the Gilyak into their present territory is a matter of a historical epoch very close to us. We have positive evidence about the permanence of the boundaries of the Gilyak territory for the last two and a half centuries, and the legends of the Gilyak about the island and the continental coast depict this tribe as fully acclimated to its present homeland, and among primitive peoples such acclimation comes about through a long process of many, many centuries, maybe millennium.

29 At this point, I cannot fail to mention one characteristic fact, which is in a way characteristic of the ways of thinking of the Gilyak themselves, on the question of their kinship with other tribes.

/86 cont./

* 614 597 [173] Adoption has played an enormous role in the life of the Gilyak. I do not know a single clan whose legends do not contain accounts of members of other tribes as the founders of the clan. I have already discussed in the first section how it happened that separate adopted individuals instead of the established element came to be the first and foremost founders of the clan, indicating that the newcomers, as the more energetic element, brought with them a greater endurance in the struggle for existence and a la longue /in the long run/ survived the less staunch, enfeebled aborigines who were gradually dying out. Such, it may be, is the law of a fixed supply of racial energy, which finally runs low under unfavorable conditions. The descendants of the newcomers do not escape this fate, of course; they in turn will be replaced by newcomers, if the clan as a whole is able to preserve its existence that long.

* 614 597 173 Now I will add only the following to what I have said earlier. It may seem strange that a clan formed out of aborigines and the descendants of newcomers should nevertheless categorically consider its founders the former and not the latter /sic/. But here is how the matter is explained. Despite the fusion of the clan with the newcomer, the old feeling of kinship continues in effect. The descendants of both sides, while fulfilling their clan obligations, nevertheless do not incorporate, but continue to maintain themselves as separate groups, each keeping its own account of kinship according to tradition. I observed this more than once in those clans in which there were descendants of aborigines and newcomers. In the settlement of Tangivo, for example, settled by the representatives of a single clan, one half (the most prosperous) traces its origin from an Ainu newcomer, the others consider themselves aborigines. When in the course of time the latter become extinct -- which is already noticeable -- it is natural that the former, who will remain the only representatives of the clan, will

/86 cont./

* 614 597 173 with full right call the Ainu their founders. And so it is everywhere.

Ordinarily, however, the composition of the clan is homogeneous, cases of /87/ adoption are quite rare, and the earlier phenomena of endosmosis and exosmosis have long effaced themselves behind the mists of legend, and they show no influence on the integrity of the conscious kinship union.

* 614 378 996 2. One fire. The common clan fire is the symbol of clan unity. As among all primitive peoples, fire is a clan deity for the Gilyak. In each hearth there sits, according to one conception, the old woman of the fire, the ancestress of the given clan; according to others, an old man and woman with their descendants. The role of these "masters of the fire" is not only in the beneficial activity of the benevolent burning element. As the divine ancestors of the clan, they are held in respect not only by their living clansmen, but also by those who, having gone to the other world, have become the clan gods of other elements, the forest, the sea, etc., and through these they can exert a mighty influence in all spheres of human existence.

Thus, the master or mistress of the fire is not only a deity that warms man and protects his domestic hearth from any evil machinations of the spirits, but is also an intermediary (1) between the clansmen and all the numerous deities

[171]

1. In the Vedas, fire (Agni) also plays the role of intermediary between human beings and the gods; he intercedes for human beings, he is herald and priest.

who influence the fate of man.

/266 cont./

177 58 [173] To a certain degree one may admit the influence on the matrimonial psychology of the Gilyak from the Ainu, who, judging from legends, were constantly infiltrating the mass of Gilyak settlements in the form of individual immigrants, and they exerted their influence on it in many respects, as we shall see particularly clearly in our examination of

[191] [601] religious institutions. But this influence in the sphere of marriage was in general quite limited, for it is impossible to find a similarity between the two systems in their kinship terms or their norms of marriage.

/267/ XIV.

Forms of Concluding Marriage

582 538 We have already had occasion to introduce in another place, as a clear illustration of the former obligation to marry women from the clan of the mother, from the an'g:ej the episode from the Gilyak poem, when the Gilyak, dying from a wound inflicted on him by a man who has the right to his daughter, summons his slayer and says to the people who a are present: "Although this man has slain me, give him my daughter; do not fail to carry out my wish for any reason." The epos just as clearly portrays for us the old forms of concluding marriage, corresponding completely to the norms of obligatory marriage.

58 Once a marriage is obligatory, there can be no question of complicated procedures in concluding the marriage, such as betrothal and negotiations concerning property obligations, and, of course, there can be no question of payment for the bride. There can be no question of religious rites connected with a move into an alien clan. The bride and the groom are of one common blood on the paternal and on the

[538] maternal side. Therefore, in all the works of the epos

/285 cont./

117 614 103 Settlement of Mayya. 1) The clan of Yngin. His clan is also in Vayr -- they are the masters of Vayr, but it happened that one brother killed his brother, and then they separated and divided the fire: "If friend kills friend, who will be born?" 2) The Beldy clan are former Goldi who came down three generation ago. 3) The Polmk clan. Gilyak from the river near Mikhaylovskiy. They have been living here for five years (1896).

Settlement of Mongol'. The Valdzu clan from the village of Val' Orosugbu -- from the same village where the wars were. Dz:aj from the village of Dzhay.

The Valdzu are four generations /kolena/ from Uval'-khotin on the Sungari -- Solodo. When they arrived here, they found only the Sigdyli (nami) clan, but these all died out (1896).

Settlement of Koyma on the upper Amur. 1) The Choril came from Tro -- one to Kol', a second here, a third somewhere else. 2) Bajal -- the Manchu or Solodo clan from Kozima. The Bajal seem to be the first who lived here; later on they were called to Kizi, and then they came back and they were given a starosta.

Settlement of Geri. Kern -- khal-Dea. Runaway Chinese

[167] [563] came here on a raft during a war and attached their raft by a hook, formed a clan of their own, and then became Gilyakified. Later the Manchu came, confirmed the name of this clan, and appointed starostas. Dua-Tvanbfing (Pat) Ajumka from Tymifing.

117 103 /286/ Settlement of Puli. Samagil -- two generations from the Gorin. The father of the informant raised reindeer. 2) Tumuli -- * 173 from Dzhongli, near the Perm ones: Goldi.

Settlement of Ukhta. Tyvl-fing -- inhabitants of Tyvl' -- Ulcha clan (Ulcha khala). They left for Kol' and formed Tyvl-fing, but came back by way of Lake Chlya (a three-day trip) -- "six fathers since we came back," i.e., six generations ago. 2) Dea -- burn their dead; ancestors of the narni, went down to Kol' and came back as Gilyak. Dea -- Kern-khal. Dzhatala -- the settlement of Udyli.

/286 cont./

117 Settlement of Mykhyl'. Ygna (Langr) -- Kugi from Rui (now
103 Aleksandrovsk on Sakhalin).
● 193 Settlement of Lyyvo (third pad'). Dea to Koyma, pure Ornyr (Ulcha from Sakhalin), came "long, long ago."

Settlement of Akhcha. Arkhong kugi (Ainu). Came to the Goldi and formed one clan with them (they gave to a Goldi the wife of a dead brother). They, however, live in Tebakh, from which they came to Akhcha five generations ago, as well as to Chil'mi.

Settlement of Tyl'mi. Khok-khal was taken into Kern-
117 khal on account of the war (before the arrival of Russians). Khok-
103 khal killed Kalmfing, an inhabitant of Kal'ma, over a woman.
193 Khok-khal was small. Then the murderer said to his kinsmen:
628 "There are few of you; leave me, let them kill me." The
682 Kal'ma people came and surrounded the house. He got through a chumashka with kaluga /Huso douricus/ oil. Then an old man opened a window for him, and he jumped out; the brother killed him from behind with a spear, but he managed (before that) to kill another with an arrow, and again a casus belli. It was then that the Kern-khal adopted Khok-khal and gave it its widow; they broke the fire and bought a bear.

Settlement of Tvarvo at the mouth of Petrovskiy Bay. The
117 Alrong clan -- Kugi (Ainu), which several generations ago mi-
103 grated here from the south. This clan is also in Tebakh.
614 Another clan, Narlaf, came from Nyura two generations ago (1896).

In Taura, Chil'ba, and Tyr -- the Goldi and the Negda speak
117 their own language. If the father is Goldi and the mother Gilyak,
103 each of the parents speaks to the children in his own language,
191 and the children speak both languages.

In the family of the Gilyak Kando the children for the most part speak Goldi, the easier language (1896).

Settlement of Tyr, Tyri. Khal Khok (Hôinchá) came here
117 and departed. Six generations of it live here. According to a
103 legend, a long, long time ago its clan (Chukchaji on the Amgun)
173 came from the upper reaches of the Amur. The leading party
[614]

/286 cont./

117 went to the Amgun and left a sharpened stick (chjakh-varadz:,
103 Gilyak gesams'a, geskha narni); the second party did not /287/
● 173 notice and traveled to Chkharbakh (Turkhung), while the third party did not like the fast current of the Amgun and it settled in Gok.

After the Chinese, Tyr was inhabited by the Kojma-fing
[173] see Koyma above/. This was at the time when "the pike lived on land and the snake in the water; the pike used to bite, and war was declared on it with a net, arrows, and so forth. Then the god decided that the pike should live in the water and the snake under the stones." After this the Kojma-fing left for Koyma.

Settlement of De, one kilometer from Tyr. 1) Khal
117 Ajumka. 2) Khal Samakhajl. 3) Khal N'askhajl.
103
361

Settlement of Khok (one and a half kilometers from Tyr). 1) Kalm-fing -- Gilyak. 2) The Udan clan (Khan'gan -- forty years of age) -- Negda; moved from the Amgun, and it had come to the Amgun from Udyli.

Settlement of Kal'ma at seven and a half kilometers from
[162] Tyr. Three Chinese; one of them married to a Gilyak woman One Kugi from Kosunaya has already lived here 20 years; he is not married, "no money to buy a wife."

A khal living here is a mixture of the Chokchagil and the
117 Ainu khal'a of Dmitriya in Tyr. They make chêdzigr (see below)
582 and select their wives from the Olcha and the Gilyak; there are women from the Amgun as well. At the present time they may not take women from the Chokchagil. They can take two sisters. They may not exchange women between clans. Here they may take widows as well. The daughter is given to the wife of the brother in order to be sold, but he cannot demand this. At the bear festival anyone can shoot at the bear (1910).

Settlement of Dal'dzha. -- A Negidal clan. Originally
117 the Ry-Negda lived in Dal'dzha, 30 kilometers from here. They
103 all died (only one girl remained). They lived at a winter en-
173 campment. Once upon a time, in summer, a tiger appeared
[539] before the entrance. They attempted to get out of the yurt, but could not. Finally they got out by stepping over the tiger. Then

/287 cont./

117 they saw in their dreams that during the daytime when no one
103 was present the tiger slept with the little girl. Six times he slept,
● 173 six times "a boy was born." Then they argued and separated in different directions. Four generations have lived here. The Tyr branch adopted the Kugi. The Goldi also have their clan (1896).

Settlement of Kuk, ten and a half kilometers from Kal'ma.
117 Chilba-khal (Goldi) -- speak Gilyak and bury their dead in the
103 ground (1896).
361

Settlement of Tkhnalo (two kilometers from Kuk). Kern-khal (it is also in Tauro, Tyl'ma, and Takhta; 1896).

Settlement of Kabachi (three kilometers from Tkhnalo). Kern-khal, Takhta-fing, Chalym-fing (1896).

Settlement of Takhta (four kilometers from Kabachi). 1)
117 The former Khydz:yr clan. One family speaks Gilyak; they bury
614 their dead. 2) The Choz'm clan /288/ (from chozmudz: -- to
[103] peck in a flock, like birds) Nag: ramlandz: (nag: -- lair and fish
[361] milk) came together. The Choz'm are poor people. They quarreled with some Gilyak and entered into a clan union with another clan and merged into one clan. Choz'm also live in Kal'ma. There are also Choz'm (1) in Pilavo. The Tvan-fing and the Chilba-fing

1. See below, "A Legend about Pilavo," 1910.

have Goldi laws and language. Kalma-fing. This khal is to be found also in Chil'mi and Khez'; they seem to have come from Pilavo. Kern-khal came from Tyl'mi; two Manchu, woman and a man, were sailing on a raft and shouted: "sinch arikhal munydz:nâ? which clan will draw me up on the bank?" They were seized with hooks on the raft.

Settlement of Chil'ma. Chilma-fing from Pilavo, near
117 northern Sakhalin. One clan of Chilma-fing is from northern
103 Pilavo. Three brothers: one went south (Pilavo); another came
614 here; the third went to the Goldi (1896).

/289 cont./

117 by two brothers. The Keg:n -- came from southern Pilavo. Re-
103 cently arrived Olcha are here also; the starosta arrived here 12
614 years ago. The Keg:n arose from the Goldi from Sofisk and the Ainu from Kryus-pal', their ancient settlement (1896). The Shafping are Amgun from Dal'dzhi; many many generations ago their fathers spoke Amgun. The Hirlung are the old inhabitants. Their clan is in Chil'bi and Kekhrvo (the Orochi). The Chilbi-fing are the Ornyr from Kekhrvo -- the Lumr-ping came from Udyl' (Hurulong in Gilyak). There is no more of this clan in any other place (1910).

They came to be one clan in the following fashion: An Olcha married a Keg:n widow, and then he bought a bear for a dead man. Without taking a woman, it is impossible to become a (common) clan. When the clans united, they had one Lezing and one Uigryf ("sinning" house, i.e., forbidden.

Settlement of Yali (Eg:li), four kilometers below the
[361] settlement of Mokraya; seven yurts. Clans: /290/ 1) Lezing-ran (one house); 2) Chiing-fing (Kedu'-Orel' -- lake), probably Negidal; 3) one family from N'anivo (1910).

Amng-khal, Narmlang, Jarli-fing (Goldi from the Khungari), Jegni and Njenkhajfing. With regard to the origin of the last clan, there is the following legend. One Goldi brother wanted to take off the or (see below, the settlement of Kol') from a girl, and another suggested killing her. The killer left for N'enkha (near Nikolayevsk).

Settlement of Kaki (13 kilometers from Vaydy). Before
117 the epidemic there were 20 houses here; 5 yurts. Three
103 Russians, one Uigryf. Clans: 1) Tvabifing -- 14 persons. 2)
173 Amng from the Amgun: only three persons were left, the rest
● [361] died. Three houses died out during the last epidemic (1910). 3) Kegnang from Choma. 4) The Tvan-fing. One old man says that he is down from the Goldi, another from the Ul' River near Avra. 5) Amn-khal -- Goldi; they came from above; the first master of this village; this is the oldest khal. In the past this was a large khal but then all of its inhabitants died out (1896).

Settlement of Chkharbakh. Torkhung-khal (1896).
117
103

/295 cont./

III.

Legends about the Past

● 173 In connection with the excavations (1), the old man Toyon

1. Which Shternberg carried on.

said: "These are Korean. Long, long ago there was a war. Formerly Koreans lived here; then the Chinese came and drove them out.

"Long, long ago the Chinese lived in Puir on the Amur. The Chinese pursued them and shot at them with a cannon.

"There were at that time few Gilyak. By a cape on a hillock near the very village (Langr) they placed a cannon (the hole remained) and shot at the Russians around the boulder stones in the bay of Puir (Pakhzyr boulder stones). The hole on the hill is almost overgrown; formerly it was four meters deep and surrounded with stones. The cannon ball made the forest burn for eight nights; a lane was created. The cannon ball was found in Kol' -- four people cannot lift it."

According to a legend, 28 skulls were seen by the lake, which "at night cried and went to drink water; now all the water has dried up," "vessel dry up," i.e., is lost.

One old man assures us that within his memory and the memory of his father the Gilyak and their neighbors have occupied the same places since olden times. The Manchu (the Chinese, Manzy) have come here since the Russian War. They did not build large towns; they settled in groups of one or two houses, and only in Tyr, Akhcha, and Mykhyl' did they have guards. Their governor lived in Tyr.

With the appearance of the Manchu, during the war with
[648] the Russians, the Gilyak left by sea for Sakhalin and other
[169] places, but upon the departure of the Manchu, they began to come back.

/295 cont./

According to a different version, when part of the inhabitants ran away and another part was captured, three persons (two men and one woman) saved themselves, /296/ who killed two suns. When they came back, they found mountains where the Amur had been, and they went back (from Shul'gin Khokfing, 80 years old).

The Manchu fought with the Russians who had come down; in the spring during the run of the hump-backed salmon, some Russians hid themselves in the taiga, and they could not be found.

The Russians from the Amur saved themselves on the Amgun; the Manzy pursued them, but unsuccessfully. Then a Chinese general asked the god for snow, and snow fell knee deep, and they found the Russians by their tracks and slaughtered them.

After the war with the Russians, the Chinese set up a post on the upper Amgun (the Burukhan) -- "while the post stands, the Russians are not allowed to pass." Now the post has fallen down.

On the Amgun there is also a mountain, "Namnakhan," 19 kilometers below Guga, with hoof prints. This is where the Manchu spent one night during the war with the Chinese.

There is a stone kettle and a boot on the cliff "Gulyakhan," the storehouse of the Shadrinkskiy mines.

According to a legend a Manchu inscription is preserved on one of the mountains.

The guides of the Chinese on the Amgun were Negidal from the clan Umkan, while on Lake Orel' -- N'as'khajl.

The Russians roasted children on their bayonets and ate their meat; they cut off women's heads (1896).

A legend has been preserved about the way in which the Amur natives fought the Russians. Once the Manchu pursued the Russians, but left a part. The Russians, on their way back, decided to attack Tyr, thinking that they were Manzy. The Gilyak placed stones on wooden boards and fastened them. When the Russians came up to the cliff, they let go of the rope, and all the Russians perished except one who started to swim; he was caught, and the Kern-khal handed him over to the Arn-khal,

/296 cont./

173 648 The following case occurred in Macha (the left bank of the Amur), opposite Kal'ma. The Gilyak set out to hunt and built a balagan; coming back they saw a great number of people. Then they ran away undetected, gathered together people from all the villages, and set up ambuscades in different places behind the rose-willow trees. When the Russians came out, they shot them all.

Sometimes the Gilyak used the following method of fighting: They tied a cut tree trunk in such a way that it leaped out and struck the legs, and the enemies fell; then they completely killed them off (the settlement Kaki).

Recollections have also been preserved about the relationship between the Chinese /297/ officials and the Amur natives. The Goldi even paid for dogs, the Gilyak -- per person; the Chinese officials collected by whim, and their khalki (boats) with people had to be fed. In exchange for this, they gave receipts which gave one the right of entry into the town of Sungari (Ychkh-khotin). Otherwise the natives would be tortured in the town. The storyteller, a Samagil, in his youth went without a receipt; he said that they paid 40 rubles for a fodder /kormovogo/ man and 20 rubles for an ordinary person, and one sable from each person.

IV.

The Union of Clans and the Bear Festival

614 796 Two clans come together -- k:khal m'ek:r: vytch. They come together in a single yurt; outsiders may also be present. They discuss, and, if there are no obstacles (for example, they have not taken wives from one another), the khlaj nivukh declares that the two clans may join into one. The other representative answers: "It is true, we have accomplished great things together; you also helped us, and we also helped you. Once we form one clan, we shall become k:khal." He says: "There are no obstacles. Our sons and daughters will be our brothers,

/302/

595 58 A person can take two sisters as wives. Brothers m widows without distinction. It is best of all to take a wi the clan of one's mother, and then one can even get her nothing, and even if a payment is required, it is less in In the past one did not pay for a woman if she was from of one's mother. It is not permitted to exchange women clans. Here, too, one's daughter is given for sale to the brother, but the latter cannot demand this.

582 There is a prohibition against the descendants of o sister down to the fourth generation.

614 173 In Vaydy (see above) there are Gilyak of the Hirul who have entered into a union k:khal n'akh:r: with the K in Chil'bi. Formerly, they lived together in the same lo and belonged to the clan of the tiger. There is a Gilyak which has become related to a snake (there are snakes on Amgun; they were seen on the Amgun by Putyun) (1).

[114] 1. In the text, "boa," but, judging by note 6 on page 222 in Materialy po izucheniiu giliatskogo iazyka i fol'klora /Materials on the Study of the Gilyak Language and Folklore/, this is a mistake in the notes on the journey.

also Goldi who are kin to snakes.

538 839 A young man from Vaydy fell in love with the wif Korean, a Gilyak woman, and enjoyed reciprocity. She the town with a fish; the Korean stayed to guard the pot Then the lover went to the town. They met and spent t in the town. She came home -- her mother also liked

The Korean demanded that his wife sleep with him resisted. At night the Gilyak woman ran outside and sle Gilyak. The husband gave her a beating; her mother a brothers tried to protect her; the Korean complained, w he take a Gilyak woman. He killed the Korean (settlem Mago).

/349 cont./

194 167 Northern Sakhalin was especially favorable for resettling (it is interesting that only the northern part of the island is called Sakhalin by the Gilyak, which is additional evidence as to whence and in what direction the settling of Sakhalin proceeded). In the first place, these were the places closest to the continent: half a day to a day's trip between the shores of the strait. Moreover, in addition to an abundance of sables in northern Sakhalin, [136] the Gilyak from the continental coast found other living conditions completely identical with those on the continent: the same abundance and rich variety of fish (Siberian salmon, kaluga /Huso dauricus/, sig /a species of salmon/, carp, etc.), an abundance of seals and dolphins. The Amur Gilyak were the only ones who found it disadvantageous to leave the banks of their irreplaceable Amur. They cannot bring themselves to do it even now, [175] [648] crowded into their hunting and fishing reservations by the Russian settlers and forced to bear the entire burden of free official transportation along the Amur. There were, of course, still other reasons which induced the continental Gilyak to move to Sakhalin, for instance, density of population, conflicts between clans, and so forth. One of these reasons may have been the Manchu reign with its mandatory annual tribute of a sable per person (we must remember that in the past sable was three or four times more expensive than it is now, while the Amur sable is still very expensive; one variety, for example, the Amgun, costs 25-30 rubles). [175] [167] [648] [435] The legends of the Gilyak themselves about their former relations with the Manchu are of interest: "We were settled," the Amur Gilyak said to me, "on the banks of the Amur by the Manchu, as free men, with the title of 'hunters,' and we were obliged to pay them one sable per person every year." [173] Moreover, every time a Gilyak went to the Chinese town of Sungari (Saising), he was forced to pay one sable and the /350/ starosti of the settlements three sables each. [171] The Orochon were also in the same position. Manchu officials made a census of the population, and every year in the summer they would come to collect the sable tribute. The Sakhalin Gilyak were free from this tribute, but eventually the

/350 cont./

177 325 themselves give a reason other than the scarcity of iron for this. As recently as a generation ago a steel was a valuable thing, /351 and sometimes an entire clan possessed a single communal steel. [372] Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in 177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 241 181 492 252 415 323 174 173 Even at the present time, the basic food of the Gilyak is the ready products of nature -- fish, fowl, berries, roots; he is as yet incapable of helping nature along and accelerating her creation of foodstuffs. He does not plant or sow, or raise domestic animals for meat. This is the fundamental feature of a "savage" state. Moreover, Gilyak traditions of times when water was boiled in troughs by means of hot stones and their memories of wooden dishes coated with clay, and the absence of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

"After preliminary politenesses, I beg

'Has your father, or your father's fath
whence the earliest Gilyaks came?'

'No. They came from over there,' poi
know by tradition to have been their hom
had asked me—

gan by asking the cham—
ner, ever told you anything about the place

nting to the west, to the mainland, which we
e. But before he would answer my question, he

e, and why do they live in big villages and not

77 baptism a means of guarding against abduction of their
97 women. Those who are baptized live just like the unbaptized ones, their children are usually not baptized, and their corpses are cremated. Their fellow-tribesmen by no means persecute them. A baptized Gilyak is regarded by the others somewhat as though he had shared in some special acquaintance.

02 XVI. Intellectual Development, Time-Computation,
05 Legends.

The Gilyak count to quite a high number: 2000, 5000 and more, but of course they almost never use such high figures. The Gilyak year is half as long as the real one: winter which probably lasts half a year, is regarded as a whole year, the [245] remaining year being regarded as another one. Moreover, there are special names for the four seasons.

21 The Gilyak know how to find their way by the stars, and the Big Dipper and pole-star are their guides. They seem to have no particular assumptions with regard to the characteristics of the heavenly bodies. From some I heard that the sun and moon were inhabited by people. I could not learn anything definite about whether they might not be "the beyond". It can only be said that the other world is somewhere up above, not under the earth, as with the ancient Greeks.

05 The Gilyak do not count their years. Only of quite young
61 people one can hear it said approximately how old they are. Older people cannot remember their age and immediately say: "the Gilyak does not count his years". This means his own age, for with them there is no question of chronology or history.

3 The majority know nothing about their past. But from
1 several intelligent Gilyak I heard that once "a long time
21 ago", there was a war between the Amur-Gilyak and those of Sakhalin; that the latter came with a great many boats, but were defeated. There is also a tradition on Sakhalin which has it that three or four generations ago a long war raged, whose cause was the abduction of a woman. It is difficult to say whether this war is the same as the one of which the Amur-Gilyak tell. In any case, the long intervals between such wars testify to the peaceableness of this tribe. The Gilyak knew nothing of fighting with the first Russians who arrived.

In answer to the question whether they had always occupied their present settlements, most of them answered simply: "I do not know". However, I heard from one of

Blagoveshchensk lies. May we not understand this to me
hat they crossed over from Sakhalin and that the first
mmigrants mingled with the Goldi who were already to b
ound on the Amur?

If one asks how intelligent the Gilyak are, it may be sa
hat for savages they are rather intelligent. In the arts,
owever, they are very backward. They know how to dra
r carve various animals. The figures are coarse, but
evertheless [246] recognizable. Music and poetry are
bsolutely embryonic, but at least they like to hear music
Their memory for places and persons is astonishing. If a
Gilyak meets a stranger somewhere, he recognizes him
nstantly after many years, and at the same time recalls
inds of minor circumstances accompanying the original
neeting. In languages, too, their memory is not bad, at
east many of them speak Russian, but the reverse is not
rue. It is, however, doubtful whether the Gilyak's memo
would be adequate for systematic instruction. In instruct
he different facts cannot be directly understood but must
e interpreted from the words of another, and thus a cert
magination and judgment are needed. For a time there w
school in the village of Mikhaylovskoye where Gilyak
children were taught to read and write. This they learne
very well, but nothing else was taught. The Gilyak, of
course, do not have their own writing.

Curiosity and a desire for knowledge are average. The
orner I judge in comparison with other uncultivated peop
whom I had the opportunity of observing, especially the
Bashkir. The latter are so intrusive in their curiosity th
hey give the traveler no peace. Of course, the Gilyak
lso gather around a stranger who stops at their yurts,
ot in great numbers; they keep at a certain distance and
oon disperse. If they come into the house of a Russian,
hey look about them with curiosity but they do not immed
tely reach for everything that strikes them and do not as
or presents. In this, as in many other respects, they ar
ecorous people.

If I must praise them in this connection, I must also s
hat their desire for knowledge is not sufficiently matured
hat they would be interested in the main springs of cultur
t seldom occurs to them to ask a Russian about a machin
bout economic questions, nature, institutions, religion,

/xxviii cont./

114 The question of cousin marriage is developed particularly
115 widely in Sternberg's works. In this respect, Sternberg enriched the
586 history of marriage with valuable material, very shrewdly analyzed
by him. When Sternberg tries to extract cousin marriage from
group marriage, however, he contradicts /xxix/ himself and takes
an anti-Morgan and at the same time anti-Engels position. To ac-
cept the proposition that cousin marriage preceded group marriage
logically leads to the conclusion that individual marriage preceded
cousin marriage. The reasoning of Sternberg on the causes for the
transition from marriage between sisters and brothers to cousin
marriage is just as completely idealistic.

Sternberg revealed the clan character of the group marriage
of the Gilyak with great thoroughness and, in addition, established
the principles of the third- and fourth-clan phratry. Indisputably,
the conclusions of Sternberg about the precedence of cross-cousin
marriage to unilateral-cousin marriage are correct.

Sternberg's discovery among the Gilyak of the institution
116 of ishegaimya (avoidance), according to which people not having
587 mutual sexual rights must avoid mutual glances, conversations,
and so forth, also has extremely great importance for confirming
the existence of group marriage. He considers the survival of this
institution among peoples who have already emerged from the stage
of group marriage as extra proof of its previous existence.

117 Further, the works of Sternberg give a vivid picture of the
118 clan way of life of the Gilyak and of the basis of their common
law. By the way, in speaking of the clan, one must stress
the correctness of Sternberg's criticism of Kunov, who, in spite
of Engels, rejected the existence of a clan structure among the
Australians.

119 Sternberg considers in some detail the khlai-ni-vushkah
588 and quite correctly explains that they are recruited from the yzi
(wealthy men), but we wait in vain for an answer from him on
the question of the reasons for the degeneration of the clan and the
appearance of the yzi. At the same time it must be said that the
fact of the existence of the wealthy men among contemporary, so-
called primitive peoples, and especially their social role, has
been treated with silence in ethnographic literature, and Sternberg
was one of the few non-Marxist ethnographers who paid attention
to it.

/14 cont./

120 The Gilyak are not the only ones who find themselves in
121 such an isolated position in northeast Asia. The Aino, the
122 Yukagir, the Chukchee, and the Koryak find themselves in the
same position. An attempt has even been made to combine them
in a common group of Paleo-Asiatics (Schrenck), but the basis
of this classification was purely external in character, namely,
their common position on the edge of the continent, and the con-
sequent probability that in the course of time these once numerous
peoples were in part destroyed and in part driven out by more re-
cent newcomers who came from the interior of the continent to
the edge of Asia. All hope of discovering a genetic relationship
between the Gilyak and the other tribes has not been lost, however.
Hypotheses about a common origin of the variables of the
Pacific coast of Asia and the tribes of North America were ad-
123 vanced long ago. My own investigation of the Gilyak language
convinced me that this hypothesis may finally be fully confirmed.
Besides the similarity in the common structure of the Gilyak lan-
guage and of many American languages, such as the merging of
pronouns with verbs and with nouns, the tendency /15/ toward
polysynthesis, the extreme mobility of phonetic changes, the
types of reduplication, etc., we can point to similarities at par-
ticular points which are extremely characteristic. For example,
one thing is common to all of the a highly peculiar cultus system
of numerals, according to which different categories of objects
can be combined only with the numerals that are peculiar to them,
a system to which, so far as I know, there is nothing similar in any
of the languages of the Asiatic continents. All this, however, is a
problem for the future, perhaps the very near future.

124 Meanwhile, an easier question is still unsolved, the question
of how long the Gilyak have occupied their present positions. On
the basis of three names borrowed by the Gilyak from the Tungus
tribes for animals (the elk, the roe, the badger) found in the lower
reaches of the Amur, but absent on Sakhalin, the late academician
Schrenck, the only authority up to the present on the ethnology of
the natives of Priamur krai, asserted that the original homeland of
the Gilyak was Sakhalin Island and that in any case the Gilyak now
125 living on the continent are descendants of immigrants from Sakhalin.
126 His opinion is based on an obvious misunderstanding. The three

/15 cont./

● 127 types of animals mentioned are actually encountered only very
128 rarely in the territory of the Gilyak on the Amur and, on the other
hand, very frequently in the territory of their Tungus neighbors,
the Goldi, Olcha, Orochi, and Samagir, and therefore there is
nothing surprising in the fact that the Tungus names spread among
the Gilyak, but even if in Schrenck's time the animals mentioned
were encountered there somewhat more frequently, this could be
a matter of pure accident. It often happens that extraordinary
events, such as the appearance of a new and strong enemy, compel this or that animal to leave itself by flight from its normal terri-
tory to distant places, but such phenomena do not prove that the
new territory in which these animals appeared was their
their primordial habitat. In general, how convincing Schrenck's
conclusion is may be seen from the fact that the tiger is absolutely
not encountered on Sakhalin and very rarely enters the territory of
the Gilyak on the Amur, the reverse being true of the Sakhalin and
the Amur Gilyak have their own name for it, "klund."

129 On the contrary, everything speaks for the fact that on
130 Sakhalin it is the Gilyak who are the newcomers having replaced
or driven out their predecessors -- the Ainu. Let us start with the
linguistic /16/ data. The Gilyak still call trees and some sea ani-
mals that are absent on the continent by Ainu terms, such as
131 inrit (maple), tarmai (yew tree), nugachep (sea pig?), and
others. Furthermore, we have even more objective proof that in
any case it was not the Gilyak who were the most ancient aborigines
of the island. Throughout the entire territory of Gilyak settlement
on Sakhalin Island, right up to the most northern extremities, one
encounters the remnants of ancient dugouts, in the form of round
and more or less large pits, and, upon excavating them, I found
132 pue fragments and some implements of the Stone Age. The Gilyak
call these pits nothing other than kugi-tul'ich (Aino pits), a name
which quite clearly indicates that the Gilyak regard the Ainu as
133 the original inhabitants. The Stone Age implements and the pot
fragments found in these pits are regarded by the Gilyak as the
handiwork of the gods (the pot fragments, for example, are re-
garded by them as the pots of a heavenly man who dropped them

/17 cont./

● 134 Thus, it is indubitable that the Gilyak are relatively late
arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time
cannot be considered very ancient, that, strange as it seems, the
Gilyak arrived in their present region from more northerly areas
closer to the Arctic Circle. Indeed, some of the peculiarities of
Gilyak life seem to be clear survivals from a period of residence in
135 a colder climate. The most typical proof of this kind is a remnant
of ancient winter abode -- the dugout. The Gilyak dugout is built in the manner of the Kamchadal. But while there is
no door in the Kamchadal yurt, because of the severity of the
arctic winter, in the Gilyak and the Ainu tribes (the Goldi
and the Orochi) have adopted from the Gilyak not only the term
and the principle of conveyance on dogs, but also the details of
building the sled, the sides of which are made of birch bark, with the
feet on ski along the sides of the sled), the harness of the dogs, and
136 other things. It is remarkable that among the reindeer Chukchee,
among whom dog-raising is preserved only in legends, the Gilyak
way of carrying on the sled already has been preserved to the present. The same way of sitting was habitual among the Kamchadal
as well.

In connection with this hypothesis, it is interesting to
compare a very widespread legend.

137 Among the numerous legends that I have collected about
138 the origin of the Gilyak clans, I have frequently encountered a
139 very clear tale about the Gilyak, who once upon a time, in the
140 called "hovykh." By "hovykh" the Gilyak mean everything that is
carried on the current of a river or sea, for the most part clods of
earth or tundra turf broken off from the bank, and also floes of
ice which are carried on a sea current. One such hovykh is still
pointed out on the eastern shore of Sakhalin in Nyvvo Bay, where
it formed a minuscule island opposite the settlement of Takvo.
141 It is alleged that a part of the clan now living in the settlement
142 of Tangi on the western shore appeared on this hovykh. There is
nothing impossible about conveyance on a hovykh. It not infre-
quently happens that during the spring hunt for seals a sudden

/18 cont./

143 hurricane breaks up the joined ice-floes and carries separate floes
144 together with the hunters caught on them, into the /19/ open sea.
145 often throwing them on the shore far from their place of residence.
One can also not infrequently see tremendous pieces of turf, on
which clumps of people could be placed, being carried on the
waves of the sea, having been torn from the coastal tundra by storms.
During the civil wars among the Ainu, when someone urgently
needed to escape from persecution, there existed a practice accord-
ing to which the persecuted one fearlessly trusted his family and
his boat to a "hovykh" which happened to be passing by fixed on it
the sacred pole with the sharpened wooden tongues, and entrusted
his fate to the caprice of the wind and the current.

Now, if we consider that the conveyance from the north
along both shores of Sakhalin Island and the continental coast,
currents which carry ice floes almost until the month of July, one
can allow with extreme probability that the legendary hovykh
served as that natural means by which individual seekers of ad-
venture or exiles moved from the north to the south, and further-
more it is not difficult to imagine how, step by step, such migra-
way of carrying on the sled already has been preserved to the present. The same way of sitting was habitual among the Kamchadal
as well.

In connection with this hypothesis, it is interesting to
compare a very widespread legend.

146 Among the numerous legends that I have collected about
147 the origin of the Gilyak clans, I have frequently encountered a
148 very clear tale about the Gilyak, who once upon a time, in the
149 of the boundaries of the Gilyak territory for the last two and a half
centuries, and the legends of the Gilyak about the island and the
continental coast depict this tribe as fully acclimated to its present
150 surroundings, and among primitive peoples such acclimation comes
about through a long process of many, many centuries, maybe
millenniums.

151 At this point, I cannot fail to mention one characteristic
152 fact, which is in a way characteristic of the ways of thinking of the
Gilyak themselves, on the question of their kinship with other tribes.

/19 cont./

● 153 In 1893 during my stay in the settlement of Langr on a
154 small island lying opposite the continental coast, I talked to an
155 old Gilyak, a contemporary of Nevelskoi and Orlov, who were
the first men active in the lower reaches of the Amur. I was not
a little astonished when during our conversation, while reminiscing
about the workers of the Russian-American Company, to whom my
interlocutor had in his time been of service, he suddenly said: "I
think, however, that the Gilyak and the Aleut are of the same
race. It turned out that the well-known seagan, Orlov, who served
in the Russian-American Company, /20/ was accompanied by an
Aleut, with whom my Gilyak interpreter had a chance to talk at
great length, and as a result, after an exchange of stories about
the customs and the way of life of their fellow tribesmen, by the
way, about the hunt for seal, they both came to the conclusion
that the Gilyak and the Aleut are kal'nyakhr (one people). Taken
by themselves, such primitive conclusions, cannot, of course,
have any great significance for the solution of the question, but in
connection with other considerations about the arctic origin of the
Gilyak, this naïve testimony of a Gilyak is, at any rate, characteristic.

156 Thus, the language, the archaeological data, the remnants
157 of peculiarities of their way of life, and the legends make it possible for us to lift somewhat the veil of the distant past of the Gilyak
tribe. On the other hand, purely anthropological data can play no
role in the question that interests us. Anthropologically, the
Gilyak least of all represent anything original. There is no such
thing as a specific Gilyak type. The average type of Gilyak is at
the present time a complex of ordinary, though somewhat softened
Mongoloid features with a deviation on the one hand to the Tungus,
and on the other to the Ainu type. In the Ainu type, as Schrenck
has already noted, the face is more or less oval, the forehead
straight, the cheek bones moderately pronounced, the squint of the
eye very insignificant or completely absent, the nose more or less
long, the spine of the nose with a curve, and the growth of hair
on the face abundant. In the Tungus type, on the other hand, the
Mongoloid features are expressed in full sharpness. In the feminine
type the Tungus features predominate. This is everything that

/20 cont./

● 158 observations of the physical peculiarities of the Gilyak give us.
At the same time, other facts and considerations provide us with a
159 full basis for believing that the ancient Gilyak type has completely
perished, drowned in the stronger wombs of the neighboring tribes.
This took place, however, not in an ordinary way, not through a
160 gradual interbreeding with the neighboring tribes by means of inter-
tribal marriages, which would be not at all surprising, but in
quite peculiar, extremely instructive way.

161 In conducting the census of the Gilyak, I carefully collected
162 information from the elders of each particular clan.
163 The study of these data brought me to the strange conclusion that
164 the founders of the great majority of the clans now in existence
165 were not the Gilyak, but representatives of the neighboring tribes.
How could this have happened? This phenomenon even
at the present time that separate individuals for one reason or
another may abandon their native tribe and, escaping persecution
or misfortune at home, seek refuge /21/ in a neighboring, alien
tribe... Here they find traditional hospitality, settle down, marry
(usually a widow), and, in this way, are adopted into this or that
clan, naturally adopting the language and customs of the tribe that
has harbored them. The descendants of such newcomers normally
form either independent clans or special branches of those clans that
adopted them. And the history of the Gilyak clans shows that these
clans of newcomers or the branches of the clans founded by them,
in the time invariably grew in membership and sturdily survived, while
the older clans or the oldest branches of the clan decayed and in
the course of several generations died out. The most vital, gow-
166 ing clans or branches of clans are the descendants of precisely such newcomers. Whether the reason lies in the fact that the newcomers
and exiles represent a natural selection of exceptionally energetic
and vital individuals, or this is the result of intertreeding, the fact
is not subject to doubt. I found it not only among the Gilyak.

As a result of the census of the Gilyak, I asked myself in
167 perplexity, if in the course of a great number of centuries there
has been a constant influx of new elements from other tribes, an
inflow that was strengthened by the purchase of wives and female
slaves from the Ainu and the Goldi, and if these new elements
flourished and multiplied while the indigenes degenerated and died

/21 cont./

out, what remained of the indigenous type of the original Gilyak tribe? Yes, that original type irretrievably disappeared. The body of the Gilyak tribe died forever, but its spirit is alive, alive in its language, a language which, as we have said, stands completely alone in the assemblage of languages of the Asiatic continent, and in its peculiar customs and institutions which, together with the language, have survived all the vicissitudes of its physical transformation. The persistent preservation of the language is striking. It has not only protected itself against distortion by roots and forms from other tribes, but, in spite of the small number of speakers of the tribe, has preserved two large dialects and no fewer than five or six subdialects, which testify to the fact that there was a time when the Gilyak language was spoken by many tens and perhaps hundreds of thousands of individuals scattered over a vast territory, who left us numerous idioms as proof of their existence.

But not only the language of the Gilyak tribe continues to testify to its isolated position among the surrounding nationalities: its social institutions, clan organization, religion, and especially /32/ the institution of marriage, amazingly peculiar norms of sexual intercourse, and equally amazing kinship nomenclature clearly testify to this. Before we proceed to this aspect of their life, however, we shall first touch upon, within the briefest limits, the external conditions of their life, the nature which surrounds them, and the outward appearance of the Gilyak.

II.

Environment. Type. External Life.

The nature amidst which these people live at the present time is full of the greatest contrasts. In spite of the southerly latitude (between 46° and 54 1/2° north latitude), the average yearly temperature falls in some places to -1.2°. The freezing of mercury in the middle of the island is a common phenomenon. Even in July there are minimums of 7.7°. Ice floats off the

/30 cont./

purchase fish. while in many places (for example, on the Tym') the inhabitants set out in whole settlements to travel several hundred kilometers to the seashore for the spring seal-hunting. only to return half a year later for the fall run of fish in their native places. The Gilyak likes to travel. however, even without various reasons for it. To make visits. receive guests. arrange celebrations, and live gregariously are the greatest pleasures of the Gilyak. Gloomy and stem while alone. he is transformed in society and becomes playful. gay, and garrulous.

In the north. in winter. between 30 and 40 people live in the big yurts of the Manchu type. It is here that sociableness. which is inherent anyway in the conditions of the social framework of the Gilyak, is cultivated. Now, however, we must leave the external aspect of the life of the Gilyak and pass to its internal structure. with whose unique peculiarities I intend mainly to acquaint my readers.

III.

Kinship System. Marriage Norms and Their Influence on the Family-Clan Structure.

Of all the peculiarities of the Gilyak way of life nothing so characteristically distinguishes them from the surrounding nationalities as their classificatory system of kinship and the rules that regulate their sexual relations and marriage. In this respect the Gilyak stand equally far from their southern neighbors, the Ainu. and from the Tungus tribes that surround them. The Ainu are the only nationality of the Priamur krai who have preserved features of maternality /materniteta/. The Gilyak family and clan are purely patriarchal institutions. As for the Tungus tribes, although the classificatory system of kinship and certain characteristics of group marriage analogous to those discovered by me in 1891 among the Gilyak were discovered by me among them. a careful comparison of this institution among the Tungus tribes and among the Gilyak leads to the conclusion that they /31/ belong to quite different

/31 cont./

periods in the evolution of marriage. and. although they could have influenced one another. they basically belong. speaking in the language of geology. to different formations. It is sufficient to say that among the Tungus tribes sexual intercourse with wives of individuals of ascending generations is allowed, for example, with the wife of the father's younger brother. while among the Gilyak this is regarded as incest.

At first sight the Gilyak institution of marriage does not seem to be anything special. A Gilyak will generally buy one or rarely two or three wives. who come over into his clan and are regarded before the world as his personal wives and the mothers of his children. The children belong exclusively to the father and succeed him after his death. When a Gilyak becomes a father. he is no longer called by his former name. but is called the father of the born child. The exclusive possession of his wives expresses itself in the stern custom of blood vengeance against the disturber of marital harmony. The clan is based on the principle of agnation. and marriage is exogamous.

One can travel over the entire territory of the Gilyak. live in their yurts. and observe their family life for a long time. and not notice anything peculiar in the structure of their family. In large winter yurts the inhabitants occupy their plank beds by families. each living in relation to its own particular interests. Complete harmony and tender relations prevail among husband. wife. and their children. That is not all. One may frequently encounter instances of striking loyalty and love between spouses. When one of them dies, the other frequently lays hands on himself or dies from grief. In a word. to all appearances we are dealing with the type of family which is generally called patriarchal. Actually, however, it is not. First of all, one is struck by the strange kinship nomenclature. A whole group of women call a whole group of men their husbands (pu; ivn). and the latter call them their wives (an'gej). Likewise, a whole group of men call a group of women their brothers (ymk) and a group of men their fathers (ytk). and these call the former their children.

/35 cont./

The views of the Gilyak in this regard are so strict that he transfers them into the animal world; dogs caught in an incestuous act are killed, being considered werewolves.

The Gilyak speak of the Russian women who sell themselves for money with the greatest contempt. This strict loyalty with regard to persons of prohibited categories created a system of prohibitions against conversation and joking with whole classes of people. It is even difficult for us Europeans to imagine that the Gilyak man or the Gilyak woman does not have the right, not only to joke. but even to talk with his own brothers and sisters. or even with brothers and sisters of the most distant degrees of kinship. i.e., with the whole clan. because. on the other hand. Familiar relations may lead to sexual intercourse in forbidden degrees and, on the other hand, to light quarrels out of jealousy in cases of permitted intercourse. On the same grounds. among the Sakhalin Gilyak, one is allowed to talk to. but not to joke with. wives of the younger brothers. because sexual intercourse with them is forbidden. and. conversely. one can both talk to and joke with wives of elder brothers. and generally with the group of an'gej (wives).

Because of the prohibition against conversation with categories of close kinsmen among the Gilyak. the custom of saying hello and good-by upon arrival and departure is absent.

So far. I have cited only facts. But where did these strange facts come from? How can we explain these complex and confusing norms of sexual cohabitation, and the no less strange kinship nomenclature? Even if we can to some extent explain the mutual rights of brothers to their wives, the right of a person to the married sisters of his own wife or the married sisters of the wives of his brothers is completely incomprehensible. Why is it that a woman calls not only her own sister. but also her husband's brothers' wives sister? Why does a man /36/ call the sister of his father-in-law his mother? Why, for instance. is it enough that a person from clan A. let us say. takes a wife from a completely alien clan for all the women of clan A to become forbidden to the representatives of the latter. The complex and confusing chain of these facts must doubtless be the result of the single, very simple basic fact of an original type of family and clan organization. a type which.

/36 cont./

because of the vicissitudes of the clan life of the Gilyak. their migrations. depopulations. immigrations. and other such reasons. naturally in the course of time had to become complicated and lose its former simplicity.

A key to the discovery of this original type is the same kinship nomenclature. which. without doubt. is a living reflection of the sexual norms which were discarded or are being discarded. First of all. it is clear that the kinship nomenclature according to which. in a man. call the sister of my father-in-law mother (ymk). while my father calls them his wives. at the same time that my wife and the wives of my brothers. both own and jinate. called me another. can develop only under circumstances in which all my clansmen take their wives exclusively from one common clan, and furthermore in such a way that each generation of brothers of all degrees of kinship takes for wives a corresponding generation of women sisters of all degrees of kinship. Then. in fact. the sisters of my father-in-law will be the wives of my father and of his brothers, and consequently, my mothers. while my wife and the wives of my brothers will be sisters to one another. Under such a system. marriages between persons of ascending and descending generations (uncles and nieces) are impossible.

But which clan is the one from which all my clansmen must necessarily take their wives? This is especially answered by that detail of the kinship nomenclature, which I applied my clansmen of my generation. i.e., my brothers and cousins in the male line, call from birth our mothers' brothers' daughters our wives. and conversely. they call us their husbands. It is clear from this that the clan from which my mother came. i.e., the clan of her father and of her brothers. is that clan from which I and my clansmen (the mothers of the clansmen of my generation are the sisters of my mother) must necessarily and exclusively take our wives. and furthermore. as I have previously said, from corresponding generations. If my father and his brothers took for their wives a group of sisters from a certain clan, then I and my brothers must marry the daughters of the brothers of this group of sisters from the same clan. But to exchange women. i.e., giving women to that clan from which my /37/ clan takes wives. is prohibited: all the women of

/37 cont./

my clan must. in turn. go to a third clan. whose ancestresses were sisters of the male ancestors of my clan. In the kinship terminology this limitation is clearly expressed in the fact that I do not call the daughter of the sister of my father wife (an'gej). but simply nav'ykh. and she calls me. not husband (pu; ivn). but ytk. akhmal'k. Such was the type of the primitive structure of the family and clan. reconstructed a priori from the kinship nomenclature. I did not. however. arrive at my conclusions a priori.

In spite of all the unfavorable conditions indicated by me which relaxed the exclusiveness of marriage within a particular clan. the old principle continue to be observed up to the present day. Upon first acquaintance with the way of life of the Gilyak. not yet knowing their kinship nomenclature in detail. I was impressed by the persistent tendency of each clan to take wives predominantly from one particular clan, namely, from the clan of one's mother. P'fand'ukh umgu genedzh urdzhra -- "You must take your wives there from whence you came. i.e., from the clan of your mother" (1); thus the Gilyak taught me their matrimonial

1. The etymology of the word p'fand'ukh is interesting; it is composed of pi (ones own. your). pandf (kinsmen of the mother). and ukh (from). The word pandf is from pandynd -- "to be born."

wisdom. Although now it is permitted to take wives not from the clan of their mothers, the terminology has preserved an old prohibition on this group of women: brides not from the clan of the mother bear the name yokh. i.e., a woman with whom sexual intercourse is prohibited (thus. for example. elder brothers. for whom sexual intercourse with the wives of the younger ones is prohibited. call the latter yokh). while a bride from one's mother's clan is called an'gej (wife, any woman with whom sexual intercourse is permitted). Indeed. the favorite form of marriage among the Gilyak even now is marriage to a daughter of a brother, own (preferably) or agnate. of the mother. but in any case a kinsman -- "brother" of the latter. On the other hand, marriage with a

/45 cont./

[illegible]

/46 cont./

but Stepanova; her daughter (a granddaughter of Varvara's), in turn. from birth. as the wife of one of the Vasil'evs (of clan V) would be called Vasil'ev's wife. the daughter of Vasil'ev, i.e., Varvara's great-granddaughter. would have to be the wife of one of the Andreevs (of clan A) /47/ and thus. in the third generation. she would again bear the clan sobriquet of her great-grandmother.

6) As we have seen. Gilyak marriage to a considerable extent simplifies our understanding of the complicated kinship among the Gonds (Gondy) of the Gilyak system of marriage among many tribes of India where a marriage between male cousins and female cousins is almost compulsory when the brother has a daughter and the sister a son. These separate facts remained unexplained up to now and are. therefore, perhaps fragments of a once common clan organization similar to the one that I found among the Gilyak (1).

1. It is remarkable that up to the present time some scientists are skeptical of even the actual fact of the discovery of marriage norms identical with those of the Gilyak. Thus. quite recently it was discovered that among the Hottentot marriage is permitted between a man and the daughter of his mother's brother and. conversely is forbidden between a woman and a son of her mother's brother (exactly as among the Gilyak). while Kohler. presenting this fact. and the author of the article on Kohler's work in Année Sociologique both doubt the possibility of such norms. even though they were known to McLennan. See J. Kohler. "Das Recht der Hottentots, " in Zeitschrift f. vergleich. Rechtswissenschaft. Vol. XVI. No. 3. pp. 341-342. and L'Année Sociologique. 11th year. p. 306.

[illegible]

2) An analysis of the Gilyak regulations sheds light on the genesis of the institution of abduction in general and in particular. on the strange institution of mock abduction. an institution which is practiced among such primitive peoples as the Australians and the Eskimo. and. furthermore. in such strange forms that it is quite impossible to consider it a simple remnant of actual abduction. as is normally thought. Let us recall again our tri-clan phratry with its norms of marriage. Clan A must take wives from clan V and give up its women to clan S. We shall remember that in the primitive stages of development such obligations are religious imperatives. the violation of

entirely enough to assume that in this way they want to avoid making the archer unsteady by noisy behavior, and thus to bring him into the danger of missing his mark. Or is the torture that they impose on the poor animal before its death meant to be a symbol of the serious nature of this festival? Even this conception seems untenable to me, for why should one torment an expiatory sacrifice that already has to suffer enough by its innocent death, as happens in this case; and, besides, does not the cruel treatment of the bear before its death give the impression of proceeding entirely from the overbubbling festive joy of the celebrators? Unfortunately, the traveller was unable to give any hints as to the significance of the ceremonies described, since the Gilyak were themselves unable to explain them. They celebrated [382] the festival the way their fathers and forefathers had celebrated it, without worrying any further about the meaning of the various actions. Jakobsen's friends in Nikolayevsk were equally unable to give *him adequate explanations on this subject. Probably, there-* fore, we need more frequent and more detailed observation than is available today before we can see into the matter clearly.

Finally, a saga current among the Gilyak which Jakobsen heard from a Russian station master who had lived in their territory for a long time. It goes as follows: A long, long time ago there appeared on the Amur coming from the east a small vessel full of enormously strong people of a dark complexion. These went ashore, attacked the villages, burned them down, and, without distinguishing age or sex, killed and ate all the inhabitants that they could lay hands on. Sailing up the river, they acted in the same fashion in the land of the Goldi till finally the invaded tribes recovered from their terror, banded together and moved in large hordes against the barbaric enemy, whom they then defeated in a bitter battle. All the cannibals were killed and their ship was destroyed. From this time on, the Gilyak always add, no more foreign people came to the Amur River from the east up to the time when the Russians appeared at the mouth of the river and took possession of the land.

occurrence of the institution, which, in the form
duction, is practiced in the marriage ceremony o
peoples.

/48 cont./

174 583 614 615 606 This likewise explains the custom of avoiding one's father-in-law (for he may not be one's mother's brother); this also explains why, for example, the Gilyak calls a bride who is not from the clan of his mother by the term sokh /sic: see yokh on p. 76/, a term meaning a category prohibited with regard to sex, because a woman who is not from his mother's clan originally could not be his wife; and other such phenomena.

174 583 614 [673] [689] [682] Finally, this explains the universal custom of the bride price, the custom of a payment for one's bride. Abduction is a sin against the clan of the one abducted, a sin which demands atonement, by force or by a material fine from the abducter. Among the Gilyak this sin of atonement comes down to the third generation inclusive. The bride price, therefore, is that same blood-money, that same material form of atonement for a sin, [192] as for the killing of a clansman. It is not a coincidence that the blood money for a slain clansman and that for an abducted woman bear the same name, tkhusind, among the Gilyak.

174 583 In conclusion I shall allow myself to make another, perhaps somewhat risky conclusion. Let us suppose that, as frequently happens after wars, the men of clan A who take wives from clan V have died out and there is no one to continue the clan. The maidens of clan V then remain /49/ without husbands, for the parents' fear of the punishment of the gods is stronger than their love for their children. From here it is one step to the killing of maidens. A considerable time must elapse for the superstitious spirit of primitive man to reconcile itself to necessity and begin to resort to the deception of his gods, arranging the comedies, sometimes cruel, of mock abduction.

V.

Religion of the Gilyak

771 In his world view the Gilyak, like every primitive man, is an animist. A dead, unreasoning nature does not exist for him; on the contrary, all nature is endowed with life and reason. If the Gilyak could parody the famous dictum of Hegel, he could say with greater right than the latter that all that exists is rational.

/124 cont./

*614 615 608 it is true, very young, unmarried, and it is difficult to say what happened to their feelings later on, but the mere possibility of such examples illustrates boldly the relations between members of matrimonial clans.

*614 615 428 583 The principle of mutual aid between members of matrimonial clans is reflected in the right of inheritance, to which, despite the strict agnatic basis, there is only one exception, namely, with regard to the pandf'y; by a will, as we already know, the ymgi can obtain the iron "shagund" (i.e., going for the bride price), while the akhmal'k can obtain the fur "shagund" (going toward the bride's dowry). This rule, which reduces the bride price to the simple formality of taking it from one pocket and putting it in another, serves, incidentally, as an important indication of the fact that originally among the Gilyak the bride price did not bear the character of payment for the bride, but rather was a form of religious ransom. But for what?

*614 615 ● 174 583 The fact is that under the Gilyak norms of marriage the bride price is in general a strange anomaly. Actually, once marriage /125/ from the clan of the mother is a religious obligation, and even preferable between the children of brother and sister, how can there be any talk of payment or ransom for the bride? Obviously the rise of this institution must have been due to some recent change in the marriage norms. This [178] change we know: it consisted in the fact that in some instances when marriage from the clan of the mother was impossible, it became necessary to take wives from a strange clan, but this clan, in its turn, was obligated to keep its women for its own lawful ymgi and therefore could only accede to giving away its women by masking it with some act of pious deception of the gods, which would at the same time be profitable for the [182] father-in-law. By analogy with the religious ransom in cases of revenge (see above), there thus arose the institution of the bride price, satisfying both the interests of the father-in-law and the dictates of religion. In its turn, the ymgi clan, which

/125 cont./

614 615 174 583

violated its own law, protected itself by another fiction: the whole clan of the "unlawful" father-in-law received the title of akhmal'k and became, as it were, a lawful clan for marriage unions. As such instances increased, the bride price, whose exclusive genesis had been forgotten, became the general rule in all marriages, even with lawful clans.

Such, perhaps, was the origin of the bride price among other peoples as well.

614 615 796 574 182

Another weighty factor which consolidated the bonds between matrimonial clans is the participation of the pandf'y in the bear festival.

In the sense of cementing interclan relations it plays almost a greater role than the Olympic games for the tribal unification of the Greeks. The bear festival takes place every winter, now in one, now in another settlement, while in populous settlements a rare winter passes without a festival. Attendance at such a festival involves no difficulties. The sled, which every household possesses, is harnessed, and off they go; the rest is not the guest's worry.

Everywhere on the road, as in the village where the festival is held, his dogs will be fed and he himself will be treated to the choicest dishes. And in return for the small annoyance of travel there is a whole array of high social gratifications: in the first place, the very rite of the festival -- the procession, the shooting at the target, the killing, the skinning of the bear, etc.; then, meetings with the ablest and most respected representatives of the tribe; finally, the competition /126/ in wrestling, races, and dances, the feasts, conversations, jokes, and songs, in a word, an endless series of enjoyments. Against the somber background of his gray existence, the hungry days, the deprivations, dangers, and monotonous impressions, the bear festivals appear as the most joyous moments of existence, as it were, landmarks of everyday life which one recollects and dreams about. But these noisy, populous festivals are strictly regulated. Besides clansmen, only ymgi are invited, and these have the right to invite their own ymgi but akhmal'k do not participate at all.

/127 cont./

609 574

reception, and nonetheless only in the rarest cases will the Gilyak refuse to tender his hospitality to the Russian who has

609 829 * 614

wandered his way. Where the Gilyak have dealt cruelly with such fugitives (1), it was only in pursuance of clan vengeance

1. The Gilyak regard Russian fugitives as one clan, the representatives of which answer for one another.

for slain clansmen -- just what they consider their duty to do with respect to /128/ their own tribesman-murderer. But isolated acts of this sort do not at all change their general

186 609 829

relations with members of other tribes. There are, of course, among the Gilyak, as among civilized peoples, national prejudices, but they are to be attributed entirely to ignorance, to lack of acquaintance with strange, unknown elements, giving a wide play to fantastic notions and fears. These prejudices exist among them even toward their own tribesmen who live in more remote regions. Thus the Gilyak of the western shore of Sakhalin are wont to represent their tribesmen of the Okhotsk shore as little short of cannibals, at any rate as extremely evil and inclined to theft, although this is the purest prejudice, the result of ignorance or generalizations from single cases. In the very same way after the first expeditions of our Cossacks in the seventeenth century the Gilyak called the Russians nothing other than kinr (devil), but then the Cossacks gave abundant cause for it, not only by their strange outer appearance, their novel garments and arms, but by a whole string of senseless cruelties and brigands' greediness for "the forties of forties" of valuable fur pelts. But now that the Gilyak have met peaceful Russian people, they recall their ancient "prejudice" as a funny anecdote and can conduct themselves with true humanity toward their neighbors.

● 174 * 614 615

But we have strayed somewhat from our main theme. We can now resume it.

/128 cont./

● 174 * 614 615

Those manifest social habits and feelings which we observ in the contemporary Gilyak, which he indisputably acquired in the beneficial school of social relations, originally developed among the matrimonial clans and from them were gradually transferred first to every tribesman, later to neighbors of other tribes, and finally to man in general.

But the source of social ties between the matrimonial clan akhmal'k and ymgi, as we have seen, is rooted in that wonde ful organization of the Gilyak clan, to the analysis of which we have devoted this chapter. In this evolution from the egoism of the closed clan through ties with pandf'y of other c close by blood, to sympathy and humanity for all men, both close and distant, is contained, perhaps, the most instructive conclusion of our long analysis. From that moment when the rule that a man should marry the daughter of his uncle on the mother's side was established, there was also laid the firm foundation for the extensive growth of social habits and feelings.

/129/

59 114

The Social Organization of the Gilyak

(Family and Marital-Sexual Norms)

I.
Introduction

Upon superficial acquaintance the structure of the Gilyak family and its sexual norms appear to be so simple, conventional, and similar to ours that they can mislead even the serious observer. The well-known academician Leopold Schr who lived among the Gilyak for more than two years and left us the well-known, multi-volumed monograph on this tribe, was profoundly convinced that he was dealing with the ordinar patriarchal-monandrous family. This appeared so obvious to

/165 cont./

582 583 Concerning the primary obligation of marriages between pu and an'g:ej, supporting evidence is offered by another extremely important peculiarity of this form of marriage, namely, the fact that the bride price, i.e., the payment which is received by the father or the brother of the bride and which in the contemporary marriage plays an enormous role in the question of giving a woman in marriage, is here completely lacking or at least plays an insignificant /166/ role. In cases of marriages between cousins of the first degree, not only is a bride price not demanded, but it is even forbidden to mention it during the betrothal.

582 583 • 174 The absence of the bride price in marriages between pu and an'g:ej is clear evidence that the marriage between these categories was at one time an obligatory marriage, and in the case of obligatoriness it goes without saying that there can be no question of any financial obligations.

There is no doubt that the bride price was a later institution. [538] In the traditional poems of the Gilyak, the so-called n'astund, in which the procedure of betrothal is so often described, there is never any mention of the bride price. On the contrary, the "fathers-in-law" usually fill the boat of the bride with all kinds of valuables.

583 174 Remembering what an enormous role the bride price plays in the economic life of the Gilyak, sometimes representing the only resource for giving the economy of a poor man a start, it must be realized that the neglect of the bride price in marriages of the above-mentioned category cannot be caused by reasons of a sentimental nature; the motives for such an attitude toward the bride price must be of a more compulsory character, that is, religious. We shall have to speak about the nature of these motives in more detail later on.

602 606 As an illustration, we merely point out the surprising relations that, thanks to this religious imperative of marriages between pu and an'g:ej, were characteristically established between persons of the class of "fathers-in-law" and their legal "sons-in-law" /zyat'ya/. These relations are surprising

/170 cont./

832 *835 684 627 114 complaint against a local woman, who the evening before had seized him by the leg, on the grounds of which he was demanding "ransom." They summoned the culprit. She confessed and by the decision of the assembly she was obliged to hand over publicly to her accuser an adjudged ransom, namely, a puppy and a birch-bark dish. Why the fine was limited to such insignificant objects (if they were not merely symbols of especially female labor) I explain only by the fact that the guilty woman was entirely alone and did not possess anything more valuable.

834 *835 • [174] [157] /171/ One must keep in mind the fact that the Gilyak are very passionate and by no means like to let felicitous opportunities for lovemaking, even with alien women, slip by, so it is necessary to regard the aforementioned custom as a survival from that epoch when intercourse with alien women was under a religious prohibition. Still more strictly regarded is an affair between persons of prohibited categories; this meets with the censure of society, the reproaches of kinsmen, punishment of the gods, the gnawing of conscience, and inevitable banishment. There can hardly be even any question of a casual passion, and a more serious feeling is regarded as the result of one's being inhabited by an evil spirit, and the persons prefer to kill themselves. Restraint toward persons of forbidden categories has become converted into that same instinct which is felt among us with regard to one's mother or own sister. All the more powerfully is the right to sexual intercourse between the categories of pu and an'g:ej realized. In this respect, one can express oneself about the Gilyak in the

*835

/205 cont./

198 unity of the latter. Life, it is true, has somewhat softened
* 614 the rigor of the prohibition; in some clans at the present
615 time the prohibition covers only those members of clans who are actually married to sisters, but formerly, evidently, the prohibition embraced all the members of both clans; even in its weakened aspect, however, the prohibition leads unavoidably one way or another to some cases of marriage outside the phratry.

The case which we have just discussed is by no means hypothetical; it is repeated in its peculiar form in the daily life of the Gilyak at the present time. As an illustration of this, we may use the legal case which we introduced earlier, with the consequences that follow from the marriage of two persons of different clans to two sisters, where one man is from the akhmalk clan and the other from the ymgiui clan. . It is of interest to repeat here that in this case group marriage among several clans is no longer allowed, but the children of these marriages are considered tuvn and cannot marry each other.

Thus, the depopulation and the thinning out of the people of a clan leads to the following extremely important consequences: 1) allowing free marriage to a woman not from the clan of one's mother begins; 2) members of one and the same clan can be married to women of different clans; 3) a man and his "brother-in-law" /syat/ (navkh, brother of his brother's wife, i.e., brother of his own wife) may not be married to sisters; 4) finally, thanks to free marriages, the old four-clan phratry entirely loses its limits, for, as we shall see further on, to every clan into which even one member of the phratry has become related by marriage are extended those same rights and obligations which pertain to a clan of the phratry, and thus it is as though this new clan were adopted into the old phratry.

198 For a certain time, the "free" marriage was a more or
* 614 less /206/ exceptional phenomenon, called forth by condi-
615 tions likewise of an exceptional character. In its way stood a huge obstacle -- the religious imperative which prohibited

/206 cont./

* 194 giving women to clan members. The procuring of such women
195 presented great difficulties. As a result of this long struggle
614 for the women of alien clans -- a struggle about which it will
[593] be necessary for us to speak in detail later, there appeared the institution of the "bride price," payment for the bride -- an institution which removed all obstacles to free marriage.

But once having appeared, the institution of the bride
194 price became, in turn, a powerful factor for the spreading
585 of the institution of the free marriage.
* 614 The bride price became the most powerful temptation
615 for violating the old norms, even in cases where there was no necessity for their being violated.

For poor people, daughters became capital, and the rich, who came into being with the establishment of trade relations, began to look on the free marriage union as a means of satisfying their ambition and of becoming related to people who were their equals in wealth and distinction.

And nevertheless, notwithstanding all the unfavorable
* 614 circumstances, notwithstanding the intrusion of the new in-
615 stitution of "free" marriage, the old norms continue to live
178 and to preserve their power over minds. In the great ma-
[583] jority of cases the old imperative still is stronger than all
[582] the temptations of bride price and of free marriage. In the eyes of the contemporary Gilyak, marriage from the akhmalk clan, from the mother's clan, is still the only "pure" marriage, and the most favored marriage for each individual man is marriage to the daughter of the mother's brother, in which case bride price is not only not required, but is not even allowed. Free marriages are rather sporadic phenomena, which destroy the customary norm for only a moment and then are spontaneously drawn into the ruts of the old norm. This comes about in different ways. In some cases a man may not marry for one or another reason from his mother's clan, but his offspring nevertheless again begin to take wives from the old clan of the ancestress. In other cases, if for some reason a return is not possible, then the alien clan from which the man takes his wife becomes the lawful marriage clan for his offspring, who in each generation

/263 cont./

195 therefore, the meaning of it is this, that 1) a man takes a
196 woman into his possession as his lawful wife; 2) he buys his
58 wife by means of a payment of bride price; and 3) in both cases in the sense of the Roman term -- uxorem ducere, i.e., the abducting of a woman into his house, as is usually practiced at the present time.

At first glance the origin of the feminine term javind, which in this form is only a marriage term for designating a woman's getting married, is not as clear. Its original meaning, however, is not so difficult to make out from forms which are etymologically close to it. First of all we have the form closest to it, the reflexive verb p'ávind = pi + avind, signifying -- "to support oneself," "to nourish oneself," and, finally, "to live," in the economic sense. Here is a characteristic example: nlg-yyvyl' n-hnyl' pri-k pavá -- "a Gilyak himself alone (i.e., singly) lived" (in the economic sense). If several persons are concerned, this verb takes the meaning of "to live together," i.e., to nourish themselves conjointly, to have a common economy. From this comes the adverb p'ávind, -- together. Further, we have the derivative form of the active voice ájvund -- to support someone at one's own expense, to take someone as one's charge, to adopt, to nourish -- in the form of the middle voice it signifies to nourish oneself, to graze (ájvun ekhan -- a grazing cow). Finally, javind, javend means also "to warm" someone (with fire), to shelter.

Thus, the term javind, used by women with respect to a man and at the present time signifying to get married, must originally have meant literally "to take a man at one's
* 194 own expense," "to receive into one's house." If this
591 etymology is true, which one could hardly doubt, then it
[191] follows from this that originally among the Gilyak the system of maternality /materniteta/ prevailed, as it does at the present time among their neighbors, the Ainu, where the husband as a common rule moved into the house of his wife, just as the masculine term gend -- "to take for oneself" -- bears witness to the contemporary form of paternity

/263 cont./

195 /paterniteta/, with the wife moving into the house of her
196 husband. At the present time the original meaning has disap-
58 peared from the consciousness of the people to such a degree that often for the expression "to get married" there is added to the verb javind the verb vind, avin vind, which would mean literally -- "go take a man and support him," but this
* 194 is an obvious contradictio in adjecto, for it signifies moving
591 into the husband's house and, /264/ consequently, being
[191] supported by him. A linguistic remnant of the old form of
196 marriage is shown in the fact that in the old language, as
58 far as the texts indicate, all the terms of joint marital life are expressed by means of forms derived from javind. The reflexive verb v'avind means -- to live in marriage with someone, the joint marrying of two persons, or, for example, ytk menash vavin kuil iymd, i.e., "father ordered us to get married," literally, "father ordered us to support each other." Further, the active verb ájvund is used in the sense of to marry, to have a wife, for example, menyn nuvn an'g-ej n'enyn' ájvuta -- "two brothers lived in marriage with one wife," literally -- "they supported one wife," etc.

In contemporary life there are likewise preserved several
178 remnants of the former maternality. Eloquent testimony
[582] of this is found in the contemporary formula of common
[583] marriage law of which we spoke earlier, namely -- ymgui
[614] ainikh jag-n'idra -- "one must feed the son-in-law," although, according to the general rule, the son-in-law takes his wife to his home and lives apart from his mother-in-law.

Clearly, such a formula could only arise in a system
[191] where the son-in-law either moved into the wife's house for good, or, as among the Ainu of today, he regularly came to live at her house for a certain length of time, and it goes without saying that the wife's family was obligated to feed the son-in-law on the same bases as those on which at the present time the husband's family is obligated to feed his wife.

/265 cont./

602 preserved in the form of remnants even among peoples who
604 by now have shifted to paternity, for example, the peoples
191 of the Caucasus, where a tribesman has the right to steal his uncle's horse, if the latter refuses to give it as a gift. Among the Altaians the saying that "a tribesman is worse than seven wolves" has been preserved to this day.

Moreover, the role of the brother in giving his sister in
584 marriage is quite characteristic. In many cases, it is not
593 the father, but the brother who plays the main role in this affair; the marriage of a sister depends on him, and the bride price is handed over to him.

Not a few other extremely indicative traces which may
* 194 be considered remnants of maternality have been preserved
196 in the language and customs. Thus, if a Gilyak wishes to say
591 that he is married, that he has a wife at home, he says:
[191] n'i-umgarvo ivá, literally "I have a wife's village" (n'i -- I, umgar -- wife's, vo -- village, ivá -- there is), an expression completely corresponding to the present-day way of life of the Ainu, among whom to this day maternality has been preserved, and where husband and wife live in different settlements, and the former shows up to live with her for several months, and then he returns to his own settlement, so that a man has, besides his own native settlement, still another settlement where his wife lives.

Another example: the term for designating a person's origin, namely, ymgui, literally "from old birth." This term indicates not the clan of a man, as would naturally be expected under the contemporary agnatic system, nor the settlement in which he was born, but the place of his mother's clan. It is interesting to note in this case the reverence with which the Gilyak regards the homeland of not only his mother, but also her female ancestors. No matter how distant such a settlement might be, every man tries to find an occasion to visit, and more than once in /266/ Gilyak companions during the time of my travels amazed me by the tenderness and

/266 cont./

* 194 reverence with which they approached a settlement where,
614 according to them, one of their female ancestors had once
615 lived.
186

In several places to this day, to a question about origin, the Gilyak point to the places from where their mothers and wives came. For example, in the settlement of Nyyvo at the mouth of the Tym'river on the eastern coast of Sakhalin, they reply to the question about the origin of the inhabitants of that settlement, "We are Nyurskie," i.e., come from the settlement of Nyur, which is on the northernmost tip of Sakhalin, and, when I asked for an explanation of this strange answer, it was explained to me: "Because we take wives from Nyur."

Thus, these people reckoned their origin according to the place of the homeland of their mothers, for, as we saw above, the wives of the Gilyak are taken predominantly from the clan of the mother. I shall introduce still another interesting remnant.

Usually at the present time children are given names
553 according to the clanmen of the father. Such is the general
184 rule, but there are still places, for example, the settlement
614 of Nanivo on the west shore) where they give names according to the brothers and clanmen of the mother; thus, it is as though the children were members of the mother's clan.

All these are remnants which are entirely out of line with
602 the agnate organization of the contemporary Gilyak clan,
614 but they are remnants which are intimately bound up with the
194 present-day psychology of the Gilyak. For the Gilyak them-
[582] selves they are not remnants; this is made clear mainly by
[614] the marriage norms, according to which spouses are cousins, the children of brother and sister, and the members of each clan preferably take wives from one and the same clan, so that the psychologies of paternity and of maternality cross each other, and in the main between male and female lines there does not exist that gulf which is present in those agnate organizations where the Gilyak form of marriage are not in effect.

/270 cont./

177 in one's own wealth, although it only amounted to the
[585] possession of several pieces of silk material, Japanese sabers,
[582] and so forth. There appeared on the scene a tendency toward
[584] differentiation. The rich man desired to associate with and
[585] become related to only rich people. In the question of the choice of a wife there appeared new dictates. One demanded of a wife that she be from a family of equal wealth and, consequently, of an equally high social rank. And now, even in the adjective "ry'gunal" -- legend -- there is heard in matrimonial dealings the expression: "He (or she) is not my
178 equal." On the other hand, wealth allowed one to manifest
556 a special fastidiousness in the choice of a wife, to seek
58 women who were famous for their special qualities, who
614 were outstanding for their beauty, their domestic talents, their artistry in sewing, and other feminine tasks. But once marriage came to be practiced between members of alien clans, the former simplicity of concluding marriage vanished. There appeared on the scene the new institution of bride price, which introduced into the institution of marriage the element of purchase-sale; besides this, marriage between persons of alien clans demanded preliminary negotiations and the procedures of betrothal. We now turn to these institutions.

The terms of betrothal. The procedure of betrothal is ex-
192 pressed by various terms, denoting literally, "to agree, to
584 come to an agreement about the bride"; hence, the matchmaker -- "the man who makes an agreement"; bride -- "future wife"; groom -- "future husband." For us, the terms for groom and bride are particularly interesting. With orthodox marriage there is no special term for groom and bride, for according to the right of birth the groom is called
* 194 pu -- husband, and the bride -- ankej. The term jokh,
which is used nowadays to designate the bride, is entirely inadmissible with orthodox marriage, for, as we have seen, with orthodox marriage jokh is a term of prohibition for sexual intercourse. Thus, the term itself shows that the procedure of betrothal arose after the weakening of the regime of orthodox marriage.

/272 cont./

584 The bride is not present during
184 the betrothal, the mother has the
[171] absolute right of veto, and the
kinsmen play no role.

last moment, when the bridegroom arrives to take her home
584 with him. The disregarding of wishes of the daughter is not
• 194 at all, I believe, the result of the newer stage of marriage
accompanied by bride price, where the parents have motives
of self-interest in the choosing of a bridegroom; it is rather
a remnant of the orthodox marriage, where from her very
childhood a girl was destined by obligation for one definite
person or limited group of persons, and there could be no
question of full freedom of choice, all the more because the
marriages were actually concluded soon after birth.
584 The procedure of betrothal. In the procedure of betrothal
among the Gilyak we find features which are repeated with
remarkable similarity among the most diverse peoples. The
procedure of betrothal is a true diplomatic war surrounded by
a whole series of military stratagems. In serious cases, when
the matter involves a very wealthy and renowned girl, the
matchmakers try to catch the other side unawares and at first
conceal the object of their coming. Arriving at the house, they
say that they are passing by. Casually they bring out vodka
from their travel provisions. The unsuspecting hosts readily
accept the treat, and, when they are in a good mood, the
matchmakers begin to recall that they are old friends of
the host, that he has never refused their requests, and they
hope that in the future they shall not meet with refusals.
The host, suspecting nothing, promises zealously to assist
them with everything at his disposal. And here they take
him at his word and come to the point. /273/ He can no
[605] longer decline, for he has given his word. In order that the
host may not repudiate his promise, the matchmakers have
taken timely, precautionary measures to invite witnesses.

/273 cont./

584 Lakkan: Whatever I have, (with it) I am ready to aid thee,
583 although I have nothing.
539 Pevn: If thou hast something, wilt thou not pity me, wilt
thou not wish to help?
Lakkan: To this day I have refused thee nothing, is it not
so?
Pevn: Of course.
Lakkan: If thou shalt have something, thou wilt have
pity on me. Once thou shalt have something, I shall also
have, is it not so?
Pevn: If thus hast thou spoken, it gladdens me. Thus in
truth thou art ready to give me what thou hast?
Lakkan: What I have, if thou shalt ask, I am ready to
give thee.
After this the matchmaker again pours the drinks and,
finally, unexpectedly announces: "Thou hast promised to
give me what thou hast. Now you have a daughter, I have a
son. Let us become akhmalk'i."
To this Lakkan replies: I have already given my word to
others.
Pevn: What if you did give your word to another man?
You also gave your word to me before witnesses. I will go to
court with you.
583 After such preliminary negotiations, they proceed to the
[584] business negotiations concerning the bride price.
Bride price and dowry. In the Gilyak institution of the bride
price, payment for the bride, the term that the Gilyak call
this institution is extremely characteristic. This term, I be-
lieve, throws light on the very origin of the institution.
• 194 In the Gilyak language bride price is expressed by the
583 word az', az'r from azimynd (?) -- to give as a gift, so that
192 literally az', az'r means a present, a gift, which the family
or the clan of the groom gives to the family or the clan of
the bride. That this term was not formed by chance is shown
[628] from the following. In other ritual cases where compensation
with valuables is obligatory, for example, in the case of
ransom -- damages paid for an abducted woman, for a
murdered man -- the term used is jus'kind, which means

/275 cont./

194 "to pay." It is curious that this very word /276/ jus'kind -- "to
192 pay" is derived from the word us'kind, which in the middle voice
583 is a synonym of ukhskind -- to fight, to war (jus'kind is merely
628 the active voice of this same verb). In other words -- us'kind was
originally an institution of revenge, later replaced by ransom --
peacemaking for a payment of damages. This evolution can still
be traced even now in the epos. In one poem written down by
me, where the hero has gone to take revenge for his murdered
father, they ask him on his return: Pytk us'kind joylo? -- "Did
you fulfill us'kind for your father (literally us'kind -- 'fulfill'),
did you take vengeance?" He answers: "ulk shukhra" -- "I
killed them all." Here the term us'kind is used in the sense of the
act of blood revenge. But in another poem the same term is used
in the sense of ransom. "Kym nafdh us'kim -- "For their (slain
companion), they paid damages, ransom."
583 From all this it is clear that the bride price in its original
194 sense was not at all a payment for the bride, but a gift, although
431 obligatory. But this becomes obvious from the fact that this gift
was by no means one-sided. For the father of the bride it was
583 just as obligatory to give, in addition to the dowry, a post-
431 wedding gift to the groom, and these gifts of clothing continue in
various values for several years, and they were very often no
less than the bride price (1). It is considered a disgrace not to

[126] 1. Here is an illustration of the in-
stitution of the bride price as an in-
stitution of mutual gift-giving, one
of many examples which I wrote down.
An elder in the settlement of Fomr,
a man who was not well-to-do, gave as
bride price for his daughter /sic/ two
Chinese kettles, one japanese /kettle/,
and five dogs. In exchange, the
father-in-law sent his son-in-law two
Chinese robes and for two or three

/277 cont./

583 of safety from evil magical influences) and social, as a symbol
182 of friendship, analogous to the exchange of gifts upon the con-
clusion of ceremonial brotherhood. We see from the rites which
are observed when the bride moves to the home of the groom that
the Gilyak give a socio-religious significance to such symbolism
of new relations.
And it is also possible that into the concept of bride price
there was introduced an element not only magical, but also purely
religious. Giving a woman in marriage to a clan not orthodoxly
prescribed was taboo, and every violation of a taboo, according
to the logic of primitive man, should be atoned for in some way
-- if not by blood, then by valuables. Bride price from this
point of view appears to be tribute for appeasing the souls of the
ancestors offended by the violation of the clan taboo. By this
[686] alone can one explain why the Gilyak react just as strongly to the
[682] nonpayment of the bride price for a woman as they do to the slay-
ing of a clansman. The obligation to receive satisfaction in this
case, as in the case of a killing, extends to the third generation
in the whole clan.
583 For the sake of obtaining this, persons are ready to take the
786 same risk and deprivation as in carrying out an act of blood re-
538 venge. The heroic exploits of such persons who have undertaken
long and dangerous treks into the most remote places are one of
the most common subjects in the epic works.
583 The objects used for bride price and the conditions of payment.
422 An object that is part of the bride price is usually a particular
kind of valuable, an object sui generis, the so-called shagynd
[439] (E.D.), shygynd (W.D.). These are valuables which are pre-
dominantly obtained from the Chinese and Japanese by trade.
Among these objects are: Chinese silk garments and pieces of
material, Chinese fur-coats, several articles of nephrite,
Manchurian spears inlaid with silver, Japanese sabers, and also
big, cast-iron kettles. Besides this, objects of this class include
fox and sable fur-coats and feminine articles of adornment. In
• [194] ancient times, evidently, axes, too, /278/ at first stone, later

422 /278 cont./
583 iron, served as objects in the shagynd (1).
• [194]

[193] 1. The following splendid legend gives
evidence concerning this. In the cen-
tral section of Sakhalin there is a moun-
tain, Kryus' pal, and along side of it
another, somewhat smaller mountain,
the "wife" of the latter, who has run
away from him and hidden her shagynd.
Three riverside rocks represent the dif-
ferent objects of the shagynd. One bears
the designation Wa-ul-ŷif, meaning
"place where the Japanese saber is
buried," another Wyn-ul-af -- "place
where the kettle is buried," and the
third, Kys'okhty -- the butt of the ax.

583 These are objects which are unalienable, extra commercium.
422 Only in exceptional cases of extreme poverty or the absence of
556 clansmen is the alienation of objects of the shagynd category
735 allowed, and even then only a part of them. A poor widow in the
554 settlement of Pilavo, who had sold her only daughter, answered
my question as to what she was going to do with the shagynd in
this way: "Part of it I shall sell, and the remainder will go with
me to Mlyvo -- to the world beyond the grave." They are pre-
served for only exceptional cases in the life of the owner -- for
the payment of blood money on account of a slaying, or when
one must marry off one's sons and pay a bride price or give a
dowry to one's daughters, and, after the death of the owner --
to accompany him to the world beyond the grave. Only such ob-
jects figure in the bride price of rich persons. But among persons
of lesser means, the bride price is made up of valuable utilitarian
554 objects -- boats, guns, dogs, and so forth.
583 Rich people, seeking a large bride price, are guided mainly
735 by ambition, for obtaining a rich bride price is the best evidence
[556] of one's own wealth. For a poor man the bride price is his only

583 /279 cont./ Along with the distribution of the bride
582 price within the family, customs of a completely exceptional
character are preserved, clearly testifying to the old orthodox
form of marriage. Namely, part of the bride price is given
to the "old akhmalk," i.e., to that akhmalk with whom a given
family has concluded orthodox matrimonial unions. Thus, for
example, if in the course of several generations family A has
taken wives from family B, i.e., the sons of sisters in each gen-
eration have married the daughters of their own brothers, then
every time the family gives in marriage any one of its women,
who, as we see, are forbidden to the men of family B by virtue
of the unilaterality of the cousin marriage, and receives bride
price, then a part of it is given to the eldest one in family B,
usually to the brother of the mother of the woman who has been
given in marriage, rarely to the father of the latter, if he is
alive. It is curious that the family of the groom presents this
gift to the old akhmalk as part of the bride price. This custom
is practiced in a still more striking form. They give their infant
sister to the brother of their mother, or their daughter to the
brother of their wife, in order that these persons may afterwards
receive the bride price for them, but participation in the dis-
tribution of the latter may not be demanded. "It is better to
propose one's daughter or sister to the old akhmalk oneself,"
the Gilyak usually add when they are talking about this custom,
"than to wait for a request about the matter." And this is not all
if a mother has several brothers and a nephew has several sisters,
then one /of the sisters/ is supposed to be given to each /of the
[171] brothers/. What is the explanation of this strange custom? We
have a completely analogous case among the Tamil, where the
mother's brother also receives a part of the bride price when the
woman is given /280/ in marriage. But among the Tamil cousin
marriage is bilateral, so that if a man's sister does not give her
daughter in marriage to the son of her brother, she thereby
breaks the law; but among the Gilyak cousin marriage is uni-
lateral, and for the son of the brother of the mother the daughter
• [194] of this last is forbidden. But why then does the mother's brother
have such preference? Here a double explanation is possible:

4 marriage among the Gilyak appeared to replace the m
bilateral one when every maiden was obliged to marry
of her mother's brother, and thus the custom which we
serving is a remnant of a more ancient norm of marria

33 I turn now to the other principal obligation, the
to the institution of marriage -- to the dowry.

33 For the dowry the Gilyak have the term jokh sho
56 fying literally -- "the thing which is brought by the br
woman." The dowry consists mainly of various types o
and ornaments. The dowry of a rich bride consists of a
ment of valuable fur-coats -- fox and sable -- and silv
lets, expensive earrings, Chinese pipes, and also rich,
and decorated dishes, including an assortment of artisti
decorated birch spoons. The mother usually gives her
her daughter, and sometimes also a bed, but for some
one must not give away pillows. They begin to prepar
dowry in the very earliest years and continue up until t
of the maiden. This is called jokh wakh -- "to get th
ready." They lay away the dowry in good time in sac
with the family valuables, among which, in a well-to
the bride usually sits solemnly. The size of the dowry
should be proportional to the size of the bride price.
gossiping women talk about one or another wedding, th
3 to a "rich" and a "poor" dowry. It is considered a ma
6 greatest pride to provide the daughter with a male or f
7 slave besides her things. In the clan of a Gilyak of my
Yuskin, they gave to a maiden as part of her dowry a
slave (akh), whom they provided with a Japanese sabe
ing the soles of her mistress' boots. Especially ambiti
people set aside a separate house for their daughter-bri
a slave, who is later given to her as dowry, is put in it t

33 The dowry, although it is compensation for the
22 price, since it frees the husband from great expenditur
wife, is nevertheless exclusively a gift to the bride, h
property /281/ to which the husband has no rights wha

/247 cont./

[101] ...ring up even between primitive peoples is curious and yet characteristic. The Tungus with indignation and proud contempt [102] ...nomenon deny their kinship, not only with the Gilyak, but even with the Orochon, saying: "We are the Tungi's people and [103] ...ortified, while the Gilyak and the Orochon are dogs."

The Gilyak themselves include themselves in the Mongol-Manchu tribe, asserting that the Gilyak and the Manchu are [104] "chal-nyakhs" ("chal" — clan, people, tribe; "nyakhs" — one). The Gilyak also consider the Chinese and the Japanese [105] ...inded people, saying that a Manchu was "yik-ungi" (father, [106] ...nscous, man), and a Japanese was "yakh-ungi" (uncouteous, [107] ...ungi, an ancestor which with the Gilyak means "man") only [108] ...low. The Sakhalin Gilyak speak a language in common with the [109] ...language of the Gilyak /249/ living at the mouth of the Amur [110] ...and on the continental coast of the Tatar Strait, but quite distinct from the language of the lower Amur Gilyak and the Tungus. [111] ...ter the question of the appearance of the Gilyak on Sakhalin, there is no doubt that they are arrivals from the continent. The materials of the 1881 census and observations and interviews with the Gilyak equally confirm in this case a conclusion which could have been made a priori. The census firm of [112] ...d proved that the settling of the island by the Gilyak went from the north to the south. The ancestors of the Gilyak of the settlement of Tyka, for instance, came from the settlement of Nyur, [113] ...ated in the northernmost settlement on the western shore of Sakhalin. Of the two foremost clans in the settlement of Arkyyvo, [114] ...ame from the settlement of Nyamlun (in the north of Sakhalin), the other from the settlement of Tangu, whose inhabitants in turn belong to the ancient clan of the settlement [115] ...of Chorra (on the continent, etc. The census further proved [116] ...that clan of the Sakhalin Gilyak is only a branch of a clan [117] ...living on the continent. Moreover, the Sakhalin language, religious beliefs, customs, and morals and manners of the [118] ...Sakhalin Gilyak are identical with those of the Gilyak of the [119] ...continental coast.

/248 cont./

[120] ...ion, it can be seen that the present time the Amur Gilyak are in the habit of setting out for Sakhalin in their heavy boats [121] ...each autumn to hunt for sable. Some travel to Ayamo, others [122] ...to Mauko, still others further to the south. The sable in their [123] ...homeland is incomparably better than the Sakhalin one, but he [124] ...is to have and those who hunt him are so many that the Gilyak [125] ...prefer to leave their family hearths for as long as six months and [126] ...to subject themselves to all the dangers of a thousand-versta [127] ...voyage, striving toward those tempting areas where the population [128] ...is sparse and sables are plentiful. In the Amur Gilyak land, in early [129] ...spring, loaded with their rich catch, they return to their distant [130] ...hearths. These journeys to the south of Sakhalin are of comparatively recent origin. As late as one hundred years ago the [131] ...ancestors of the present-day sable hunters did not travel beyond [132] ...Cape Ei and the Tyrmi River, and at the time of Ekaterina, the [133] ...northernmost point of their hunting. There is no doubt at all [134] ...that in former times sable-hunting was carried out even farther [135] ...to the south. There must have been some reason which compelled the Amur Gilyak to travel farther and farther away from [136] ...their homeland and to spend more and more time in their hunting [137] ...activities to the very south of Sakhalin, where the sable is quite [138] ...rare and where their catch must be paid for by the fur from [139] ...Asia the hunting territories which they now use. /249/ The [140] ...reason is to be found in the gradual settling of northern Sakhalin [141] ...by Gilyak from the continent. Gulgulyay, the ancestor [142] ...of the contemporary Sakhalin Gilyak, like the Amur Gilyak of the [143] ...present day, traveled to Sakhalin in companies of hunters only [144] ...in the season for sable hunting. Here they set their numerous traps [145] ...on the basis of some stream and placed snares along the natural [146] ...game paths in the mountains on the other side of the river to the [147] ...other. It is not surprising that an annual pilgrimage to the [148] ...same area for hunting ended in permanently settling on this island [149] ...with its sable.

/249 cont./

[150] ...Northern Sakhalin was especially favorable for resettling [151] ...in a pioneering fashion, not only because of its good land in [152] ...called Sakhalin by the Gilyak, which is additional evidence as to whence and in what direction the settling of Sakhalin proceeded. [153] ...In the first place, these were the places closest to the continent; [154] ...half a day's trip between the shores of the strait. Moreover, in addition to an abundance of sables in northern Sakhalin, [155] ...like Gilyak from the continental coast found other living conditions completely identical with those on the continent: the same [156] ...abundance and rich variety of fish (Siberian salmon, kalugu [157] ...Pleco dogfish), sig /a species of salmon/, carp, etc.), an abundance of game, and the same climate. In early times, the only ones who found it disadvantageous to leave the hearth of [158] ...their ancestors for the sake of a pioneering life in a new country, [159] ...were those who had no hunting and fishing reservations by the Russian settlers and forced to bear the entire burden of free [160] ...tribal transportation, the Amur Gilyak. These were, of course, [161] ...still other reasons which induced the continental Gilyak to move [162] ...to Sakhalin. Some were driven by enmity of wooden conflicts between clans, and so forth. One of these reasons may have been [163] ...the Manchu reign with its mandatory annual tribute of a sable [164] ...for every person over twenty years of age. The sable was three [165] ...or four times more expensive than it is now, while the Amur [166] ...Gilyak is still very expensive, one variety, for example, the Angun, costs 25-30 rubles). The legends of the Gilyak themselves about their former relations with the Manchu are of [167] ...interest. "We were settled," the Amur Gilyak said to me, "on the basis of the Amur by the Manchu, as tax men, with the title of 'hetman,' and we were obliged to pay them one sable [168] ...per person every year." Moreover, every time a Gilyak went [169] ...to the Chinese town of Sungari (Sahlinq), he was forced to pay [170] ...a sable /250/ for the privilege of entering the town and then also [171] ...to pay a sable for the privilege of being allowed to trade. The Orochon were also in the same position. Manchu [172] officials made a census of the population, and every year in the summer they would come to collect the sable tribute. The [173] Sakhalin Gilyak were free from this tribute, but eventually the

/250 cont./

[174] Manchu reached them also and installed elected starosti. There [175] was such a starosta, for example, in Tangdi. It was from the Manchu that the Gilyak used to obtain all those objects which they [176] could not produce themselves.

I shall not at this time enter into the question of how long [177] the Gilyak have inhabited the island. I shall only say that when [178] the first settlers appeared there they must have been in possession of the entire economic inventory which they had brought with them [179] (with the exception, naturally, of firearms). Needless to say, [180] the Gilyak could not have existed on Sakhalin without boats [181] and boats, without trained sled dogs, and without iron tools. [182] No fish-hooks or fish-spears could be made in areas which were especially favorable, at least with regard to fishing. It may [183] be that the Amur River was such a cradle.

[184] The Sakhalin Gilyak, like their fellows on the continent, [185] have taken many very basic things from their civilized fellows. [186] They have replaced the bow with the gun, their dishes made of [187] wood and birch bark with metal kettles. They have given up [188] artfully work with carpenters' and cabinetmakers' tools. They [189] build yurts in the Manchu style and adorn them with numerous [190] chimneys of stone. They market Japanese sabers and they preserve [191] for person to person some ancient silver idols. They wear robes [192] and skirts made of Chinese and Russian fabrics, they drink tea [193] and bell rice and beds (a special variety of grass). They have [194] begun to plow and sow, and they have begun to raise pigs. Perhaps, completely adopt the culture of their civilized neighbors. [195] What did they stop in their own independent cultural development?

[196] Of all the borrowings made by the Gilyak, the use of iron [197] is the most important and the oldest. Because of their isolation [198] from the centers of civilization, however, it has come to them [199] in very limited quantities. Iron was so dear that they have to process one, but are even incapable of making tools. Until recently iron itself was very expensive among them. These boats and sled do not contain a single iron nail, though the Gilyak

/251 cont./

[200] ...permission, the emigrant hunts a yurt, fishes, kills seals, hunts [201] ...sable, etc.; only the streams are prohibited to him for the setting of snares for sable.

[202] /253/ Only in exceptional cases does the Gilyak live [203] alone with his family in the yurt. Customarily he lives with his [204] brothers and clansmen, sometimes with his father-in-law, more [205] rarely with members of other clans. The winter yurts of northern Sakhalin are frequently enormous, holding as many as 50 people, [206] frequently all related to a common ancestor. The bonds of communal dwellings consists in the fact that heating, which consumes [207] a great deal of wood among the Gilyak by reason of the unsatisfactory construction of the present dwelling, is carried out individual taken separately. Moreover, these dwellings guarantee security from abduction for the women, who, in comparison with the [208] creation of foodstuff. He does not plant or sow, or raise domestic animals for meat. This is the fundamental feature of a [209] tribal transition, the Gilyak, which, by the way, proves that all those who live in the yurt, temporary or permanent inhabitants, [210] clansmen or members of another clan, who have lived in dwellings, all live in the yurt without any compensation to the builders, [211] and it is known that the latter enjoy any special privileges in obtaining firewood. If the yurt is abandoned, the owner [212] will always be found a pair of persons who can then only intentionally undertake the construction of a new yurt, into which the builders themselves move and gradually welcome co-dwellers. Thus, [213] the dwelling of the Gilyak is, it is true, the common property of several families who participated in its construction, but at the same time it is an object of gratuitous utilization by clansmen [214] and, in general, by anyone who desires it. This is a vestige of the time when the dwelling was built by the joint efforts of the clan and was an object of collective property.

The views of the Gilyak concerning movable property are perfectly clear and strictly defined. The ordinary articles of movable property are: boats, sled, sled dogs, harness, nets, dogs, sleds, supplies of dried fish, etc. It often happens that a boat, a net, or dogs are the common property of two or three

/277 cont./

[215] ...Russian settlers, etc.) only the streams are prohibited to him for the setting of snares for sable.

[216] /278/ Only in exceptional cases does the Gilyak live [217] alone with his family in the yurt. Customarily he lives with his [218] brothers and clansmen, sometimes with his father-in-law, more [219] rarely with members of other clans. The winter yurts of northern [220] Sakhalin are frequently enormous, holding as many as 50 people, [221] frequently all related to a common ancestor. The bonds of communal dwellings consists in the fact that heating, which consumes [222] a great deal of wood among the Gilyak by reason of the unsatisfactory construction of the present dwelling, is carried out individual taken separately. Moreover, these dwellings guarantee security from abduction for the women, who, in comparison with the [223] creation of foodstuff. He does not plant or sow, or raise domestic animals for meat. This is the fundamental feature of a [224] tribal transition, the Gilyak, which, by the way, proves that all those who live in the yurt, temporary or permanent inhabitants, [225] clansmen or members of another clan, who have lived in dwellings, all live in the yurt without any compensation to the builders, [226] and it is known that the latter enjoy any special privileges in obtaining firewood. If the yurt is abandoned, the owner will always be found a pair of persons who can then only intentionally undertake the construction of a new yurt, into which the builders themselves move and gradually welcome co-dwellers. Thus, [227] the dwelling of the Gilyak is, it is true, the common property of several families who participated in its construction, but at the same time it is an object of gratuitous utilization by clansmen [228] and, in general, by anyone who desires it. This is a vestige of the time when the dwelling was built by the joint efforts of the clan and was an object of collective property.

The views of the Gilyak concerning movable property are perfectly clear and strictly defined. The ordinary articles of movable property are: boats, sled, sled dogs, harness, nets, dogs, sleds, supplies of dried fish, etc. It often happens that a boat, a net, or dogs are the common property of two or three

/104 cont./

[229] ...vague and incorrect all the modern Russian reports concerning the southern border of the Gilyak on the Amur are. Some generally this border is put deep in the Olcha area, even in the Goldi area and in the latter up to the Usuri (1). The chief reason for this

1. See above, p. 51 and p. 183, note 1.

[230] ...lies in the fact that even today the designation "Gilyak" is often used by the Russian as a collective name for all the dwellers living along the Lower Amur River and the adjacent seacoast. For the Russian, the Gilyak are the same as the Tungus are the Goldi. and, as I myself became convinced, even the Orochi of de Castries / De-Kastri/ and Kaiarkhafen simply Gilyak. A traveler, for example, who had his arrangements on what was said by Russian settlers or Cossacks -- and many have done it -- could see nothing but false information about the territorial boundaries of the Gilyak and the other peoples named above. But even a traveler like Boschmak /Bodmak/, who clearly and correctly indicated the boundaries of the Gilyak and the Goldi, falls for him. Mangun on the basis of the radical difference between their dialects of languages, nevertheless, considers the Orochi part of "Kidzi-Gilyakan." though there are no Gilyak in the narrow and true sense in Kidzi at all (1). The use of this designation

2. See above, p. 52, note 2.

[231] as a collective name for many peoples of the lower-Amur region often renders the oldest Russian reports useless for an investigation of a possible shift of the habitation sites of the Gilyak and their neighbors. just as is the case. for the same reason. for all the Russian reports concerning the Amur Tungus.

While, according to the above discussion, there appears to be no doubt but that the Russian name Gilyak for the people around the mouth of the Amur some from the Chinese Kile or Kileng. the question remains as to how the origin of this latter

/104 cont./

[232] ...designation is to be explained. Unfamiliar with any kind of linguistic research. I shall permit myself in this connection. only to express a surmise to which I have been led by special facts. It is readily observed that many names of Tungusic peoples, tribes. or his groups have a final syllable gir. Corresponding the many examples of this kind among the Tungus of Siberia (1). I

3. Many such names may be found among the Tungus tribes from various regions of Siberia enumerated by Georgi (Georgi. "Allgemeine Nachrichten von Russ. Reiche im Jahre 1772 /Notes on a Journey in the Russian Empire in the Year 1772/, Vol. I. St. Petersburg. 1775. pp. 244-248).

give /105/ as examples among the Tungus tribes living or roaming in the Amur region the Mangiu. Ulkagir. Bogagiu. Lalgiu. Gorgir. Yengir. Bagir. Bagir. Bagir groups of the Nogiu. Jurki. Ju. Mulkogir. Turbutkhakagir. Nikuskagir. Tschumkagir (1. etc/(2).

1. Middendorff (Reise. etc., Vol. IV. p. 1183) erroneously writes the final syllable Mulkogir. Turbutkhakagir. Nikuskagir. Tschumkagir.

2. When this final syllable occurs in the name of a non-Tungusic people, such as Yengir. we then I suspect that the name is of Tungusic origin.

It is noteworthy that these are all dwellers along the left. northern and western tributaries of the Amur River. I do not know of any Tungus who. on the basis of this fact. gives vocabularies at my disposal (3) give no information concerning it.

3. Klaproth. Asia polyglotta. linguistic atlas. Prtia. 1823. pp. XLII ff. Castren's

Grundzüge einer Tungus. Sprache nebst kurzem Wörterverzeichniss /Principles of a Tungus Grammar with a Short Vocabulary/. ed. by A. Schiefner. St. Petersb. 1856.

3. Many such names may be found among the Tungus tribes from various regions of Siberia enumerated by Georgi (Georgi. "Allgemeine Nachrichten von Russ. Reiche im Jahre 1772 /Notes on a Journey in the Russian Empire in the Year 1772/, Vol. I. St. Petersb. 1775. pp. 244-248).

[233] ...Tungus and the Tungus. Although the Gilyak in the ...ordinary sense. the Russian designation Kiljaki and Gilyaks. And that there is no doubt. if my surmise is correct. the strange fact that the collective name for a number of almost exclusively Tungusic peoples. tribes. and groups of the Nogiu. ...Tungusic word by the Chinese. is at present limited to the one people who throughout the entire lower Amur region is not Tungusic.

After this digression we now return to an examination of the historical accounts concerning the Gilyak and the other Amur peoples. and first of the Gilyak. Very soon after the Russians learned of the existence of the Gilyak. they became acquainted with the Gilyak of the Amur. Already 25 years had [234] 1665. on their first expedition into the Amur region. under Maxilli Poyarkov /Poyarkov/. they traveled throughout the region of the Gilyak on the Amur. Only after a four-days' trip down the Usuri -- which Poyarkov. by the way. thought was the upper Amur -- the Russians encountered the Gilyak and Goldi. and the latter. who had discussed later. the Natkos (Natki) followed. and after them the Gilyak. who. as the report states. occupied the lowermost part of the Amur River to the sea. Poyarkov went through the areas of the latter two peoples in 14 days for each of them. until he reached the mouth of the Amur. where

/111 cont./

[235] they visited the large islands within sight from their coast. [236] barely wooded. and still uninhabited. on which they could peacefully pursue the hunting of the precious fur-animals. [237] sable. etc.. and the productive fishing and animal-trapping along the coast. Indeed. I am even inclined to believe that [238] whereas their westward expansion along the coast of the main land. as we have seen. was first made by the Tungi and later did not go beyond it. they did visit the Shantar Islands. even the westernmost of them. and bear island (Medvéshiy) located beyond [239] Tyuy Bay. At least the Russian Tungus (Tungi) called the Tungus gave to this island. in its unidoubtedly of Gilyak

6. Middendorff. op. cit.. p. 110.

origin. in that "Ngarbach" /111/ in Gilyak means "animal rock"

1. From nga -- animal. and nach -- stone. rock. Middendorff. p. 175. note.

2. Similar Gilyak place names are Tschichachach. Tschurbach. Tchach. etc.

[240] But the Gilyak were surely never very numerous on the Shantar Islands. since the Gilyak population on the adjacent coast of the mainland is very low and since navigation around these islands [241] difficult and dangerous on account of the rapid and changeable currents. the floating masses of ice. the frequent fog. the pounding surf. etc.. It was therefore natural that as soon as the Russians appeared on the Shantars. wintered there. and in fact [242] the beginning of the 19th century. the Gilyak remained away there just as later. in 1820. they withdrew temporarily from the mouth of the Amur River and from the seacoast and up water quarters at the mouth of the Great Ulkon (2). It is very probable

2. Komura. according to the accounts of the priest from Ushkoi Ostrog.

/112 conc./

2. (conc.)
Dzielchowski, who learned it it while travelling through his diocese in the winter 1878/79 (Zap. Ghen Sem., Part VI, p. 38).

that it was because the Gilyak had just seen themselves pushed off the Amoors by the Russians that they appeared so hostile toward them when the latter advanced from there into their territory on the mainland. It is no wonder that they took advantage of their greater number and simply killed off the Russians. Now since, as Maximovich has shown, the trips by the Russians to the Amoor took place during the most intensive time, the Gilyak lost their former hunting territory altogether. It seems, then, that while in the course of time they lost territory on the islands in the northwest of their area of distribution, they advanced on the mainland southward from there to the west.

Much less can be drawn from the oldest human reports from the lower Amoor about possible battle shifts in the south of the Gilyak territory, along the Amur River. In them only the Aljasean neighbors are named, and at most the naming of the required to cross their respective territories is given. Moreover, all these reports are written differently, as has, according to Pojarkof, the further border the Gilyak operators, according to Chabarof the Aincharon, and according to Isepanof the Dyalchonen. The next question is how are these peoples to be identified with those known to us today from the lower Amoor region and how are those apparently contradictory reports to be reconciled.

As Miller (3) and after him Fischer (4) correctly remarked

3. Samml. Russ. Gesch., Vol. II, p. 326.

4. Sibir. Gesch., Vol. II, p. 809.

/113 conc./

2. "Ta-ram ka ki" (Sieboldt, Nippon, VII, pp. 178, 198, note 3 also Nippon 6: p. 102).

Tyre also gave the name as "S'ynta," with which, according to him, the Aina and after them the Japanese designate his people. And this leads us to what I consider the true origin of this name. It comes from the Gilyak. "Jant" or "Tanta" is the Gilyak name for the Gold. Now, since, on the one hand, the Gilyak are the immediate neighbors of the Aina on Sakhalin and, on the other hand, the means of communication between the islands is the trade with the Amur peoples up to Mancha, it is scarcely conceivable that the name could have become acquainted with the most numerous and most widespread of these peoples, the Gold, through the Gilyak, and that the Japanese would then also accepted the Gilyak name for them, only changed slightly in accordance with the Japanese tendency to add the name to the Ohiba, who in their eyes were members of the same people (5).

4. When, therefore, in a Russian document dated 1703, which Middendorff found among papers in the Jakutsk Uchlisch (Reise, etc., Vol. IV, p. 10), Gold is called the Gilyak Tungusic name for Sakhalin is "Jankar," one can only recognize in it, by the name for the island and the final syllables, the above-mentioned Aina designation, bearing the modification of the Gilyak, for the Tungusic Amur region which was unknown to them.

/113/ Though the name Samatan or S'ynta is plainly used by the Aina and Japanese on Sakhalin for the Ulcha as well as for the Gold, this is not the case with the name Ulcha, which is the usual report by Siberia Russ. Along the Amur he only stayed in the areas of the

/113 conc./

2. Gold, Tungusic or Tschelchi (3), Manchu." Now since the

2. Among the Gilyak on the Sea of Okhotsk, Middendorff found the name Tschelchi, however, only plied tung on the Amur (see his travel report in Reise, etc., Vol. IV, p. 1, "Tschelchi," but it, goes village, the one on the Sea of Okhotsk, on the other on the mouth of the Sea of Japan, and both are highly significant today (3).

3. According to Gilyak (Tschelchi, von der Insel Tschalcha /Tschelchi/ Tschelchi, Tschelchi Insel of Sakhalin)," = Beitr. zur Kenntn. der Russ. Reiche, Vol. XXV, p. 1 Tschelchi." Now, the latter village has only one yurt today; concerning the other one, Middendorff, who visited it himself, see above, p. 29, note 1. Incidentally, when Gilyak, which, according to Pojarkof, was a formerly larger population on the Gilyak part of Sakhalin, the remainder consisted of a few yurts at present time only form of winter dwelling, on the island of Sakhalin, however, yurts are found only on the mainland, along the Amur, and on the Sea of Okhotsk, interspersed with huts yurts, and all the other Gilyak parts of the island, only the hut form is found. Because of the distribution of the two types of winter dwellings one may conclude that the south yurt in the original dwelling peculiar to the Gilyak, which was formerly also used generally on the mainland, but later was driven out, little by little and finally completely, from the mainland and in large part which came to relapse back into the historical period in the Amur region and on the island of Sakhalin, where it persisted longer the Gilyak occupy a continuous territory which extends approximately from the lower Amur along the Amur and the Ussuri at most to the sources of the latter, still into the tungusic region. But was not the case in the south—we can hardly assume that the Gilyak, when they first became acquainted with the Gold. When Pojarkof /Pojarkov/ (1646), Chabarof /Khabarov/ (1651), and Isepanof (1653) unanimously that both

/113 conc./

do they have to do with the Amur people at all? In order to explain the "Kordeiker" of Maxim Ismail one need only remember that the Japanese knew of the Amur only at least, which they lack. If one remains the latter and at the same time combines the relationship between the 3 and 4, he arrives at "Kordeiker" and "Codokiza" for that ethnic name. And also everything that has been said above about the Gilyak origin of the Gold-name is report fits the Gilyak.

The correspondence in the designations for the Gold on the part of the Japanese and the Russian points to a common origin of the name. It can only be the Gilyak one. The obvious assumption would be that they call themselves this. In fact, in answer to the question as to what they were or what they called, the latter frequently designated themselves to me as "Gold." Nevertheless, I do not know that they call themselves by this name. This may be only a designation that they use when dealing with the Russians, and perhaps they call themselves by the name when dealing with them, whereas among themselves, Nikjavkh, perhaps the origin of this name should be sought somewhere else entirely. In any case, it is not Gold-ki and it may be that the Gold, but from the Gilyak during his way on Sakhalin. It remained foreign to the Gilyak, and, according to the seventeenth century, to the extent and as a consequence of their contact with the Japanese; they were first acquainted with the Aina through the Gilyak and finally, on Sakhalin and the Kurilen. Since their whole area of distribution /113/ consists of islands which are separated by straits which they cannot cross, the Gilyak, in the initial stage, only spread northward from island to island, the oldest reports concerning the Gilyak are thus only concerning the northern one are for apart, and whereas the former are two and a half centuries old, the latter only go back to the middle of the seventeenth. According to Sieboldt (1), at the time of the founding of Japan

1. Ainu-, an mukamuk, tonichi, no Ainu-, an mukamuk, tonichi, no Ainu-, an mukamuk, tonichi, no

/512 cont./

complicated than the Goldi-Gilyak boats, but essentially and in general are the same in form and construction. For example, like the latter, the Manchu-Chinese boat also consists chiefly of three long boards -- a bottom board which projects for quite a distance beyond the prow, and two side or edge boards, which are bluntly closed off in the rear by a vertical stern-board, and in front, in a pointed prow, by two small boards of uneven length. Furthermore, the way in which the boards are joined and fastened to one another, the way in which the seams are stuffed with moss and covered with strips inside and outside, etc. are the same in both cases. The far larger dimensions of the Manchu-Chinese boats (the bottom board is from 7 to 9 1/2 fathoms long), however, permit or demand certain additions or modifications in contrast to the Goldi-Gilyak boat. For example, the sides are always raised by a second board on either side, which /513/ is attached to the first one from the outside; this is done among the Goldi and Gilyak only as an exception, in case a boat is to be used for a sea voyage. These upper side-boards project toward the rear about a fathom beyond the stern board serving as their support, and at their rear ends they are joined to each other by a plank, but on top are covered with boards placed crosswise so that at the rear end of the boat there is a wide bridge or platform. On this, at the rear edge, are placed two vertical rods, between which the rudder is stuck in order to be controlled by the steersman standing on the platform. The greater depth of the boat given by the considerable width of the lower side-board and the added upper side-board further permits laying a floor made up of crossboards loosely set against one another in the rear part, over which a piece of wickerwork made out of several rods bent into a semicircle and a few horizontal ones is erected, which, covered with reed or straw mats, gives a kind of tent or cabin in which one may sit, or even stand in a stooped position, protected against rain and bad weather. A similar, though much smaller and lower covering under which a few persons may crawl in case of an emergency is found in the frontmost part of

/513 cont./

the boat. For this purpose a long and strong switch is stuck into the continuation of the bottom board there, bent toward the rear over the prow, and likewise provided with wickerwork made out of semicircular and horizontal switches, over which reed or birch-bark mats are spread. Furthermore, unlike the Goldi-Gilyak boat, the Manchu-Chinese boat has fixed rowing benches resting on the edges of the lower side-boards and a like mast-bench, through which the square lower end of the mast is inserted into the mast bearers put on the bottom board underneath it and, superfluously, tied with a cord to the nearest rear cross-piece connecting the lower side-boards to each other. Finally, on the Manchu-Chinese boat the arrangement of the oars is different, in that they are not stuck on prongs, and, accordingly, are not bored, but are set into correspondingly deep indentations in a board attached to the upper edge. They have only relatively narrow blades and on the upper end a transverse handle which is seized with both hands for rowing, always done at only one side. The rudder, provided with a blade that bulges toward the bottom, likewise has such a transverse handle. It is heavy and, when traveling under ordinary circumstances, seems to rest almost immovably, but a slight turn to the right or to the left is sufficient to give the boat the required direction.

This description will suffice to show that the boat of the dwellers along the lower Amur River and that of the Manchu and Chinese along the Sungari completely correspond in their basic features and their construction, and that the former is, so to speak, only the husked and pared down kernel taken, I might say, from the latter. It can hardly be assumed that the Chinese, clinging to their ancient customs, shaped their boat after a pattern borrowed from the Amur peoples standing far below them and provided improvements and additions only in accordance with their needs. And so /514/ there remains only the conclusion, which in fact is much more probable, that, conversely, the natives of the lower Amur region, first the Goldi living next to the Manchu-Chinese and then, through them, also the sedentary Olcha and Gilyak farther downstream, after they had become acquainted with the Manchu-Chinese

/514 cont./

boat on the Sungari as well as on the Amur, began to build their vessels on the same principle and in the same form in that they borrowed from that boat only the basic and fundamental parts satisfying their needs and gave them the small dimensions appropriate to their means and powers. Indeed, this situation is all the more probable inasmuch as the Sungari Chinese, always intent on exploiting the labor power of the natives for their own advantage, had probably long since arrived at the idea of not building their boats themselves, but of having them built by the latter according to a given pattern and in return for small pay, as is done to this day. In particular the lower Goldi and the Olcha living next to them (for instance, those of Adi), in whose regions the wood required, tall cedars, is found in abundance, provide the most and the most highly skilled builders of both the Manchu-Chinese boats and those for their own people and the other peoples of the lower Amur region. Maximowicz saw a Manchu-Chinese boat made to order by the lower Goldi, with an over-all length of eight fathoms and at its greatest width an opening of one and a quarter fathoms, for which the Chinese merchant had paid a jug of liquor two feet tall and a foot wide, three fathoms of cotton cloth, and four sacks of millet groats. Only in one point, as is seen from the above, is there an important difference between the Goldi-Gilyak boat and the Manchu-Chinese one, though in part it is due to the difference in size. It is in the mode of arranging the oars, since the former has bored oars stuck on prongs, while the latter has ordinary oars resting in appropriate indentations on the sides. I am not aware that the first mode occurs among the Chinese or any of the neighboring Siberian peoples; on the other hand, it recurs generally among the Ainu of Sakhalin and Jesso (1) and

1. Siebold, Nippon, VII, Plate XXIII.

therefore may perhaps be an Ainu-Gilyak or general Paleo-Asiatic invention or peculiarity, which was imparted by the Gilyak to their Tungusic neighbors along the Amur, the Olcha and Goldi, and, on account of its usefulness, was also

/514 cont./

transferred to the boat copied from the Manchu-Chinese. The amount of local invention by the lower Amur peoples on their boat is not nearly as large as it might seem at first glance -- rather, we see that, with respect to the nature of the river vessels, just as in the construction of the winter houses and in so many other things, Chinese influence has spread from the Sungari over the whole lower Amur region.

How could it have happened, however, that the so practical and useful boat copied from the Manchu-Chinese pattern and distributed throughout the lower Amur region /515/ nevertheless remained wholly foreign to the upper Amur region which was under its dominance and inhabited by peoples of related tribes? The explanation for this must undoubtedly be sought in the political policy, often mentioned above, which the Chinese government observed in this region after the departure of the Russians from the Amur in the seventeenth century and which consisted of leaving its upper section as depopulated as possible and of isolating it by vast, uninhabited stretches from the Sungari region which was especially important to them (1). For

1. See above, pp. 332, 369.

this purpose the natives of the lower Amur region and, so it seems, also the Chinese traders on the Sungari, were forbidden by them to go beyond the mouth of the latter up the Amur, and, in order to enforce this prohibition, a permanent guard-station was established at the mouth of the Sungari (2). In this

2. See above, pp. 72, 119.

manner communications between the upper and lower Amur peoples on the water route connecting them, and thus also a compromise in the means used for it, was prevented by the measures of the Chinese government. But all the conditions for any possible independent imitation of the Manchu-Chinese boat on the part of the native were lacking in the upper

/515 cont./

Amur region. To be sure, there are Manchu-Chinese boats there, which are used by the Manchu officials and Daur traders, and, indeed, a number of large boats of this kind constantly lies before the city of Aigun -- I myself counted 37 of them, divided into three groups -- but these old boats, painted black and red and decorated at the stern with crudely carved and likewise colorfully painted dragons, which represent the military might of China and are supposed to inbue the Amur peoples with respect for it, are of course, quite inaccessible to the latter. Moreover, these hunting nomads, depending more on the tributaries, are, as was said, completely satisfied with their primitive canoes, and, finally, also lacking there are the avaricious Chinese traders acting as intermediaries as they do along the Sungari and the lower Amur.

In looking back at all the means used by the Amur peoples to move and to get from place to place on land and on water, it seems justifiable to conclude that they show very essential and characteristic differences in the upper and in the lower Amur region, and in the latter have reached a higher development on the whole than in the former -- a fact that in itself shows that here the aims and purposes served by them must be much more far-reaching, and, in particular, that the trade maintained among the Amur peoples themselves and with the neighboring civilized peoples is far more active and extensive here than there, for which, in fact, many examples and confirmations will be given in the following, with a more detailed consideration of these conditions.

226 spongy that it is dangerous to step on it, or is covered with water -- this ushers in the most meager and difficult period for the river-dwellers, since human beings and dogs live on only the scanty remains of the winter supplies. Moreover, all communication between the villages on the Amur ceases at this time. The Gilyak therefore waits impatiently for the opening of the river, when it becomes lively anew and fishing and traffic on it are again possible. The opening up of the Amur River is therefore always a joyful and important event in the lives of the Gilyak and is appropriately hailed by them. As soon as the river is entirely free of ice, a boat manned by as many oarsmen as possible sets out from every village of any size in order to offer it, on a swift journey and amid loud shouts of joy, the customary sacrifices, that is, to toss pieces of jukola, berries, millet, tobacco, and the like into the water. On May 14/26, 1856, shortly after beginning my upstream return trip from Nikolayevsk, I had the good fortune to meet, between the villages of Wair and Magho, such a boat on its sacrificial voyage (see Pl. XXXIX /see p.1009/). It was a long boat with one steersman and 13 oarsmen. The latter, each with two oars, sat in a row up to the prow of the boat. Above them rose three light racks, each consisting of two upright rods connected at the top by a crosspiece. The oarsmen rowed in perfect time and with full force, and the steersman for his part helped at each stroke of the oars with a powerful stroke of the steering-oar. Thus, amid the wild shrieks of its occupants, the boat shot past us like an arrow. It is therefore not impossible that some of its equipment-escaped me. For instance, I saw nothing hanging down from its racks, and yet they must have the purpose of carrying something, even though, in view of their very weak nature, it could only be quite light objects. And so this automatically leads me to the conjecture that they are intended to carry the so-called zach, i.e., long, thin, curled wood-shavings, such as are customary in connection with all the events in Gilyak life that are bound up with superstitious ideas, the bear festivals, funeral ceremonies, and the like (1).

1. See p. 662 ff. above.

/536 cont./
hunting inherent in them, as in all Tungusic tribes, makes it certain that they will prefer methods of fishing that are less common among the Gilyak. For example, the /537/ above-mentioned method of fishing with a hook attached to a wooden clog, which is little used among the Gilyak, is very popular among the Olcha and even more among the Goldi, both on the Amur and in particular on the Usuri, and, judging by the striking correspondence in the designations for the individual pieces of this fishing apparatus among the former and among the latter (1),

1. For example, the anchor part of this apparatus is called tschabch by the Gilyak, tschabbe by the Olcha and Goldi; the main rope fastened to the bottom by means of it is called tyk by the former, dyka by the latter; the clog equipped with the hook is called kita by the former, kuital and kuitzale by the latter.

I am inclined to believe that the Gilyak, despite the fact that in most things concerning fishing they may be regarded as the teachers of their Tungusic neighbors, have borrowed this method of fishing from the latter. Still greater and more characteristic in comparison with the Gilyak is the preference of the Olcha and in particular the Goldi for catching sturgeon and hausen with the above-mentioned and illustrated (Pl. XII /p.1021/, Fig. 8) too, the fact that the Gilyak term for this weapon (tschak) is very similar to that of the Olcha-Goldi (dzhogbo) seems to me to argue in favor of a borrowing of it on the part of the Gilyak from their Tungusic neighbors, whereas the much simpler one-pronged harpoon, the tugnay, was probably theirs originally. In the preference of the Olcha and Goldi for this method of fishing, which is closest to hunting, indeed, in fact is more fish-hunting than fishing, their Tungusic hunter-nature is clearly to be seen. Moreover, it is intimately bound up with the boldness, ease, and adroitness with which they glide over the water in small

/568 cont./
Gilyak (1).

1. See p. 590 above and Plate XXVIII /see p.1008/, Fig. 1.

For this type of work among the Gilyak, in addition to iron (Gilyak wytsch), other metals, as has been mentioned, are also used, especially copper (Gilyak paghla, i.e., red), brass (Gilyak tutsj), and silver (Gilyak totta) (2). The more of the

2. The quicksilver which they saw in my possession was totally new to them and caused great surprise among them, but they immediately gave it the characteristic designation of "totta-tschach," that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make ornaments, such as rings, ear pendants, clasps, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to use for their purposes (3).

3. A few words about the use of silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is an art practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg stands in agreement with this. Undoubtedly, however, they have borrowed this art from one of the two civilized peoples of East Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relations

/568 cont./
grounds (4), before they came to the mouth region of the Amur,

4. See p. 214 above /untranslated/.

they already had a homeland on Sakhalin, where they were directly in contact with the Ainu and thus also indirectly with the Japanese -- this circumstance points to the latter as the source of the Gilyak's knowledge of iron and other metals, and as their teachers, even though only indirectly, in the smith's art. And a series of facts corroborate me in this view.

If the use and the working of iron had come to the Gilyak from the Chinese, that is to say, down the Sungari and Amur through the intermediation of the Manchu and Goldi, one would expect in the opposite direction, going uptream from the Gilyak, an increase in skill in the forging of iron. Actually, however, in the direction mentioned there is not only no increase, but, on the contrary, a decrease in the fineness and neatness of the metalwork. For the Olcha, to be sure, may be scarcely less skilled ironsmiths, and especially armorers, than their teachers, the Gilyak, but the Goldi are far behind the Olcha in this (5),

5. This is Maack's opinion also (see his Puteshestvie na Amur", pp. 175 and 207).

though they are extraordinarily skilled at many other things, such as boat-building, sewing, embroidery, and plaiting. In this connection, they do something different from the Gilyak in forging in that they use only one bellows, and also accessories that are not insignificantly /569/ different, for instance, an anvil shaped quite differently, and the like (1). Finally, it is not to

1. See Maack, op. cit., p. 207 and Plate II, Figs. 11, 12, 13, and 24.

/569 cont./
be overlooked that the Goldi designations for these things have nothing in common with the Gilyak ones. All this seems to suggest that the Goldi obtained their smith's art from a party, that is to say, from the Manchu-Chinese immediately adjacent to them, other than the Gilyak, but the Olcha through the latter.

On the other hand the following additional facts indicate that the Gilyak owe their knowledge of iron and its treatment to the Japanese. Exactly the same manner of forging iron as among the Gilyak is also found among the Ainu on Sakhalin. Mamia Rinsô devotes a special section to this subject in the description of his journey through Krafto (Sakhalin) and a part of the lower Amur region (2). In his time (1808) iron-forging was

2. Siebold, Nippon, VII, p. 187.

practiced only very little by the Ainu on Sakhalin, indeed, only here and there by a few old people, because the iron tools imported from Japan, which naturally were of much better workmanship, had already been generally disseminated among them. Prior to that, they had devoted themselves to manufacturing what they needed in iron weapons and utensils themselves, and, to be sure, out of iron which they obtained by barter with the Japanese in Sisiranusi. Mamia Rinsô describes their procedure in forging the iron, and this agrees completely with that described above for the Gilyak; he mentions the two bellows made out of seahkin or fish skins and lying on the ground side by side, the bellows tubes covered or weighted down with earth up to the common opening, the simultaneous participation of two men in the work, etc. Subsequently (3), in speaking of the

3. Ibid., p. 194.

Smerenkur (Gilyak) of Sakhalin, he expressly states that they have the same method of forging iron as the Ainu. To be sure, despite the fact that he further notes that the Ainu make the

/570 cont./ According to Mamia Rinsô's Testimony, the Ainu on Sakhalin gradually lost their skill at forging iron more and more and finally practically gave it up entirely as a result, so he thinks, of being flooded with Japanese ironwork. We must add that this step backwards by the Ainu certainly had another, deeper reason, which the Japanese traveler probably would not or could not mention -- the oppressive bondage in which they found themselves in relation to the Japanese, connected with merciless exploitation by the latter, under which they were bound to sink more and more into poverty, misery, and indolence. The Gilyak of Sakhalin, on the other hand, were in a more favorable situation because of the greater distance of their sites from the Japanese. Thanks to these circumstances and, at the same time, their greater energy and intelligence, they were able to remain independent of them. Indeed, fear of the Japanese and the sad fate which had befallen their neighbors, the Ainu, may have chiefly prompted them to retreat more and more northward on Sakhalin and, finally, even to emigrate, or, in consideration of a more distant past, perhaps more correctly said, to migrate back in large part to the opposite mainland (2).

2. Concerning this emigration or migration back by the Gilyak from Sakhalin to the mainland, see pp. 214 and 247 above /untranslated/.

At any rate, the political independence which they were able to maintain on Sakhalin with regard to the Japanese and in the Amur region with regard to the Manchu-Chinese was a powerful lever for the preservation and increase of their well-being, as well as for the further development of already acquired skills, among them the art of metal forging, and all the more so the more abundantly the springs of their subsistence flowed, as was especially the case along the large and fish-rich Amur River.

Like the Ainu and Gilyak, the third people on Sakhalin, the Orok, also owed their knowledge of iron and the working of it to the Japanese, though they did not obtain it directly from

/572 cont./
their eyes, of course, were surrounded with the aura of great wealth and esteem, made those knives, swords, and the like which they themselves (the Ainu) prized so highly and paid for so dearly in trade with them. How very much this was the case can be seen from Steller's information that the Kurile Ainu gladly gave 20 sea beavers for an old Japanese saber and thought that they had made a very good trade, but wore such sabers only on festive days or during festive processions and made "the strangest figures during the welcoming" with them.

For the moment it must remain undecided whether the above-mentioned iron needles, which came from Japan to the Kamchadal as their iron implements, spread from the latter to their neighbors, the Koryak and the Chukchee, before iron was brought these peoples by the Russians. At any rate, three Paleo-Asiatic peoples, the Ainu, the Gilyak, and the Kamchadal, received iron from Japan, and this was a natural consequence of the geographical position of the latter in the vicinity of these peoples, for just to the north of Nippon, the principal island of Japan, is the island of Jesso, the principal region of the Ainu (1).

1. The view advanced chiefly by Ph. Siebold that the Ainu formerly also inhabited the north of Nippon (see above, p. 255) has recently been attacked by Braune ("Die Bewohner des Japanischen Inselreichs /The Inhabitants of the Japanese Island-Realm/" in the Jahrerber. des Frankfurter Vereins für Geogr.-u. Statist., Years 48 and 49, 1883-1884, 1884-1885, Scientific Part, pp. 5 ff).

which, in turn, on the one hand, leads to the half-Gilyak Sakhalin, and, on the other hand, via the chain of the Kuriles, to Kamchatka. One may therefore draw the further conclusion that at the time when these peoples lived farther in the interior

/572 cont./
of the continent (2), as may be presumed for various reasons,

2. See p. 247 above /untranslated/.

they still had no knowledge of iron and obtained this only after they had become peripheral peoples, that is, after they had been pushed to the extreme eastern coast of the mainland and to the islands and peninsulas lying in front of it and had thus arrived in the vicinity of Japan (3).

3. The question as to the origin and development of ironworking in Japan lies, of course, outside the scope of this work.

If we now return to the Gilyak after this digression, this is the place, in concluding the above discussion of their weapons used for hunting on land and on the water, to mention a few other pieces of their armament. First to be mentioned here are two types of armor (Gilyak petsch) which are completely different in form, material, and origin, /573/ and which, to be sure, are no longer in use at present, but are of no little historical-ethnographic interest.

One of them is iron armor (Gilyak wytsch-petsch). This consists of thin, longish, iron lamellas provided with holes, by means of which they are fastened close to one another on animal or fish skins with straps. The headpiece of this armor (Plate XLIV /see p.1034/, Fig. 2) has the shape of a helmet. The upper, round ends of its iron lamellas are bent back somewhat and wound with a strap; a piece designed for the protection of the neck hangs down from its lower edge. The breast or body pi (ibid., Fig. 3), of which I saw only individual parts (in the village of Tebach) consists of several rows of iron lamellas overlapping from top to bottom, which are wider and longer than those of the headpiece. In speaking of the Smerenkur (Gilyak) of Sakhalin, Mamia Rinô (1) mentions this iron armor and says

1. Op. cit., p. 194.

/403 cont./

000 3. (cont.)
der Gross-brit. Gesandtsch. in den J. 1793 und 1794, transl. from the English by Hüttner, Vienna, 1805, Vol. I, p. 88. Bazin, Chine moderne, ou descr. hist., geogr. et littér. de ce vaste Emp., Part II, Paris, 1843 (L'Univers), p. 610. Huc, L'Emp. Chinois, Paris, 1854, Vol. I, p. 317. Itier, Journ. d'un voyage en Chine en 1843-1846, Paris, 1848, Vol. III, p. 389. The latter tried to acclimate Urtica nivea along with other, similar plants in France and stated that it has the advantage over all of them in that it needed the least care. According to Richthofen (Zeitschr. der Berl. Gesellsch. für Erdkunde, Vol. V, p. 321), the Koreans also have clothing materials which, judging by their lustre, seem to have been woven out of the fiber of a nettle-like plant.

286 194 191 326 714 I therefore conjecture that formerly the Gilyak, like the Ainu, knew how to weave crude clothing fabric out of the fibers of the nettle, and an old specimen plaited out of cords and interlaced whalebone fibers, a sort of mail shirt (Pl. XLIV, Fig. 1), which I acquired from them in the village of Ssabach and which will be discussed later, corroborates me in this conjecture. But whereas

[99] the Ainu, generally held back and hurt by pressure and exploitation on the part of the Japanese, persisted, often out of poverty and necessity, in wearing their locally made, crude garments, the independent Gilyak, in contact with the Chinese, very soon learned how to obtain their finer clothing material through barter, and since /404/ there was no lack of material for such trade, in view of the wealth of their region in precious furs, they naturally gave up entirely the manufacture of their own, more laboriously made and nevertheless cruder and poorer, weaving.

/444 cont./

000 resistance. It certainly existed among them long before they be-
263 came acquainted with salt, as can be seen from the fact that
194 they do not have any independent designation for it, but only a some-
[196] what modified foreign one. For the Gilyak designation taftsch for
[192] salt was probably /445/ borrowed from the Manchurian dabssun (Mongolian: dabassu) (1). On the basis of this etymology, I would

[113] 1. Klaproth, Asia polyglotta, p. 298; Sprachatlas /Linguistic Atlas/ p. XXXXVI.

also presume that the Gilyak first became acquainted with salt at the time when a Manchu tribe, the Djutscheren, engaged in agriculture, livestock breeding, and the like, lived along the lower Amur from the mouth of the Sungari to below the mouth of the Ussuri, from where they were transplanted to the Churcha in the middle of the seventeenth century upon orders from the Chinese government (2).

2. See p. 318 above.

In the two centuries since then salt has found no acceptance among the Gilyak -- certainly proof that there was no physiological need for it.

263 Whereas the Gilyak aversion to salt is so pronounced and
438 general, sugar (Gilyak ssäta), on the other hand, finds great approval among them, and to be süre, in the form in which they became acquainted with it from the Russians (3). The Chinese

[192] 3. Could it not be that the Gilyak designation given for it was borrowed from the Russian ("ssachar")?

sugar already known to them earlier, brown in color and only faintly sweet in taste, had no attraction for them, and since, moreover, it is to be had only for a high price and only by way of exception from the Chinese traders along the Amur, who usually carry with them only small quantities of it for their own use,

/447 cont./

323 similar in shape to that of the Chinese and Japanese (2). /448/
114
191
[113] 2. Mamia Rinsô, "Tôtats kiko" (Siebold, Nippon, VII, p. 194).

323 One might suppose that the traveler was concerned with, not
114 originally Gilyak, but only with imported Chinese and Japanese
191 pottery which he saw among the Gilyak, but this would still not
194 remove the contradiction with my above statements, because Mamia Rinso goes on to say that there were especially many porcelain factories along the Amur (Mankô) near Kidsi (1). This,

1. Op. cit., p. 172.

however, no longer refers to the Gilyak, whose territory does not begin until somewhat below Kidsi, but even among the Olcha, to whom it must refer, and still farther upstream among the Goldi, at least as far as the Ussuri, I never saw such factories or any of their products. And Maack had the same experience, except that in the Goldi village of Ssilbi he saw some earthenware pots among the household utensils of the natives (2). This village, however,

[113] 2. Maak", Putesh. na Amur" /A Journey to the Amur/, p. 143.

is in the vicinity of the Sungari, where, as we shall presently see, totally different conditions prevail in this respect. If, therefore, one is to believe Mamia Rinsô's reports, and, according to my experience, they fully merit it, one is forced to assume that the Olcha, and presumably also the lower Goldi, at the beginning of this century were making pottery and porcelain and sold the products even among the Gilyak as far as Sakhalin, and that the latter were likewise familiar with this industry -- an industry which had been completely lost fifty years later when I explored
323 the Amur region. How this happened will be illuminated as
194 much as possible in one of the following chapters in the discussion
191
648

323 /448 cont./
191 of the trade relations of the Amur peoples, and especially of the
194 Gilyak, with the neighboring civilized peoples. For the moment,
648 it will suffice to make the general remark that it most probably was brought about by violent seizure and devastation plotted by the Manchu-Chinese government itself for political reasons and to which Mamia Rinso's voyage may even have given rise. Through the devastating blow that the government, feared by the natives, executed, among other things, against the pottery and porcelain manufacturing of the Olcha on the Amur, they were forced back, like their neighbors upstream and downstream, the lower Goldi and Gilyak, to their traditional woodworking industry and were so strongly and lastingly prejudiced against all pottery and porcelain that from then on even articles of this sort made in China or Japan could not find approval and acceptance among them. This
415 destruction of the pottery manufacturing in the lower Amur region,
194 on the other hand, may have prompted the Goldi to take up the
191 mass production of wooden implements, to turn those large bowls
322 and plates which are still generally used by the Gilyak and Olcha under the designations aam-ngir and kota, respectively.

Whereas the pottery and porcelain industry was destroyed
323 along the lower Amur by the Manchu, it made rapid and unimpeded
191 progress in southern Manchuria and along the Sungari and its tribu-
[648] taries. /449/ According to the notes of the Chinese U-tschen in 1722, the Manchu at that time did not have any earthenware, but only wooden vessels, bowls, and plates (1). With the increasing

[113] 1. Vasil'ev", "Zapiski o Ningutie /Notes on Ninguta/" (Zap. Imp. russk. Geogr. Obshch., Vol. XII, 1857, p. 96).

colonization of the country by the Chinese, however, many pottery and porcelain factories also arose there. Near Sur-mu-tsching in Liao-tong Williamson (2) saw many such factories and various

[113] 2. Journeys in North China, Manchuria and Eastern Mongolia, London, 1870, Vol. II, p. 187.

Ainu ABG

/487 cont./ Just
as the Gilyak on trips tries to lighten the work for his dogs during the traveling, so does he always see to it that they have the necessary relaxation and rest at night. If no village can be reached and the night must be spent in the open, he prepares a resting place for his dogs similar to the one for himself. The guide-line, detached from the sled, is tied to a tree trunk, and for each of the dogs a depression is made in the snow at suitable intervals and lined with fir branches. From these traces one can immediately see how many Gilyak sleds have stopped at a campsite and how many dogs were harnessed to each of them.

Undoubtedly the present practice of keeping dogs to harness to the sled, which is so deeply entrenched in the life of the Gilyak, is not a relatively new custom, borrowed from one of the other Amur peoples, but, on the contrary, is a custom originally peculiar to them, in contrast to the latter, reaching back into the most distant past. The situation is similar for the other Paleo-Asiatic peoples in contrast to their respective neighboring tribes: all of them, since ancient times, are or were fishermen who used their only domestic animal, the dog, chiefly for locomotion, with there being no proof of the borrowing of this custom from one of the neighboring peoples nor any reason for assuming it probable.

Among the Ainu on Sakhalin the dog in general plays exactly the same role as among the Gilyak, even the construction of the sled, the harnessing of the dogs, and the manner in which they are treated and driven are said to be the same (1). But the Ainu do not

1. N. Busse, Ostr. Sakhalin" i Eksped. 1853 i 1854 gg. /Sakhalin Island and the Expedition of 1853 and 1854/, St. Petersburg, 1872, p. 54. As I learned from Rudanofskij's manuscript diary, the above-described use of the poles /Pfiemerstangen/ on especially difficult routes is also quite common among the Ainu on Sakhalin.

use this method of locomotion nearly as often and as extensively as the Gilyak do, the reason for which, as we shall see in the following, lies not only in the less favorable position of their country for journeys and travels by sled, but particularly in the

Eskimo ND2
Ainu ABG
Goldi RK3

/490 cont./
Eskimo reached the fullest development of their individuality. The poorer and more difficult their life is in the east and /491/ the north of their habitation area, amidst unfavorable natural conditions, the more man must share the labor that falls to the dog as a draft animal. It also sometimes happens that when the use of sleds becomes too difficult or impossible there (1), the dog

1. In Greenland, to be sure, the dog goes as far north as man, but is not used for driving by the Eskimo farther south than Holsteinborg, because the sea is not sufficiently frozen in winter for one to be able to travel over it in sleds (R. Brown, op. cit., p. 463).

is used as a beast of burden, as Klutschak, for instance, found on his trip with Schwatka to King William's Land (2) -- a use which is

2. H. W. Klutschak, Als Eskimo unter den Eskimos /As an Eskimo among the Eskimo/, Vienna, Pest, Leipzig, 1881, p. 23 and the illustrations on pp. 22 and 109.

certainly not in accord with the nature of the animal and does not occur in the Old World either among the Gilyak or, as far as I know, among any other people.

After this digression, as we again return to the Amur region, the contrast that we find between the two Paleo-Asiatic tribes, the Ainu and Gilyak, and the other peoples of the lower Amur region, all belonging to the Tungusic tribe, with regard to the use of the dog for harnessing should be pointed out first of all; whereas among the former it extends back to the most distant times, belonged to them originally, so to speak, the latter adopted it only in later, relatively recent times, and, to be sure, through the direct or indirect agency of the Gilyak.

/502 cont./ Two Persons are required to work with this drill, in that, by means of a piece of wood, one person presses it from above, where a little iron peg set into the handle is found, against the place where the hole is to be, and the other one sets it in rotating motion by quickly pulling a strap looped several times around the handle -- a procedure which I also observed in connection with the Gilyak method of making fire by friction to be discussed later and in another connection. For this reason, I am inclined to regard the lung, as well as a second, quite similar and also similarly operated, but somewhat thinner drill, which the Gilyak call pisk, as ancient instruments perhaps invented by them themselves, whereas the small drill for finer work and similar to our tools of this type (ibid., Fig. 8), whose Gilyak designation is still unknown to me and which is wholly of iron, may be later and foreign in origin. (1). This is undoubtedly also the case for another

1. The Olcha-Tungusic designation for this small drill, according to Maximowicz, is sselgefó and sseldschefó.

instrument, the saw. I myself never encountered this among the Gilyak, but in the village of Tylm Maximowicz saw a specimen of it which looked exactly like our ordinary carpenter's saw and was called puf by the Gilyak, pófo by the Olcha -- a correspondence in designation which likewise indicates a common borrowing of the object concerned by both peoples from a foreign source.

But after this digression let us return to the construction of the boat. The rear end of it is closed off with a vertical stern-board, and above it and between /503/ the two side-boards a horizontal board (Gilyak ott(o)mo), projecting somewhat toward the rear, is put in to serve as a seat for the steersman. The boat is closed off in front by two obliquely placed boards (Gilyak alo), the left one always rising a little higher than the right one, which gives the prow a pointed shape. All the seams, and especially the two longer ones, between the bottom and the two side-boards of the boat, are calked, but this must be done

Tungus RU5
Goldi RK3

/512 cont./
like the dsaï in form and nature, but twice as long, while the width remains about the same. Thus, among the latter I saw such a boat that was 35 1/2 feet long and only 2 feet and 2 inches wide. Such a boat, like the multiple-seated Aleutian bidar and, incidentally, also like the large mango, if the latter are not propelled, say, by poles, is propelled by two or three persons equipped with double oars and rowing uniformly on one side and then the other, and thus shooting forward with great speed.

It is very noteworthy that the above-described boat made out of boards, which is distributed throughout the lower Amur region, among the Goldi, Olcha, Gilyak, and Orochi, is completely absent in the upper Amur region. At least, I never saw any there, and Maack, traveling down the Amur from the Schilka, did not meet the first boat of this kind until at the mouth of the Ussuri (1). And, correspondingly, the form of

1. Maak", Putesh. na Amur", p. 178.

the hollowed-out boat that is patterned after this boat, the unjmagda or awarpe, also seems to be absent in the upper Amur region. I must therefore designate this boat made out of boards in a specific fashion as solely and exclusively peculiar to the lower Amur region and characteristic of it. And yet, I believe, one may not regard it altogether as an invention of those peoples or one of them. Whereas the hollowed-out or birch-bark boats bear the stamp of originality, the Amur boat, or, as I would prefer to call it in accordance with the above, the Goldi-Gilyak boat, reveals in its more ingenious form and construction a certain cultural influence, and I believe that I do not err if I trace this back to the Manchu-Chinese on the Sungari. For centuries Chinese traders and sometimes also Manchu officials have traveled from the Sungari into the lower Amur region, the former in order to engage in trade with its peoples, the latter in order to collect from them the tribute owed to the Chinese government. The boats in which they made these trips are, to be sure, much larger and more

/575 cont./

411 114 he gives an illustration of it and calls it a wooden saber (2) and

2. Vol. IV, p. 1535. The specimen brought back by him and now in our museum is in fact flattened somewhat like a saber in the last third, as mentioned above.

"cudgel of honor." In his opinion it is used only to settle matters of honor in combat, during which it is seized with both hands, and the blows are parried by moving the stick to and fro. His host, the old Negda Oltungab, on the Nemilen (a tributary of the Amgunj showed him how this weapon was used. This agrees essentially with what I learned about it from the Gilyak. During 411 [115] the initial period of my stay in the Amur region, the Patchä-Gilyak Jutschin, a very intelligent person to whom I am indebted for the first groundwork of my Gilyak vocabulary, appeared at the Nikolayev post armed solely with the mungtsche. When I questioned him, he demonstrated the fencing movements for me with his wooden weapon. From his total handling of it, however, it could be assumed without any doubt that it was more than a simple fencing stick or "cudgel." For as he held it in front of him with outstretched right arm, like a halberd resting on the ground, he assumed an air of dignity as though he were a most distinguished person. Also, he did not want to be separated from it even when sitting down. Finally, the respect and regard that he rendered to his mungtsche were also expressed in the fact that at several places where it had been damaged /576/ it was carefully covered with birch bark and through that had not only not suffered in the eyes of its owner, but, on the contrary, had gained in value. All in 411 all the mungtsche gave me the impression of a conventional 174 weapon of honor, which originated in ancient times, perhaps in imitation of Japanese lances, and has inherited with the latter its continuing traditional significance. The deep groove always present on the back of the mungtsche, which Middendorff leaves unexplained, but obviously is supposed to represent a channel for the blood, also points to such a prototype.

/591 cont./

whaler that had run aground in the vicinity of the northwestern tip of Sakhalin was killed by the especially notorious Gilyak from Tammlawo and the boat was [114] plundered. In 1855, among the Gilyak of Poghobi, I saw a bucket bearing a number and an English inscription, which presumably came from it.

that the occupation of their territory achieved by the Russians with very few means in the beginning took place in such a peaceful manner and without any bloodshed. Undoubtedly the love of trade inherent in the Gilyak to a high degree very 439 essentially contributed to this. The possibility of being able to [174] exchange in the Russian settlements an assortment of products of which they had an abundance, and for which they otherwise could find no market, such as fish, game, berries, etc., for various articles greatly coveted by them, especially material for clothing and tobacco, must have made them peaceably disposed toward them, and the great advantage that they were able to draw from this trade by their industriousness, cleverness, and skill kept suppressed the suspicion and fear that the newcomers and their rapidly growing numbers and strength aroused in them. The Nikolayev post soon became the most important trade center of the Amur Gilyak, and, thanks to the active trade /592/ that the latter maintained with their fellow-tribesmen along the Sea of Okhotsk and on Sakhalin, as well as with the Ainu and the Tungusic Amur peoples, many Russian wares were soon widely distributed in the region. Nevertheless, in my time among the 184 648 Gilyak of Sakhalin, where, apart from the Murawjof post in Aniwa Bay, already destroyed again, there were not yet any Russian settlements, there was a suspicious and hostile attitude toward the Russians, which made it necessary for the traveler to be on his guard constantly against actual attacks. In the evening, [123] when they sat around the fire blazing in the yurt, I repeatedly heard them argue about the Russians who had come into their

tip of the Bay de la Jonquière), is undoubtedly the Gily of Duĭ, and thus the whole of the above incident refers subjugation of the Sakhalin Gilyak, or making them tri

/719 cont./

that led him to it and was the cause of it all. It itself thus recognizes the toad as the culprit. The Gilyak, on the other hand, have shown it only kindness: they have received it as a guest in their houses, put it in the seat of honor, offered it some of all the foods, in general did everything only with its knowledge and permission, and their women show it a final act of kindness by consolingly drying the tears in its eyes. Therefore no guilt for its fate or responsibility for it falls on them. At the same time a second symbolic act is carried out on the bears, the explanation for which, it seems to me, must be sought somewhat further afield. In addition to the tschudbas, a second head-band is put on them: a strap tied crosswise, on which are found one or two agate balls about one and a half inches large, which rest on the forehead and a little to one side (2). The small bear was given a band with one agate

2. See the woodcut, p. 1163.

ball which lay above its eyes in the middle of its forehead, the large bear was given two such balls, that is, in addition to that one, a second one which rested over the right parietal bone, and, finally, a band with two agate balls in the middle of the forehead, one directly over the other, was put on the medium-sized bear displayed in another house (that of its owner). On this point it seems that if more balls than bears are available, there is room for choice and only the ball in the middle of the forehead is obligatory. These agate balls are of Chinese ("Manchurian") /720/ workmanship and are highly prized and never sold by the Gilyak. Their exotic origin seems to me to suggest an explanation for the entire procedure. /Illustration appears here./ During the many years of frequent intercourse between the Gilyak and the Chinese on the Sungari, it could certainly not have escaped them that the Buddhist divinities of the latter as a rule had a bump or swelling on the forehead above the eyes, indeed, it is possible and probable that they viewed this as a sign of the special holiness of the divinities concerned in the eyes of the Chinese. If one now considers the striving of the Gilyak to imitate Chinese ways, it is quite

/720 cont./

Bears' head-bands with figure of toad and agate balls.

conceivable that they are trying to imitate this Buddhist forehead swelling likewise on the head of the bear venerated by them in superstitious fear and likewise regarded to some extent as divine, and that they do this with the agate balls which are furnished them for this purpose by the Chinese themselves. Thus, according to Gilyak ideas, the bear is to some extent moved up among the divinities and therefore a formal bear-cult is practiced.

With the putting on of the snout and head bands, or the toad and agate-ball bands, all the honors imaginable have been shown to the bear and now, in the awareness of their complete innocence, the Gilyak may, with a clear conscience, give themselves up to the pleasures of the table. A great number of wooden bowls were immediately brought into the house on a sled and arranged on the floor around the bears, while the participants in the feast took their places, sitting cross-legged, on the bench of honor. First, a ski, which probably was one of the sacred utensils since it /721/ had been propped up against the étagère the whole time, was used to present pieces of frozen sturgeon to the guests. While they were still eating it simple circular

Goldi RX3

/731 cont./

which were strung in a row by means of the Foramina vertebralia on the branches of the brush, and beside them hung Goldi birch-bark bowls and baskets, such as are found also on the grave sites, of deceased human beings and which apparently were offered as a sacrifice to the manes of the slain bear.

It is not to be assumed that the Gilyak of Sakhalin differ essentially from their fellow-tribesmen on the mainland in their basic ideas about the bear and the festival dedicated to it, especially since we must think of how the Gilyak spread, that, having come to Sakhalin from the mouth of the Amur, they found a home there for a long period, and only then, oppressed by the Ainu, migrated back to the mainland for the greater part (1). In individ-

1. See pp. 214 /untranslated/, 247 /untranslated/, 889, and 892 of this work.

ual phases of the festival, on the other hand, there are very considerable differences between them; determined chiefly by the different method of construction and the spaciousness of the dwellings of the continental and the Sakhalin Gilyak.

As plain as the exterior of an earth-yurt of the latter is -- a low, conical, snow-covered mound somewhat blackened at the top by the smoke streaming out -- its external decoration for the bear festival is just as shabby. As a rule, only one or two young fir trees, stripped of their lower branches, are stuck in the snow at the entrance to the yurt, with a few ringlet-shaped, curled wooden-shavings (zach) hanging down from their crowns and from the branches of neighboring shrubs. Only when a bear has been eaten in the same dwelling a few weeks or a month previously or even in the course of the year is its skin used for the exterior decorating of the yurt, being spread over a long and sturdy branch stuck obliquely into the snow and sometimes supported by a small railing, and in front of it is put a bundle of wooden curls (zach) (2).

2. See the woodcut, p. 1180.

I saw this, for example, in Tyk, Duĭ, Jwlk, Pud-wo, and elsewhere along the /732/ west coast and in the Tymy Valley of Sakhalin. If

/741 cont./

and monstrous contradiction in the religious conceptions of the Gilyak: on the hand, the idea of a single supreme and benevolent being, even though so completely empty that it precludes the worship of it, and, on the other hand, the purification of countless evil powers, along with a crude cult to ward them off and keep them away; many representations of animal and human forms in the yurts, and yet the Gilyak say that they have no representations of God; countless superstitious and shamanistic acts, and yet they deny that they pray. And, on the other hand, they speak of a supreme, wholly good being and have the word "pray" (mjägratsch) and yet do not worship this god. How is this to be explained? It seems to be that there is not a dualism of conceptions here, but rather a matter of two completely separate concepts with connection with each other and also historically distinct. -- The former is a thoroughly attenuated, obscure, and now only traditional deism which among the Gilyak consists of no more than merely a few traditional words -- God, the Good One, pray; and exerts no influence upon the rest of their so-called religious conceptions and acts (superstition, shamanism, idols) other than that those words are not carried over to these conceptions and acts. The second religious conception is probably basically identical with that of many primitive Siberian peoples and aims at keeping evil spirits and powers away from human beings by means of various superstitious observances and performances. The former deistic belief is probably the echo of an ancient conception perhaps commemorative of the cradle of the Gilyak. In fact, in the attribute of "God," kīngulätsch, and in the abstract, nihilistic character of the conception there is accord with the Central Asiatic religious systems, but the second conception may have originated at a much later time, after the Gilyak tribe had moved downstream into the wilderness of the eastern forests of the Asiatic continent (?) and therefore shows many points of contact and similarities with the religious conceptions of the neighboring Siberian peoples, and even of the Ainu. The first conception was completely lost, except for a few words, and another, a cruder and more concrete one developed, without, however, on account of the persistence of

771 /741 cont./
174 tradition, reaching any pretensious of a religious one or completely driving out and replacing that empty concept of God among the
812 Gilyak.

I realized that the wooden idols of the Gilyak do not
778 actually enjoy any very great esteem or reverence among them
[126] from the fact that the Gilyak from Kulk from whose deserted yurt /742/ I had appropriated a collection of their idols in the summer of 1854, did not seem to notice the loss upon their arrival in the village, or at least did not consider it worth mentioning. In the same village I also once saw a small boy come out of the house playing with a wooden bear figure, a sign that these things were not as inaccessible to him as they certainly would be if they enjoyed special veneration. (Bm. I, pp. 22-27.)

Idols and Amulets in Human Shape

778
789 2. Gilyak. The various idols carved in wood, some-
532 times human or sometimes animal in shape, which served to ward off danger, misfortune, sickness, and the like, were designated to me by the Gilyak with the general names of kägn and tschngai (1).

[192] 1. The word mafk also seems to refer to idols in general.

In addition, however, special names for individual figures were also given to me. A crude representation of the whole human form (Plate LIII /p. 1253/, Fig 1) or at least a bust of one is found as a rule in the yurt of the Gilyak on the crossbeam of the roof-frame, above the sleeping benches along the narrow side of the yurt away from the entrance (that is, above the place where among the Olcha
778 and Goldi the similarly-shaped säwa stand). Sometimes, however,
789 the Gilyak wear similar small idols on their chests, to which they
755 give the name pangch (Plate LIII /p. 1253/, Fig. 5). If a Gilyak is seriously ill, the shaman carves such an idol for him, or advises
532 him to carve one and to wear it so that he will become well. But
[756]

10 resettled. In southern Sakhalin, individual families live in the village of
[361] Taran, Poronayskiy Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

197 The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

[194] In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan—dog; pil'a-ğan—big dog). The agglutinating
[193] features include the addition of affixes (kkan-gu—dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives have many similarities with verbs. The Nivkhi numerals are interesting:
802 in the Nivkhi language, there are no numerals common to all objects. Instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and manlike spirits; 7) paired objects. For example, t'ig'r-n'ekh—one tree; k'u-n'ik—one bullet; tyv-n'akkr—one house; tamkh-n'rakh—one tobacco leaf; kkan-n'yn—one dog; nivkh-n'in—one person; mu-n'im—one boat; t'u-n'irsh—one sled; and n'a—one handbreadth, etc.

197 As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

174 In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits—marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware—flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation—the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Shternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the Sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lia-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

175 The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasiliy Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large vil-
[361] lages in wooden winter houses, flanked by barns, racks for hanging fish and
[342] log structures for bears. The Nivkhi wore clothing of fishskins and animal
[343] pelts; they kept many dogs, engaged in fishing, and their diet consisted
[291] mainly of fish. They traded with the Chinese, Ainu and Tungus.

131
182

1. "Uni" means "river" in the language of the Goldi. The name "Amur" seems to have derived from the Goldian designation for water: mu.

former means "river people"; the latter, "the lower ones" The Russians regard them simply as Gilyak and know no other name. Beyond the Gorin, the Goldi begin to appear, but they are also found scattered among the Mangun-Gilyak. The latter differ from the Goldi in certain external characteristics and customs, and from the true Gilyak in their burial ceremonies and in their language which is nothing more than the somewhat modified language of the Goldi. Among these Mangun are to be found, here and there, some nomadic Orochon and Tungus or Sofiysk-Gilyak, as they are usually called in those parts (from the town of Sofiyskoye on the Amur).

On the river Amgun which flows into the Amur from the left side at the so-called Tyr, about 80 versts above Nikolayevsk live the so-called Negidal who are considered a mixed race of Gilyak and Tungus. They speak Tungus, and in their way of living rather resemble the Gilayk who do not, however, recognize them as kin.

The following is the picture: 1) The full-blooded Gilyak live on the island of Sakhalin (northern half), on the continental coast, and on the Amur as far as Bogorodskoye; but they fall into two sub-groups of which the island Gilyak differ from the continental ones only slightly in language and in the way in which they build their dwellings. 2) The second group are the Mangun who are probably a mixture between Gilyak and Goldi and who have little more than their language in common with the Goldi. 3) The third group of Negidal is no longer very closely related to the Gilyak and will therefore not be considered in this essay.

174 We do not know how long the Gilyak have occupied their present habitations [99], but we surmise that they came to the mainland from Sakhalin.

The Goldi consider themselves the original inhabitants of the Amur country, but among the Gilyak it is frequently assumed that they formerly all lived on the island of Sakhalin. And, as a matter of fact, if the opposite were the case, the Sakhalin-Gilyak would probably have brought along with them the more complete type of dwelling which is common on the

Seeland--3 E-5 (no date) 1882 Gilyak

4 mainland among Goldi as well as Manchurians. It is more likely that the first Gilyak who emigrated to the mainland from Sakhalin, took over the building methods as well as the language from the Goldi, and that the later ones who remained in closer contact with their native country, adopted the building methods of the Goldi and Manchurians but kept their own language.

The Russians became acquainted with the Gilyak as early as the middle of the 17th century when the first bold Russian pioneers traveled along the Amur. At that time there were also supposed to have been occasional bloody animosities. The Gilyak themselves, however, no longer know anything about this, unless perhaps there are accounts in rare legends which may be known by only a few. The majority know nothing of their own history and I was not even able to ascertain whether there was not someone still living among them who might tell me something of their antiquity.

61 The population of the Gilyak can be only approximately de-
77 termined, because, up to the present time, these people do not even pay yassak, and thus there can be no official methods set up to observe the shifts in their population. According to the estimates of the ispravniks (officials) the number of Gilyak of the Nikolayevsk district (1) and the

ispravniks, but instead I asked the traveling fur dealers whose business, when all is said and done, would give them a greater interest in this question than the ispravniks would have. According to their opinion, there may be about 3000
161 Gilyak on the island of Sakhalin. The entire race of Gilyak
621 (exclusive of the Negidal) may thus comprise some 8000 souls. I believe the figure is not too large for, although the Gilyak villages are small and present a diminutive appearance, they are [100] relatively densely populated. One may assume that one house shelters no less than 12-15 persons. From a rough calculation which I made in the year 1880, there were about 900 persons in nine villages extending from the coast to the village of Vaida (30 versts above

●175 Judging on the basis of the small amount of historical data
131 that we have on the Amur region, the boundaries of the Gilyak area of settlement have remained unchanged for the last two and a half centuries.

The greatest density of population is found in the areas of
131 the most abundant fishing, such as the banks of the Amur and its
102 estuary [villages: Kol' (196 persons), Langr (205), Vayda (184),
162 Mago (154), and others]; on the western shore of Sakhalin, the points Tamlevo, Lyrkryvo (144 persons), Viskivo (116), Nyur (103), Nyanivo, and on the shores of the Sea of Okhotsk the settlements Chayvo, Nyyvo, and others.

101 The boundaries of the Gilyak territory are highly characteristic. /14/ It is sufficient to take a look at the ethnographic map of the Priamur krai to become convinced that the minuscule Gilyak tribe is surrounded by a complete circle of nationalities foreign to it. Abutting on it from the south on Sakhalin Island are the Ainu, a tribe which was once so numerous that it occupied the entire Japanese archipelago. On the continent the Gilyak are surrounded on all sides by representatives of the great Manchu tribe, and the Tungus nationalities: the Negda, Olcha (in my terminology -- the Amur Nani), the Goldi, the Orochi, the Samagir, and the Tungus proper. Even in the very heart of the Gilyak area of settlement, on the eastern shore of Sakhalin, the Tungus tribe of Orok (in my terminology -- Sakhalin Nani) has penetrated in a thick mass.

The most natural idea that occurs to one is the possibility
[149] of tribal kinship between the Gilyak and the Ainu, or their Tungus neighbors. The physical resemblance seems to confirm this idea to a considerable degree. We shall see below, however, that the facial resemblance of these tribes has nothing in common with identity of origin, while the most important, and perhaps the only determinant of tribal identity, language, in this case gives
[197] a categorical indication in the negative. For neither in its lexicon, in its phonetics, nor in its grammatical structure does the Gilyak language have anything in common with the languages of the neighboring tribes; furthermore, throughout the Asiatic continent we find no other language which could lay claim to close relationship with the Gilyak language.

/349 cont./

104 Northern Sakhalin was especially favorable for resettling
167 (it is interesting that only the northern part of the island is called Sakhalin by the Gilyak, which is additional evidence as to whence and in what direction the settling of Sakhalin proceeded). In the first place, these were the places closest to the continent: half a day to a day's trip between the shores of the strait. Moreover, in addition to an abundance of sables in northern Sakhalin,
[136] the Gilyak from the continental coast found other living conditions completely identical with those on the continent: the same abundance and rich variety of fish (Siberian salmon, kaluga /Huso dauricus/, sig /a species of salmon/, carp, etc.), an abundance of seals and dolphins. The Amur Gilyak were the only ones who found it disadvantageous to leave the banks of their irreplaceable Amur. They cannot bring themselves to do it even
●[105] now, crowded into their hunting and fishing reservations by the
[648] Russian settlers and forced to bear the entire burden of free official transportation along the Amur. There were, of course, still other reasons which induced the continental Gilyak to move to Sakhalin, for instance, density of population, conflicts between clans, and so forth. One of these reasons may have been
175 the Manchu reign with its mandatory annual tribute of a sable
167 per person (we must remember that in the past sable was three
648 or four times more expensive than it is now, while the Amur
[435] sable is still very expensive; one variety, for example, the Amgun, costs 25-30 rubles). The legends of the Gilyak themselves about their former relations with the Manchu are of
[173] interest: "We were settled," the Amur Gilyak said to me, "on the banks of the Amur by the Manchu, as free men, with the title of 'hunters,' and we were obliged to pay them one sable per person every year." Moreover, every time a Gilyak went to the Chinese town of Sungari (Saising), he was forced to pay one sable and the /350/ starosti of the settlements three sables
[171] each. The Orochon were also in the same position. Manchu officials made a census of the population, and every year in the summer they would come to collect the sable tribute. The Sakhalin Gilyak were free from this tribute, but eventually the

1;Shternberg--500 E-5 (1890-1897, 1910)1933 RX2 Gilyak RX2 Sakhalin

/350 cont./

●175 Manchu reached them also and installed elected starosti. There
168 was such a starosta, for example, in Tangak. It was from the
648 Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

104 I shall not at this time enter into the question of how long
167 the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

179 The Sakhalin Gilyak, like their fellows on the continent,
4 have taken many very basic things from their civilized fellows.
325 They have replaced the bow with the gun, their dishes made of
342 wood and birch bark with metal kettles. They forge iron and
354 artfully work with carpenters' and cabinetmakers' tools. They
24 build yurts in the Manchu style and make stoves and tremendous
202 chimneys of stone. They master Japanese sabers and they preserve
267 expensive spears decorated with silver inlays. They wear robes
247 and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

170 Of all the borrowings made by the Gilyak, the use of iron
325 is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ore, but are even incapable of making tools. Until recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail, though the Gilyak

2; Schrenck--193 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2 Southeast Siberia RX1

S.S. /94 cont./
175 peoples could and must have frequently resulted during this time,
169 but they are most difficult to perceive from the historical reports
131 available, for, on the one hand, the territorial boundaries of roaming hunting and seminomadic fishing peoples are never very /95/ definite and even at the present time are inadequately known among the Amur peoples, and, on the other hand, the historical reports concerned, since we are indebted for them to the notes and reports of simple, uneducated people pursuing practical interests, suffer as a rule from too much vagueness and sometimes obscurity for our purposes, and, what is worse, they not infrequently present the Amur peoples under names that are completely foreign to us today and therefore require an interpretation beforehand. Now, whether the interpretations and explanations that will be found in the following pages are always the correct ones must remain undecided to begin with --for my part I hope, since they are not without reason, that they will be verified in most cases at least and may provide a key for a better understanding of some of the historical reports concerning the Amur region and the ethnographic facts contained in them.

G Let us begin again with the peoples of the lower Amur
G ●175 region and from among them with the most extreme, the Gilyak.
[121] The first printed mention of the Gilyak is found on the map pub-
[113] lished by Nicolaus Witsen in 1687 in Amsterdam and dedicated to Peter the Great, "Nieuwe Land-Karte van het Noorder- en Oostzer-Deel van Asia en Europa /New Map of the Northeastern Part of Asia and Europe/" (1), and in

S.S. 1. Müller (Sammlung Russ. Gesch., Vol. I, pp. 203 ff., and Vol. VI,
G 175 pp. 29 ff.) gave a detailed description and evaluation of this map. In
114 addition to the rare, original edition
[113] of this map, I have before me another copy of the Witsen map provided by Allard on a smaller scale and with some corrections, which was not mentioned either by Müller in his

cont./ 1. (cont.)
"Nachricht von Land- und See-Carten, die das Rus. Reich und die zunächst angränzenden Länder betreffen /Report on the Land and Sea Maps Which Refer to the Russian Empire and the Immediately Adjacent Countries/" (Samml., etc., Vol. VI) or by Adelung in his article, "Ueber die älteren ausländischen Karten von Russland /Concerning the Older Foreign Maps of Russia/" (Beitr. zur Kenntn. des Russ. Reichs, ed. by Baer and Helmersen, Vol. IV). It bears the title, "Tartaria, sive Magni Chami Imperium ex credendis Amplissimi Viri D-ni Nicolai Witsen, Cos: Amst: Aliorumque probandorum, et hodie vigentium Geographorum Archetypis congestum, auctum, et in lucem editum a Carolo Allard, Amst: Bat: Cum Privilegio Potentissimorum D. D. Ordinum Hollandiae et Westfrisiae," without date. The Dutch inscriptions of the original edition are rendered in Latin. The map has almost precisely the same borders, but with the addition of Korea in the east and, on the other hand, the exclusion of the course of the Volga in the west. I call it a copy of Witsen's map, because in fact it reproduces it in all parts, especially in the north and in the east, down to the smallest detail. Also, one finds on it, for example, the same curiosa as in Witsen, that is, misunderstood Russian words and expressions were taken for place names. At the confluence of the Schilka /Shilka/ and the Argun /Argun/, for instance, there stands in large letters the regional name "Otsel Poschel," evidently because in a Russian statement (and, to be

/95 cont./ 1. (cont.)
sure, on a map!) it said: otsel' poshel" Amur (that is, from here, from the confluence of the Schilka and Argun), begins the Amur); in the lower course of the Lena and east of it are likewise found the regions "Otmore" (from ot" morya -- from the sea), "Nasabate" (na zapadie -- in the west), and "Wostok" (vostok" -- east). The mountain range that separates the tributaries of the Lena from those of the upper Amur (Stanovoi) bears in Witsen the inscription "het /the/ gebergte /mountain range/ gori," or in Allard "montes /mountains/ Gori" (Russian: gory -- mountains), etc. With regard to the Amur region in particular, there is also repeated on the Allard map the peculiarity of the Witsen one in having so many rivers designated on it twice because of the direct posting from the various reports; thus, the Ussuri as Schur or Usiur and as Uschuri, the Dseja /Zeya/ as Sia and as Zija, the Urkan as Urka and as Urki, etc. The Allard map, however, gives the course of the Sungari River differently than the Witsen one: on the latter this river goes under the name of Singal to the Amur and at the same time in a further bifurcation as Schingal or Quentung to the sea; the Allard map, however, pulls it apart and has the Singal flow into the Amur, the Quentung -- which, as is well known, is the Chinese name for the Sungari -- into the sea. Incidentally, there should also be noted here a small map that is appended to the third edition of Witsen's work Noord en Oost Tartarye /Northern and Eastern Tartary/ of 1785 (Vol. I) and on which the Amur is entered twice: once under the name Amur, with its tributaries Schur (Usuri),

/95 cont./ 1. (cont.)
Schingal (Sungari), and others, and with the region Giletskaja at its mouth, and another time farther east under the name of Helung (the well-known designation for the Amur), with the tributaries Songora, Quentung, and others, flowing through the region of Niuchi or Nikanskaja (of the Manchu and Chinese) and inhabited by the Jupi people at its mouth. I found two copies of the above-mentioned Allard map in our academic library.

/96/ his well-known work which appeared soon afterward in 1692, Noord en Oost Tartarye. In this bulky work abounding with data thrown confusedly together, the Gilyak are named in many places and, to be sure, under various modifications of one and the same name, for example, as "Chilakken, Chilanen, Gilaki, Giliaki, Gilaci, Gilaitski, and Gilanki," or "Giliakische and Gilaitse Volken" /Volken, "peoples"/, and their region as "Gilaitskie, Giletskaia, Gilenskije, and Gilanska gewest or landtschap" /gewest, landtschap, "district, region"/ (1). In this connection several, often

1. Edition of 1692, Part 2, pp. 9, 29, 30, 32, 33, 36, 104, 520, 528, 543; edition of 1705, pp. 11, 67, 68, 77, 86, 87, 88, 96, 106, 112, 267, 838, 847, 884.

distorted, to be sure, but nevertheless characteristic features of their way of life are mentioned, and we shall come back to them on occasion later. The statements in Witsen about the habitation sites of the Gilyak differ even more than the name, for at one time he states only in very general fashion that they have their sites on the right bank of the Amur and southward (2), and

2. Edition of 1692, Part 2, p. 29; edition of 1705, p. 67.

/96 cont./ elsewhere that they live at the mouth of the Amur River and along the seacoast to the north and south of it (3), as well as

3. Edition of 1692, Part 2, pp. 33, 36; edition of 1705, pp. 88, 106.

on a very large island lying opposite the mouth of the Amur, called Giliat (4), which evidently is Sakhalin; sometimes

4. Edition of 1692, Part 2, p. 34; edition of 1705, p. 96.

they are said to extend along the seacoast southward almost to China (5) and northward to the Anadyr River (6), and, finally,

5. Edition of 1692, Part 2, p. 104; edition of 1705, p. 267.

6. The rivers around whose mouths they live are expressly named, and, to be sure, in two versions (edition of 1692, Part 2, p. 32; edition of 1705, pp. 86 and 105), among which the later, more correct ones run: Lama, Ochota, Towoi (evidently Ta-ui), Tadui, Penchion (Penshina), Kamtschatka, Tschiundon, and Anadir.

sometimes their habitation sites are given on the northern bank of the Amur River near Nerchinsk (7), and therefore quite far

7. Edition of 1705, p. 77.

from the sea. Accordingly, the Gilyak are shown on the map at three places: first, on the seacoast directly north of the Amur

/96 cont./ mouth ("Zemle Giletskaja," land of the Gilyak) (8), then high

8. On Allard's map the "Holaki" are also shown here.

up in the north, along the Anadyr, and, finally, far to the west, along the sources of a northern tributary of the Amur, which on the map bears the name of Urka and presumably is the Urkan.

Like almost all the Siberian names for places and peoples on Witsen's map or in his work, the above designations for the Gilyak and their region also reveal by their endings their undoubtedly Russian origin. Witsen himself repeatedly states, both in the individual cases concerned and in the introduction to his work, that he has often drawn on Russian sources (9). He used

9. According to Müller (Samml. Russ. Gesch., Vol. I, p. 202), in collecting the reports on Siberia he also found especially helpful Andr. Winiu's "Dumnoi djak," which, however, he does not mention. Recently Spasskij ("Svied. Russk. o riekie Amurie v" XVII stolietii /Information from the Russians concerning the Amur River in the Seventeenth Century/," in Viestn. Imp. Russk. Geogr. Obshch., Part VII, 1853, Sec. II, pp. 17 ff.) published a "Story from the Amur River," which he found in a collection of seventeenth-century manuscripts and which evidently was written before the Nerchinsk treaty (1689) was concluded. It bears the inscription, "Skazanie o velikoi riekie Amurie, kotoraia razgranila Russkoe selenie s" Kitaitsy" (Story from the great Amur River, which forms the boundary between the Russian settlements and the Chinese). One recognizes it as one of the

/96 cont./ 9. (cont.)
Russian sources used by Witsen. The information that it gives is found in Witsen in literal translation, for example, the statements concerning the location of the Gilyak region (Gilianskaia zemlia) on the mouth of the Amur and on the coast to the south and north of it, concerning the rivers that flow to the sea in the Gilyak region: Lama, Ochota, Tawui, Todui, Penthin, Kamtschatka, Tchuldan, Anadyr, etc.

/97/ as aids for the map, as he himself states, both several Siberian wooden panels and especially a map of Siberia which was made by the commander of Tobolsk, Peter Godunof, and his assistants in 1667 upon the orders of Tsar Alexei Michailowits /Alexis I Mikhailovich/ and was put on a woodcut in Moscow with a statement of the distances between the places recorded on it (1). Thanks to Middendorff's elucidation of the oldest map

for his view in the still extant, like-sounding name Kilan (Gilan) for a Persian province on the Caspian Sea -- that Gmelin cast Strahlenberg's whole account into doubt. At most, he thought, the "Kilani" could be a family of the Tungus, since there were so many in Siberia who gave themselves special names, but not a separate, different people who, as Strahlenberg maintained, distinguished themselves by their skill in so important an art as the forging of weapons -- how could there be such a people, he says, without the whole of Siberia knowing about it (4). Never-

[113]

4. J. G. Gmelin, Reise durch Sibirien, von dem Jahr 1733 bis 1743, Göttingen, 1751-1752, Vol. II, Preface.

theless it was Gmelin's travel companion who, without entering the Amur region, made the greatest contribution to our historical knowledge of its peoples, and among them the Gilyak.

Müller was the first to stress the importance of the rich mine of information concerning the Amur region which had accumulated in the Siberian archives and only fragments of which had been seen by Witsen. Later many more gleanings were obtained in this field. Through this there was brought to light the oldest information that we have up to now concerning the Amur peoples being discussed here. According to it, the Russians /99/ obtained their first information about the Gilyak even before they entered the Amur region. In the years 1639 and 1640, when the leader of the Yenisei Cossacks, Maxim Perfiljef, advanced up the Witim /Vitim/ and its left tributary, the Zypir (Zipa /Tsipa/), almost to Lake Baunt, the Tungus there told him of the Daur people, who were supposed to live along the upper Witim and along the Schilka and to trade with the Chinese, as well as a people living where the latter river empties into the sea, that is, at the mouth of the Amur, the "Kilorzy," who were distinguished from all the other peoples by their language and likewise had trading relations with the

/103 cont./

they also have the Kile and Kileng begin in the lower Amur region all the sooner or all the farther upstream the less their knowledge of the region and its population. The most distant of these peoples, the Negda and even more the Gilyak, were therefore most frequently and most generally included under this collective name.

As we saw above, the first information about the Kiler people on the mouth of the Amur came from the Chinese via the Daur and the Witim /Vitim/ Tungus to the Russians, among whom this name, provided with a Russian ending, became "Kilorzy." Only a little later, when they themselves took their expeditions down the Amur, they must have, in the lower course of it, repeatedly heard of the Kile or Kileng living downstream, until they reached the last of these peoples and discovered in them a people actually completely different from the Tunguisic tribes whom they already knew. For them they now retained the traditional name, only, of course, provided with a Russian ending, as Kiljaki, Kiljajzy, Kiljany, etc., out of which developed, according to the spirit of the language, Giljaki, Giljajzy, Giljany, etc. Thus we come to all the versions of this name which Witsen gave from Russian sources and which are explained in part by the aforementioned various versions of the Chinese name for the Kile people and in part by the arbitrary selection of the Russian ending.

/104/ It could not have failed to happen, however, that some of the Russian Cossacks who went down the Amur in boats did not become aware of the tribal difference between the adjacent Tunguisic peoples and the Gilyak. They, therefore, since they used that designation, like the Chinese, more or less as a collective name, had the Gilyak begin much farther up on the Amur than their true boundary lies. During the later, more precise examination of the statements concerned, we shall see, for example, that, according to some, the region of the Gilyak begins with the Cicha area: according to others, even sooner, shortly below the Usuri, and therefore in the midst of the Goldi area. And, significantly enough, this is repeated, like an echo of those times, to this day. It has been stressed above how

/105 cont./

3. (cont.)
Grundzüge einer tungus. Sprachlehre nebst kurzem Wörterverzeichniss /Principles of a Tunguisic Grammar with a Short Vocabulary/. ed. by A. Schiefner. St. Petersb. 1856.

However that may be, gir becomes kil in the Chinese pronunciation, and I have heard the Chinese pronounce the name "Samagir" as "Sama-kil." Likewise the names of the other above-mentioned Tunguisic tribes end in kil in Chinese. Consequently it seems to me not unlikely that they made this common ending into a collective name for all these peoples of the northern and lower Amur region, including as well the, in their eyes, not essentially different Gilyak. From Kil and Kileng, however, alone, as was shown above, the Russian designation Kiljaki and Giljaki. And this there results, if my surmise is correct, the strange fact that the collective name for a number of almost exclusively Tunguisic tribes, which arose from the distortion of a Tunguisic word by the Chinese, is at present limited to the one people who throughout the entire lower Amur region is not Tunguisic in origin.

After this digression we now return to an examination of the historical accounts concerning the habitation sites of the Amur peoples, and first of the Gilyak. Very soon after the Russian learned of the existence of the Gilyak, they became acquainted with them themselves. During the years 1644 and 1645, on their first expedition into the Amur region, under Wassilij Pojarkof /Poyarkov/, they traveled throughout the region of the Gilyak on the Amur. Only after a four-days' trip down the Usuri -- which Pojarkof, by the way, thought was the upper Amur -- did the Djutschezem (Dyuchere) people come to end, who will be discussed later, the Natken (Natki) followed, and after them the Gilyak, who, as the report states, occupied the lowermost part of the Amur River to the sea. Pojarkof went through the areas of the latter two peoples in 14 days for each of them, until he reached the mouth of the Amur, where

2: Schrenck--'218 E-S (1854-1856) 1881-1895 RX2 Gilyak RX2

/105 cont./

stopped on September 29 and at a place on the left bank where there was a large village he erected a fort. Auchankoi gorod, for a wintering place. From there one could supposedly by a ten days' journey reach the Gilyak, who lived all the way to the sea and around it (2). Chabarof, however, did not visit them.

2. Müller, Samml. loc. cit., pp. 320 ff; Fischer, op. cit., pp. 808 ff.; Dopoln. k" aktam" istorich., Vol. III, pp. 364, 368.

but in the next spring, after successfully enduring the siege of his fortress by the Djutschezen and Atschanen, set out again upstream with his expedition. On the way, however, presumably in the region of the mouth of the Sungari, he missed the Cossack Ivan Nagiba who had been sent to look for him and to inform him of the arrival of a fresh supply of men and ammunition on the upper Amur. Nagiba and his small company of 26 Cossacks and volunteers went down the Amur from Bashulayo gorod (above the Dseja /Zeya/) for four weeks, then they heard from a captured Natken that Chabarof was farther downstream among the Gilyak. They retained this man as a guide, but after another journey of three weeks they found themselves so surrounded in the middle of the river by a crowd of Gilyak boats that they could not move forward or backward. For two and a half weeks they remained in this position, anchored in the river, until finally hunger and despair forced them to try to break through the ranks of the besiegers and make their way to a nearby village, where they confiscated some fish that was hanging out in front to dry. They were able to do this, however, only after a stormy battle in which more than 30 Gilyak died. Three days later they found themselves at the mouth of the Amur (3). Hard pressed by the Gilyak there as

3. (cont.)
and at another place (Büching's Magaz., Part 2, p. 508, July 2 (three days after the Day of Peter and Paul), which however cannot be correct if the trip, as is said previously, started on May 4 and -- putting together the above-mentioned periods of time -- lasted ten weeks. In Fischer (op. cit., p. 817) it is said instead toward the end of July, which, however, would be somewhat too late according to that reckoning. In the detailed and rather drastic account by the Cossack Iwan Dwarof, a participant in the expedition (see Dopoln. k" aktam" istor., Vol. III, pp. 354 ff.) almost all these dates are lacking, except the date of departure (May 4) and the statement that Nagiba had been sent to look for them and to inform them of the arrival of a fresh supply of men and ammunition on the upper Amur. Nagiba and his small company of 26 Cossacks and volunteers went down the Amur from Bashulayo gorod (above the Dseja /Zeya/) for four weeks, then they heard from a captured Natken that Chabarof was farther downstream among the Gilyak. They retained this man as a guide, but after another journey of three weeks they found themselves so surrounded in the middle of the river by a crowd of Gilyak boats that they could not move forward or backward. For two and a half weeks they remained in this position, anchored in the river, until finally hunger and despair forced them to try to break through the ranks of the besiegers and make their way to a nearby village, where they confiscated some fish that was hanging out in front to dry. They were able to do this, however, only after a stormy battle in which more than 30 Gilyak died. Three days later they found themselves at the mouth of the Amur (3). Hard pressed by the Gilyak there as well and unable /107/ to make the return trip upstream, they constructed a larger vessel and begun the sea journey along the coast to the north. On the thirteenth day after their departure (1), however, the vessel was crushed by drifting ice (2).

1. According to Dwarof's report (op. cit., p. 355), on the tenth day.

2. Müller (op. cit., p. 330) considers drifting ice in the Sea of Ochotsk as unconceivable at that time of the year. On the other hand, thanks to the experiences of Middendorff, Starizkij, and

/107 cont./

2. (cont.)
others, we know that it is a characteristic feature of that northwestern corner of the Sea of Ochotsk. See the present work, Vol. II, p. 758, and my "Strömungsverhältnisse im Ochotskischen und Japanischen Meere /Currents in the Sea of Ochotsk and the Sea of Japan/" (Mém. de l'Acad. Imp. des sc. de St. Pétersb., Ser. VII, Vol. XXI, No. 3), p. 10.

during which they lost their entire supply of food and ammunition and only after much hardship barely escaped with their lives. They continued on foot for five days along the seacoast, living on roots, berries, seatang, seals, and whatever else the ocean washed up (3). Then they built a new vessel, with which

3. Fischer (op. cit., p. 818) also mentions walruses, as does Uwarof's account, but it is well known that there are none in the Sea of Ochotsk; this is probably a reference to whales, which abound in this sea.

in 14 days, by rowing they reached the Utschalda River, on which Gilyak and Tungus lived. They stayed there until December 15 whereupon they continued their journey inland and after 14 days, or, according to other information, after four weeks, came to the Tugur River, on which they found a large Tungus population with abundant food. The following spring, 1653, Nagiba went down the Tugur to its mouth and from there, with five men, started the return trip to Yakutsk along the sea and then across the mountains, while he sent back the other men under Dwarof in order to build among the Tungus on the Tugur a "Jassachnoje Simowjo," that is, a winter hut for collecting tribute (1).

/107 cont./

4. Curiously Uwarof says in his account that he sent Nagiba with five men, whose names he gives, to Yakutsk, while elsewhere he constantly refers to Nagiba as the leader of the expedition.

The next and last contact of the Russians with the Gilyak which we know about from this period of the first Russian military expeditions into the Amur region took place under Chabarof's successor, the Cossack Onufrij Stepanof. The latter had already spent the winter of 1653/54 in Djutschezen territory, "in the neighborhood of the Gilyak" (5). In the fall of 1655, with the

5. Müller, Samml., loc. cit., p. 343.
In Stepanof's report to the Yakutsk voivode, Michail Lodyshenskij (Dopoln. k" aktam" istor., Vol. III, p. 354), it is said "v" Dyuchenskoi zemlie, ne doply" Gilyatskie zemli, that is, in the country of the Djutschezem, above the Gilyak country.

"Syn bojarskoi" Fedor Pustchtschin who had been sent from Yakutsk in the meantime, he again went into the lower Amur region, and this time beyond the Djutschezem to the Gilyak bordering them(7). Shortly before, the latter had killed a

6. Müller, op. cit., pp. 354, 355;
Fischer, op. cit., p. 849.

company of 30 Yakutsk Cossacks, who had reached them by land from Ochotsk, and were now punished for it by Stepanof, moreover, he built an ostrog /fort/ among them, to which, because of its position on a mountain slope, he gave the name Kossogorskoi (7). He spent the winter in it, took from the Gilyak

7. In Stepanof's report the ostrog is called

/107 cont./

7. (cont.)
"Kossogirskoi"; see Dopoln. k" akt. istor., Vol. IV, St. Petersburg, 1851, p. 82.

a handsome /108/ tribute in furs, and in the spring of 1656 again went up the Amur. Two years later part of his company who did not want to submit to the delegate of the new commander, Paschkof, and had fled, returned to the lower Amur, wintered at its mouth (1658/59), and went back upstream again with the rich tribute collected from the Gilyak (1). There are

1. Müller, op. cit., p. 367; Dopoln. k" aktam" istor., Vol. IV, p. 176.

no other reports concerning the Gilyak during this visit of the Rus among them.

So much the oldest Russian reports concerning the Gilyak and their closest neighbors. What may be drawn from them with regard to the mutual boundaries of these peoples at that time? Nagiba's expedition acquainted us with the Gilyak along the coast of the Sea of Ochotsk westward at least as far as the Utschalda River, and, to be sure, in the company of the Tungus, who apparently at that time occasionally roamed to the sea to hunt and fish, as is still done today (2). To be sure, the

2. See above, p. 25.

location of the Utschalda River has not yet been ascertained (3).

3. Middendorff, Reise, etc., Vol. IV, p. 178. It is incomprehensible how Stuchenberg (Hydrogr. des Russischen Reiches, Vol. II, St. Petersbg. 1884, p. 749) could identify the Utschalda with the Udj. In doing this he confused the very simple and clear account from the expedition of the shipwrecked, and

/108 cont./

3. (cont.)
was forced to a second and likewise unacceptable assumption, namely, that their "Tugur" referred to the Utschur, a tributary of the Aldan. But then how did they reach the ocean, going down it in boats? And how incorrect this hypothesis is ethnographically: the Gilyak would have lived along the Udj!

but there is scarcely any doubt that it is to be sought in the east and perhaps not far from the great bays -- Uliban and Unalgin -- which cut deep into the land and which probably caused Nagiba and his companions to give up any further travel along the coast, about whose nature they had heard from the Gilyak and the Tungus, and instead to wait for the winter, in order to go inland along the Tugur, probably in the company of and guided by the Tungus. Neither Nagiba nor Uwarof mention the Gilyak along this river, but only numerous Tungus, although, as their reports show, they could perfectly well distinguish these peoples from each other. Hence it seems that at that time the Gilyks had not yet spread to the Tugur River. This is confirmed by the fact that in the account of the first trip of the Russians to the Shantar Islands, on which they spent the whole summer of 1712 and the winter until May of the following year at the mouth of the Tugur, the Gilyak are not mentioned at all (4), whereas

4. Müller, Samml. Rus. Gesch.,
Vol. III, p. 98.

during the later trips by the Russians along the coast farther to the east conflicts with the Gilyak did take place. There is further confirmation in the fact that in 1737, on the basis of reports collected in Yakutsk, Müller wrote that along the coast of the Sea of Okhotsk the Tungus did not extend much beyond

/108 cont./

the Tugur River and the Gilyak then followed (5). But even at

5. Geogr. und Verfass. von Kamtschatka /Geography and Conditions on Kamchatka/, p. 57 (appendix to Steller's Beschr. von dem Lande Kamtschatka /Description of the Kamchatka Region/, Frankfurt and Leipzig, 1774.

But every one that time the Gilyak went as far as Tugur Bay, north of the mouth of the Tugur River, for /109/ on an old Russian handwritten map, whose origin Middendorff puts in the middle of the last century for several reasons, one finds the sketch of a "Gilyak towpath" (Gilyatskaya perevoloka), which led over the narrow, stem-shaped part of the Siegneka Peninsula from Uliban Bay to Tugur Bay (1). By this route the Gilyak may also have

1. Middendorff, Reise, etc., Vol. IV, p. 116, note 2. The map is in the library of the Akademie der Wissenschaften. Müller (in Büsching's Magaz. für die neue Hist. und Geogr., Part 2, second ed., 1769, p. 50) also mentions a towpath used by the Gilyak and therefore "called Gilyatskaja perewoloko in Russian since ancient times." This, however, as he says, was used in order to avoid the northern promontory at the mouth of the Amur, since it ran from one brook, which emptied to the south into the bay formed by the mouth of the Amur, to another brook which flows into the sea to the north. Müller adds that the latter brook bears the name "Gole" on Chinese maps and this indicates the towpath, for "Gole" evidently refers to the Gilyak village of Kulj or Kulj

come across Uliban Bay and Siegneka Peninsula to the mouth of the Tugur. The same route was advantageous for them for another reason: they had to go across Uliban Bay to Siegneka Peninsula and along the latter northward, if, on their coastal voyages, they wanted to reach the Shantar Islands without getting too far from land.

There is still no mention of these islands in the reports cited above, though Pojarkof and Nagiba must have sighted them on their return trip from the Amur. In the oldest reports concerning them, which go back to 1709 and are based upon accounts by Cossacks stationed in Udskoi Ostrog and Tungus there, it is said that the Shantar Islands have no permanent inhabitants and are only visited by the Gilyak for hunting

/109 cont./

1. (cont.)
located on the seacoast and perhaps also to a book of the same name. Here, therefore, there is to be understood either the passage from the Amur to Lake Tschlja and from there to Kulj, or from the Kamr River, which empties into the Amur immediately above Nikolayevsk, to the Hinka Brook down this to the sea only slightly east of Kulj. Both routes are still used by the Gilyak in order to go from the lower Amur to the seacoast or g vice versa. Under no circumstances, however, can the "Gilyatskaja perewoloka" mentioned by Miller refer to the towpath on the Ukskyt -- from the Nemilen to the Tugur -- as Middendorff (Reise, etc., Vol IV, p. 198) has presumed, because then neither the localities nor the designation "Gilyak towpath" would fit. The towpath mentioned in Stuckenberg (Hydrogr. der Russ. Reiches, Vol. II, p. 774) is the same as the one in Miller.

when The Russians under the Cossack Semjon Anabara first came to the Shantar Islands in the summer of 1713, they found them uninhabited; on only one of the three islands visited by them, on which there were ample forests and good hunting and on which they spent the winter (5), did they meet a woman, whose language

5. According to Middendorff (op. cit.,

/109 cont./

purposes (2). Miller thought that their name was of Gilyak

2. Müller, Samml. Rus. Gesch.,
Vol. III, p. 97.

origin, since "schantar" means "island" in Gilyak (3), which,

3. Op. cit., p. 96. Also in Büsching's Magaz. für die neue Hist. und Geogr., Part 2, second ed., p. 310.

however, is certainly not the case (4). When the Russians

4. In Gilyak "island" is pölio-mif, a compound word in which mif means "earth" or "land": thus, La-mif -- the Amur region, Lasan-mif -- Sakhalin, Chagi-mif --part of the Amur-Liman, etc. I do not know the meaning of pölio. According to Middendorff (Reise, etc., Vol. IV, p. 108), the name "Schantar" first occurs on the handwritten map of the extreme eastern part of Siberia drawn up in 1720 and based on the works of the two surveyors, Jewreinof and Luchin, and, to be sure, on it the more southerly of the two easternmost islands of this group bears the name, "Schandanskij."

5. (cont.)
p. 98), it was probably Large Shantar Island /Bolshoi/.

they could not understand -- presumably a /110/ Gilyak woman, who, however, disappeared, and there is no information given about her anywhere later (1). It cannot be determined whether in

1. Müller, op. cit., p. 99.

fact this woman had been left behind on the island by her countrymen or whether, as Middendorff thinks (2), was abducted

2. Reise, etc., Vol. IV, p. 103.

by the Cossacks themselves on the mainland and was brought to the island. Subsequent expeditions to the Shantars confirmed that they had no permanent inhabitants. On the second trip, in 1718, under the Syn bojarskoi Filkejef, who, however, did not go there himself (3), the winter was spent on

3. Müller (Samml. Rus. Gesch., Vol. III, p. 107), who spoke to Filkejef himself in Yakutsk, says expressly that because of differences with his men he had himself put ashore with two Cossacks at the mouth of the Tugur. Accordingly, therefore, the statements by Sokolof ("Opis' Udskago ber. i Shantarsk. ost. poruch. Kozmina /A Description of the Uda Bank and of the Shantar Islands, Commissioned by Kozmin/. Zap. Gidrogr. Departa., Part IV. St. Petersburg, 1846, p. 3, note 4) and by Middendorff (Reise, etc., Vol. IV, p. 99, note 1), who have Filkejef himself reach the Shantars, are to be corrected.

/110 cont./

Large Shantar Island, which proved to be uninhabited. Through carelessness in making fire, it is said, the forests on the island caught fire and a ship that happened there. On the return trip the following summer the Cossacks wanted to do some fishing along the coast of the mainland between the Tugur and the Amur, but most of them were killed by the Gilyak (4).

4. Presumably there is a connection between this event and the story that Sokolof relates, apparently copied verbatim from a logbook, in Morskoi Sbornik (1855, No. 6, Miscellany, p. 107 -- it is the entry hinted at by Middendorff, op. cit., p. 99, note 2, which he was unable to find again as the result of an incorrect citation). Seaman Petrof, who had participated in Ivan Schestakof's expedition to the Shantars in 1738, related that they had found on Large Shantar Island and had taken aboard three Russian men, who gave the following information about themselves: they had spent about 20 years on the island; when they had come to the land of the Gilyak to fish, the latter had overcome them and killed 17 of them; only three of them escaped the Gilyak and got away to Large Shantar Island where they had lived ever since. One can see that the account is quite similar to the one mentioned above, though, if it is the same event, the twenty-year stay on the island does not fit, since it could only be twelve. But this number is given only roughly and, in view of the style of the narrative, which clearly shows a gap, could just as well refer

/110 cont./

4. (cont.)
the number of Russians originally present on the island, in which case the number of years of the stay would have been omitted, for the Russian original reads: shitya ibk" bylo na tom" ostrovie liet" s" 20, kotorye khodilip v" tu semlyu dlya rybnoi lovli..., etc. This information is also interesting because to a certain extent it is confirmation that in 1730 (not 1729 as is said in Middendorff and others), Schestakof had actually been on the Shantars, about which Middendorff, on the basis of the short and insufficient reports in Müller (op. cit., pp. 130 ff.), expresses doubt. According to him, the islands seen by Schestakof on the trips back and forth between Kamchatka and Udskoi Ostrog were not necessarily the Shantar Islands at all, since he navigated around the southern point of that peninsula and arrived at its east coast. The latter assertion, however, seems to me wholly unfounded, since Schestakof's trips, according to data from his own reports presented by Müller, took place only in the Sea of Okhotsk between the west coast of Kamchatka, Udskoi Ostrog, and Okhotsk. Müller himself never expresses doubt or uncertainty about the fact that Schestakof had visited the Shantar Islands, but only regards being unable to give more detailed information about this trip because of the absence of the logbook.

It is noteworthy that all the accounts concerning the temporary visits of the Gilyak to the Shantar Islands are inadequate and

/110 cont./

1. "Opisanie zemli Kamchatki /Description of the Kamchatka Region/" (Poln. Sobr. uchen. puteshv. po Rossii, Vol. I, St. Petersburg, 1818, p. 130).

is said to have received its name because it had no forest at all, which, however, had not always been the case: formerly it had been quite densely wooded and rich in table, but the Gilyak once forgot to extinguish the fire before leaving the island, and all the forest on it was burned (2). Krascheninnikof,

2. Middendorff thinks that it is probably impossible to put the name "Chudoi Schantar," which is not marked on any map, in its proper place (Reise, etc., Vol. IV, p. 108, note 1). According to Krascheninnikof's statements, which he does not seem to have noted, it can hardly be doubted that Small Schantar Island (Malyi Shantar") is meant by it, just as it is also by the name "Snuhoi (dry) Schantar," according to Middendorff (loc. cit.). On the "Karte von der Lage von Kamtschatka" /Map of the Location of Kamchatka/ in Steller's pertinent work one finds an island "Huft Schantar" west of the island of Bjelinchij, just as Krascheninnikof, too, gives it, but this

Chinese who came by sea (1). We therefore obtain here informa-

1. J. E. Fischer, Sibir. Gesch., Part I, St. Petersburg, 1768, p. 527-530. Here, as at one other place in his work (p. 477), Fischer calls the author of this information Perfirjef and designates him as a Yenisei (Cossack) hetman. In Pojarkof's /Poyarkov/ original report on his expedition along the Amur (Dopoln. k" akt. istor. /Supplements to the Historical Documents/, Vol. III, St. Petersburg, 1848, pp. 51, 52), however, he is sometimes called Perfiljef and sometimes Perfirjef and is mentioned as a military man from the Yenisei Ostrog (Eniseiskago ostroga sluzhilyi cheloviek").

tion about two of the most remote peoples on the Amur River at the time, for there seems to be no doubt but that the Gilyak are to be understood under "Kilorzy," as was also noted by Fischer in giving this information. It is just one of the many versions of this name, as we have already seen above: they all correspond in the primary sound, Kil or Gil, and differ only in the endings. This oldest version, however, leads directly to an explanation of how and where the name "Gilyak" arose for these people.

Among themselves the Gilyak do not designate themselves with this name at all, as many assert; they do it only when dealing with the Russians, because they know that they are so named by them. Among themselves they call themselves merely "Nib(a)ch" (2), that is, "human being," in that

do not provide any firm foothold. At first glance, it seems that somewhat more can be drawn from Stepanof's report since he built a fort, Konogorskoi Ostrog, among the Gilyak in order to spend the winter there. As Romanof has shown, however, this place was most probably located on the island of Sustuchu located in the Amur near Kidzi. He found there the remains of a low earthen embankment with pits in it, traces of former earth dwellings -- the whole located on the inclined plane of a mountain slope so that the name Konogorskoi Ostrog seems fully justified (1). From this I conclude that Stepanof did not spend the

1. D. Romanov". "Ocherk" mientnosti mezhdu zal. de Kastri i r. Amurom" /Essay on the Locality between De-Kastri Bay and the Amur River/" (Vietns. Imp. Russk. Geogr. Obshch., Part XXIX, 1859, Sec. on Res. and Mat., p. 136, note 4). Miller (Sammlg. Russ. Gesch., Vol. II, p. 355) explained the name Konogorskoi Ostrog from the location of the place "on the slope of a mountain." In Onufrij Stepanof's original account, this fort is not called Konogorskoi, but Konogorskoi Ostrog (Sopln. k" ist. Amur., Vol. IV, 1851, p. 82).

winter among the Gilyak at all, but among the Olcha, whom he, like Romanof and others later (2), did not distinguish from

2. See above, p. 51, 183, 213.

the Gilyak. This also explains his statements concerning the Dzutschuen bordering the Gilyak: he includes under this name all the peoples on the lower Amur River -- the Goldi, Olcha, and Gilyak -- as it still repeatedly done in recent times. This sufficiently explains the contradiction between the statements by Stepanof and his predecessor, Pojarkof and Chabarof, concerning the peoples of the lower Amur, and at the same time reveals the former, as a consequence of the collective extension of the name Gilyak to entirely different peoples, as the most

/116 cont./

vague and the least useful for our purposes (3).

3. As was mentioned above (p. 224, note 5), Fischer, on the contrary, was inclined to regard Stepanof's account as the most authoritative. For this reason, on his map of old Siberia (Sibir. Gesch., Vol. II, Pl. II) he showed the Natkem, who, perhaps in his opinion, could only be identical with the Gilyak, below the Atschanen, whereat, according to our interpretation of these names above, it should have been the reverse.

The later, but still from the seventeenth-century, Russian accounts concerning the Amur region, and especially concerning the habitation sites of the Gilyak in it, such as we find in the "Tale from the Amur" published by Spasski and in Witsen, have already been discussed. (4). The pertinent statements are very

4. See above, pp. 196 ff.

general and in part even erroneous, because they are only taken from collected stories and not original reports, like those mentioned above.

The text detailed reports concerning the habitation sites of the Gilyak, especially along the Amur River, do not come to light much more than a century later, and, to be sure, from quite different quarters, from the Japanese. We owe them to the Japanese traveler, Mamia Rinō /Rinō Mamiya/, who, upon orders from his government, explored the west coast of Sahalin in 1808 and 1809 and in 1810 also visited the lower Amur region, or Santan, as the Japanese called it. From /117/ Cape Rakka (Lak) (1) on Sahalin he went over to the mainland, followed in

1. Sahalin, to whom we are indebted for publishing the very valuable travels of Mamia Rinō /"Tō-tan ki ko," i.e., "Voyage to Eastern Tatary," in Nippon,

/117 cont./

1. (cont.) Nippon, Pt. 3, pp. 167-196), thinks it highly probable that Cape Rakka referred to Cape Tekka, and the first name arose only through confusion of the very similar Japanese characters for Te and Ra (op. cit., p. 199, note 6). From my own knowledge of these localities, however, I must deny this. Cape Rakka is undoubtedly the low promontory of Lak, inasmuch as the Japanese, lacking the ŋ sound in their language, as is well known, substitute an r for it. Cape Tekka, however, is the somewhat more southerly Cape Tyk.

coast southward to Cape Muibo (in Taba Bay), pulled his boat across the much-traversed towpath to the small Taba River, traveled downstream by boat into Lake Kidzi, and thus reached the large village of Kidzi located on the Amur. From there he went up the Amur to what was then the trading station of Deren, stayed there a few days, and then returned to Sahalin by following the Amur downstream to its mouth and crossing the Liman three times. On this voyage he came into close contact with the Gilyak and their southern neighbors on the Amur River, the Olcha. Both were already known to him and to the Japanese generally: the former both as permanent inhabitants of north Sahalin and as frequent visiting traders in Sisanusi; the latter only as occasional traders coming over from the mainland. Mamia Rinō even spent the entire winter of 1809/10 on Cape Notesito (2) among the Sahalin Gilyak. "Smerenkur" is the

2. Between Cape Lak and Cape Tyk. There was no village there in my time.

name that they bear in his travel account, as well as generally among the Japanese. A much-traveled Olcha from Tyt, who

/117 cont./

buyers of the fur pats captured by them and among them the fox skins common on Sahalin; or, what seems more probable to me, the name originated because the Gilyak in former times, with greater wealth than the Ainu, for the most part were themselves clothed in fox skins (5).

5. In the seventeenth-century tale from the great Amur River (Vietns. Imp. Russk. Geogr. Obshch., Part VII, 1853, Sec. II, p. 20) it is said that the Gilyak on the large island facing the mouth of the Amur wore sable and fox fur clothing.

The situation is different with regard to the customary Japanese name for /118/ the Amur dwellers from Tungusic tribes who come from mainland to Sahalin for trade. I must note at once that they are not only Olcha, but in like measure Goldi, who, however, are not distinguished by the Ainu and Japanese, but rather are covered by the collective name "Santan" or "S'santa." And then the region inhabited by them, the Amur region, is designated by the same name, after the people (1). Mamia Rinō's predecessor, the Japanese

1. During his visit to the island of Jesso /Yesso/ (1792), Adam Laxmann heard the Japanese speak of the "Sandan-aino" (Sandan people), who came to Sahalin to trade; he, however, took them for Koreans (cf. Polotskii, "Kurily." -- Zap. Imp. Russk. Geogr. Obshch. Po Otd. Etnogr., Vol. IV, 1871, pp. 486, 541). Krusenstern was quite erroneously told by the Japanese on Jesso and on Sahalin that this latter island, or, as he heard in Atsiwa, even only its northern part, was called "Sandan" by the Ainu

/118 cont./

3. "Tō-tan ki ko" (Siebold, Nippon, VII, pp. 178, 198, note 3; also Nippon, I, p. 131).

Tyne also gave the name as "S'santa," with which, according to him, the Ainu and after them the Japanese designate his people. And this leads us to what I consider the true origin of this name. It comes from the Gilyak. "Santan" or "Santa" is the Gilyak name for the Goldi. Now, since, on the other hand, the Gilyak are the immediate neighbors of the Ainu on Sahalin and, on the other hand, the major and certainly the oldest middleman in their trade with the Amur people up to the Manchu, it is scarcely conceivable but that the Ainu first became acquainted with the most numerous and most widespread of these peoples, the Goldi, through the Gilyak. And thus it is understandable that they also accepted the Gilyak name for them, only changed slightly in accordance with the Ainu language, and extended this name to Olcha, who in their eyes were members of the same people (4).

4. When, therefore, in a Russian document dated 1789, which Middendorff found among the archival papers in Ushkui Ostrog (Sopln., etc., Vol. IV, p. 102, note) it is said that the Tungusic name for Sahalin is "Jankur," one can easily recognize in it, by both the initial and the final syllables, the above-mentioned Ainu designation, through the mediation of the Gilyak, for the Tungusic Amur peoples visiting their island.

/119/ Though the name Santan or S'santa is plainly used by the Ainu and Japanese on Sahalin for the Olcha as well as for the Goldi, this is not at all the case in the travel report by Mamia Rinō. Along the Amur he only stayed in the areas of the

/119 cont./

Apart from along the Amur River, we also learn from Mamia Rinō's travels that he visited the Gilyak along the seacoast at that time. In the Amur-Liman he visited the village of Tsjomen, which consisted of large dwellings of the Smerenkur, scattered along a small river of the same name (1).

4. "Tō-tats ki ko," op. cit., p. 178.

Today's Tschomi, the southernmost coastal village of the Gilyak, is arranged in precisely the same way, as I can confirm from experience. And that at that time, too, it was the last is shown by the dotted line that on Rinō's map runs from Hoso on the Amur to the seacoast directly south of Tjsjomen and undoubtedly is intended to designate the southern boundary of the Smerenkur area on the mainland. From there southward to beyond Taba Bay stretched at that time, too, only an uninhabited coast, as one likewise understands from Mamia Rinō's statements on his return trip to Sahalin, he sailed around Cape Waiibundi (Cape Lasaref /Lazarev/, called Wafun by the Olcha) and into the channel which Siebold rightly named after him, but on his outbound voyage he had sailed along part of the coast north of Taba and named on it a series of place names, but with the express remark that the coast was uninhabited and these places were only anchorages (5). Thus, in

5. Op. cit., pp. 170, 178.

/120/ Rinō's time, too, the boundary situation between the Gilyak and their southern neighbors was the same as it was in my time.

In general, then, no shifts at all along the entire southern boundary of the Gilyak on the mainland are observable from the time of our first acquaintance with this people, that is, in about 200 years. The oldest reports are so inadequate, however, that one cannot with certainty deny that there may have been changes; they permit us to know scarcely more

/120 cont./

than that the neighbors adjacent to the Gilyak on the south were the same 200 years ago as they are today. The only thing known with absolute certainty is that the boundary situation which I found there in the fifties was exactly the same as it was half a century earlier.

If we now go back to the island of Sahalin, we are faced there with an even greater scarcity of useful older reports. In the above-mentioned reports from the seventeenth-century tale the Russians conducted to the mouth of the Amur and beyond, no special attention is given to it, though in one of them it is generally noted that the Gilyak also occupy the nearby islands in the ocean (1) which however, could just as well refer to the

1. In Pojarkof's report (see Müller, Samml. Russ. Gesch., Vol. II, p. 302).

Shantar Islands (2). Not until the above-mentioned "Tale from

2. Fischer, in this connection, actually confused Sahalin with the Shantars (see his Sibir. Gesch., Part II, p. 788, and the map, "Sibirjae veteris," Pl. II).

the Great Amur River," likewise from the seventeenth century, and to a certain extent also in Witsen, it is said more precisely that opposite the mouth of the Amur there is a large island on which numerous "Giliyak peoples" live (3). Elsewhere Witsen

3. Spasskii, "Svied. Russk. o r. Amurie v" XVII stol. /Information from the Russian concerning the Amur River in the seventeenth-century)" (Vietns. Imp. Russk. Geogr. Obshch., Part VII, 1853, Sec. II, p. 20). Witsen, Noord en Oost

/121 cont./

carried out very unsatisfactorily, since they did not go to the southern part of the island at all and even in the north they noted only the names of the villages through which they passed, while even the name of the island as a whole remained uninvestigated (1). We do not even learn from them the names

1. Du Halde, Descr. de l'Emp. de la Chine et de la Tart. Chin, Vol. IV, Paris, 1735, pp. 12, 13. According to the statements of the Manchu sent there, the natives on the mainland designate the island quite differently, according to the villages that they visited on it, but the general name for it was "Saghalian ang hata," that is, "island of the mouth of the Black River," a designation which the Jesuits put on their map, and from which, as is well known, the present name arose. According to Klaproth (Asia polygl., p. 301), however, the words "Sachalian ang chada" mean only "rocks (or island) of the black river-mouth" and merely referred to some rocks lying close to the mouth of the Amur. I must note that the bays of the Amur at its mouth, especially the left one, are rocky, though not very high. But there are no individual rocks standing from the water in front of it. For more of the many names given to Sakhalin, see below.

of the peoples inhabiting the island.

We are again indebted to the Japanese for the first detailed reports on the peoples of Sakhalin, and, to be sure, the same travelers, Mogami Tok'nai (1785 and 1786) and Mamia Rinō (1808-1810). In 1618-1615, a century before the Manchu expedition, some Japanese were sent from Jesso /Yesso/

/121 cont./

to Kzafto under the governor Kinfiro, in order to draw up a map of this country, but they did not advance very far, and they supplied hardly any information about its peoples; Siebold, at any rate, to whom we are indebted for the information (2),

2. Nippon, I, p. 128.

has nothing to say about it. There were no further expeditions to Sakhalin by the Japanese until Mogami Tok'nai and, soon after him, Mamia Rinsō set foot on the island. To be sure, Sakhalin was geographically explored at about the same time by European seafarers -- La Pérouse (1787), Broughton (1797), and Krusenstern (1805) -- and the Hollander Vries had landed on its east coast about a century and a half earlier, but they came into contact with its population only at odd coastal points, and therefore could give no more than odd bits of ethnographic information, which shall be mentioned later. The Japanese, however, studied not only the two coasts -- the west coast almost to its northern end, and the east coast as far as the bay of Patience -- but even a part of the interior of Sakhalin (3). We

3. Mogami Tok'nai, for instance, went from the Bay of Patience along the Poronai (Ty or Flyi River) across the island to Onisi (in the vicinity of Dui). Siebold, Nippon, I, p. 128.

are indebted to them for the first information about the three indigenous peoples living on Sakhalin, the Gilyak, Ainu, and Orok. Since their reports, however, and especially the one by Mamia Rinsō, are not very old, and since, as we have seen, there has been no subsequent border change on the mainland between the Gilyak and their southern neighbors, /122/ we cannot expect any considerable border changes on the island within this short space of time. In fact, Mamia Rinsō states that the area of the Smerenkur territory on the west coast of

/122 cont./

Sakhalin begins to the north of the Kitoni region still inhabited by the Ainu (1). According to the pertinent map, however,

1. "Tō-tats ki ko" (Siebold, Nippon, VII, p. 191).

the latter, with its north end, extended to Porokotan (2), and this

2. On the map to which we refer (with the inscription "Mogami Tok'nai" 1786, see above, p. 248, note 1) there is written "Torokotan," evidently only the result of a printing error or of confusion between p and t on the part of the Japanese, the adjoining map, inscribed "Mamia Rinsō 1808," on which the same place is called "Porokotan," shows.

it, as we saw above (3), at the same time the Pilja-wo of the

3. See above, pp. 29, 30.

Gilyak, their last village to the south, where they already live intermixed with the Ainu. At the present time a large portion of this kind is advancing to the north of Pilja-wo, as was explained in detail above. This may not have been the case at that time, or not to the same extent, and the two peoples concerned may have been much more distinctly separated, though mixture through marriage has always taken place. If that is true, then the entire change in the boundary situation between the Gilyak and the Ainu that has taken place there from the time of Mamia Rinsō's visit to these regions to mine is only that a somewhat more pronounced or more widespread mixture of the two has occurred, probably because even then some of the Ainu fled northward to the Gilyak out of fear of the Japanese, just as happened quite notoriously later when the Japanese colonization

/122 cont./

began to spread rapidly (4). There are no reports at all for

4. See above, p. 154.

evaluating a possible change in the boundaries of the Gilyak area on the east coast of Sakhalin, since that part of the island was visited neither by earlier travelers nor by the two Japanese mentioned above.

In maintaining everything that has been said about the Gilyak up to now, we are able to draw the conclusion that, so far as our historical information concerning this people extends, which does not cover a very great period of time, no considerable change or shift of their habitation sites has taken place. Whether and how much might have taken place in prehistoric times, however, can only be judged as a conjecture on the basis of other facts and phenomena, which we shall discuss later.

While we lack historical information on the Gilyak going back very far, this is by no means the case with respect to the Ainu. This is true, however, for only a part of this people, particularly those who are beyond the scope of this work. The farther they were to the south, the earlier the Ainu emerge from the darkness of the prehistoric period, according to the extent and as a consequence of their contacts with the Japanese: they were first observed on Nipon, then on Jesso, /Yezo/, and, finally, on Sakhalin and the Kuriles. Since their whole area of distribution /123/ consists of islands which are separated by straits with rapid currents in part, and the Japanese only gradually spread northward from Island to island, the oldest reports concerning the southern Ainu and those concerning the northern ones are far apart, and whereas the former are two and a half millennium old, the latter go back only as many centuries. According to Siebold (1), at the time of the founding of Japan

1. Aardr. en volkenkund, toelicht. tot de ontdekk. van Maerten Gerr. Vries; benev. eene verhand. over de Aino-taal en de voorthesgn. der Aino-landen

3. Steller, op. cit., p. 248, note a.

Among their neighbors on Sakhalin, the Gilyak, the Ainu have a quite similar sounding name, "Kughi" (4), which is also in

4. I write gh when the g is strongly guttural, between g and ch.

general use among the Gilyak of the mainland (5). Undoubtedly

5. Middendorff heard the Gilyak in Tugur Bay call the Kuriles "Kuwi" (see his travel report in the Bull. de la cl. phys.-math. de l'Acad. Imp. des sc. Vol. IV, pp. 288, 289; see also Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, pp. 615, 618).

all these names have the same origin in that they all, as Klaproth states for the name Kuriles, arose from the word "kur" or "kuru," which means "human being" in the Ainu language (6).

6. Klaproth, Asia polyglotta, p. 300. In San kokf tiou ran to tett (pp. 183, 184) "kur" is said to mean "tribe /Stamm/, tribe."

Moreover, the Kurile Islands, as the Japanese Ezd Tsikugo noted in 1720 among other valuable reports concerning them, were embraced under the collective name "Kuru-misi" (that is, Land of Man) by the Ainu (7). Here, then, is the simple explanation of the name Ezo Tsikugo, the Pacific Coast Province.

7. Arai Tsikugo, "Jeso-ki, ou Descr. de Jesso," op. cit., pp. 192, 207, 211. Cf. also Klaproth's additions to San kokf tiou ran to tett, pp. 191, 193, 195. Following the Chinese Japanese Source,

(2.4) p. 8. Russ. Geogr. Obshch. Po obshch. Geogr. Vol. IV, 1871, p. 399; the same, "Umurinskie Man'tzy /The Usurie Man-dse/" (Izvieztia Russk. Geogr. Obshch., Vol. VII, 1871, Sec. II, pp. 83, 123).

repeatedly designated for me by the Goldi on the Usuri with the immediately recognizable name "Kikar," but once also only generally and vaguely as "Litimka" (see Appendix). It is noteworthy that the former name is also customary among the Gilyak for the Orochi. During his stay among the Sakhalin Gilyak, Mamia Rinsō learned of a "Kiakkara" people, who were said to live on the mainland opposite (7), and later in

7. "Tō-tats ki ko" (Siebold, Nippon, VII, p. 189).

Taba Bay, when he himself visited the mainland, he saw their vessels, which came from afar, he thought from the vicinity of Kōraī (Korea) (8). Among the Gilyak along the Sea of Okhotsk,

8. Op. cit., p. 171. Prompted by a fortuitous similarity of sound, Siebold attempts a far-fetched interpretation of this name by saying that "Kiak kara" reminds one of the Mountain Kirgiz, called Kara, that is, the Blacks (op. cit., p. 199).

Middendorff heard of a "Kjächkal" people who were said to live along the Amur and beyond it (9). A Gilyak from Tykyra in the

9. Travel report in the Bull. de la cl. physico-math. de l'Acad. Imp. des sc., Vol. IV, p. 235; Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, p. 618.

/148 cont./

do they have to do with the Amur peoples at all? In order to explain the "Kordeikke" of Mamia Rinsō one need only remember that the Japanese substitute sh r for the d sound, which they lack; if one restores the latter and at the same time considers the relationship between the k and g, he arrives at "Koldeikke" and "Goldeikke" for that ethnic name. And also everything that has been said above about the Kordeikke on the basis of Mamia Rinsō's report fits the Goldi.

This correspondence in the designations for the Goldi on the part of the Japanese and the Russian points to a common origin for them. But what could this origin be? The obvious assumption would be that they call themselves this. In fact, in answer to the question as to who they were or what they were called, they repeatedly designated themselves to me as "Goldé." Nevertheless, I do not mean to say that they also do this among themselves. This may be only a designation that they use when dealing with the Russians, just as the Gilyak call themselves Gilyak when dealing with them, whereas among themselves, Nihkyvk. Perhaps the origin of this name should be sought somewhere else entirely. In any case, Mamia Rinsō did not hear it from the Goldi, but from the Gilyak during his stay on Sakhalin. It remained foreign to the Russians in the beginning, in the seventeenth century, when they went downstream and visited the Goldi area; it was not until they again occupied the Amur region in the fifties of our century and advanced from the mouth of the Amur by first establishing themselves among the Gilyak of the same Goldi appeared among them for the former Natken and Atchanen. This situation suggests the conjecture that the name Goldi /149/ in the Russian version and Kordeikke in the Japanese version may be of Gilyak origin. Now, to be sure, as has already often been mentioned (1).

1. See above, pp. 245, 303, 304.

the Gilyak designation for the Goldi is "Jam", but if one asks the Gilyak about the peoples living upstream from them along the Amur, they enumerate them in the following order: "Crongsch,

/192 cont./

3. (cont.)
of the Kamchatka Region/"(Poln. sobr. uchen. puteshestvii po Rossii, Vol. II, p. 49),

says the same, but more vaguely and evidently repeating Steller; according to him, however, Italmen needles are supposedly called "schischi," and, accordingly, the Japanese, "Schischaman." The following will show that this explanation is wrong and based on a misunderstanding. Names for the Japanese quite similar to those used by the Kamchadal are used by the Amur peoples, at least those on the island of Sakhalin and along the lower course of the Amur. The Gilyak on the mainland and on the island call them "Ssisam" (4), and the Olcha and Goldi, "Ssissa (5)."

4. Therefore, when in a handwritten document from 1744 found by Middendorff in the archives of Udskoi Ostrog there is mention of the "Ssysaizy," who are said to have destroyed a village in the mouth of the Amur (cf. his Reise in den Äus. Nord. etc., Vol. IV, p. 165), it is undoubtedly the Japanese who are being referred to by their Gilyak name transformed by the Russians. Middendorff himself, by the way, had heard the name "Ssissan" among the Gilyak along the Sea of Okhotsk, but he thought that it referred to the southern Kurile Islands (cf. Bull. de la cl. physico-math. de l'Acad. Imp. des sc., Vol. IV, p. 233; also Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, p. 619).

5. See above, pp. 29, 219 ff. above.

permit conclusions about the nature of the Gilyak houses at time. In the case of another Paleo-Asiatic people, the Kamchadal, we see the original earth-yurt completely disappear before an imported, foreign type of house construction within the short space of time. At the time of Krasheninnikov and Steller (in the forties of the previous century), all the Kamchadal still lived in earth yurts of the type described above. Even in 1779, when Clerke, the successor of Cook on the last third voyage, visited Kamchatka, at least the south of the peninsula, between Peter-and-Paul's Harbor and Bolscherezk

/353 cont./

hunting matter it and therefore is better suited for the feet than for the head. There is another justification for this custom of the winter houses of the Ainur peoples. If one lies with his head against the wall, he exposes himself to the rats, which are excedingly abundant in these houses and which always run along the walls, would be constantly running over the face. This alone, however, would not make the Gilyak refrain from to allow even a stranger to assume this position on their beds. If superstition did not demand strict observance of the traditional custom, and afraid of any violation of it, no matter to whom, as misfortune for all the inhabitants of the house.

Due to the lack of historical data, it cannot be determined when the Chinese winter-yurt reached the Gilyak on the Amur and, gradually spreading downstream, supplanting the earth yurt, reached the Amur-Liman, the coast of the Sea of Okhotsk, and the Liman coast of Sakhalin. In the reports of Pojarkof and Nagiba, who spent the winter among the Gilyak at the mouth of the Amur and along the Sea of Okhotsk in 1644 and 1652 (3), there are, unfortunately, no hints which would

175 131 484 they visited the large islands within sight from their coast, densely wooded, and still uninhabited, on which they could peacefully pursue the hunting of the precious fur-animals, sable, etc., and the productive fishing and animal-trapping along the coast. Indeed, I am even inclined to believe that whereas their westward expansion along the coast of the mainland at first did not reach the Tugur and later did not go beyond it, they did visit the Shantar Islands, even the westernmost of them, and Bear Island (Medwäshij) located beyond [103] Tugur Bay. At least the name "Ngorbak," which allegedly the Tungus gave to this island (6), is undoubtedly of Gilyak

6. Middendorff, op. cit., p. 110.

origin, in that "Ngarbach" /112/ in Gilyak means "animal rock" (1).

1. From nga -- animal, and pach -- stone, rock (see above, p. 175, note 2). Similar Gilyak place names are Tschcharbach, Tschorbach, Tebach, etc.

175 174 648 131 133 But the Gilyak were surely never very numerous on the Shantar Islands, since the Gilyak population on the adjacent coast of the mainland is not large and since navigation around these islands is difficult and dangerous on account of the rapid and changing currents, the floating masses of ice, the frequent fog, the pounding surf, etc. It was therefore natural that as soon as the Russians appeared on the Shantars, wintered there, and in fact took possession of them, the Gilyak remained away from them, just as later, in 1829, they withdrew temporarily from the mouth of the Tugur when a party of Russians took up winter quarters at the mouth of the Great Uikon (2). It is very probably

[113]

1. Middendorff, Reise, etc., Vol. IV, p. 1536. Though this statement seems to leave no doubt but that "Ngatku" was a Tungusic designation for that Amur people, Middendorff says elsewhere (travel rep. in the Bull. de la cl. phys.-math. de l'Acad. Imp. des sc., Vol. IV, p. 235; the same, Beitr. zur Kenntn. des Russ. Reiches, Vol. IX, Part 2, p. 618) that he had received information on this people from the Gilyak. But in this case, too, these must have been border Gilyak adjacent to Tugur Bay, who obviously gave the traveler the name customary among their neighbors, the Tungus, for those people, for as much and as frequently as I myself inquired among the Gilyak on the Amur, the Liman, and on Sakhalin about the peoples known to them, I never heard the name Ngatku. In any case they have other designations for the Olcha and Goldi, which will be discussed later.

Gi
175 the above description by the Tungus of the Natka, their place
101 of habitation, and their way of life agrees with Pojarkof's statements concerning the Natken and Chabarof's concerning the Atschanen, who likewise lived only from fishing and without agriculture and livestock-raising, and even though in this direction it fits the Goldi as well as the Olcha, it is not therefore to be assumed that the Tungus, especially the Negda, were likewise unable to distinguish between these two peoples
Gi
101 not too far away from them. Experience has shown that, on the contrary, primitive peoples are inclined to regard even minor branches of one and the same people, individual families,

/115 cont./

syllable in order to recognize in this designation the name Olcha only slightly changed. And this is the name that this people gives itself. I shall come back to this later. Chabarof also named the fort which he erected for winter quarters Atschanskoi gorod after this people. It cannot be learned from his report where it was located. I believe that one may assume, however, that it was already in Olcha territory since it was the last place he reached along the Amur and since he must have learned the name given for the Olcha people, appearing before us here for the first time, from them themselves. Or else it may have been that Olcha staying in Goldi territory were accidentally involved in the learning of the name, which, however, is less probable. Chabarof must therefore have proceeded quite far below the Ussuri on the Amur. In view of the relatively short duration of his voyage from the mouth of the Sungari (3), however, that would have been possible only if he followed the main stream and not the right bank with its many bays. And this appears to have been the case in fact, for otherwise he would surely not have overlooked the mouth of the Ussuri.

3. The duration of this voyage cannot be determined very precisely; from what can be learned from Chabarof's account, however, he seems to have been at the mouth of the Sungari on about September 15 and to have gone downstream from there for 14 days, for he reached the place where he set up his winter quarters on September 29.

/116/

Although we learn about the present neighbors of the Gilyak on the Amur through Pojarkof and Chabarof, nothing can be learned from their reports about where the boundaries between these peoples were at that time because the statements of the distances in terms of days of travel, without any designation or mention of recognizable localities, are too vague and

/353 cont./

Shortly thereafter, however, in 1790, Ssarytschof reported /354/ from his journey through the country that there were no longer any earth yurts anywhere and that instead of them Russian-style houses (log houses, so-called isba) had been built everywhere; only the summer dwellings of the Kamchadal, which are likewise peculiar, had been retained (1). On the basis of a remark by

1. Sarychev", Putesh. po Sieverovost. chasti Sibiri, Pt. I, p. 179.

Mamia Rinsô on his voyage in 1809 from Deren down the Amur, one might think at first glance that the same thing had happened among the Gilyak on the Amur. Coming from the territory of the S'janta (Olcha), when he entered the territory of the Smerenkur (Gilyak) at Horo (Chjare), he noticed that from there on people, dwellings, implements, and way of life changed and became exactly the same as on Krafto (Sakhalin) (2). One might

2. Siebold (Nippon, VII, p. 177). Cf. also p. 248 above.

think, therefore, that at that time the Gilyak on the Amur were still living in earth yurts as on Sakhalin. But this is impossible, for, as mentioned above (p. 466), four years earlier Krusenstern had found Chinese winter-yurts among the Gilyak on the northern tip of Sakhalin, that is, at the farthermost point, as far as these dwellings are found even today. If, in addition, one considers the fact that Mamia Rinsô was traveling in summer, there can be no doubt but that his above remark referred to the summer dwellings, which in fact, as we shall see in a moment, are quite different among the Gilyak on the Amur and on Sakhalin than among their neighbors, the Olcha, and the other Tungusic Amur-peoples. Conditions in Kamchatka and in the lower Amur region were too different to have produced an equally rapid disappearance of national peculiarities in both places. In the former, the Russians, after conquering the region, settled

/385 cont./

are, on the contrary, of such a type that they abundant food with a nomadic life because of grazing areas and therefore in a way give the tional motive for the nomadic life.

/386/

Chinese origin (1). To make the fish-skin robes the Gilyak use

175
301
797
291
648

1. During my stay in the Amur region, among such decorations several little brass crosses with the inscription "Souvenir de mission" and a bronze medallion bearing the picture of the Savior with a Chinese (?) inscription were found on a woman's robe from the village of Wair or one of the nearby villages. In all probability these pieces came from the French missionary, de la Brunière, who in 1846, after he had spent the winter in Wair, was murdered and robbed by the Gilyak. His colleague Venault, who by order of the Apostolic Vicar of Manchuria made a journey in 1850 from Ashe-ho on the Sungari to the Gilyak on the Amur to investigate the crime, saw many of their children wearing such crosses and medallions (Nouv. Annales des Voyages, fifth series, Vol. XXX, 1852 [Vol. II], p. 218). To supplement the reports collected by Venault concerning the killing of de la Brunière, it should be noted here in passing that it took place, according to what I learned from the Gilyak, on the left bank of the Amur, between the villages of Wair and Ssabach, at the point where the rocks in a strange gate-like formation come close to the river. I visited it during my winter journey on March 29 (April 10), 1855. The already aged Gilyak in whose house I stayed in the village of Wair was named for me as one of the murderers. He evaded or declined to answer my questions concerning the details of the matter. Since, however, the Gilyak consider it bad luck (uftsch) to destroy a piece of paper with

175

797
114

/388 cont./

1. (cont.)
characters on it -- no matter whether written or painted -- I hoped that perhaps through him I would succeed in obtaining possible diaries or other written notes of de la Brunière. But despite the high monetary reward that I offered the Gilyak for them, only a few scraps of one of D'Orville's maps of China were brought to me by them after the lapse of some time, when I had already again returned to the Amur region.

[192] 2. MAKE THE GILYAK SKIN COATS, THE GILYAK USE the most common species of salmon in the waters of the Amur region, namely the large pink (Gilyak tygk-tscho, on Sakhalin lagki-tscho). For this purpose the skins stripped from them have the scales removed, which is done by pounding the soaked skin in a wooden vessel; then, by scraping, they are cleansed of the adhering muscle and fatty parts, flattened and smoothed, and the individual pieces sewed together. A material varying in quality is obtained, depending on how carefully these operations are performed. On the robes intended for everyday use or for protection against rain, which are of a yellowish-gray color and usually without any ornaments, the places where the scales were attached to the individual skins can be clearly recognized (Pl. XVIII). [192] The more elegant robes, on the other hand, look as though they were made of a fine yellowish-white leather. This contrasts especially sharply with the wide black edgings with which the body of the robe in front, above and below, as well as the sleeves at the shoulders and hands is provided with the above-mentioned color by means of paint. Various kinds of embroidery is put on in the intervening spaces, and the back in particular is distinguished by pretty, intertwined arabesques embroidered with differently colored threads, as they are shown on Plate XXIII, fig. 2, 3 and 4. The above-mentioned metallic ornaments, too, are never lacking on them.

[See category IIa, p. 448--Analysis]

/394 cont./

[191] the neck or head, or with the fur cap (see Pl. XIX), and in which they continue to sit, even after throwing off the fur coat, inside the house. Furthermore, in order to keep the chest and abdomen in the area of the pit of the stomach especially warm, a flap lined with fur, the so-called koch-pasi, is worn there under the shirt, on the naked body, hung round the neck with a small band and at the bottom knotted around the body by two others. The example of the type pictured on Plate XXII, Fig. 3 which I saw in the possession of the Gilyak Julin in Tebach, was of Goldi workmanship. It was of pentagonal shape, rounded off at the bottom, lined with fox fur, and trimmed all around with otter fur, but provided on the outside with multicolored and in part artistic embroidery on black chintz material, which I shall come back to below. Here there must still be mentioned a peculiar undergarment that is noticed in particular among the Tao Gilyak in Nyi, both among adults and on a boy about seven years old; this is a pouch tied around the loins and as far as the thighs and knees. For the Gilyak sitting astride their sledges it is especially important to protect the knees against wind and weather, and a knee sheath (Gilyak pasi) made of seaskin and tied around the leg below or above the knee serves for this purpose.

[193] The footgear has already been mentioned. In winter, for warmth, the Gilyak put some dry grass in their boots, as more or less all the northern primitive peoples do (1). Accord-

1. Thus, besides the Siberian peoples, the Eskimo of northwestern America and Greenland, for example (Rob. Brown, "Das innere von Grönland, The Interior of Greenland,"in Petermann's Geogr. Mitthell., 1871, p. 384).

/395 cont./

[193] ing to the statements of the Chinese U-tschen, who wrote a description of the town of Ninguta in 1722, it is also customary among the Manchus there, and for this they use a soft, fine, longish grass growing in the vicinity of water, which they call

/387 cont./

[194] (1). Presumably only loosely hung over the racks upon departure, [195] they could only too easily have fallen off during the rapid [196] and wild voyage and could have been carried into the river by the wind. Indeed, the latter may even have been the actual intention of the sacrificers, for the entire sacrificial voyage is supposed to serve to gain the favor of the river or the river spirit through the gifts mentioned, and through that to secure good luck and success in fishing and during all river travel in the coming /518/ summer and fall. My opinion concerning the fact in connection with the sacrificial voyage on the Amur was confirmed by the fact that in the fall, as soon as a new covering of ice has formed on the river, another celebration with sacrifices and zach taken place. The Gilyak then go out on the ice in front of their village: here a hole is cut in the covering of ice, and beside it a pole decorated with zach is erected. Now the above-mentioned gifts are thrown into the river by means of this hole, obviously to obtain its favor for the winter fishing and perhaps also for the traffic on the ice covering.

226 Immediately after the Amur is open, there comes up from the sea the best and largest fish that it has to exhibit: the Amur sturgeon (Acipenser schrenckii, Gilyak nakki-tscho) and the even larger Amur hausen (Ac. orientalis, Gilyak pakt-tscho). Both go far up the Amur and its major tributaries, the Ussuri, Sungari, etc., and, indeed, of the latter, the haluga of the Russians, it was reported as early as Pallas that it also occur in the source rivers of the Amur, in the Schilka (Pallas/ and in the Argun/ Argun/ (1). It has already been pointed out

1. Pallas, Reise durch verschi. Prov. des Russ. Reichs /Journey through Various Provinces of the Russian Empire/, Vol. III, p. 207; The same, Zoogr. Rosso-asiatica, Part III, p. 107. Georgi, who gave the first description of this fish, which was also used by Pallas, called it

/518 cont./

(1). As dasticoi, as Brandt also does in turn (Bull. de l'Acad. Imp. des sc. de St.-Pétersb., Vol. XIV, p. 172. Among the source rivers of the Schilka, the Onon has it especially abundantly, whereas the Ingoda, as Georgi noted (Bemerk. einer Reise im Russ. Reich im J. 1772 /Notes on a Journey in the Russian Empire in 1772/, Vol. I, p. 353), and recently Maack (Reise, as cited, p. 1.) assure us that the Argun in the Amur/, p. 27), is too shallow and tony for it. When in other older as well as more recent reports Dauria, Chinese and Russian ones, reference is made simply to hausen (hielugo) and sturgeon (ostro) in connection with the kinds of fish occurring in its rivers, as, for instance, in Hedenström (Otrywki o Sibiri /Siberian Fragments/, 1830, p. 146), Paroschin (Poiezdka v Zabaikal'skii kraj /Journey to the Transbaikalia Region/, Moscow, 1846, p. 117), Hagemeister (Statist. obozr. Sibiri /Statistical Survey of Siberia/, St. Petersburg, 1854, Vol. I, p. 251), Kaschin ("Nachlese über die Fische des Kalmyk uw to kill birds and small animals. Sopel (in Pallas, op. cit., Vol. III, p. 49) reports on the arrows with a blunt bone knob used among the Ostyak along the Obi for shooting smaller animals, and in Middendorff's travel work (Vol. IV, p. 1576, woodcuts 1 and 2), there is an illustration of such a knob-shaped Ostyak arrow point.

226 above how greatly the Gilyak prize sturgeon and hausen. The [227] situation is the same among the other Amur peoples. There is [228] eager pursuit of them everywhere, and the methods of fishing are

/519 cont./

[411] [412] [413] [414] [415] [416] [417] [418] [419] [420] [421] [422] [423] [424] [425] [426] [427] [428] [429] [430] [431] [432] [433] [434] [435] [436] [437] [438] [439] [440] [441] [442] [443] [444] [445] [446] [447] [448] [449] [450] [451] [452] [453] [454] [455] [456] [457] [458] [459] [460] [461] [462] [463] [464] [465] [466] [467] [468] [469] [470] [471] [472] [473] [474] [475] [476] [477] [478] [479] [480] [481] [482] [483] [484] [485] [486] [487] [488] [489] [490] [491] [492] [493] [494] [495] [496] [497] [498] [499] [500] [501] [502] [503] [504] [505] [506] [507] [508] [509] [510] [511] [512] [513] [514] [515] [516] [517] [518] [519] [520] [521] [522] [523] [524] [525] [526] [527] [528] [529] [530] [531] [532] [533] [534] [535] [536] [537] [538] [539] [540] [541] [542] [543] [544] [545] [546] [547] [548] [549] [550] [551] [552] [553] [554] [555] [556] [557] [558] [559] [560] [561] [562] [563] [564] [565] [566] [567] [568] [569] [570] [571] [572] [573] [574] [575] [576] [577] [578] [579] [580] [581] [582] [583] [584] [585] [586] [587] [588] [589] [590] [591] [592] [593] [594] [595] [596] [597] [598] [599] [600] [601] [602] [603] [604] [605] [606] [607] [608] [609] [610] [611] [612] [613] [614] [615] [616] [617] [618] [619] [620] [621] [622] [623] [624] [625] [626] [627] [628] [629] [630] [631] [632] [633] [634] [635] [636] [637] [638] [639] [640] [641] [642] [643] [644] [645] [646] [647] [648] [649] [650] [651] [652] [653] [654] [655] [656] [657] [658] [659] [660] [661] [662] [663] [664] [665] [666] [667] [668] [669] [670] [671] [672] [673] [674] [675] [676] [677] [678] [679] [680] [681] [682] [683] [684] [685] [686] [687] [688] [689] [690] [691] [692] [693] [694] [695] [696] [697] [698] [699] [700] [701] [702] [703] [704] [705] [706] [707] [708] [709] [710] [711] [712] [713] [714] [715] [716] [717] [718] [719] [720] [721] [722] [723] [724] [725] [726] [727] [728] [729] [730] [731] [732] [733] [734] [735] [736] [737] [738] [739] [740] [741] [742] [743] [744] [745] [746] [747] [748] [749] [750] [751] [752] [753] [754] [755] [756] [757] [758] [759] [760] [761] [762] [763] [764] [765] [766] [767] [768] [769] [770] [771] [772] [773] [774] [775] [776] [777] [778] [779] [780] [781] [782] [783] [784] [785] [786] [787] [788] [789] [790] [791] [792] [793] [794] [795] [796] [797] [798] [799] [800] [801] [802] [803] [804] [805] [806] [807] [808] [809] [810] [811] [812] [813] [814] [815] [816] [817] [818] [819] [820] [821] [822] [823] [824]

(1). Eagle feathers, however, also enjoy special popularity for the feathering of arrows among the Eskimo of northwestern America, along the Kwichpak, Norton Sound, etc. (3).

1. Zagoskin", Pešehodnoje opis' chatni russk. vlad. v^ Amerikje /A Foot-traveler's Description of Part of the Russian Possessions in America/, Part I, p. 61.

At various places in the foregoing, mention has been made of the iron utensils and iron weapons of the Gilyak, in the course of which we have come across, especially among the latter, specimens of very artistic workmanship. It is therefore in the place to inquire into the origin and eventually into the manner of the manufacture of these objects. The circumstance that the Gilyak do not use any iron in the exterior of interior construction of their houses, and likewise in the making of boats, sledges, etc., and always use only wooden pegs instead of iron nails to join the individual pieces together, does not lead one to expect them to be masters in the craft of forging, and at first glance suggests the conjecture that the numerous and in part neat and artistically worked iron utensils and weapons found among them are of foreign origin. Nevertheless, this is by no means the case. Even the earliest reports they are described as old-known. During his captivity in Siberia at the beginning of the previous century, Strahlenberg was told that a people living at the bends of the Amur, the Kilani, whom the Russian call "Kilaki, Tatarzatch," make excellent, fine weapons, and forge their best bows, and work in iron" (2) -- a report which was given to little credence

/566 cont./ Dunning was Century in Siberia at the beginning of the previous century, Strahlenberg was told that a people living at the bends of the Amur, the Kilani, whom the Russian call "Kilaki, Tatarzatch," make excellent, fine weapons, and forge their best bows, and work in iron" (2) -- a report which was given to little credence

2. Ph. Joh. v. Strahlenberg, Das Nord- und Ostliche Theil von Europa und Asia/ /The Northern and Eastern Parts of Europe and Asia/, Stockholm, 1730, p. 386.

by a later traveler, Gmelin, chiefly no doubt on account of the indeed very strange linking of the Kilani with the Pentan province of Gilan and the Awans /Avas/ to it, that he felt obliged to question the very existence of such a people (3). Gmelin thought

3. See p. 203 above.

that if there were a people there which «an especially distinguished by its weapon-making, all of Siberia must be filled with them, and these weapons would long since have been available, if not from the people themselves, at least through the Chinese (4). Nevertheless, the report which came to Strahlenberg's

4. J. G. Gmelin, Reise durch Sibirien, Göttingen, 1752, Vol. II, Preface.

attention more than one and a half centuries ago is now confirmed, for both the above-mentioned bows faced with buffalo horn and decorated with silver and the beautiful lances, spears, and knives with inlaid figures in copper, brass, and silver, which have no equal among any of the Siberian peoples, are of Gilyak workmanship. If, however, these beautiful weapons were unknown in Siberia in Gmelin's time, and even today scarcely go beyond the Amur region, the reason lies, on the one hand, in the small quantity of metal available to the Gilyak, and, on the other hand, and even more, in the high value which they themselves put on

/573 cont./

that it is known under the name of "bemu," in which can be recognized without difficulty the above-mentioned Gilyak designation "petsch" distorted in Japanese fashion. He says of it that, although little used, it was greatly esteemed and in war was the chief decoration of the one chosen as the leader. In the case of the latter statement the imagination of the traveler may have put in a word, but the former one is perfectly correct: in my time these pieces of armor were not used at all, but, though most of them were in a damaged condition and, indeed, were often to be found only in fragmentary parts, they were regarded as such valuable objects that they gave their owners a great extraordinary wealth and respect, and a few of them sufficed for the purchase of a wife. Today, therefore, they are only rare remnants of fabulously high values. They owe this to their foreign origin, for, according to unanimous statements by the Gilyak, they came from the Manchu, and, as Manzia Rimd also states, are highly prized by the latter themselves.

It is known from the oldest European reports on the subject (1)

2. Cf. Neuhof, Die Gesandtschaft der Ost-Indisch. Gesellsch. in den verreisten Niederländern an den Tartarisch. Chan u. memnalt nach Chinen. Keiser /The Embassy of the East Indies Company in the Netherlands to the Tartarian Khan and Two Also to the Chinese Emperor/, Amsterdam, 1666, p. 384. Also Witsen, Noord en Oost Tartarye, second edition, Amsterdam, 1705, pp. 3, 6, 13.

that even the ancient Manchu (Nüntschi) had pieces of armor and helmets, which, like the ones described above, consisted of iron lamellae placed over one another like scales and connected with one another by pins or fastened to a leather foundation. After the conquest of China by the Manchu such armor and helmets were also worn by the Chinese soldiers, officers, and by the

/573 cont./
empere himself (3). Also of interest for our purpose is the

3. Gerbillon in Du Halde, Descrip. de l'Empire de la Chine et de la Tartarie Chinoise, Paris, 1735, Vol. IV, p. 273.

statement by Lakof, the well-known member of the Russian mission in Peking in the years 1807-1820, according to which, among the gifts prescribed by law which the Chinese emperor /574/ had to give to the father of his bride and young wife upon his engagement and marriage was to be found a certain number of pieces of armor and helmets (1). Under these circumstances, it

(115)

quite understandable that these objects would also appear as most valuable and honorable possessions in the eyes of the peoples of the lower Amur region standing under the rule or at least under the influence of the Manchu-Chinese, down to the Goldi, and, accordingly, would be used by them in their most important social transaction, the purchase of a wife.

The art of making iron armor was also passed from the Manchu-Chinese to the Goldi immediately neighboring them in the Sungari and lower Amur region, and Mamia Rinsö (2) specifically mentions the latter, distorting their national name in Japanese fashion as "Kordekke" (2), as makers of the iron armor. Needless

2. See p. 315 above.

to say, these were not the first and only objects that the Goldi learned how to make from their southern neighbors. Here, therefore, we see the art of forging iron advancing along another route from the Manchu-Chinese, down the Sungari and Amur,

Trade. Value of the Principal Items Occurring in Trade, the Household, and the Rest of Life. Trade Relations of the Amur Peoples with One Another and with the Manchu-Chinese, Japanese, and Russians. A Look at the Recent History of Trade and the Rule of the Manchu-Chinese in the Lower Amur Region.

As essential as fishing and hunting may be for the existence of the Amur peoples, they nevertheless cannot directly satisfy all their needs. They cannot procure some of their necessary items in food and clothing, as well as the luxury items that have become no less essential to them, except by selling part of their hunting and fishing products to the neighboring civilized peoples, that is, by trading. Thus, in this latter, a third source of subsistence is opened to them, by means of which the first two are essentially supplemented and brought to their full significance.

It is clear that even more than in the earlier sections the Japanese sources for the trade of the Amur peoples should begin with the Gilyak. None of the indigenous peoples of the lower Amur region has as much interest in and talent for trade and such extensive trade relations as the Gilyak. It is typical for them that in the first information which the Russians received about them -- I mean the above-mentioned account that the Cossack leader Ivan Ivanof gave to the Russian Prince Vasilii Tsugin in the years 1639 and 1640 (1) -- they were already designated as a people living

1. See p. 203 above.

at the mouth of the Amur (Schilkha) and having trade connections with the Chinese. In fact, they do move trading with the Chinese and Japanese than all the other peoples of the lower Amur region, although they /592/ live farther from them, and often act as middlemen in the trade of the latter with the former as well as in the of the two civilized peoples with each other.

/591 cont./
the two civilized peoples with each other. Thus, they stand in the center, so to speak, of all international trade relations in the lower Amur region. This is especially true of the Amur Gilyak, while those on Sakhalin and the southern coast of the Sea of Okhotsk have hardly less a peripheral position in this respect than the other peoples of the region. The former however, are also favored more than the latter two by their geographical position, in that, besides the sea route to the Japanese by way of the Liman and along the west coast of Sakhalin, they also have a second water artery on the Amur River, which leads them to the Chinese living on it as well as on the Sungari. Finally, in the trade with the Russians, too, the Gilyak, and, to be sure, again those of the Amur River, occupy a central and intermediary position, so to speak, in contrast to the neighboring peoples, merely as a result of the fact that the occupation of the Amur region in the 50's by the Russians started at the mouth of the Amur and the first settlements were founded in Gilyak territory, in particular the Nikolayev post, which for some time remained the headquarters of the Russian administration and from which the further exploration of the lower Amur region and of Sakhalin took place.

If one calls to mind the violent and bloody resistance with which the Gilyak opposed the Russian freebooters in the seventeenth century (1) and considers that by nature they are by no

1. See pp. 218-227 above.

means as good-natured, docile, and indolent as the Tungus, but rather, far to the contrary, are mutinous, spiteful, and deceitful, while at the same time energetic and even ready to shed blood if humiliation of greed are involved (2), it might be surprising

2. The killing of de la Brunière by the Gilyak mentioned above (p. 575, note 1) is evidence of this. Shortly before my arrival in the Amur region, the crew of a

/591 cont./
whalers that had run aground in the vicinity of the northwestern tip of Sakhalin was killed by the especially notorious Gilyak from Tymovsk and the boat was plundered. In 1855, among the Gilyak of Pogbobi, I saw a bucket bearing a number and an English inscription, which presumably came from it.

/609 cont./
(Sakhalin), and which he therefore calls "kraft-oti" (1).

1. "Jenoki, ou Descr. de l'île de Jeso," translated from the Japanese by the late M. Timing (Annales des Voyages, publ. by Malte-Brun, Vol. XXIV, Paris, 1814, pp. 162, 164). Cf. also p. 561, note 3 above.

There is an even more definite statement in Rinsiže's work, San hyō kokf tsou ran se sets, published in Iedo (Tokyo) in 1785 or 1786, where it is said that the inhabitants of Jeso (Sakhalin) exchange their products on Karafuto with the "islands" for blue glass beads, eagle wings, tobacco pipes, silken fabrics embroidered with dragons, and colored linen and cotton materials (2). This undoubtedly refers to the trade which

2. Klaproth, San hokf tsou ran to sets, ou Aperçu général des trois royaumes (General Survey of the Three Kingdoms), Paris, 1832, p. 180. Cf. also Hirter, Asien, Vol. III, p. 487.

the Manchu-Chinese, Gilyak, and Olcha, with the above-named, mostly Chinese commodities, but in part also indigenous products of the Amur region (such as the eagle tails), conducted on Sakhalin with the Japanese and Ainu of this island and, through their intermediation, also with the inhabitants of Jeso, and which the last-named indigenous peoples of the lower Amur region and some of the Goldi still conduct. To be sure, there are not named there, but this is not to be expected in view of the tact of Klaproth, that the peoples of the lower Amur region at that time on the part of the Japanese, and, rather, it is to be assumed that under "Manmin" in the collective sense they meant all those people there carrying on trade with Manchu-Chinese

/609 cont./
commodities. The Gilyak and Olcha coming to Sakhalin to trade with the Japanese are simply designated as "Manchu" even by many a more recent Russian reporter (3), though at present

3. For instance, by Radonitski (cf. P. Tikhmenev", Ist. obozr. obrazovaniia Rossiisko-amerik. Kompanii i deiatel'nosti do nastoiashch. vrem. /Historical Survey of the Founding of the Russian-American Company and of its Activities up to the Present/, Part II, St. Petersburg, 1863, p. 127), Bunge, (Otrov "Sakhalin" i Elepod. 1853 g. /Sakhalin Island and the Expedition of 1853/, St. Petersburg, 1872, pp. 62, 72, 85), and others.

neither they nor the Chinese merchants referred to as a rule under this name by the Russians visit Sakhalin. The first Russian report concerning the trade in question is almost as old as the latest Japanese accounts. In 1785, Adm. Lassburg heard the Japanese on Jeso speak of the "Sandan-ains" who bring beads and fabrics to "Karap" (Kraft), Sakhalin and barter for animal furs, skins, etc., for them. To be sure, he thought that

/609 cont./
designation /610/ for the lower Amur region, there can be no doubt but that the Gilyak, Olcha, and Goldi trading on Sakhalin were meant by it.

The principal center for the trade of the Gilyak with the Japanese is Nairanuki, the foremost settlement of the latter and located close to the southeastern tip of the island (1). It is,

1. See pp. 146-156 above concerning the founding and the character of the Japanese settlements on Sakhalin.

therefore, also the most distant goal of the "Susam" voyages of the Gilyak, on which trade is conducted, not only with the Japanese, but also with the Ainu. The voyages are made in summer and in winter, by boat and on sleds. For the sea voyage the Gilyak use either the above-mentioned Manchu boats brought from the Sungari or, and for the most part, their own ordinary river boats described above, on which they only raise the sides by a board put on either side for protection against the higher waves of the sea. Taking allowance for these peculiar vessels of theirs, they cautiously avoid the open sea on the voyage and always stay, after they have crossed Mamia Rinsö Strait in calm weather, in its narrower part, the so-called Gilyak Pilias-ishy (2) that is, "Great Cape," Olcha Waifun)

the Gilyak coming to Sakhalin to trade were no longer admitted to Nairanuki by the Japanese but only as far as Dushungoro, and in the following year the Olcha trader were prevented from entering even that place, so some of them remained in Kusunai and some went to Taraika on the east coast (2).

Manchu language. Rinso continues his report, "The successors of those first harata and kasinta, accompanied by other natives, from then on annually brought the designated gifts to the officials in Deren. Even today, the most intelligent and most suitable of the natives on the island are appointed as harata and kasinta by the Manchu. Their number is now limited to eight: one harata, in Najoro, and seven kasinta, three of whom are on the west coast and four on the east coast (their names and their places of residence, which are all in the Ainu area, follow). Several years ago, because the furs on Krafto became rarer, the chiefs brought their gifts to Deren only every three years, and with an even greater decline, only every four or five years. But then the Manchu had the stipulated gifts collected by the Sautaner, and, as a consequence, this year the kasinta of Usijoro, Najoro, and Raitsiska personally brought the gifts to Deren." Rinsô met these people on their journey there and asked them about the manner in which the gifts were offered. They confirmed for him that the gift consisted of a black sea-otter fur, and at the same time disclosed to him that the Manchu officials had taken it amiss that they had failed to deliver the gifts for a few years and had pointed out to them that in the future they should better appreciate the favor that they had received from the Manchu and should be more careful about bringing the stipulated gifts.

/622/ It was approximately in the middle of the previous century, according to these reports, that the Manchu, who had formerly come to Sakhalin only to trade, expanded their tributary relationships with the peoples of the lower Amur region, among them the Olcha and Gilyak, to include the Sakhalin Gilyak and the Sakhalin Ainu as well, in that at various places there, too, they appointed chiefs or elders and imposed upon them the obligation of bringing to them at Deren an annual tribute of furs -- an obligation which, to be sure, was not always punctually observed, but was still in full force in Mamia Rinsô's time. A few facts noted by European travelers may be cited to confirm these statements, quite credible in themselves, by the, as already noted several times above, extremely accurate [114] and reliable Japanese traveler.

Ainu AB6

/622 cont./

and reliable Japanese traveler. Krusenstern (1), for instance,

1. Reise um die Welt /Voyage around the World/, Vol. II, p. 176.

reported that when he met the Gilyak ("Tatars") in Nadeshda Bay, near the northern tip of Sakhalin (1805) -- as was pointed out above (p. 467), it was probably in the village of Ngywr-wo -- one of them was distinguished from the rest by his clothing, which was a red silk robe of Chinese cut, with gold flowers interwoven in it, and "without doubt" was their chief -- evidently, therefore, one of those harata or kasinta appointed by the Manchu and mentioned by Mamia Rinsô. Of far greater importance, however, is a second, very definite sounding report which we owe to Fr. Schmidt (2). In 1860, in Najoro, he

2. "Histor. Bericht," etc., p. 94.

became acquainted with one of the most distinguished Ainu, the aged Ssetakurero, upon whom, as an Ainu elder, the Japanese had conferred a saber. He still had in his keeping a document written in the Manchu language, which his father had received at one time from the Manchu superiors on the occasion of a tribute journey to Ssan-ssin on the Sungari, and through which he was appointed an elder of the Ainu. By means of this report the accuracy of Mamia Rinsô's statements concerning the tributary obligations of the Ainu to the Manchu at that time and the manner in which they had to be met is placed beyond any doubt. But I cannot refrain from expressing the conjecture that on the basis of the above report there was some misunderstanding on the part of the reporter or the listener with regard to the place to which Ssetakurero's father made his tribute journey, in that this journey was not made to Ssan-ssin on the Sungari, but, as must be assumed from the dates, to Deren on the Amur. Such a misunderstanding could arise all the more easily since Ssetakurero, according to his own words, had himself never been in Manchu country.

2: Schrenck--1055 E-5 (1854-1856) 1881-1895 RX2 Gilyak RI

/648 cont./

It must be noted here that the Japanese traveler, Mamia Rinso, either misunderstood the conditions just described, and especially the position of the slaves among the Gilyak, or else intentionally put them in a different light and thereby gave rise to completely false conceptions concerning their domestic and marital situation. With reference to his stay among the Smerenkur (Gilyak) on Cape Noteito on the west coast /649/ of Sakhalin (1), he says that "there it is the custom of the country

1. Cape Noteito is not given on Mamia Rinsô's map as reproduced by Siebold (op. cit., Pl. XXV), but on Mogami Tok'nai's map it is shown somewhat diagonally across from Taba Bay or the entrance into Taba-Kidsi Straits (see above, p. 964).

that the women give orders to the men, treat them like servants, and have them perform all the work. He himself, it is said furthe had to bend under the yoke of the mistress of the house, and he, like the rest, had his daily work imposed on him by her, but since the mistress of the house was particularly well disposed toward him, her other men became jealous, and he, who was well aware of this, was careful not to become involved in things which he would have had to conceal, but rather occupied himself solely with domestic work under the eyes of the other men, and, as a result of this modesty, he gained the confidence and esteem of the former, who presented him with meat and fish" (2).

2. Mamia Rinsô, "To-tatskiko," in Siebold's Nippon, VII, p. 169.

[191] It is difficult to understand how Siebold (3), on the basis

3. Op. cit., p. 198.

/649 cont./

114 171 175 569 592

of this statement by Rinsô, could express the conjecture that the kojektschutsch or kojachtschitsch of the Kamchadal known through Steller and Krascheninnikof (4), that is, men being used

4. Steller, op. cit., p. 351, note. Krascheninnikof, op. cit., p. 40. See also p. 473, note 2, above.

in the place of women, were also to be found among the Gilyak. Suffice it to state that neither I nor, as far as I know, any other traveler in the Amur region ever encountered any trace of this deplorable custom among the Gilyak, and that Siebold's con-
114 595 175 jecture is therefore wholly unfounded. At first glance there seems to be more justification for his conclusion, drawn from the same statement by Rinsô, that polyandry exists among the Smerenkur on Krafto (Gilyak of Sakhalin). "The northwest coast of Krafto," he adds, "would accordingly be the only land in the world where polyandry is practiced in accordance with law or custom at the present time." But, as may be seen from the above descriptions, this conclusion, too, is by no means accurate: nowhere, neither on Sakhalin nor on the mainland, does polyandry prevail among the Gilyak. But how then can the Japanese traveler's report quoted above, which speaks of the "rest" and the "other men" of the Gilyak "mistress of the house" in Noteito, be explained? The trustworthiness of Mamia Rinsô, often stressed in these pages, does not permit simply rejecting the report under discussion as fiction. In his discussion of the domestic situation of the Gilyak which occupies us at the moment, he gives further proof of his credibility, in that he so accurately describes the peculiar cradle used by them (5), as

5. Op. cit., p. 191.

has also been done here (6). Yet I cannot but assume that in this

6. See p. 1046 above.

/649 cont./

114 175 595

case personal motives on the part of the Japanese traveler came into play and gave rise to the vague wording of the report, which can be interpreted in various ways. Forced to wait among the

114 175 592 595

Smerenkur (Gilyak) at Cape Noteito for an opportune moment to carry out his planned trip to Tôtats (on the opposite mainland), which had been unsuccessful the year before, /650/ and without any provisions, Mamia Rinsô found himself, in order to stay alive, forced to do all kinds of work, such as cutting wood and the like, in the house where he had taken refuge. For a time,

[357] [567]

then, he entered the ranks of persons obligated to perform domestic service in exchange for food and lodging and had to accommodate himself, like the "rest" and the "other" men in a similar position, including the slaves, to act according to the orders of the woman in charge of the house and to being treated "like a servant" by her. This does not mean either polyandry nor a dominant position of the woman over her husband. Pride and vanity, and perhaps also fear of his government, probably prevented the traveler from fully and openly confessing in his report the undignified and humiliating position and treatment which had befallen him among the Smerenkur, and prompted him to describe the situation in a more favorable light as the alleged

[515]

custom of the people. He also depicts the women of the Smerenkur in an ideal light, saying that "their face and skin are extremely delicate and beautiful due to daily washing," whereas actually the Gilyak women of Sakhalin look still dirtier than those on the mainland as a consequence of staying in the cramped, dark, and sooty earth huts.

114 175 569 435

Even though Mamia Rinsô avoids speaking of slaves in referring to his subservient position among the Smerenkur, he is well aware of the existence of such among them. For he says (1)

1. Op. cit., pp. 186 and 187.

of the inhabitants of southern Krafto (Ainu) that in their trade with the Santaner, that is, Gilyak, Olcha, and Goldi, they "even frequently sell human beings, and, to be sure, widowers

/650 cont./

114 175 569 [435] [439]

and widows, unmarried people, orphans, and the needy; 3-4, often 6-7 pieces of gold cloth are paid per head, but young and stupid persons, however, who cannot be used for any services, are exchanged for crude goods." According to him, even the Ainu from Jesso /Yesso/ and from the island of Risiri come over to Sakhalin in order to buy there human beings in the situations

[304]

named. He adds: "This is why one finds tattooed women in the country of the Smerenkur" -- a perfectly correct conclusion, for, as has already been pointed out (2), tattooing is by no means

2. See pp. 631 ff. above.

[184]

customary among the Gilyak. Rinsô's observation concerning the slave trade of the Ainu correspond completely with ours above and substantially supplement them, but his latter remark leaves no doubt that not only the Gilyak on the mainland but also those of Sakhalin keep slaves, or at any rate female slaves, among them, whom the latter obtain probably exclusively from the Ainu. Be-
175 567 sides purchase, however, the Santaner, as Rinsô reports, also get their slaves in another, more brutal manner by taking to their country as security the brothers, sisters, and children of those Ainu who owe them debts in trading and are unable to settle these debts in the following year when they return. Needless to say,

[648]

they become slaves there. The Japanese government, which had absolute domination over southern Sakhalin and its main trade center, Ssiranussi, did not /651/ feel bound to check this scandalous practice, which ceased only after the island passed into Russian possession.

567 171

Before I go further in describing the family relations of the Gilyak, I should like to insert some data concerning slavery among other Paleo-Asiatic peoples for comparison. As disgraceful as the Ainu practice of selling fellow tribesmen as slaves to the Gilyak and Olcha is, yet nothing is reported, either by Rinsô or by other travelers, to the effect that they keep persons from their own tribe as slaves. What kept them from it, whether it was their own kindheartedness and weakness or a prohibition of the Japanese acting as absolute rulers, may be left undecided.

/663/

Section 12

000 Social relations: political and legal position. Social organization on the basis of wealth. National communism. Inviolability of property. Hospitality. Caution and indecision on journeys: wind and weather tests. Superstitious calming of storms. Greeting and expressions of thanks. The custom of giving gifts and return-gifts to one another. Reliability in business affairs. Time reckoning. Calender. Cosmic conceptions. Amusements: singing, music, dancing, games.

128 In connection with the family, the basis of all social organization, the most essential and important characteristics of the latter among the Gilyak and the neighboring peoples in the lower Amur region were discussed in the preceding section: morality, slavery, blood revenge. It remains for us to consider those aspects of their social life which are less directly and immediately connected with the family.

195 648 At the time of my stay in the Amur region the Gilyak were not subject or tributary to either China or Russia. At the beginning of the century the Chinese government had exercised some authority over them on the Amur as well as on Sakhalin and in several places appointed elders from among them, who were to collect a certain amount of tribute in their districts and deliver it to Deren. In the twenties, however, as was discussed in detail above (1), it relinquished this authority and confined it to

1. See pp. 970 ff. above.

those parts of the lower Amur region located farther upstream around the Sungari, so that the Gilyak and the Olcha remained only nominally subject to it, and since from them on no tribute was collected and delivered to the Manchu-Chinese government, the posts of village or district elders created by it automatically perished, too. For the Gilyak in particular, more conscious of their freedom, they had already in my time /664/ disappeared

/664 cont./

195 648 from memory to such an extent that I never heard them mentioned by them and learned of no Gilyak term for them. On the part of the Russians, however, in my time, at the beginning of the fifties, a firm foothold was held at individual points in the lowermost Amur region, for example, in Petrovskoye, Nikolayevsk, and Mariinsk (1), but they did not pay any atten-

1. See pp. 174-181 above.

tion at all to the natives and left them with their own institutions and customs as long as they did not disturb the order within the 000 Russian settlements (2). Thus in my time the arrangements made

195 197 648 114

2. Only after the conclusion of the Treaty of Aigun (1858) and the definitive occupation of the Amur region by the Russians were village elders (Russ. starosta) appointed by them from among the Gilyak and the other natives and put under the district chief (Russ. ispravnik /ispravnik/) residing in the nearest post. Dr. Seeland, who had already met such village elders among the Gilyak in the years 1878-80 (Russische Revue, Vol. XXI, p. 233), failed to recognize the wholly Russian origin of this arrangement, and generally failed to distinguish adequately between what was originally peculiar to the Gilyak and what they took over from the Russians -- and at that time this had already spread very far and deeply -- deprives his description of them of almost all its value.

195 648 Thus in my time the arrangements made by the Manchu-Chinese for governing the Gilyak had already disappeared, and none had yet been introduced by the Russians; the people were left to themselves and within the limits mentioned, could do as they pleased. The following remarks pertain

/698 cont./

231 hind legs. After this the other boards on top of the cage are removed, and the bear is dragged by a number of people into the yurt, where the dogs' table found in the middle of it has meanwhile been removed. Since one cannot depend on merely the leather noose thrown around the neck of the animal, if it is full-grown, a Gilyak now jumps in front of the bear with legs apart, seizes it by the roots of the ears, and presses its head against the floor. Simultaneously two other Gilyak armed with wooden poles do the same thing with its front paws, and now still another jumps on the back of the animal, straddles it, and puts a collar on it, from which, by means of a revolving ring, long iron chains and leather straps run in two directions. With these the bear, after its hind legs have once more been unfettered and, roaring loudly, it has stood erect, is now tied between the two central posts of the yurt in such a way that it can comfortably lie down and get up again. As a reward, so to speak, or as a token of fondness a few slices of jukola or seal fat are then given to it, whereupon it is led around the inside of the house several times and then back to its cage.

114 231 175 Undoubtedly this Gilyak custom of keeping bears in captivity, occasionally bringing them into their houses, and treating them in the manner described has given rise to the legend, very widespread in Siberia, that they tame bears and use them as domestic animals for riding and driving. In a Russian document about the Amur stemming from the seventeenth century and published by Spasskij (2) ("Skazanie o velikoi riekie Amurie /Story

[113] 2. In his article, "Sviedieniia Russk. o riekie Amurie v" XVII. stol. /The Russians' Knowledge about the Amur River in the Seventeenth Century/," in Viestn. Imp. Russk. Geograf. Obshch., Pt. VII, 1853, Sec. II, Res., p. 20.

about the Great Amur River/"), it is said: "on a large island (Sakhalin) lying opposite the mouth of the river live the Gilyak peoples, who keep 500-1000 dogs in their villages, eat all kinds

/698 cont./

114 231 175 of animals, and feed bears for peaceful work" (3). At the

3. In the original the latter passage reads: "i medvyedei kormyat" v" ulusakh" dlya raboty mirno."

beginning Spasskij did not want to give any credence to the latter statement, both on account of its strangeness and from the lack of any other confirmation. But in the "Copy of a Sketch from the Siberian Country" (Spisok" s" chertezha Sibirskiia zemli) published by him in 1849, it is said explicitly: "The Gilyak people sow no grain, eat fish, and drive or ride on /699/ bears" (Gilyanskie lyudi khlyeba ne syeyut", pitayutsya ryboyu, a yezdyat" (1) na medvyedyakh"). Witsen also found

[192] 1. The Russian verb, yezdit', means both "to drive" and "to ride."

the same legend, that at the mouth of the Amur River "lives a savage people called Gilaki, who keep many bears and dogs in order to utilize their services" (2). Finally, it is also found in

2. Witsen, Noord- en Oost Tartarye /Northern and Eastern Tartary/, 1705, p. 884.

Strahlenberg (3), for it says there: "at the mouth of the Amur

[113] 3. Das Nord- und Ostliche Theil von Europa und Asia /The Northern and Eastern Part of Europe and Asia/, Stockholm, 1730, pp. 386, 387.

River lives a people whom the Russians call Kilaki; some 'Yakut Tatars' have related to me about these people that they tame bears and use them as we do horses:" (4).

4. Witsen (op. cit., p. 886) was also told

/699 cont./

114 231 175

4. (cont.)

this fable by the Yukagir in the country of "Ssabatsia" (sobach'ya zemla = dog country) in Siberia, but he himself labeled the report doubtful.

231 *792 The length of the bear's captivity depends on its age: old animals are kept in captivity only a few months; young ones for several years, until they are fully grown. When it has acquired a thick layer of fat as a result of plentiful food and lack of exercise, the time draws near to lead it with great pomp to its doom. The only season of the year in which bear festivals take place among the Gilyak is winter, for then they stay, at least on the mainland, in the spacious dwellings built in accordance with the Chinese pattern and have much time for social gatherings, festivities, and feasting; in fact, the abundance of time is probably the chief reason why they like to prolong them as much as possible. In particular December, or Anj-long of the continental Gilyak, is the month in which most of the bear festivals occur. But this is by no means obligatory; they may equally as well take place in January and February; indeed, I myself attended such a festival among the Olcha that did not begin until March 22 (April 3). But this is about the latest date for it, for by then preparations for the summer begin in earnest, and soon afterward, in April and at the beginning of May, the move to the summer dwellings is undertaken. Sometimes setting the date for when a bear festival is to take place is assigned to the shaman, but usually, as was mentioned, it is left to the owner of the bear or bears, who is also the host, and he will let it depend on his own business affairs and can, if the latter demand it, have a more or less long pause between the individual acts of the festival. As a result of this, as well as thanks to the great number of bears kept in captivity by the Gilyak and Olcha and the long duration of the whole festival, it may easily happen that the traveler in the country will encounter here or there an individual act of the festival, but usually on such an occasion the Gilyak, animated by mistrust and suspicion, try to keep such strangers from entering their dwellings by all kinds of pretexts, as I myself experienced on Sakhalin.

[156] [109] [123]

4:Ivanov et al. E-4 (no date) 1964 RX2 Gilyak RX2

768 Peoples of Northern Siberia and the Far East

101 [361] resettled. In southern Sakhalin, individual families live in the village of Tarasa, Poronaysky Rayon.

Administratively, the Nivkhi territory belongs to Sakhalinskaya Oblast and the Nizhne-Amurskiy and Takhtinskiy Rayons of Khabarovskiy Kray.

197 The Nivkhi language is usually classed with the group of paleo-Asiatic languages. But among the languages of this group, it has a distinct place.

[196] In its structure, the Nivkhi language belongs to the synthetic-agglutinative languages. The synthetic features are the fusion of the nominal and verbal elements (kkan-dog; pil'a-gan-big dog). The agglutinating

[193] features include the addition of affixes (kkan-gu-dogs). The phonetics of this language are very complex. The language has the following parts of speech: nouns, numerals, pronouns, verbs, and adverbs. The adjectives

802 have many similarities with verbs. The Nivkhi numerals are interesting: in the Nivkhi language, there are no numerals common to all objects, instead, there are various groups of numerals, for the counting of: 1) long objects (sticks, staffs, trees, plants, etc.); 2) small round objects; 3) large, round, cylindrical objects and objects of indefinite shape; 4) thin, flat objects; 5) animals and insects; 6) people and mantlke spirits; 7) paired objects. For example, t'ig'-r-n'ekh-one tree; k'u-n'ik-one bullet; ty-el'akk'-one house; tamkh-n'rikh-one tobacco leaf; kkan-n'yn-one dog; nivkh-n'in-one person; mu-n'im-one boat; t'u-n'irsh-one sled; and n'a-one handbreadth, etc.

197 As a result of the Nivkhi's close ties with the Tunguso-Manchurian peoples, the Nivkhi language contains a large number of words in common with the languages of these peoples.

174 In the Lower Amur Basin, the Nivkhi are unquestionably old inhabitants. There are enough grounds to consider them the most direct descendants of the neolithic population of this territory. This population left behind numerous pits--marks of old dugouts of square or round shape, polished stone implements, and a special type of ceramic ware--flat bottomed, with spiral ornament. Such pits have been found both along the Amur and in Sakhalin. There are different points of view as to which is the older site of Nivkhi habitation--the Amur or Sakhalin. The well-known student of the Amur peoples, Academician L. Shrenk, held that Sakhalin was the original home of the Nivkhi, whence they spread to the continent. The opposite viewpoint was expressed by L. Ya. Sternberg, who insisted on the continental origin of the Nivkhi and their considerably later migration to Sakhalin. Historical data indicate a larger northward distribution of the Nivkhi along the coast of the sea of Okhotsk in the past. It is also beyond question that the Nivkhi once lived farther up the Amur than they do today. According to Chinese sources, tribes of Chi-Lin-Mi lived on the lower reaches of the Amur in the 12th century; there is every reason to conclude that these were Gilyaks, or Nivkhi.

175 The first Russian data on the Nivkhi date to the 17th century. According to these data, the Nivkhi did not pay tribute to China. The first Russian to travel down to the mouth of the Amur was the "writing chief" Vasily Poyarkov (1643-1646). He was followed by Yerofey Khabarov, Ivan Nagiba, the boyar's son Pushchin, the official Stepanov and others. In the Cossack reports of the 17th century, both the Nivkhi and the Ul'chi are referred to as "Gilyak peasants." According to these reports, they lived in large villages in wooden winter houses, flanked by barns, racks for hanging fish and log structures for bears. The Nivkhi wore clothing of lashkina and animal skins; they kept many dogs, engaged in fishing, and their diet consisted mainly of fish. They traded with the Chinese, Ainu and Tungus.

[361] [196] [193] 231 231 231 231 231

439 with the Chinese. After the appearance of the Russians in the Amur region,
268 the Nivkhi began to use small quantities of bread, sugar and salt.
[263] The immemorial, and until recently the only, domestic animal of the
231 Nivkhi was the dog. It served as a draught animal and provided for fur
clothing and meat for food; it was widely used as a medium of exchange
and played an important part in religious ideas and rituals. The number
[556] of dogs in a household was an index of wealth. As a rule, every household
[422] kept 30-40 dogs, which demanded considerable care. They were fed chiefly
fish and acid-fat; feed had to be stocked for the whole winter, when dogs
were used most as draught animals.

492 The old sled of the Nivkhi, which was still found in use by Shrenk in
● [175] the middle of the last century, was so narrow that the driver sat astride
it, resting his feet on small skis; sometimes he raised himself and ran in
this position on skis. The runners of this sled were curved both in the back
492 and in front. The dogs were harnessed to the towing strap alternately on
either side, rather than in pairs. The harness was a simple collar, so that
the dog pulled with the neck.

499 Until quite recently, dog races were still a part of the bear festival; in
493 these, the Nivkhi used the old sled and the old type of harness. The harness
[546] and the sled which appeared among the Nivkhi in the beginning of the 20th
[171] century were considerably different from the old type. They were of the
so-called Eastern-Siberian type; the sled was of greater capacity and
equipped with a vertical shaft-bow and paired harness, not in collars but in
yokes, which the dogs pulled with the chest.

The development of the carting trade brought with it a new type of sled,
170 its greater size and stability permitted the transportation of up to 200 kg
142 of goods. It was usually drawn by 9 to 11 dogs. The best trained and most
143 valuable dog was the leader. The driver—kayur—usually called out his
directions to this dog. The dogs were stopped with a shouted order and a
brake-pole. Dogs were sometimes also harnessed to a boat on a longer
tow strap.

498 The horse as a draught animal appeared among the Nivkhi relatively
171 recently.

In addition to dog transportation, winter travel on land was done by
281 skis—bare skis without fur lining, or skis lined with seal fur. The former
were used for short trips; the latter, for distant expeditions during the fur-
hunting season. The Nivkhi skis were distinguished by the wooden strips
nailed over the fur.

Travel along the rivers (particularly in Sakhalin) was in light hollowed
501 boats made of poplar. These dugouts were so light that they were carried
[824] by hand across barriers (shallows and isthmuses). They were propelled
[171] with oars or poles (usually employed for upstream travel). For long-
distance travel, the Nivkhi had a large boat similar to that of the Ul'chi,
Nanays and Orochi. It was made of three wide cedar boards, of which
[824] the bottom one was bent upward in front, projecting like a spade. It was
rowed with 2 to 4 pairs of oars, by lifting alternately the right and the
left ones.

361 The Nivkhi villages were usually situated near the mouths of spawn-
ing-rivers, and seldom exceeded 20 dwellings. Until recently, the dwell-
ings of Amurmen were set side by side. Some 40 to 50 years ago, the
342 Sakhalin Nivkhi, still widely used the dugout house. It was made by dig-
175 ging a pit some 1.25 meters deep, over which a wooden framework was
built of thin logs, and covered on the outside with earth. The smoke vent
[354] served as a window as well; the hearth was built in the center, and
[352] plank beds were set around the walls. At the end of the 19th century,

342

Mud hut.

342 the entrance to the hut was no longer from the roof, but through a long
● 175 low corridor.

From about the period of the Ming dynasty, the Nivkhi dugouts began
to give way to Manchu fanzas of the frame type, which spread over the entire
Nanay territory and were taken over by the Nivkhi. The structure and lay-
[171] out of the winter dwelling were similar to those of the Ul'chi. In summer-
time, the Nivkhi usually lived in summer dwellings built on piles some
1.5 m high. They usually consisted of two parts: the rear part, which served
as living quarters and was lighted by an opening in the roof, and the front
part, which served as a warehouse. The summer house was usually sur-
rounded by racks for jerking fish and storehouses on piles for storing
[171] various products. The general appearance of the Nivkhi summer dwelling
was similar to the Ul'chi summer storehouse.

291 The old summer dress of the Nivkhi men was similar in many features to
that of the Nanaya. It consisted of trousers (varsh), a robe, reaching to the
knees and closing from left to right, footwear of sealskin, and a conical
birchbark hat (kh'ibkrakk). The trousers and robe were made of blue or
gray cotton cloth. The women's summer robe of fishskin or fabric was
longer, and was decorated along the edge with copper disks. In winter, an
outer garment of dark fur, with the fur outside, was worn above the robe.
During sled trips, the men wore a kind of sealskin above the fur garment, to
[531] save it from wear (sealskin was not used for dressing the dead). The head
was protected by earmuffs and a fur hat. Men's and women's clothing
differed only in that the latter had more embroidery and appliqués, and was
[439] made of a greater variety of materials (silk, cloth, lynx-fur on the hat).

Formerly, the Nivkhi obtained material for their clothes from Chinese
and Russian merchants. Footwear, robes and overcoats were made of

614 parties to agree. When agreement was reached, the khlay-nivkh came to the
[629] offending clan with men of the victim clan, fully armed, and a duel was
enacted between the representatives of the two clans. Then each clan repre-
sentative killed a dog, and peace was considered established. After that, the
ransom was paid. It consisted of coats of mail, spears, silk materials and
other valuable objects.

The Nivkhi had a classificatory system of kinship. But, in distinction to
601 the Tunguso-Manchurian system, the specific term of kinship among them
applied always to persons of one, rather than different generations. As
Shternberg showed, the classificatory system of the Nivkhi reflected even in
[178] his time the existing marriage norms. The Nivkhi retained until the end of
[595] the 19th century some remnants of group marriage. These relations were
possible only for persons of the same generation, and were categorically
forbidden among persons of different generations.

614 All the members of a clan were divided into four age groups: 1) grand-
56 fathers and great-grandfather (atak); 2) fathers (ytyk), their brothers
(tuvng), the husbands of the mother's sisters and the brothers of the hus-
bands of the mother's sisters; 3) brothers and sisters (tuvng); and 4)
children (oba).

● 175 Trade ties with China and the transformation of fur-hunting, and later of
439 fishing, into economic activities directed to commercial ends stimulated
614 the disintegration of the clan order among the Nivkhi, which occurred
184 first among the Amur Nivkhi. The latter had early begun to trade with
182 the Manchus. Nivkhi merchants sailed up the Sangari to San-hsing, and
bartered furs and beluga backbones for tea, tobacco, fabrics and metal
articles. They also bartered with the Ainu, the Japanese and with other
neighbors. Members of the Tvabing clan, for instance, were for a long time
the middlemen between the Sakhalin Nivkhi and the Ainu. Thus, long before
[556] Russian colonization, the Nivkhi began to be divided into rich and poor.
[595] The rich could have several wives and 3-5 slaves. The rich man's bride-
price always included large quantities of imported valuables. But commodity
[560] relations developed slowly, since exchange was only in the medium of furs
and, to a lesser extent, fish. The mass of the Nivkhi continued in a sub-
sistence economy.

195 Slaves did only housework. They could set up their own households
567 and marry free women. The slave's descendants of the fifth generation
were considered free. On the whole, slavery was not widespread among the
Nivkhi and was of a patriarchal character.

At the end of the 17th and in the 18th centuries, the Manchus established
195 among the Nivkhi, as well as the Nanays, the posts of khalada— clan elders,
648 and gosyanda—village elders.

672 After the middle of the last century, the disintegration of the Nivkhi
subsistence economy proceeded more rapidly. After the Nivkhi had finally
become a part of Russia, slavery disappeared; a new form of exploitation
195 appeared, in the institution of "half-shares." Nivkhi who lacked the imple-
198 ments of production fell into the position of "half-sharers." The catch
432 was divided according to the number of participants, plus the share to the owner.
[567] The implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox
771 Christians, but their views remained animistic. They thought of the island
776 of Sakhalin as an anthropomorphic creature; similar ideas were held about
trees, mountains, rivers, water, earth and cliffs. The killer whale was in
their thinking an yz'—a "master" of other animals. Almost every natural
phenomenon had its yz'. The chief of these were Pal-yz'—the "master"
of the mountains and the taiga, and Tayrnadz, or Tol'yz'—the "master" of

534

342

Playing a wooden percussion instrument.

The wooden religious sculpture was akin to that of the Orochi, Ul'chi
and Nanay. The figurines of bears on dippers and spoons used in the
bear festival were finely made and realistic in style. The bear dippers
were often remarkable in their craftsmanship. Some of them were carved
with pictographs, relating the history of the hunt or rearing of a given
bear. The carvings on the dipper handles were also symbolic; they
indicated by a variety of symbols whether the bear was killed in a hunt
or reared in captivity, whether it was killed in the summer; and so
forth.

The musical culture of the Nivkhi was very poor. They played the
primitive one-string instrument (t'ngyrng) and a lip jew's-harp (kkangga).
During the bear festivals they used, instead of musical instruments, an
ordinary log, which the women struck with sticks.

Education was entirely lacking among the Nivkhi before the Revolu-
tion. The Nivkhi-Nanay alphabet written in the 1880's by the missionary,
Pitotod'yakonov, was not used by the Nivkhi.

534

[212]

In 1895 an elementary school was opened in the city of Maritsk; two
others were opened in 1898, by 1905 they were closed for lack of funds.
Only a few individual Nivkhi attended Russian schools.

Contemporary Life of the Nivkhi

175 ●
648

In 1918, soon after the establishment of the Soviet government in the
Far East, this area, and especially the Amur Basin and Sakhalin, be-
came the scene of civil war and intervention. Guerrilla units were organized
to fight the White Guards and interventionists. The bitter fighting lasted
several years.

● 175 In the beginning of 1920, the laboring people of Sakhalin overthrew
648 General Kolchak's appointees and reestablished the Soviet regime, which
immediately began to organize contacts between the Russian revolutionary
workers and peasants and the Nivkhi and other peoples of Sakhalin. However,
the Soviets lasted only three months in Sakhalin. In April 1920, the Japanese
landed on the island and seized the city of Aleksandrovsk. The poorly armed
Red Guard units were compelled to retreat and withdraw to the taiga. They
became guerrillas and, joined by men who escaped from the interventionists,
they engaged in a stubborn fight against the invaders. The Nivkhi took part
in the struggle side by side with the Russians, rendering substantial aid to
the guerrillas by transporting their units in dogsleds from district to dis-
trict. The occupants, afraid of the guerrilla movement, initiated brutal
retaliation against the population. Many fighters for the Revolution were
executed. The terror and violence went on for 5 years. It was not until
January 1925, after the Japanese troops were expelled from the Far East,
that Japan signed an agreement ceding the northern part of Sakhalin to
Russia. By May 15, the Red guerrillas mopped up the last remnants of the
interventionists in northern Sakhalin; since then, the Soviet government has
been firmly in control of the area.

In August 1945, the Soviet Army liberated southern Sakhalin from the
Japanese invaders, and Soviet people came to the immemorially Russian
lands, Yuzhno-Sakhalinsk developed on the site of the former Vladimirovka.

The period of Japanese intervention brought great suffering to the Nivkhi.
Their economy was completely disrupted. The Japanese shamelessly took
away their fishing areas, fostered drunkenness, sowed dissension among
Nivkhi clans. Drunken sailors raped Nivkhi women and beat up their hus-
bands. The Nivkhi endured extreme poverty and entire villages died out
from hunger and diseases. The Japanese also made serious inroads into the
natural resources of Sakhalin. They carelessly exterminated sable, musk
deer, and wild reindeer; they devastated fishing waters, bays and small
rivers. They chopped down forests without any plan and did nothing to com-
bat forest enemies. A great deal of forest was destroyed by fires. Coal and
oil resources were also plundered.

In 1929, native village soviets and two native Rayon Executive Committ-
tees were established, replacing the initial village and rayon committees—
revkoms (revolutionary committees). In 1933, 63 Nivkhi were elected to
native and Russian village soviets, 30 Nivkhi were elected to the two native
Rayon Executive Committees, and 5 to the Sakhalinskaya Oblast Executive
Committee. The Nivkhi were equally active in the village soviets on the
continent.

Formerly illiterate and extremely backward economically and culturally,
the Nivkhi were gradually drawn into the work of various Soviet organiza-
tions—becoming a part of a new, hitherto unknown, culture. Their politi-
cal activity also expanded and developed. The former distrust of Russians,
resulting from the arbitrary rule of the tsarist administration and, later,
from the conduct of the Whites who worked with the Japanese interven-
tionists on the island and along the Lower Amur, began to disappear. We
must not forget the vast initial gulf between the Nivkhi and Soviet culture.
Of all the Amur peoples, the Nivkhi, particularly on Sakhalin, were the most
deprived. They were people who depended wholly on the harsh nature
surrounding them, who were isolated in the narrow circle of family and clan
interests, who fearfully shunned new and unknown people. The socialist
reorganization of Nivkhi life on the continent proceeded along the same
patterns as that of the other peoples of the Lower Amur region, akin to the
Nivkhi in their life and culture such as the Negidals, Ul'chi and Nanays.

/17 cont./

174 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in
174 a colder climate. The most typical proof of this kind is a remnant
171 connected with their winter abode -- the dugout. The Gilyak dug-
342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

342 There are also times when the smoke opening in the Gilyak
796 yurt once again performs the function of a door as among the
178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt; through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu
[177] yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited by us is actually a
[192] remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

/27 cont./

22 In spring, with the seals and the first fish that travel in masses upstream to spawn, the koryushka, herring, the Gilyak is again revived, and in the course of the summer months in the expectation of the autumn catch he again begins to make visits and dolce far niente.

574 252 In speaking of guests I cannot fail to mention a peculiar festive dish and the favorite food item to which Gilyak guests are treated -- the so-called mos'. It is prepared from a sticky broth of fish skins, seal fat, berries, rice, sometimes with the addition of small pieces of yukola. All this is mixed together and cooled. Sometimes, to add color and flavor, a solution of white clay is added to the mixture. Without any fastidiousness, the boiled fish skins are squeezed out into a trough by the dirty hands of the Gilyak women, and for more flavor the small pieces of yukola are first ground with the teeth and spat out with the saliva into the dish...

342 354 352 [177] The exterior living conditions of the Gilyak are very simple. Only in some places closest to the Amur have the Gilyak adopted the Manchu type of winter dwellings, which, by the way, are also very primitive. In form they are large sheds /28/ built with poles and spars, in which large pipes made of stone or wood and smeared with clay, and connected at the openings with the stove, are laid on the floor along each wall. Laid out over the pipes are plank beds, which are always heated by the warmth of the pipes. The smoke of the stove goes out through an underground passage into a high, vertical pipe which rises straight up from the surface of the ground. The role of this pipe, which resembles those on our factories, is played by a hollow tree. In the middle of a yurt there is a high rectangular scaffold on which the packs of dogs are let out when they are to be fed. A more primitive yurt is a dugout, which is half in the ground and covered with poles and spars smeared with clay or covered with earth. The entrance from the passageway is through a low door along several steps. The hearth is in the middle of the yurt and is surrounded by passages between the plank [132] beds; over the hearth is the smoke opening. In winter, even in the yurts of the first type, it is sometimes so cold that the mercury in the thermometer freezes, and with the least wind the yurt becomes 352 516 full of smoke. One sleeps on the plank beds with the head toward the hearth and on skins or quilted bedding; under the head there are

/94 cont./

As among all nearly primitive peoples, murder within the clan among the Gilyak goes unpunished (1). The clan

1. In clans that have combined with Ains, who retain maternity, in cases of murder within the clan the brother of the mother of the slain man and the closest agnate of the latter (father, brother) ransom the ransom, which they divide in half.

cannot shed the blood of a kinsman, which is the blood of an ancestor. This is not only a religious principle, but a dictate of self-preservation, a categorical imperative of the existence of the clan itself. The strength of the latter is in its numbers and internal peace, while every incident of vengeance within the clan would inevitably be the cause of /95/ new vengeance by the closest kinsmen of the punished man and would thus lead to endless internal war, which would end in the physical and moral destruction of the clan.

Murder and any serious infraction of rights and laws by a clansman do not go completely unpunished, however; in fact, it involves public punishment, since the criminal is compelled to leave the clan and move to a distant village, thus being deprived not only of all the benefits of the clan union during his lifetime, but of still weightier ones after his death, since the privilege of cremation is extended only to clansmen. In general, however, slayings within the clan are extremely rare; the many speech prohibitions among clansmen discourage the causes for quarrels and irritation, while the extensive communal conjugal rights weaken the fire of jealousy and make superfluous the abduction of women, which is the most frequent cause of bloody disputes and vengeance. Thus, the very practice of a life cannot favor the institution of vengeance within the clan.

/111 cont./

Thus in the settlement of Kol' there are clans which bear the designations, Tyvli-ling (inhabitants of the settlement of Tyvlin); M'yeskire-ling (inhabitants of the settlement of M'yeshin), N'yenkhayf-ling (inhabitants of the settlement of N'yenkhay), etc., although the representatives of these clans have lived for a long time in the above-mentioned settlement of Kol', having broken all their ties with the primordial abode of their ancestors (1). The only clans

1. Similar territorial designations among the Australians were the reason that Kunow came to the completely unfounded conclusion that among these tribes there is no clan organization.

that have true clan names are those founded by emigrants from the neighboring Tungus tribes; thus were formed such clans as the Tskharung, the Chonli, etc. And it is noteworthy that in just these clans we observe a clear transition to totemism. In the Negda tribe, for example, almost every clan traces its origin from one or another kind of animal (tiger, toad, bear, etc.). Among the Gilyak such phenomena are very rarely encountered.

/112/ Now let us proceed to what for the European is the most important sign of clan unity -- to the organs of power. Without complex, as we have seen, clan life, the clan does not know any established authorities. True, the Chinese, and after them the Russians, sought to establish among the Gilyak the institution of elders, and at that not clan but settlement elders, but it had no relation to the life of the clan. This was a nasty episode, but that was all. The elders designated by the Russian authorities were selected, not from among the best or even the wealthiest inhabitants, but from the most officious ones, and these not only did not enjoy any authority, but rather scorn, and in some instances even hatred. The primordial structure of the clan knew nothing of the kind. The patriarchal authority which, according to the Biblical examples, is ordinarily associated with the

/125/

II.

Terms and Forms of Kinship

Before proceeding to the kinship nomenclature of the Gilyak itself, it will not be without interest to dwell on the question: to what degree is this nomenclature independent in the formal sense of the word, what is its relationship to the kinship nomenclature of their neighbors -- the Ainu and Tungus peoples of the Priamur land, and through the latter to the Ural-Altaic group of peoples in general, for in that ceaseless process of mingling which inevitably took place between the Gilyak and their neighbors, borrowings in this field in particular would be noticeable. We shall give below a special sketch of the nomenclature and norms of marriage among the Ainu, as well as among the Tungus peoples. We shall see that these peoples also have classificatory systems of kinship, although considerable differences from that of the Gilyak, and it will be all the more interesting to elucidate to what extent these kinship designations resemble each other.

We shall begin with the Ainu. Taking into account a priori the reckoning of kinship through the mother and other sharp features of maternality, in contrast to the agnatic principle of the Gilyak, one could say that there must be little similarity between the kinship designations of the two peoples. Indeed, the only instance of a complete genetic resemblance is the term "aki," but in Gilyak, as in the Tungus languages, it signifies elder brother, while in Ainu, on the other hand -- younger; thus the correspondence may be completely accidental. Other Ainu terms which sound more or less like the Gilyak, for example, "acha" -- uncle, "ama" -- mother (Kurile Islands) again do not correspond in meaning: the Gilyak "ama" signifies mother-in-law (wife's mother), aunt, grandmother; "nanakh" -- elder sister. The remaining terms do not have the faintest similarity to each other. One could assume that there would be a much greater

1: Shternberg--209 E-5 (1890-1897,1910)1933 RX2 Gilyak RX2

/139 cont./ Each Gilyak, man and woman, uses one and the same term for "mother" (yma and synonyms), not only for his own mother, but also for the following groups of persons: 1) all the "sisters" of the mother (female tuvu) of his mother; 2) all the wives of the "brothers" of his father (1);

1. The sole exception that I found during the time of the census in the settlement of Kol' was one case in which the wife of the older brother of the father is called by the Tungus term yvej, which is explained by the presence in the settlement of persons of Tungus origin.

3) all the wives of his father, i.e., his stepmothers; 4) outside the clan; all the "sisters" of persons of the ahlmalk class (concerning this, see below).

The clan of "wives" within the clan. The designation most in use for wives in both dialects is ayfin. Aifgr, the wife of the clan the Gilyak gives this name, not only to his official wife, but also to all her "sisters" (i.e., female tuvu), to the wives of all his elder "brothers" (i.e., aki), and, finally, to all the sisters of the wives of these last. To the wives of the clan of younger "brothers" (arkh) the Gilyak gives the name of jokho, jokh /see yokh, p. 76/, the same term which the father-in-law or mother-in-law applies to his or her daughter-in-law (literally, "daughter-in-law" or "sister-in-law" in Russian/. Only an insignificant number of Gilyak on the Amur, due to their proximity to the Olcha, took from the latter the special designation ivy for the wives of all brothers without distinction (2).

2. Among the Olcha, a man calls the wife of his older brother ivy.

It is especially characteristic that "wives" of the tuvu class, no matter who they may be by origin, call one another "sister" (tuvu), and, depending on the age of their husbands, one calls

/145 cont./

Only in one case does pilang, in the form pila n'kryvyn (or pilang, appear as a kinship term -- namely, in the meaning of younger brother of the father; the synonym yik -- father -- is a term that has evidently been made up under the influence of the Tungus term ykt.

Plural kinship terms. Due to the classificatory system there has developed the custom of using the plural for such terms as father, mother, wife in reference to a single individual, for example, "n'i ykuntokh vind" -- "I am going to my father" (i.e., to the village where the clan of the speaker's fathers lives, even though his own father may no longer be alive); "ayfinar lo pymkkhun lo arv" -- "I fed my fathers and mothers."

/146/ Owing to the frequent use of such terms in the plural, a rather curious phenomenon has resulted. In the first place, they have also begun to use the plural a great deal in those cases where by the sense the reference is to only one person, for example: instead of "chur shaktokh vind" -- "where did thy father go?" they often say, "chur'kyn shaktokh vind?" -- "where did thy fathers go?" Another example: "aka, pyukhun kherja!" -- "O, elder brother, notify our fathers (1)!" I shall introduce one more characteristic example

1. L. Shternberg, Materialy po izucheniiu giliatskogo iazyka i fol'klora /Materials for the Study of the Gilyak Language and Folklore/, I, p. 13, line 173. Petersburg, 1908. Published by the Academy of Sciences.

2. Ibid., p. 88, lines 108-109; p. 86, lines 120-122.

Durins

/184/ my residence of many years among the Gilyak, despite careful questioning, I heard of only two or three instances of clear violation of the prohibitive norms. The most outstanding of these instances took place in the settlement of Tamlevo, where a young Gilyak, after the death of his father, lived for some time with his young stepmother, purchased by his father shortly before his death. This incident shocked all Sakhalin, and he was spoken of as some kind of monster. Another commonly known incident involved the young Gilyak, Pavlinka, who married a woman from the clan of his yingi, i.e., from the clan that took its wives from Pavlinka's clan. But Pavlinka was a considerably Russified Gilyak who had served in the police service and regarded the customs of his people superciliously. Another Russified Gilyak, Allykh, from the settlement of Tamlevo, after the death of one of his younger tuvu, compelled the gathering of clansmen which was deciding, as was customary, to whom the widow of the deceased should pass, to award her to him, although he, as an aki (elder brother), had no rights whatever to this. But these cases are the exception and evoked an energetic reaction from the community.

In the first two cases the violators had to go into voluntary exile, i.e., settle outside the settlement and lead a lonely existence, with all the deprivations of clan blessings associated with ostracism. But, we repeat, these were quite exceptional cases bound up with psychics changed under the influence of an alien culture (1).

1. There are exceptional cases of another kind when the marriage norms are disrupted for the sake of upholding other norms which are considered even more important by society; this occurs during an epidemic, when the shaman is not found for this or that widow according to the principles of the levirate.

/201 cont./

Still more destructive is the process of depopulation. We are speaking not of the gradual dying out of separate families, but mainly of the process of catastrophic depopulation. This process is of comparatively recent origin, for it is an immediate consequence of clashes with cultured peoples, first Eastern and later European peoples as well. These peoples, together with their alcohol and exploitations, have brought the Gilyak a whole set of communicable diseases with an especially destructive effect in their non-immunized primitive surroundings. We have already discussed the ravaging effects of this process. It is sufficient to say here that whole clans died out before my eyes, and one not infrequently meets clans in which only one or two individuals are left. It must be borne in mind that the process of depopulation does not by any means strike clans equally, so that at any given time one clan may remain untouched, while another may lose a considerable number of its members.

War also has an effect similar to that of diseases and various other causes. Although according to the interclan rules the women are spared and the number of men who are killed is limited, nevertheless /202/ in the heat of battle the rules are not always observed, and thus a military epopee can also lead to the destruction of a clan.

Contact with other peoples, both primitive and more highly cultured, must have acted in an indirectly destructive manner. As a general rule, the contact of outside peoples intellectual horizons and weakens the strength of religious imperatives. A representative of a higher culture looks down on the institutions of a lower race, and the representatives of the latter gradually begin to observe their own institutions less rigorously themselves. At first separate individuals begin to violate the law a little, and they gradually begin to draw after them many others. The Gilyak themselves assert that with the coming of the Russians their marriage regulations were considerably weakened. But even before the appearance of the Russians the Gilyak had contact with various other peoples.

/203 cont./

As we have seen, the Gilyak were also furnished with wives by the Chinese; they, just like the Ainu, furnished them with slaves. Some influence was also exerted by seasonal trade and hunting expeditions to the territory of neighboring peoples. The Amur Gilyak offset went into the Ainu territory for years on hunting expeditions or for purposes of trade and frequently brought Ainu women back to their homelands. Conversely, representatives of the Tungus peoples or Ainu settled among the Gilyak and entered into marital relations with them or carried off their women. And although these cases might be isolated, nevertheless they could not be without influence.

A quite specific influence in the economic sphere has been exerted by communication with cultured peoples. Until the encounters with the Chinese and the Russians there was no similar to the concept of property. The Gilyak were only objects of consumption. No one accumulated them, and the highest ambition of a more capable or successful man was to share his acquisitions with others. Trade with the Chinese created the stimulus for accumulation. There appeared new valuables which it was impossible to consume, but which they began to value, which were profitable to accumulate. Among the Gilyak appeared rich men, fortunate possessors of valuables, and others who did not have them and wished to possess them. In rich men there was born a consciousness of their wealth and their importance, and together with this the aim began to become related to their possessions. Among the poor people there arose the temptation to make the marrying of their daughters a source of the acquisition of valuables. The black turn of the obligatory marriage, where the woman was given without a bride price, became unprofitable, and with the slightest loophole everyone /203/ tried to circumvent the old imperative. Finally, the phenomenon of the institution of wealth strengthened the institution of individual marriage. The custom of brothers' living together with one

/203 cont./ **Clans of brothers living together without a wife became ever rarer. In the words of the epos, such passages as "so many brothers were supporting one wife" are almost the usual thing. More than a hundred years ago, Mamio Rinzō Mamiya/ described such facts as being ordinary phenomena, while nowadays they are more and more rarely encountered.**

Such are the conditions which stood in the way of the inviolable existence of the phratry. But however powerful these conditions appeared, the force of the primordial norms, having become religious imperatives, naturally preserved their power, and the new influences broke a trail for themselves, adapting themselves to the old norms by means of a whole series of correctives and fictions... How this occurred we shall see immediately.

VI.

The Dynamics of the Destructive Conditions

Of all the conditions mentioned which are destructive to the phratry (emigration, depopulation, wars, destruction of economic equality, seasonal expeditions, the most powerful factor is the depopulation of clans, and besides, as we have said above, catastrophic depopulation which strikes the individual clans unequally. How must this factor have operated on the surviving clans? Let us recall the thinking of one four-clan phratry. Let us suppose that clan A has died out or there are only a few persons left in it, and this is the clan from which clan C took women. We shall consider the first case, where clan A has died out without a trace. What happens then? What then is to be done by the orphaned clan C, which used to take wives from A, and B, which gave wives to clan A? Of course, first of all, the members of these clans will search for some solution within the phratry itself, in which only pure marriage is possible.

/260 cont./

It is characteristic that in purely Gilyak poems, not having any traces of Gold-Manchurian borrowings and influences, we do not encounter any procedure of betrothal, which at the present time plays such an important role. All is reduced to a laconic dialogue: Groom: "I have come to take my wife." Father: "All right, take her." After this everything is done unusually simply. The marriage is immediately consummated. The only ceremony, about which I shall speak in detail later on, is the confaretatio, the joint smoking of the meal.

The old man, the father of the bride, questions the hero: "Thou art a man from where?" Our Gilyak: "I am a dweller of the village in the middle of the bay. I have come to take thy daughter in marriage." Then the old man said: "My child, this guest has come to take thee, go with him." This woman said: "Very well, I shall go with him." This old man said: "Hey, slaves! Prepare a meal, feed the guest... Our Gilyak ate with his wife. Having eaten, having finished, he set out with his wife" (1). Another example even better

1. Shternberg, op. cit., 47.

depicts this simplicity of ritual. "That old man (the father of the bride) said: 'Eat with your husband.' Then that woman ate with our Gilyak. Having eaten, they went out, urinated, came in, made the bed, got in under one blanket, lay down, and slept." On the following day the hero departed with his wife and the dowry (2).

2. Ibid., 81.

But along with such lawful marriages there are also described cases of the forcible carrying off of women. And this is quite natural, for such misfortune may overtake the hero that the clans of his lawful fathers-in-law may become extinct, and willy-nilly he must obtain a wife by force.

/260 cont./

To a certain degree one may admit the influence on the matrimonial psychology of the Gilyak from the Ainu, who, judging from legends, were constantly infiltrating the lands of Gilyak settlements in the form of individual immigrants, and they exerted their influence on it in many respects, as we shall see particularly clearly in our examination of religious institutions. But this influence in the sphere of marriage was in general quite limited, for it is impossible to find a similarity between the two systems in their kinship terms or their norms of marriage.

/267/

XIV.

Forms of Concluding Marriage

We have already had occasion to introduce in another place, as a clear illustration of the former obligation to marry women from the clan of the mother, from the anguej the episode from the Gilyak poem, when the Gilyak, dying from a wound inflicted on him by a man who has the right to his daughter, summons his slayer and says to the people who a are present: "Although this man has slain me, give him my daughter, do not fail to carry out my wish for any reason." The epos just as clearly portrays for us the old forms of concluding marriage, corresponding completely to the norms of obligatory marriage.

Once a marriage is obligatory, there can be no question of complicated procedures in concluding the marriage, such as betrothal and negotiations concerning property obligations, and, of course, there can be no question of payment for the bride. There can be no question of religious rites connected with a move into an alien clan. The bride and the groom are of one common blood on the paternal and on the maternal side. Therefore, in all the works of the epos

/270 cont./

my children and your children also be akhmak'i. If you do not give your daughter to my son, you will completely break the old law, that will be bad. Let us do everything according to law ('live pure')."

After such a reminder, rarely does anyone refuse his duty, even though this obligation entails the loss of property, for in such cases they either do not give a bride price, or they give a very small one, if the akhmak is not an ancient one.

Unorthodox forms of concluding marriage. The most varied interpretations of the expression: "the other (or she) is not my equal." On the other hand, wealth allowed one to manifest a special fastidiousness in the choice of a wife, to seek women who were famous for their special qualities, who were outstanding for their beauty, their domestic talents, their artistry in sewing, and other feminine traits. But once marriage came to be practiced between members of alien clans, the former simplicity of concluding marriage vanished. There appeared on the scene the new institution of bride price, which introduced into the institution of marriage the element of purchase-sale; besides this, marriage between persons of alien clans demanded preliminary negotiations and the procedure of betrothal. We now turn to these institutions.

The terms of betrothal. The procedure of betrothal is expressed by various terms, denoting literally, "to agree, to come to an agreement about the bride"; hence, the matchmaker -- "the man who makes an agreement", bride -- "future wife"; groom -- "future husband." For us, the terms for groom and bride are particularly interesting. With orthodox marriage there is no special term for groom and bride, for according to the right of birth the groom is called pu -- husband, and the bride -- anuej. The term johk, which is used nowadays to designate the bride, is entirely inadmissible with orthodox marriage, for, as we have seen, with orthodox marriage johk is a term of prohibition for sexual intercourse. Thus, the term itself shows that the procedure of betrothal arose after the weakening of the regime of orthodox marriage.

/283 cont./

it is noteworthy that such a ceremony of "stamping the kettle" takes place among the Tungus tribe of the "Negda," who since olden times have concluded marriages with the Gilyak, from whom they have undoubtedly borrowed the custom.

A year after the wedding the newlyweds, usually already with a child, come to stay a little while with the wife's family, and when they again depart they once more go through the ceremony of "stamping the kettle," only this time, instead of kettles, they use cups.

The vicissitudes of marriage. Just as in our society, marriages are not always happy. Since the consent of the woman to the marriage is not asked, and rarely does any girl resolve to disobey the will of her parents, and very rarely do the parents yield to the protests of their daughters, not backing down from their decision even in the face of a threat of suicide, life after the wedding is fraught with tragedies. Either a woman runs away with her lover, or she runs away to her parents, especially in the case of ill-treatment by her husband. In such cases the husband often tries to take back the fugitive by force, and otherwise he demands the return of the bride price. Since no one has a desire to part with something once it has become his own property, litigations to recover the bride price are endless. During my wanderings among the Gilyak, who at first took me to be one who had power, I had to listen to complaints concerning the bride price in several settlements. They preferred, however, to ask for the forcible return of the wife, which was often done by the Sakhalin administrators with the favorable assistance /284/ of the priests. The fact was that persons who had lured away or abducted another man's wife appeared before a missionary with the request to be baptized and married, in order to guarantee themselves against the wife's being forcibly taken back by her former husband. The missionary willingly fulfilled such requests and gave them marriage certificates, which gave to her owner the right to a police order demanding her return in case she was forcibly taken away. And this led to tragedies. One such case deserves to be immortalized.

/284 cont./

from an Amur Gilyak named Tyx', 22 years old and from the settlement of Mibyl', another Gilyak, Urgayn from Vāyda, stole the wife and went with her to the missionary Moskvitin. The husband overtook them and began to beg the missionary not to marry them, but he carried out the request of the abductor for a certain bribe. Then the husband collected his clansmen and took back his wife by force. The original abductor presented his marriage certificate to the police, who, for a bribe, ordered the woman to be returned to her lawful owner. It ended with the husband's shooting his wife and himself. They return the bride price without litigation when the wife dies childless soon after her wedding, or when she runs away because her husband is poor and is not in a position to feed a wife, and, finally, when a wife betrothed in childhood dies.

Separate Materials on the Ethnography of the Amur Gilyak

(Extracts from Notebooks and Diaries)

I.

The Tribal and Clan Composition of the Population of the Lower Amur

A legend. Long, long ago the Gilyak, the Orochi, and the Goldi were one people. They were born on one branch of an alder tree. The brother and sister did not know where to go. The sister said, "down to the earth," and was the first to descend.

Settlement of Bulava. Due (Kugi /Amur/) -- 35 people; nine finds them also in Patu, Tebakh, and Mago. When three men came, they found one house of an Ulcha khal'x. Mongol -- khala -- Djakhnut came down from the Goldi village of Choi'chi (1896).

/333 cont./

are carried into the taiga, there they find a tree with a hollow trunk, make an opening in the hollow trunk, feed the head, throw all the bones and the head there.

The otter is fed and buried in exactly the same way as sable. The remaining beasts are uigund kauk (i.e., there is taboo on them).

When a pair of reindeer horns from a mature specimen is found lying side by side in the taiga, the possession of them by the Gilyak fucks.

During the hunting with nooses (pochakhir a'rkhund), a woman must not sew anything new or give anything from her wardrobe, even a button, even a thread, if that woman has spent a night in the house. One must not carry the fire outside. One must not allow any guest to spend the night. In the taiga, one may enter another's balagan, but not spend the night. If a sable is caught in a noose, an alien may not take it without the hands without the permission of the master, and in general during the hunting season the captured sable cannot be touched even by a person from the same clan if he is not a participant in the hunting party; even a killed bear-goose may not be touched. Any person commits an uigind -- sin, they do not let him fish or hunt on the stream, and they do not attend his bear festival.

/334/ Sables, when caught, should not be killed by dogs. Catching a wolf. In Ekhdam (northwestern Sakhalin) they place a tree with a forked branch and sharpened edges not far from the yurt. Yukola is hung between the forked branch and the trunk. The wolf jumps up to seize it, sticks in his paw, which becomes caught, and he cannot get free -- it is a sin to shoot at wolves.

Seals are caught thus: a net is placed around a tor' (?), the seals sleeping on the sand are driven together, then they go into the net.

Mon' is made twice a year (in summer after the salmon, and in autumn before the sable). In winter one must unfailingly still a great number of dogs oneself (a minimum of four), make plenty of mon', and in summer catch a great number of bears will be pal (Yukola thousand). In general a great deal of fish, the sake of thousand.

/50 cont./

23 formed where his sacred feet stepped; from the lashes of his whip appeared the rivers.... Here is Kryuspal', a marvelous cone, one of the highest peaks of Sakhalin, which impresses everyone approaching the island from the sea with its grandeur, a lonely, stern demon of the sea, who, in a fit of anger, killed his children and compelled his wife to run hundreds of versts away from him and form another cape in a new place. And even the lonely cliffs sticking out of the water all along the shore of the island -- all of this is alive, gods who ran away from their clans under the influence of internecine wars.

32 All the rest of nature is equally alive: the menacing "tol'" 74 (the sea), the somber forests of the mountainous island, the 76 fast mountain rivers, etc. When cutting down a tree, the Gilyak is afraid to destroy its soul and places upon its stump a special being, the "inau" (chekhn-kun-inau), soul-creating "inau" (1), which returns soul and life to it. The mountains,

1. A sharpened stick. The cult of "inau" has been borrowed from the Ainu, and I shall discuss it separately /in an untranslated section/.

the ocean, cliffs, trees, animals -- this is only a mask under which the gods conceal themselves from the curiosity of man. The peculiar profundity of this sort of metaphysical analysis by 25 the Gilyak is striking. Once when a Gilyak began to explain to me that the small kosatka (Orca gladiator) accompanying a large one in the sea constitutes in fact only the sword of the big kosatka, and I expressed my bewilderment at this, he began to prove that it only seemed to me that that is a kosatka, but in fact it is the sword of the large kosatka-"master," just as that the latter in reality has the form of a real Gilyak, and that which seems to us to be a sea animal is only the boat of this Gilyak-kosatka (2).

2. Kosatki travel in the sea in packs, within which are distinguished the older -- leaders, and the younger -- soldiers. In an attack,

56/76 cont. Once I myself became the object of a legend about the
23 omnipotence of a shaman. In the settlement Nyyvo, at the mouth of the Tym', I once ventured to offer medical help to a female patient of a famous shaman. Learning of my interference, the shaman not only prohibited taking my medicine, but decided to punish me severely for my insolence. Immediately after my departure he went fully dressed into the waters of the bay and began to adjure the god of the water to fall on me with all sorts of punishments. A day later I had to spend the night in an abandoned Orok shed on the lower shore of Nabil' Bay. At night there arose a strong wind accompanied by a most terrible downpour; the water began to spread beyond the shores of the bay and to flood the low area. We awoke at dawn, literally swimming on our bedding. It was necessary to build a platform and shiver with cold on it for many hours until the water receded. For all the Gilyak on the coast there was no doubt that I had borne the punishment sent down by the shaman, who, moreover, could have been much sterner, but this time spared the Russian "tyan'gi" (gentleman). It is remarkable that the death of my female patient, even though she had refused to take the medicine I had left, was charged, not to the shaman, but to her sacrilegious appeal to me for help.

77 The Gilyak, however, willingly and with full faith, are treated by the Russians, not, of course, because they believe in the power of science, but for completely peculiar reasons. "The Russian god," they reason, "is stronger than the Gilyak one; this means that the Russian shaman is stronger than the Gilyak one." /77/ And if you inquire why the Russian god is stronger than the Gilyak one, you might hear such an answer: "Behold how many centuries the Gilyak has been living here, and he still travels on paths, but the Russian arrived and immediately built wide roads, such roads as the Gilyak has never seen." It is curious that neither steamboats nor automobiles, nothing impresses the Gilyak and convinces him of the superiority of the Russian god over the Gilyak one as much as just these roads.

VII, pp. 167-196), thinks it highly probable that Cape Rakka referred to Cape Tekka, and the first name arose only through confusion of the very similar Japanese characters for Te and Ra (op. cit., p. 199, note 6). From my own knowledge of these localities, however, I must deny this. Cape Rakka is undoubtedly the low promontory of Lak, inasmuch as the Japanese, lacking the l sound in their language, as is well known, substitute an r for it; Cape Tekka, however, is the somewhat more southerly Cape Tyk.

coast southward to Cape Musibo (in Taba Bay), pulled his boat across the much-traversed towpath to the small Taba River, traveled downstream by boat into Lake Kidsi, and thus reached the large village of Kidsi located on the Amur. From there he went up the Amur to what was then the trading station of Deren, stayed there a few days, and then returned to Sakhalin by following the Amur downstream to its mouth and crossing the Liman three times. On this voyage he came into close contact with the Gilyak and their southern neighbors on the Amur River, the Olcha. Both were already known to him and to the Japanese generally: the former both as permanent inhabitants of north Sakhalin and as frequent visiting traders in Ssiranussi; the latter only as occasional traders coming over from the mainland. Mamia Rinsô even spent the entire winter of 1809/10 on Cape Noteito (2) among the Sakhalin Gilyak. "Smerenkur" is the

otherwise about the places on this island that are mentioned, even though based on facts and the truth, nevertheless has the character of accounts based upon hearsay, as, for instance, the statement about the high reed thicket that makes its coast
G
175 inaccessible, and the like. And as a matter of fact, we do
177 not have any reliable reports on Sakhalin and its people in that period, not even brief ones like those on the Amur region, because this island had no contact with the Russians at all in the seventeenth century. Later on, in the eighteenth century, when the Russians undertook voyages to the Shantars, Sakhalin, as was mentioned above (5), was repeatedly visited by Russian

5. See above, p. 171.

deserters, shipwrecked persons, etc., but no reports about it have come down to us.

M The oldest Chinese reports about Sakhalin provide just as
G slight a foothold. When the Jesuits Regis, Jartoux, and Fridelli
175 drew up the map of the lower Amur River, the natives told them
177 that opposite the mouth of the Amur /121/ there was an island which was inhabited by a people similar to them. Consequently, Emperor Kang-hi soon afterwards sent several Manchu to explore the island, and they crossed over to it in the boats of the natives, but, according to the testimony of the Jesuits, their task was

/341 cont./

VII.

Miscellanea

148 The exploitation of the Sakhalin natives by the Russians (Gibel'ka's
170 story). The merchant Ivanov sorely abused the Gilyak, Ainu, Orochon, the Amur Gilyak; he ruined the Tymovsk Gilyak and others. He forced people to buy packages of tobacco and then took two or three sables per package. /342/ He collected debts by force, breaking into the storehouses, breaking trunks, holding in one hand a revolver and a dagger. He used to give some kind of okht to women (see above, p. 480, "Women, Childbirth, and Children"), and they slept with him. Then he became rich.

But the god did not forget all his deeds. Once his son went boating on the Amur and drowned. The Gilyak in Pronga recognized the cast-up body and informed the mother. But when she arrived the body was gone; she saw only the tracks of a bear. By these footprints she reached the place where the bear dealt with its prey. Only a gold ring was left at the scene of the feast. The mother cried and cried and went back. Ivanov himself, not yet an old man, began to pine and to lose weight; no medicines helped. Finally he died. The Yakut Semenchuk was one of those who dug him a grave on the cemetery hill. But the hole filled with water, and, no matter how they dug, the water kept increasing. This was the tears of those people whom he had abused. These tears do not disappear. Alongside of it a grave was dug for another, a poor person, and it was without water.

169 A good father teaches his son not to abuse anybody, not to laugh at anybody.

169 Slaves -- krygrys (1894). In Kuklyakh (?) a krygrys was exchanged for a woman. In Vaydakh -- a krygrys, Khyumik, a limping woman; she was beaten and beaten, everyone ordered her about," "she did not have time to eat"; one could not sleep with her, for no one wanted to have krygrys children. There were krygrys also in Tengakh, Tevakh, Kutr. The atk (see p. 222,IV) of Gibel'ka had krygrys.

Sakhalin

/350 cont./

175 Manchu reached them also and installed elected starosti. There
169 was such a starosta, for example, in Tangak. It was from the
648 Manchu that the Gilyak used to obtain all those objects which they could not produce themselves.

194 I shall not at this time enter into the question of how long
167 the Gilyak have inhabited the island. I shall only say that when they first appeared there they must have been in possession of the entire economic inventory which they possess at the present time (with the exception, naturally, of firearms). Needless to say, the Gilyak could not have existed on Sakhalin without sleds and boats, without trained sled dogs, and without iron tools, etc. His first cultural products must have been made in areas which were especially favorable, at least with regard to fishing. It may be that the Amur River was such a cradle.

• 177 The Sakhalin Gilyak, like their fellows on the continent,
41 have taken many very basic things from their civilized fellows.
325 They have replaced the bow with the gun, their dishes made of
342 wood and birch bark with metal kettles. They forge iron and
354 artfully work with carpenters' and cabinetmakers' tools. They
291 build yurts in the Manchu style and make stoves and tremendous
292 chimneys of stone. They master Japanese sabers and they preserve
262 expensive spears decorated with silver inlays. They wear robes
244 and shirts made of Chinese and Russian fabrics. They drink tea and boil rice and buda (a special variety of groats). They have finally begun to plant potatoes. In the near future they may, perhaps, completely adopt the culture of their civilized neighbors. On what did they stop in their own independent cultural development?

177 Of all the borrowings made by the Gilyak, the use of iron
325 is the most important and the oldest. Because of their remoteness from the centers of civilization, however, it has come to them in an extremely limited form. They not only do not know how to process ore, but are even incapable of making tools. Until recently iron itself was very expensive among them. Their boats and sleds do not contain a single iron nail, though the Gilyak

1: Sternberg--301 E-3 (1890-1897, 1910)1933 RX2 Gilyak RX2
Sakhalin

/350 cont./

• 177 themselves give a reason other than the scarcity of iron for this.
325 As recently as a generation ago a steel was a valuable thing, /351/
[572] and sometimes an entire clan possessed a single communal steel. Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in
177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is
241 the ready products of nature -- fish, fowl, berries, roots; he
181 is as yet incapable of helping nature along and accelerating her
492 creation of foodstuffs. He does not plant or sow, or raise domes-
252 tic animals for meat. This is the fundamental feature of a
415 "savage" state. Moreover, Gilyak traditions of times when
323 water was boiled in troughs by means of hot stones and their
174 memories of wooden dishes coated with clay, and the absence
173 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

614 /355 cont./ A touching custom among the Gilyak is
372 connected with this steel. When a clan is divided and part of it
169 emigrates to another place, the elder in the clan (khal'-geyman) breaks off a half of the steel and hands it over to the elder among the departing clansmen. With this steel the new settlers will light the fire on a new hearth at the bear festival, and it will be handed from clan to clan for the same purpose. Hence the expression "to break the fire" came to signify the separation of the clan. This custom reminds us of Greece, where those leaving their native land to found new colonies used to take with them the sacred fire of the home altar.

614 Another clan festival is held in the spring before the hunting
225 of the seal. On this occasion, too, the expenses of the refresh-
782 ments are borne by the /356/ clan. With the approach of even-
[562] ing, when the moon rises, the entire male population of the clan (again the women are excluded) goes to the seashore. Here, in long troughs, they bring all the choicest viands which, carefully prepared, had been left untouched for the moment of the sacrifice. Then all those present squat down and each throws into the sea a handful from each trough as a sacrifice to the deity, pronouncing the customary formula of prayer: "Kur niongu-khlai!" ("God, please!"), after which they gather in one yurt, where the refreshments begin, in which the women take part.

614 6. The khal' guarantees life and security to each of its
682 members from encroachment on him by the individuals of
628 another khal'. The means is çlan vengeance.

• [177] The settling of Russians in the region, it is true, has weakened considerably the efficacy of this institution, but has not destroyed it. Every murder, intentional or unintentional, calls for clan vengeance. The closest clansman of the murdered man -- his father, son, or brother, and in their absence his other clansmen -- must, in the figurative expression of the Gilyak, "raise up the kindred bones" (nyn'vo yozynedzh), i.e., kill the murderer or at least some person of the male sex of his khal'. And the wrath of vengeance is so great that not even newborn children are spared. I have heard that the unhappy mothers of such children, out of fear of the avenger, have resorted to

/358 cont./

614 It is quite natural that the ransom should correspond to the
628 condition of the murdered man and the wealth of the clan of the
682 murderer. This explains to us the origin of the ancient punishments for murder among the Germanic and Slavic tribes, among whom there was no set amount for the fine (blood money); it depended on the rank and wealth of the murdered man. It is natural, also, that an unintentional killing entails a much smaller ransom than an intentional one. The entire khal' of the murderer participates in the payment, each according to his means. A
614 murder within the clan finds its avengers among the closest
628 kinsmen of the murdered man and in the brother of his mother
682 (i.e., a person from an alien clan, and he gets half of the ransom). An unintentional slaying within the clan among the Amur Gilyak incurs no consequences.

614 The khlay-nivukhi obtain as a reward for their labors their
628 fine costumes, arms, and a dog. In conclusion, it must be said
628 of vengeance that among the Gilyak vengeance is a sacred and
[537] obligatory debt. And in life one must be indulged toward phenomena of this sort. The Gilyak take vengeance frequently, not from any predisposition toward it, but from obligation. Re-
[562] venge is also extended to cases where someone has been driven to suicide, but in such a case the affair ends with the payment of a ransom or the infliction of property damage on the guilty person.

614 One of the forms of clan vengeance is war. Wars between
628 clans came to an end with the appearance of the Russians, but
72 the recollection of them lives in the popular memory; they tell
• [177] of them in tales; they sing of them in songs. Women were the most frequent cause of wars. A Gilyak abducts a woman and then falls into the hands of the kinsmen of the abducted woman; they kill him -- and a cause for war is provided. And, in general, injuries inflicted by the entire clan ended in war. There was no preliminary declaration of war. Once a clan had inflicted a blood injury on another clan, it awaited the unavoidable attack. And indeed, one fine day the whole adult population of the injured clan, armed with bows, spears, and knives, set off on an expedition

/360 cont./

614 620 685 among the Amur Gilyak, among whom such a mixed assembly imposes a larger or smaller fine. The elder of the clan (khal'-
614 622 geymar), even comparatively recently (one, two generations ago), was the social leader, the starosta of the clan. His suc-
[177] cessor was the khal'-geymar next to him in years. The intervention of the Manchu and the appearance of the Russians on the island brought about the disappearance of this institution. But the khal'-geymary never played the role of patriarchs with unlimited and hereditary power. Such power is not exercised among the Gilyak, even by fathers over their sons. At the present time the role of the elders of the clan amounts only to leadership in religious ceremonies, to the deciding voice in questions concerning seniority in the line of kinship, and similar questions where years play a special role in the competence of the judgment.

614 11. Clans are often dispersed in places very distant from
621 one another. But after division the clansmen continue /361/ to
[167] remember one another, to visit one another, and to lend one another assistance and protection. The Gilyak who hides from the persecution of the avenger will find security and armed protection in a remote settlement of his clansmen. Let a Gilyak become poor or an unlucky year befall him, and he will go to spend some time with clansmen until matters improve. On the western coast of Sakhalin one rarely finds a settlement in which the whole population belongs to one clan; there are no more than five or six such settlements (Pyanovo, Tangi, Tyki, and two or three more insignificant settlements). In the majority of cases there are two or three clans in a settlement. This partly
614 arises from the fact that the Gilyak is often compelled to abandon
167 his clan and emigrate, seeking a more advantageous site for fish-
621 ing, and emigration does not present any difficulties, for the Gilyak joyfully accept an emigrant from another clan. Moreover, the custom of many sons-in-law to emigrate to the clan of their wife has greatly aided the mixing of the clans. This
[591] latter custom, possibly a survival of the archaic clan mode of life, is based on a female principle, according to which husbands entered the clan of the wife, and not conversely, as is done at

/362 cont./

614 Thus it is that kinship and social bonds attach the Gilyak
182 to his clan. Without some particular need the Gilyak will not abandon the settlement of his clansmen, the tombs of his clan. No matter where the Gilyak may grow rich, he finally returns to his homeland. The writer has seen Gilyak who had become
• [177] completely Russified, who had grown up in service among the Russians, but who, having married, settled down and returned to the settlement of their clan. And this is so easily done. The Gilyak does not find it absolutely necessary to construct a yurt, since in any yurt of his clan there will always be two to three square arshins on the plank bed for the family of a clansman. He does not even need a boat and a net; he will always find owners of these things, with whom he will go fishing on a basis of equal rights. The inevitable affiliation of every Gilyak to the great clan union has placed an indelible stamp on his entire spiritual make-up, on his character, customs, and intellectual
[155] development. The custom of judging all jointly, this necessity of entering into the interests of his clansmen, this mutual responsibility in matters of vengeance, these communal festivals and sacrifices, this fraternal bond of numerous fathers, brothers, and children, and finally the necessity and practice of living in large yurts together with dozens of one's fellows -- a necessity that compels the Gilyak to live continually in the eyes of others -- all this must have developed a social, communal, loquacious, serious character, sensitive in matters of honor.

342 Enter one of the large winter yurts, which are so frequent
354 in the north, enter one of these anthills on a winter's evening,
521 and you will be pleasantly surprised. The huge yurt is lighted up only by the flame of the stoves; in the far corners it is completely dark, but you will hear the sedate conversation of the old men, the loud talk of the middle-aged, merry laughter, the jokes and music of the youth. Here boredom has no place...

/362 cont./

504 Try entering into a conversation with anyone about their
[521] life, customs, and so forth -- the whole yurt gathers about you. The adults listen and reply with serious interest. The children will not tear their gaze from /363/ you. Their eyes glow with the fire of intelligence and fascination. They answer you seriously and conscientiously; only inspire trust in them. You will feel yourself drawn toward these barbarians... And never, so to speak, does life stagnate here, because each day brings some large or small occurrence in the life of the settlement, each day brings, finally, new guests with new subjects for conversation. In each yurt you will find many such guests, who often stay for weeks, and during all this time the hosts feed them and their dogs.

The Gilyak are very hospitable and love to pay visits and entertain guests. Not only do the clansmen and kinsmen of the wife pay visits, but also those outsiders who are simply friends. In the yurt there often live together people of different clans, on whom guests and clansmen from all parts of the Gilyak territory
[203] call. Imagine how much news each winter day brings. Winter is the preferred season for visiting. This noble custom of hospitality has still another good side. In a bad year, when the Gilyak does not have enough food for either himself or his dogs and nothing to buy it with, he does not have to stretch out his hands to a benefactor; he quietly sets off to pay a visit, knowing full well that in time his host will do the same. One encounters many guests in the summer as well. At this time of year, too, the Gilyak rarely lives alone in his yurt; there are always one or two families
• 177 of his brothers or other clansmen with him. Despite their long subjection to the Sinicized Manchu, despite the destructive influence of the rascally population of the Amur region, the Gilyak, morally, preserve many of the virtues of primitive tribes. But the fate of their mode of life is irrevocably settled. One or two more generations, and the Gilyak of the mainland will become completely Russified and, together with the fruits of culture, will master all its vices. One must give his due to the Gilyak: he does not lightly abandon his ancestral traditions, but they involuntarily give way. At first they were indignant and perplexed, meeting

/363 cont./

• 177 deception and exploitation everywhere, but by degrees they will end up by making use of the same weapon. The Sakhalin Gilyak have a good chance of maintaining themselves longest of all since they are farthest from the center of settlement. But Russian influence makes itself felt even on them. From all the settlements
177 464 they go out to work for wages and go to make their purchases at
[439] Nikolayevsk, and every Gilyak who returns from work to his native settlement brings back the same atmosphere as the youth who returns to a Russian village from work in the big cities. Moreover, work in the towns, with its varying fortunes, ever more /364/ and more destroys that primitive equality which constitutes the dominant feature of the simple economic life of such peoples as the
[454] Gilyak. Together with the wealth that they have amassed in the new environment, people bring back the economic customs of that environment. But for the present, let us not look into the new phenomena in the life of the Gilyak; let us turn now to their still unshaken foundations.

III.

Religious Views

776 Though the dominant feature of the polytheism of the Gilyak
392 is its anthropomorphism, the worship of the powers of nature lies
[771] at its foundation. Thus, among them, fire is a deity, "a small-small deity," it is true, but one nevertheless. To the question "why?" a Gilyak replies: "But without fire how can one live?" It is considered a sin to put out a fire in the hearth; even damaging the fence of a hearth is a sin. During the season of seal hunting,
[688] or when a newborn child is in the yurt, and in many other cases, it is considered a sin to carry the fire out of the yurt. It is to fire, as to a divine element, that the Gilyak entrusts the bodies of his dead. In the hierarchy of deities, however, fire is far from occupying first place. The fact that obtaining fire is within the power of man greatly diminishes its majesty in the eyes of the

/370 cont./

634 his wife half to death. Even his ruvn, in such cases, does not
184 escape without a severe lecture, while among the Amur Gilyak
614 even the ruvn finds no mercy. But such bloody vengeance is absolutely required only when the seducer is caught in flagrante
• [177] delicto. Fear of Russian justice has weakened the force of this bloody custom, and frequently in such cases the matter ends with
108 a sound thrashing. The modern method of securing a wife grad-
583 ually worked itself out from the old clan arrangements, from the collective and individual abduction of women from another clan and the subsequent reconciliation by means of a ransom, transformed in the course of time into the modern bride price. But even today the custom of the abduction of women exists among the Gilyak of both Sakhalin and the mainland. In part it is a corrective against the coercion of womanly sensibilities in the contemporary form of marriage, in part a reaction against the purchase of wives, not possible for every Gilyak. When a Gilyak comes to like a woman, either a maiden or a married woman, and for one reason or another it appears impossible to obtain her in a peaceful manner, /371/ he arranges things with a group of his clansmen, and one fine day (usually in the summer) when the men are out of the yurt, the boat of the abductor draws near the settlement, and, profiting by the absence of the men, they bear away the desired woman. Abductions sometimes take place by preliminary agreement with the woman, or sometimes without her assent and even against her will. Abductions, of course, produce counter-abductions, even with an armed hand (I know of one instance where a group of 14 men armed with spears and guns broke into the yurt of the elder of a settlement at night and bore away a woman), but in the event of failure the matter ends with reconciliation and the payment of bride price. Not infrequently the abduction is performed by the father of the woman himself, or at his instigation, in those instances where the son-in-law does not fulfill all the conditions of the bride price and at the same time does not voluntarily return the woman he has purchased. To this day the Gilyak regard the custom of abduction as a normal phenomenon; it astonishes no one and is censured by

/371 cont./

583 no one, and this demonstrates how widespread, even universal,
178 it was in quite recent times. The wars of which Gilyak tradition
921 tells were fought principally on account of the abduction of
women, and they developed the practice of reconciliation by
177 way of payment of a ransom. The entrance of the Russians into
583 the Amur region has led to a considerable diminution in the number of abductions. No matter what efforts accompany the abduction of a woman, the display of a paper from a Russian office will incontrovertibly result in the return of the abducted woman. Thus, the prevailing mode of obtaining wives has become that of purchase. The price paid for a woman is known to the Russians under the term kalym. The bride price is ordinarily paid in articles, money, and labor. As bride price they give boats, kettles, guns, spears, fur coats, pieces of silk material, dogs, and, finally, money. The size of the bride price is in proportion to the wealth of both sides, the age of the bride, and her domestic talents. A woman who is an "accomplished woman" in the full sense of the phrase among the Gilyak is one who understands the culinary arts well, sews garments and footwear well, is industrious and meek. In general the purchase of a wife is a rather expensive affair. Here is an example of a not very considerable bride price. One Gilyak from Kitnidvo paid for his wife with two Japanese kettles (one large one, costing 60 rubles), one spear with silver fretwork, a fox-fur coat, ten dogs, and, in addition, took down his father-in-law's summer yurt, after
583 which the wife was irretrievably abducted. An extremely characteristic method of acquiring a wife, one which recalls /372/ the Biblical story of the service of Jacob for Laban, is that of labor. Some clanless Gilyak will work in a family for several years, and as his reward he will receive the sister or daughter of the master. When the head of a family is a middle-aged man and has no sons, he takes to himself a son-in-law who agrees, instead of a bride price, to share with him all the economic labor for a certain period or for the entire life of the father-in-law. The son-in-law, customarily a complete pauper, fishes and kills seals, and all this constitutes the common

/374 cont./ Yet

562 loaded down with work as she is, sometimes profoundly unfortunate, with an aged and blind husband, purchased and sold, she is
[264] nevertheless not a slave. She is not shut up, as in the East; she
[593] eats at the same table with her husband and children, she participates in the conversation, and she is treated with respect as a wife and mother. The children treat her with respect. They are ready
[765] to exact vengeance for her. When she dies, they will cremate her with the same solemnity as her husband; as a sign of mourning they will undo their braids, not infrequently for life, and an occasional inconsolable husband will lay violent hands on himself out of grief for his wife. Although married, she does not sever her
[574] bonds with her former family and clan. She, along with her husband and children, visits them frequently, and in a year of misfortune she and her husband and children will find assistance and a hearty welcome there. If her husband should offend her without cause, she will find protection in the family of her father, and true protection: they will return the bride price and take her back.

595 Polygamy is found to a limited extent. The causes of polygamy lie in part in the above-mentioned conjugal rights of
[589] brothers. It is not by chance that there are so many bachelors among the Gilyak, /375/ frequently without special reasons, such as poverty, etc. Then, again, barren wives, as well as the desire to have a young healthy worker in his old age, impel the Gilyak to provide himself with two or three wives, whom he gradually acquires. It is noteworthy that in the settlements closest to the Aleksandrovsk post, even in such a large settlement as Arkyyvo, I did not encounter a single case of polygamy.

595 This is explained, of course, by the influence of the Rus-
• 177 sians. Polygamy often produces quarrels between wives, and the husband, of course, most frequently takes the side of the favorite wife, yet that division into lawful wives and concubines, as in the Eastern harems, does not exist among the Gilyak.

831 Two words concerning sexual morality. In their talk the Gilyak are not very irreproachable. Young maidens allow themselves to use words and expressions that are not tolerated by the

/379 cont./

556 with a feeling that is strange for people with a primitive mode of life. There is fear and respect and even reverence in this feeling. That a rich man should inspire fear and respect is a thing easy to understand, but the feeling of some sort of reverence has its own peculiar source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence the respect for him. But since all human success is at the same time a gift from the gods, the rich man also stands out as their favorite,
556 their chosen one. The degree to which the Gilyak are inclined
538 to attribute supernatural origin to wealth can be seen from a widely
171 diffused legend among them concerning a certain Tungus, still living today, who amassed his wealth by unscrupulous exploitation and robbery, a legend which affirmed that this virtuous man /380/ had secured his wealth thanks to a golden rain which showered down upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

675 Since the Gilyak have notions of property, there naturally
432 exist among them contracts of purchase and sale, barter, loans,
437 etc., but most frequently of all, of course, these contracts have
427 the character of barter.
426

Two words about debt obligations. The Sakhalin Gilyak
426 does not borrow money; his debts arise principally from the nonfulfillment of one side of the property obligations of a contract.
[184] No interest is charged for waiting for repayment. Interest is known
• [177] only to the Amur Gilyak, who borrowed it from the Manchu, but even among the Amur Gilyak interest is extorted only for the loan of money or sable skins, but never for loans of any other nature. The
[614] popularity of debt obligations among the Sakhalin Gilyak con-
[672] sists, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the insolvency of a debtor and his closest relatives or after the death of these persons, the clan, in the person of the clansmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

/383 cont./

422 delicacies and edibles, and the Gilyak, like almost all barbarians,
673 regard such transgressions indulgently. During my journeying to the north of Sakhalin, I had the opportunity to observe this characteristic of the Gilyak. They took without permission, or asked me for, dried crusts, sugar, or tobacco, but never once did they
673 try to take objects of much greater value. Theft is a sin among
762 the Gilyak, and he who commits it covers himself with disgrace. And disgrace and shame are a great punishment to the Gilyak. The Gilyak who is convicted of doing something shameful goes out into the taiga and lays hands on himself (hangs himself). Never does a Gilyak commit suicide out of fear of poverty, which, in view of the custom of mutual assistance, is a cause of fear to no one. Nor will any physical sufferings impel him to such an act, but he will yield to the feeling of shame or strong personal grief and take his life.

674 Murders among the Gilyak are very rare and never have
• 177 a mercenary motivation. Murders are committed principally in
526 the heat of passion and frequently under the most inconsequential
152 circumstances. For example, the Gilyak have a habit of wrestling,
273 and sometimes during the fighting the opponents grow so heated that they take to their knives. In general the Gilyak reaches for his knife at the first feeling of irritation, but he is by far not as prone to resort to weapons as the southerner. Fear of Russian justice has had a beneficent influence on him in this respect. The Gilyak youths, fearing being borne away by passion, have begun to throw down their knives before beginning to wrestle. But Russian vodka has caused frequent slayings among Amur Gilyak in an intoxicated condition. I shall not discuss the murders committed deliberately to satisfy the demands of clan vengeance or conjugal honor. Such murders are regarded by the Gilyak as lawful, although with the settlement of the Russians they have begun to disappear.

683 Insults by word or deed are also an infrequent phenomenon among the Gilyak and end in either a reconciliation or a duel. In the first case, the offending party, recognizing his guilt, atones for it, voluntarily presenting the injured party with dogs, a robe,

/383 cont./

683 and other objects. In the second case the adversaries fight it out
411 with cudgels until one side admits defeat. The Gilyak are most
868 proficient at wielding cudgels. The Gilyak study this art from
859 childhood, and the children give themselves up with passion to this noble exercise, even by moonlight on frosty winter nights.
628 In their civil relationships, as a general rule, the Gilyak display
48 veracity, fidelity to their word, and conscientiousness. /384/
177 Unfortunately, the destructive influence of the rascally population of the Amur region has begun to extend even to the most remote Gilyak settlements. A few individuals imbibe wisdom at Nikolayevsk, and it is enough to enmesh whole settlements in deceit and to breed imitators and a whole mass of interminable lawsuits. The court and mediation of the clansmen, still exerting authority within the clan, are becoming powerless when the quarrel is between members of different clans. The Gilyak have the custom of turning to a mixed assembly of "khlay-nivukhi" of different clans for the resolution of mutual disputes. But at the
178 present time this institution is losing its strength, since the Russified Gilyak, who are simultaneously the chief culprits of dissension and lawsuits, deny to it respect and competence. The Russian administration is going to impart authority to this court of "wise" and honorable men by sanctioning the "khlay-nivukhi" by election, regulating the time of their meetings, the area of their authority, etc. And a first condition is that the "khlay-nivukhi" be of various clans. Observation has shown that the Gilyak are able to elect men intelligently and to appreciate the importance of the elected court sanctioned by the Russian administration.

V

Statistical Data

121 In conclusion, in order to provide some idea of the num-
128 ber of Sakhalin Gilyak and to present their economic status more

[The western Coast]

166 /386 cont./ To make some money,
464 115 individuals, i.e., one-sixth of the adult population, make
183 the trip to Nikolayevsk. The settlements richest in seals and
433 dolphins are Tamlyvo, Viskvo, Pomr, and Tangi; this last is
244 also richer in sables than the others. Potatoes are raised by the
162 Gilyak in Khoe and Tangi. In the settlement of Tyki, the
177 Gilyak have made a request concerning the settlement among
244 them of at least one Russian with whose help they could raise potatoes. The settlement of Tyki should be mentioned for sev-
224 eral other reasons. In the first place, starting from this point
433 the Gilyak are ceasing to hunt sables because of the overwhelming
178 competition from the Tungus who have killed off the sables in the
648 vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyak were very successful in hunting wild deer and sables. In the second place, be-
342 ginning at this settlement one notices a progressive improvement
178 in the construction of the winter yurts. In Tyki the dugout rises
354 a little above the ground, it has windows made of fish skin, and
239 in one yurt even of glass; in the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters enormous yurts with half a dozen large windows and a fairly complex heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and stretch along the wall under the plank beds serve mainly to heat these latter; the smoke goes through a subterranean passage into a high vertical pipe which is made of a hollow tree trunk especially
184 adapted for this purpose. A similar system of heating is used by
171 the Amur Gilyak and in the fanza /houses/ of the Manchu, from
177 whom it may have been borrowed.

133 As to the character of the region, the maritime sections
139 of the western coast are mostly tundra-like, with sparse vegeta-
491 tion. The road runs partly along the sea, partly through the taiga, and occasionally over the mountain ridges. Near the settlement of Pomr the coast becomes more elevated, and, beginning at the summer settlement of Muz'vo, it strikingly

G 131 that in itself indicates the role that sea and river play in the lives and the economy of these people. At the same time, with such
G 101 a location and limitation of their area of distribution, the Gilyak
177 have no neighbors to the north and east, and therefore, in a large part, in fact, the greater part, of it, but only some in the west and south. Here, however, they come in direct contact with many of the Amur peoples, for example, with the reindeer Tungus of the Sea of Okhotsk and of the Stanovoi Mountains, with the Negda, Olcha, and Orochi on the mainland, and with the Orok and Ainu on Sakhalin. Taken together, these factors give the Gilyak, on one hand, an isolated position among the Amur peoples and greater independence, but, on the other hand, they make them the natural connecting link between the peoples of the mainland and of Sakhalin Island, not excepting even the civilized peoples of the two areas, namely, the Chinese and the Japanese.

Though the Gilyak are sharply differentiated from all the Amur peoples through their unique language, nevertheless a manifold mutual intermeshing of the respective areas of distribution takes place on the borders with their above-mentioned neigh-
Gi 101 bors. It has already been mentioned above that on the Tugur and
177 Ulban gulfs, along with the Gilyak, the Tungus, too, pursue their
342 livelihood and erect their easily transportable birch tents beside
361 the Gilyak yurts (3). Indeed, they roam far to the east along the Sea

1. Du Halde, Descr. de l'Emp. de la Chine et de la Tart. Chin, Vol. IV, Paris, 1735, pp. 12, 13. According to the statements of the Manchu sent there, the natives on the mainland designate the island quite differently, each according to the villages that they visited on it, but the general name for it was "Saghalian anga hata," that is, "island of the mouth of the Black River," a designation which the Jesuits put on their map, and from which, as is well known the present name arose. According to Klaproth (Asia polygl., p. 301), however, the words "Sachalian anga chada" mean only "rocks (not island) of the black river-mouth" and merely referred to some rocks lying close to the mouth of the Amur. I must note that the banks of the river at its mouth, especially the left one, are rocky, though not very high. But there are no individual rocks emerging from the water in front of it. For more of the many names given to Sakhalin, see below.

of the peoples inhabiting the island.

F.J.
G
175
178

We are again indebted to the Japanese for the first de tailed reports on the peoples of Sakhalin, and, to be sure, t same travelers, Mogami Tok'nai (1785 and 1786) and Mami Rinsô (1808-1810). In 1613-1615, a century before the Manchu expedition, some Japanese were sent from Jesso /Y

[121] cont./
to Krafto under the governor Kinfiro, in order to draw up a map of this country, but they did not advance very far, and they supplied hardly any information about its peoples. Siebold, at any rate, to whom we are indebted for the information (2),

2. Nippon, I, p. 126.

has nothing to say about it. There were no further expeditions to Sakhalin by the Japanese until Mogami Tok'nai and, soon after him, Mamia Rinsō set foot on the island. To be sure, Sakhalin was geographically explored at about the same time by European seafarers -- La Pérouse (1787), Broughton (1797), and Krusenstern (1805) -- and the Hollander Vries had landed on its east coast about a century and a half earlier, but they came into contact with its population only at the coastal points, and therefore could give no more than odd bits of ethnographic information, which shall be mentioned later. The Japanese, however, studied not only the two coasts -- the west coast almost to its northern end, and the east coast to the Bay of Patience -- but even a part of the interior of Sakhalin (3). We

3. Mogami Tok'nai, for instance, went from the Bay of Patience along the Poronai (Ty or Flyi River) across the island to Oxiai (in the vicinity of Dal'). Siebold, Nippon, I, p. 128.

are indebted to them for the first information about the three indigenous peoples living on Sakhalin, the Gilyak, Ainu, and Orok. Since their reports, however, and especially the one by Mamia Rinsō, are not very old, and since, as we have seen, there has been no subsequent border change on the mainland between the Gilyak and their southern neighbors, /122/ we cannot expect any considerable border changes on the island within this short space of time. In fact, Mamia Rinsō states that the area of the Smerenkur territory on the west coast of

2: Schrenck--294 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2 ●
Orochi

/136 cont./ A Gilyak from Ykyrn in the Tymy Valley, very well-versed for his means in the geography of the Amur region and who had undertaken many trading voyages to the mainland and was acquainted with the Ainu and Olcha languages, named for me, among other peoples on the continent already known to me, the "K'kkal," who were said to live along the seacoast to the south of de Castri (Dze-Kamri/ Bay. There has already been mentioned many times above a village located on the east coast of Sakhalin and at present inhabited by Gilyak and in addition by Orok, which, belonging to the former people, bears the Gilyak name of "K'kir-wo" (10). A conjecture as to what circumstance is

10. "Wo" means "village" in Gilyak.

responsible for this name is /137/ to be expressed later. If, however, we first continue to discuss the names K'kkal or K'kis(a)r, I would draw the conclusion from the fact that among the Ainu it would be just the same as among the Gilyak, with minor modification, also among the Manchu that the first borrowed it from the latter, and not vice versa. For along the entire line from the Chongor to the sources of the Umuri, the Goldi are the direct neighbors of the Orok, they have all kinds of associations and contacts with each other; I myself have repeatedly met Orochi passing through Goldi territory; between the Gilyak and the Orochi, on the other hand, there extends a large stretch of uninhabited land, and the contact between these two peoples can only be exceedingly few. Though the Gilyak in the interests of trade often come down along the west coast of Sakhalin as far as Sirarauni, the deserted mainland coast, only very sparsely inhabited by Orochi, remains alien and unknown to them. The sea, too, becoming wider toward the south and not freezing in the middle in winter, precludes any contact between the Orochi and the Sakhalin Gilyak living opposite them -- and, of course, to a greater extent the Ainu as well. Judging by those designations, then, the Gilyak seem to have first become acquainted with the Orochi through the Goldi. If one

2: Schrenck--456 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2
Goldi, RX3 Orochi

/324 cont./
coast of Sakhalin. Four Tymy Gilyak and one from the village of Tyk, who were traveling along the same route, camped next to me. With a moderate northerly wind, there was a very heavy snowfall. The Gilyak shoveled out a pit a few feet deep in the snow, lined the bottom and the walls with fir branches, spread a cover of fish skins over it on the north side, over sticks stuck obliquely in the snow, and in the center built a small fire, over which hung the kettle. The wind increased during the night, and in the morning the storm was so severe that further travel was inconceivable. The Gilyak immediately set to work to make a camp better protected from the storm and snow. First they dug a circular cavity in the snow, partly spread it out, running together conically at a midpoint, and spread several fish-skin covers over them in such a way that only an opening at the top of the tent was left for a smoke vent; a tip of the cover that could be folded back served as the door. The location of the pit and the ground around it were covered with fir branches, and over that were spread the bear skins used for a bed, which the Gilyak always take with them on their winter journeys. Next came the setting up of a hearth in the little dwelling. The important thing was to create a solid base for the fire, because otherwise, made directly over the snow, it would soon sink deeply into it and could no longer warm those sitting around it. For this purpose several very flat pieces of wood were placed as exactly and as close to one another as possible, framed on all four sides by others, thicker and set on edge, and these latter were fastened in position by wooden pegs. In this manner a longish-rectangular cavity was obtained for the hearth, and the bottom of it the Gilyak now spread out a larch-tree bark, then brought lumps of frozen sand from the high embankment along the seacoast, cut them up with their axes, which they always carry with them on such journeys in order to procure the necessary firewood for the nightly campfire, and with this filled the cavity made for the hearth up to the rim. In passing I must mention that the axes customarily used for housebuilding and the like by the Gilyak and their neighbors at the time of my stay among them were either, on Sakhalin, of Japanese shape and

2: Schrenck--457 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/324 cont./
origin, or, on the mainland, Chinese, with a rather long, straight handle and a thick blade almost equally broad at its edge, and as is shown on Plate XXX in the hand of a Goldi boy. At that time there were practically no Russian axes, with a short, somewhat sloping handle and a blade broadening greatly toward the end. Thus, in the shortest time, there arose a lodging which offered the Gilyak sufficient protection against the weather and in form and construction reminded one strongly of their earth yurts. Like the former in the snow, the latter are sunk into the ground to insure protection against wind and weather. Perhaps /325/ this was how the idea of erecting earth yurts such as we find among the Gilyak arose. In any case their complete similarity with these emergency tents in building, general plan, and construction speaks for their quite primitive character.

As simple and primitive as the Gilyak earth-yurt is, it nevertheless offers many advantages, especially when its dimensions are somewhat larger. The location of the pit in the ground, the carefully built, tightly closed roof provided with a thick layer of snow on the outside, and the absence of any window openings give the cold outer air, with even the strongest wind, no direct entry into the inner part of the yurt, provided that the door is closed, and the fire maintained continually on the hearth warms and ventilates the small room and makes a sojourn in it cozy. At the same time the hearth located in the center of the yurt gives it a unified character: the entire company is gathered around the blazing fire which is equidistant from all three benches; all face one another, all receive warmth and light from the same source. This inevitably leads to greater communicativeness, to a mutual exchange of adventure, views, and experiences, and I have often seen the Gilyak sitting this way in general conversation around the fire far into the night and the tobacco pipe passing from hand to hand, often participating in their conversation myself insofar as possible. But aside from these advantages the earth yurt has many drawbacks. The most unpleasant of these is the frequent, severe, and rapid change of temperature to which it is exposed. Whenever the door is opened, a cold stream of air comes into the yurt and moves along the floor. To be sure, it is lessened by the roofed-over passageway [See Category 116, P. 1010 -- Anchor]

2: Schrenck--458 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/325 cont./
in front of the door, but in no way eliminated, and if the door remains open, such a strong draft is produced between it and the smoke vent, filling the whole interior of the yurt, that the latter is deprived of all its warmth in no time and comes close to having the temperature of the air outside. And yet this experiment must often be repeated several times a day precisely during very cold and stormy weather, because then it frequently happens that a mass of cold air sinks down through the smoke vent, or an eddy of wind gets into it, forces back the smoke, and temporarily blows it into the interior. In the shortest time the small room is then filled with suffocating smoke affecting the eyes, throat, and lungs, and there is nothing left but to make a draft by opening the door, clearing the air again. This is why all the beams in the yurt are blackened by smoke and covered with a more or less thick layer of soot near the top. The change of temperature in the earth yurt is even more perceptible at night, for after the fire, beside which one has fallen sleep, goes out, the yurt is soon filled with cold air coming down through the smoke vent. To be sure, it is said that this can be closed, but I have never seen it done, though I spent many a night among the Gilyak. And to be sure this drawback is all the worse the smaller the yurt is and the lower the smoke vent is over the hearth and the sleeping benches. At night in the small tent-yurt of Tafiz-wo, where one could reach the smoke vent with the hand and where no big and lasting fire was therefore possible, /326/ we soon had the temperature of the outside, which, in addition, was accompanied by a noticeable draft. Under these circumstances how greatly to be preferred is a night's rest in the open air with a steadily burning fire, even if it should be very cold, as long as there is no snowstorm!

The winter yurt built after the Gilyak pattern tehadryf of the Gilyak, is completely different in character. It always has the appearance of a house provided with walls and a roof. It is an approximately square structure, though it is somewhat longer than it is wide, about 6-7 fathoms long and about 5-6 fathoms wide, with low walls and a large roof sloping down flatly toward the two longitudinal sides (see Pl. XI) (1). The walls

2: Schrenck--463 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/328 cont./
proportions in this respect and at the same time show other peculiarities discussed details in the construction and interior arrangement of a Gilyak winter-house. In concluding this description I must mention that along the walls (a), immediately to the right and left of the entrance, there are sometimes shelves or cupboards for storing household utensils, and here, too, is the place for one or more large receptacles which contain the water needed for drinking and cooking the food. An open cabinet with various cooking and eating implements similarly hangs on the wall behind the hearth. Finally, it should be noted that in the front transverse wall of the house, close to the roof, there is a round hole which can be closed with a similarly-shaped, straw mat and is used for ventilating the house when it is filled with smoke and steam during the preparation of the fish broth for the dogs or with other, when there is insufficient draft in the pipes. Incidentally I almost always saw it open, and closed only at night. Since, because of this smoke hole, the /329/ plank bed along the front transverse wall, which, as we have seen, is the place of honor, is not provided with a straw mat, whereas the bench along the front longitudinal wall and, after that, the one along the rear transverse wall are regarded as the best, and here, to honor a guest, a fur rug is spread, the two longitudinal benches furthermost also spread out over the straw mat, which is never lacking.

As advantageous as the Chinese winter-yurt of the Gilyak is over their earth yurt, insofar as it is much more spacious, lighter, and more comfortable, due to the plank bed, also warmer and not subject to such sudden changes of temperature, nevertheless it, too, has many disadvantages, and in part some that the earth yurt does not have, or at least not to the same degree. The thin outer walls and large windows do not offer sufficient resistance to the heavy frosts and violent snowstorms. There is often a strong draft, and in many places fine powdered snow comes in, or there is a deposit of ice. The draft is even stronger along the two sides, because the door opens directly to the outside and not into a protected space in front, as in the earth yurts. In addition, it must occasionally be kept open for

in more ancient times (1).

1. Weniaminof, op. cit., p. 201.

After this digression, which acquainted us with the earth yurt in its various modifications as the original winter dwelling of all the Paleo-Asiatic peoples as far as Greenland and the extreme northern part of America, let us again return to our point of departure, the Amur region and the Gilyak. While the earth yurt, the toryf, is the original, national winter-dwelling of the Gilyak, the tchadryf, erected on level ground and equipped with pipe heating, must be designated as a later form of winter dwelling brought to them from the outside, from contact with other peoples, chiefly through Chinese influence. I have therefore called it above simply the Chinese winter-yurt. Glehn (2),

2. "Reisebericht von der Insel Sachalin" (Beiträge zur Kenntn. des Russischen Reiches, Vol. XXV, 1867, pp. 233 ff.).

Schmidt (3), Mizul (4), and others call it the "Manchurian

Section 3: "Ethnographie, auf Grund des von Dr. Karl von Scherzer gesammelt. Materials bearb. von Friedrich Müller (Ethnographie, on the Basis of Material Collected by Dr. Karl von Scherzer and worked up by F. Müller)." Vienna, 1868, p. 158. In the last-named work the heating by pipes is called "Russian type," though this it by no means a national Russian arrangement.

by means of which an evenness of temperature is attained in the house to an extent inconceivable in the primitive dwellings of the Amur people.

Finally, the fact that the heated sleeping benches are used by the Gilyak and all the other Amur peoples in exactly the same way as by the Chinese also /353/ argues in favor of the Chinese origin of them. According to U-behsu, the Chinese always put the sleeping place in the house

1. Cf. Wassiljef's translation of U-tschen's writing, op. cit., p. 98.

toward the wall (2), and the same is also observed by the Gilyak

2. Pallas, op. cit. In the Amur region, too, I have never seen Chinese sleep otherwise on the kang.

and the other Amur peoples with superstitious strictness, whereas in the earth yurts, one sleeps in the opposite position, with the head toward the wall. In a Gilyak winter-house on the Amur, when I once placed my head against the wall, as in the earth yurt, in order to have a support for my pillow, it aroused general indignation among the Gilyak, and the cry "ulxch, ulxch," which means the same as "misfortune" or "unlucky, forbidden," rang out on all sides. The reason, why the Chinese always sleep in this position on the kang is said to be that the part of the sleeping bench that joins the wall is especially warm because of the pipe

/353 cont./

Shortly thereafter, however, in 1790, Saratychof reported /354/ from his journey through the country that there were no longer any earth yurts anywhere and that instead of them Russian-style houses (log houses, so-called izba) had been built everywhere; only the summer dwellings of the Kamchadals, which are likewise peculiar, had been retained (1). On the basis of a remark by

1. Sarychev*, Puteši. po Sieverovost. chasti Sibiri, Pt. I, p. 179.

Mamia Rinō on his voyage in 1809 from Deren down the Amur, one might think at first glance that at the same time it happened among the Gilyak on the Amur. Coming from the territory of the S'janta (Olcha), when he entered the territory of the Simenmlar (Gilyak) at Horo (Chjate), he noticed that from there on people, dwellings, implements, and even the style changed abruptly, because exactly the same as on Krafto (Sakhalin) (2). One might

2. Siebold (Nippon, VII, p. 177). Cf. also p. 248 above.

think, therefore, that at that time the Gilyak on the Amur were still living in earth yurts on Sakhalin. But this is impossible, for, as mentioned above (p. 466), four years earlier Kruzenstern had found Chinese winter-yurts among the Gilyak on the northern tip of Sakhalin, that is, at the farthermost point, as far as these dwellings are found even today. Hence, he concludes from the fact that Mamia Rinō was traveling in summer, there can be no doubt but that his above remark referred to the summer dwellings, which in fact, as we shall see in a moment, are quite different among the Gilyak on the Amur and on Sakhalin than among their neighbors, the Olcha, and the other Tungusic Amur-peoples. Conditions in Kamchatka and in the lower Amur region are too different to have produced, at an equally rapid disappearance of national peculiarities in both places. In the former, the Russians, after conquering the region, settled

/354 cont./

permanently among the natives, who were greatly decimated by the previous bloody battles, building their houses in their own way and entering into permanent, peaceful relations with the Kamchadal, even mixing with them more and more. It is therefore not surprising that their style of building soon became the customary one throughout the region. Matters were different in the lower Amur region among the Chinese and Manchu: a conquest and colonization of this region by the peoples named have never taken place. As we discussed above in detail (3),

3. See pp. 119, 142-144 above.

it instead was and is visited only from time to time by individual Manchu officials and Chinese merchants, who live a few places where they have their own houses, always take up residence in the houses of the natives, and this only among the Tungusic Amur-peoples, for the Gilyak have even denied the Chinese traders entry into their region. Hence, it undoubtedly must have taken a long time before the Chinese winter-yurt reached the Gilyak from the Chinese on the Sungari, spreading down this river and the Amur among these peoples, and the trading expeditions which the Goldi, Olcha, and Gilyak from ancient times to now have conducted annually to the Chinese along the Sungari and on which they have had repeated opportunities to become familiar with and to appreciate the type of construction of the Chinese house, must certainly have contributed most of all to its adoption and further spread among the Amur peoples.

/355/ In April and May, when spring comes, the Gilyak find it necessary to abandon their winter dwellings and to move into their summer dwellings. First the inhabitants of the earth yurts are driven out of their houses, because they are made wet and uninhabitable by the water running in both from the top and the sides as a consequence of the melting snow and the thawing of the ground. The Chinese winter-yurts, set on level grounds, are more serviceable, even in spring and summer, though even in them water sometimes comes through or over

/360 cont./

in general and in the individual areas. Such principal and essential points are of special importance for the ethnographer, because in connection with it, the Gilyak receive in exchange, besides various fabrics both in solid colors and patterned, many ready-made articles of clothing, this, as well as their general association with this civilized people next to them, easily explains the influence of Chinese customs and Chinese taste discernible in their clothing in the shape, cut, and the type and patterns of embroidery and other decorations.

/361/ The clothing worn next to the body by the Gilyak consists of drawers, which are not taken off even at night, trousers (Gilyak warněh), an under and an outer shirt (Gilyak larkěh) reaching to the knees and buttoned from left to right at the neck and girdled. These articles of clothing are always made out of Chinese, or nowadays also of Russian, blue or grey cotton material, and sometimes also of white, which, however, since the Gilyak never wash their clothing, very soon turn a more or less dirty gray. As a rule, no outer garment is needed during the summer, but if unfavorable weather, not infrequent even in this season, requires it, a winter garment, in particular the dog-fur coat to be described later, is used. High boots of seal leather and fur always serve as footgear. As a rule, the lower part of the boot (Gilyak ki) and the sole are made of the skin of Phoca barbata (Gilyak kighitsch and kighitsch-langj), which, especially in the case of older specimens, is thicker and stronger than that of the other type of seal very common in the waters of the Amur region (Ph. nummularis; Gilyak pyghi and pyghi-langr) (1) and

1. See my Reis. und Forsch. im Amur-Lande, Vol. I, pp. 180 ff. Langr simply means "seal."

for this purpose deprived of its hair. In accordance with the foot structure of the Gilyak, the lower part of the boot is small and graceful, with a high back heel-shaped in the middle, and the pointed end, turned somewhat upward and back, shows unmistakably the influence of the Chinese pattern. The legs of the boots, broad

/386 cont./

represent the principal articles in the trade with the Chinese. Since in connection with it, the Gilyak receive in exchange, besides various fabrics both in solid colors and patterned, many ready-made articles of clothing, this, as well as their general association with this civilized people next to them, easily explains the influence of Chinese customs and Chinese taste discernible in their clothing in the shape, cut, and the type and patterns of embroidery and other decorations.

/387/ The clothing worn next to the body by the Gilyak consists of drawers, which are not taken off even at night, trousers (Gilyak warněh), an under and an outer shirt (Gilyak larkěh) reaching to the knees and buttoned from left to right at the neck and girdled. These articles of clothing are always made out of Chinese, or nowadays also of Russian, blue or grey cotton material, and sometimes also of white, which, however, since the Gilyak never wash their clothing, very soon turn a more or less dirty gray. As a rule, no outer garment is needed during the summer, but if unfavorable weather, not infrequent even in this season, requires it, a winter garment, in particular the dog-fur coat to be described later, is used. High boots of seal leather and furs always serve as footgear. As a rule, the lower part of the boot (Gilyak ki) and the sole are made of the skin of Phoca barbata (Gilyak kighitsch and kighitsch-langj), which, especially in the case of older specimens, is thicker and stronger than that of the other type of seal very common in the waters of the Amur region (Ph. nummularis; Gilyak pyghi and pyghi-langr) (1) and

1. See my Reis. und Forsch. im Amur-Lande, Vol. I, pp. 180 ff. Langr simply means "seal."

the sea of Okhotsk do we not have /361/ any data at all, except for the small stretch between Kulj and the Amur Liman likewise visited by me (1).

1. Middendorff was told during his stay on Tugur Bay (in 1844) that there have been large Gilyak villages between Cape Umelongte (Mykelāja), the point of this coast

/387 cont./

and wide in comparison with the foot part, are made out of the thinner skins of the Gilyak, pliable skin of the hair-named species of seal, with the hair turned outward; they almost reach the knee and, after the ends of the trousers have been tucked in, are tied under the knee with a leather strap sewed to or on them. In view of the heavy growth of hair of the Gilyak, a head-covering is usually unnecessary during the summer. Nevertheless, for protection against rain and sunshine, they wear a peculiar, rather shallow-conical hat made out of birch bark (Gilyak chih-bah, i.e., in literal translation, "birch-bark hat"), which as a rule is decorated with different kinds of black and red arabesques arranged to radiate out around the tip and, likewise cut out of thin birch-bark, sewed on or fastened on by means of fine cargut (see Pl. XVII[a] and Pl. XX, Figs. 1 and 2)[a].

2. The colors (black and red) are not washed off by rain. I therefore suspect that they are produced by a mixture of Chinese ink or iron ocher with fish or seal train-oil.

The women wear quite similar undergarments, but a longer shirt reaching far below the knees, and over it a robe /Rock/ provided with sleeves, arranged in front for buttoning, and made of other material than that of the shirt. The shirt and robe usually have a broad edging of material in a different color, over which is put a decoration, especially on the robe, one or several rows of variously shaped brass disks of Chinese workmanship hanging down on little straps, or /388/ of the well-known Chinese copper coins with a square hole, running all around (cf. Pl. XVII and Pl. XVIII). As a result, all the movements of the women, every step that they take, is accompanied by a clatter made by the striking together of the above-mentioned metal disks or coins. This custom, as the ornaments themselves reveal, is undoubtedly of

[a] [See Category 116, p. 997 -- Analyst]

/388 cont./

Chinese origin (1). To make the fish-skin robes the Gilyak use

1. During my stay in the Amur region, among such decorations several little brass crosses with the inscription "Souvenir de mission" and a bronze medallion bearing the picture of the Savior with a Chinese (?) inscription were found on a woman's robe from the village of Wais or one of the nearby villages. In all probability these pieces came from the French missionary, de la Brunière, who in 1846, after he had spent the winter in Wair, was martyred and robbed by the Gilyak. His colleague Venault, who by order of the Apostolic Vicar of Manchuria made a journey in 1850 from Ashe-ho on the Sungari to the Gilyak and Goldi settlements on the Amur-cline, saw many of their children wearing such crosses and medallions (Nouv. Annales des Voyages, fifth series, Vol. XXX, 1850 [Vol. III], p. 70). To substantiate the reports collected by Venault concerning the killing of de la Brunière, it should be noted here in passing that it took place, according to what I learned from the Gilyak, on the left bank of the Amur, between the villages of Wair and Sabach, at the point where the rocks in a strange gate-like formation come close to the river. I visited it during my winter journey on March 29 (April 10), 1855. The already aged Gilyak in whose house I stayed in the village of Wair, pointed out to me, for example, the place as one of the murderers. He evaded or declined to answer my questions concerning the details of the matter. Since, however, the Gilyak consider it bad luck (uthwah) to destroy a piece of paper with

/392 cont./

royal beast. Hence it is no wonder that, in accordance with the proverb, "Clothes make the man," which is especially apt among primitive peoples, the Gilyak who can occasionally parade around in a whole coat of lynx skins, and who can show off the profit that would accrue to him from the sale of these skins, is surrounded with an aura of extraordinary distinction and wealth in the eyes of his countrymen.

But let us return to the ordinary winter-clothing of the Gilyak. Like the shirt, the fur coat, too, is always buttoned by the Gilyak from left to right over the chest, sometimes with several metal buttons of Chinese or Russian origin, sometimes with a large wooden button of Gilyak workmanship (Pl. XXIX, Figs. 4, 5, and 6) and sometimes fastened by the Gilyak, His colleague Venault, who by order of the Apostolic Vicar of Manchuria made a journey in 1850 from Ashe-ho on the Sungari to the Gilyak and Goldi settlements on the Amur-cline, saw many of their children wearing such crosses and medallions (Nouv. Annales des Voyages, fifth series, Vol. XXX, 1850 [Vol. III], p. 70). To substantiate the reports collected by Venault concerning the killing of de la Brunière, it should be noted here in passing that it took place, according to what I learned from the Gilyak, on the left bank of the Amur, between the villages of Wair and Sabach, at the point where the rocks in a strange gate-like formation come close to the river. I visited it during my winter journey on March 29 (April 10), 1855. The already aged Gilyak in whose house I stayed in the village of Wair, pointed out to me, for example, the place as one of the murderers. He evaded or declined to answer my questions concerning the details of the matter. Since, however, the Gilyak consider it bad luck (uthwah) to destroy a piece of paper with

/393 cont./

and in this latter, more common case, to put the cap on, the bead mentioned is first brought under the chin, and then the cap is pulled over the head. The cap is always lined with fox fur, which, standing out in front and on the outside, also forms the edging. The outside consists of either the same kind of sealskin throughout or various pieces of fur not infrequently put together artistically and tastefully. /394/ For example, the tom-hak of a Tschonsi Gilyak who visited me in Nikolayevsk, which is illustrated on Pl. XXI, Fig. 1, was of this type. The upper middle piece of this cap, brown in color, was of reindeer skin, the white arabesques on it are of short-haired dog-skin; the edging, separated from the middle piece by a blue band, is made up of pieces of dappled sealskin; the front edge, as always, consists of the fox fur emerging from the inside, but at the bottom the cap is trimmed all around with long-haired, white dog-fur. This trimming, by the way, is not lacking on the less elegant, indeed even on the simplest fur-caps, which, for a better fit at the waist and in order not to hinder the movement of the body, is provided, at the top with a wide edging of fish skin, through which run the straps for tying it (see Pl. XVIII and XIX). The konjiha seems to be an article of clothing that is genuinely Gilyak in origin, though it may also be found among some of the Tungusic peoples neighboring the Gilyak and living as they do, the Olcha, for example. /395/ The Gilyak always traveling astride his low dog-sled, the konjiha gives the lower body excellent protection against the oncoming wind and snow or rain, and on many other occasions particularly conditioned by the practices of the Gilyak we shall see below, it performs excellent service for him. To prevent wind and snow from entering the sleeves, they are wrapped in a swathing fashion and tied on the wrists by means of a wide sleeve-band of fabric or leather (Gilyak tughahar; see Pl. XXII[a], Figs. 4, 5). The hand coverings (Gilyak womjaghi) are tied to the ends of the sleeves. As a rule, they are mittens lined with fox fur (Plate XX, Fig. 3, 4, and disguised in cut by the fact that at the wrist, close to the thumb, there is a slit protected by a

[a] [See Category 116, p. 1004, 998, 999, 1002 and 1000 respectively -- Analyst]

/394 cont./

291 the neck or head, or with the fur cap (see Pl. XIX), and in which
[177] they continue to sit, even after throwing off the fur coat, inside the yurt. Furthermore, in order to keep the chest and abdomen in the area of the pit of the stomach especially warm, a flap lined with fur, the so-called koch-passj, is worn there under the shirt, on the naked body, hung round the neck with a small band and at the bottom knotted around the body by two others. The example of
[177] the type pictured on Plate XXII, Fig. 3 which I saw in the possession of the Gilyak Judin in Tebach, was of Goldi workmanship. It was of pentagonal shape, rounded off at the bottom, lined with fox fur, and trimmed all around with otter fur, but provided on the outside with multicolored and in part artistic embroidery on black cotton material, which I shall come back to below. Here there must still be mentioned a peculiar undergarment that I noticed in particular among the Tro Gilyak in Nyi, both among adults and on a boy about seven years old; this is a pouch tied around the loins and of use to the male sex only. For the Gilyak sitting astride their sleds it is especially important to protect the knees against wind and weather, and a knee sheath (Gilyak panj) made of sealskin and tied around the leg below or above the knee serves for this purpose.

291 /395/ The footgear has already been mentioned above. In
171 winter, for warmth, the Gilyak put some dry grass in their boots,
175 as more or less all the northern primitive peoples do (1). Accord-
824

1. Thus, besides the Siberian peoples, the Eskimo of northwestern America and Greenland, for example (Rob. Brown, "Das Innere von Grönland /The Interior of Greenland/," in Petermann's Geogr. Mittheil., 1871, p. 384).

ing to the statements of the Chinese U-tschen, who wrote a description of the town of Ninguta in 1722, it is also customary among the Manchu there, and for this they use a soft, fine, longish grass growing in the vicinity of water, which they call

/396 cont./

291 which runs around the neck and throat and from which two long
237 tips, with beads sewed on them, hang down from the shoulders over the breast.

291 /397/ The winter headgear of the Gilyak women is peculiar
177 and manifold in nature. The everyday cap, in which one sees them even at their domestic chores, when they fetch supplies
531 from the storehouses, carry water from the river or firewood into the yurt, care for the dogs, etc., is the so-called tulv-hak, i.e., simply "winter cap" (Pl. XXI, Fig. 2).* It has a peculiar shape, with the high crown, usually provided with a cord clasp, and the extensions running down at the back and sides for the protection of the neck and ears, not unlike a helmet, a similarity to which the concentric or scalloped quilting on the outside, corresponding to the shape, to some extent contributes. This latter consists of single Chinese material, usually black or dark-blue cloth.
[237] On the inside the cap is lined with fox fur and trimmed on the
292 edge with otter skin. The tscharp-hak, i.e., "silk cap" (Pl.
177 XXI, Fig. 3), used on longer trips and on festive occasions, is
531 more elegant. It is similar in shape to the fur cap of the men, but with a somewhat higher crown and extending down farther over the ears and the neck. Corresponding to the designation, it is made out of Chinese silk, on which gay-colored dragons and other figures, worked in here and there with gold thread, are
[237] represented (1). On the inside this cap is likewise lined with fox

[171]
[113]

1. It is well known that the dragon design on fabrics, furniture, and other articles is very popular among the Chinese, but only the emperor is said to be entitled to have five-clawed dragons on his clothing and utensils, whereas all other persons, from imperial princes and mandarins down, must content themselves with four-clawed dragons (Van-Braam, Voyage de l'Ambass. de la Comp. des vers l'Emper. de la Chine

* [See category 116, P. 1001--Analyst]

/397 cont./

1. (cont.)
en 1794 et 1795, publ. by Moreau de St. Méry, Paris, year VI, Vol. II, p. 237 [editor's note]. Girard, France et Chine, vie publ. et privée des Chinois anc. et modernes, Paris, 1869, Vol. I, p. 59). The dragons on the above-illustrated tscharp-hak belonging to a Gilyak woman from the village of Allof was of the latter type.

fur, which in a broad strip also goes around the front edge of the cap, trimmed at the bottom and in back with otter fur. The tscharp-hak, however, is still not the peak of elegance among the Gilyak women. The most elegant and distinguished piece of their entire winter wardrobe is the lynx cap (tschlyghi-hak, Pl. XXI, Fig. 4). It is made out of the head and tail pieces of a lynx skin. The former, with the upright, tufted ears of the animal, forms the crown of the cap. The shells of the ears are lined with red Chinese silk and on the edges are provided with small bunches or tufts of blue silk threads or of black sheep's wool (2). A row

2. The Gilyak designated the material of the black tufts to me as such, which, since the Gilyak themselves have no sheep, must likewise be of Chinese origin.

of such tufts also runs along the center of the headpiece, from the forehead to the tip of the snout. The fur of the lynx head is trimmed all around with a wide band of sable fur, which ends in an elongated tip at the bottom on either side to protect the ears. In the rear the lynx tail hangs down from the trimming to the back, like a braid, and at its tip it is provided with a small ring or one of the pierced brass disks with which the women customarily adorn the edging of their robes. Through such use of the lynx-head /398/ fur and of the tail the tschlyghi-hak

/399 cont./

531 and snail-shaped spiral figures prevail throughout.

/400/ As on their garments, the Gilyak like to decorate all the other implements in their household and their lives with all kinds of designs and ornamentation, as we noted on the above-mentioned implements worn at the belt and as we shall frequently have occasion to see below. The general character of these decorations is always the same, as is described in more detail above, whether the articles are made of wood, tree bark, leather, bone, or iron, and only the execution will be less exact and neat in the case of more brittle material, although with every type of object we shall come across some which testify to the great skill and dexterity on the part of the Gilyak in the use of the simplest tools. The talent of the Gilyak for ornamentation, 531 294 however, appears to us in its boldest and greatest development in the embroideries for the decoration of their clothing, utilizing for this in particular, besides the easier reproduction of diverse lines and figures, also the effects obtained by putting together various colors. And of this the Gilyak, as much as in general they prefer somber colors for their clothing, also popular among the Chinese (1), a more or less dark blue or gray, make liberal,

1. Du Halde, Descr. de l'Emp. de la Chine, Vol. II, p. 82. Girard, France et Chine, vie publ. et privée des Chinois anc. et mod., Paris, 1869, Vol. I, p. 59.

but moderate and tasteful use in decorating their clothing, as [439] the above illustrations show. This is made possible by the variously colored silk and cotton thread obtained in trade from the Chinese.

531 I have previously described the general character of Gilyak 177 ornamentation as unique and completely different from that of the Siberian peoples. Also, no trace of Russian national influences, as are quite explicable among the latter as a result of centuries old, manifold, and constant intercourse with the Russians, is found among the Gilyak. On the other hand, much of the Gilyak ornamentation, spiral-shaped coiled lines,

/400 cont./

531 177 artistic interlacing of bands, tapering ornamental borders with multiple points, and the like, can also be recognized on anci Chinese articles, costly garments and porcelain and ivory objects such as our museum has. Furthermore, quite similar orn mentation is found on some old Japanese objects, for example on the brass mountings of half decayed wooden scabbards in ou possession, which we obtained through Mr. Poljakof from anci Ainu graves on southern Sakhalin and which undoubtedly are o Japanese origin. I therefore feel justified in concluding that t [439] Gilyak ornamentation has developed largely under the influenc of ancient Chinese and, in part, ancient Japanese models, sin in view of the anciently established and constant trade relatio of the Gilyak on the mainland up the Amur and Sungari with t Chinese and on Sakhalin with the Japanese, and the Ainu com pletely subject to their influence, it could scarcely be otherwise (2).

2. The role that the Gilyak play as middlemen in trade between the Chinese and the Japanese will be discussed below.

531 /401/ Thus, as in other things, so also with regard to or 177 mentation, Chinese cultural influence spread along the natur 171 route of trade, down the Sungari and Amur to the Gilyak. If, addition to what has been presented above, more direct proof were needed, it is provided by the fact that the same type of ornamentation on clothing and other objects is found among al the other peoples of the lower Amur region, from the Gilyak upstream along the main river, as well as along its tributaries up to the Sungari. Though these peoples are from Tungusic tribes, they nevertheless have nothing in common with the Russian-Siberian Tungus with regard to the ornamentation custo ary among them, but rather are linked to the Chinese and Gily In this connection, however, we are met by the striking phenomenon that the feeling for ornamentation and the develo ment of the latter in the Amur region do not decrease but increase with greater distance from the civilized people concern

531 /401 cont./
177 the Chinese, and reach their climax among the people farthest
171 from the latter, the Gilyak. I think that the reason for this is
531 not, say, in the natural disposition of the peoples concerned,
174 but in political conditions. The Gilyak were able to keep them-
648 selves independent of Manchu-Chinese domination and to prevent direct visits and settlements of the latter in their territory (1).

1. See p. 144 above.

[439] Since in this manner they escaped continuous exploitation by the Manchu officials and the Chinese merchants, they could attain greater affluence than the Tungusic Amur peoples subject to the Manchu-Chinese, and, secure in their possessions, they must have found greater joy in them and along with this felt a desire and an incentive to concern themselves, beyond acquiring the mere necessities, with decorating and beautifying their clothing and other equipment, in which they were furthermore lent a helping hand by the trade with the Chinese, conducted on their part with innate cunning and circumspection.

294 Returning specifically to the clothing of the Gilyak, I must
412 mention a few tools customarily used among them for making it.
[439] For sewing and embroidering the Gilyak of today use only steel needles, which, on the mainland, they obtain from the Chinese, or, more recently, from the Russians, and on Sakhalin from the
294 Japanese (2). The container for storing the needles(Gil. nugsis,
415
412

[114] 2. Steller's statement that the Kamchadal obtained steel needles from the Japanese and the erroneous explanation of their designation for them linked with it are discussed above (pp. 407 ff.) in detail.

from nug, "the needle"; see Pl. XXIX, Fig. 2), worn by the women at the belt, is peculiar. It consists of a bone tube through which a strap provided with two stoppers runs and into which the needles are stuck: whereas the lower stopper is tied fast to the strap, the upper one can be moved along it; if one lifts the
[See Category 116, P. 1009--Analyst]

294 /401 cont./
415 latter and pushes it upward, the strap with the needles sticking in
[412] it can be pulled out of the tube at the lower stopper. This in-
415 genious construction of the needle box is also /402/ found among
171 the Eskimo: Dall saw it among the Innuit on Norton Sound (1).

1. Dall, Alaska and its resources, Boston, 1870, p. 142, with woodcut.

[177] And all the Tungusic neighbors of the Gilyak have borrowed it from them, the Orok (2), the Olcha (3), and the Negda.

2. Through Mr. Poljakof, our museum obtained several Orok specimens of this kind, which completely correspond to the Gilyak specimens.

3. Maak", Putesh. na Amur" /Journey to the Amur/. Atl., Pl. 4, Fig. 9.

415 Middendorff saw it among the latter, and the illustration pro-
171 vided by him (4) shows exactly the same decorations on the bone
531

4. Reise in den äuss. Norden und Osten Sibiriens /A Journey in the Extreme Northern and Eastern Parts of Siberia/, Vol. IV, p. 1529.

[114] tube as our Gilyak specimens bear. But I cannot agree with his opinion that these figures approximate those prevailing on the South Sea islands and are to be regarded as an offshoot of the death's-head form popular there, which is associated with cannibalism and the trophies of human skulls. Similar, quite
[789] crude and primitive representations of a human face by means of a couple of circles with a dot in the center, a vertical line in between, and a horizontal line under them, as eyes, nose, and mouth, are not infrequently found on the implements of the Gilya and owe their origin, I believe, to the notion that by putting ther

415 171 531 789 /402 cont./
on an object the influence of any evil spirit involved will be removed and the use of the tool will be accompanied by success -- a belief that I shall discuss in another place.

294 283 The thread with which garments are sewed varies according to the variety of material in them. Fish-skin robes, for example, and birch-bark hats are sewed with fish-skin yarn, that is, fine thread cut out of fish skin, which the Gilyak call mydisk and distinguish, according to the type of fish from which it was taken, as pilengat-mydisk, mimk-myd., kych-myd., etc. (5), fur coats and similar articles of clothing with the thread

5. Pilengat is Cyprinus Carpio L.; mimk -- Hypophtalmichthys Dybowskii Herz.; I do not know what type of fish the name kych refers to.

(Gil. kuba) that the Gilyak know how to make from the ordinary stinging nettle, and which is also used for making cord and fishing nets (6). The garments made out of cotton or cloth are sewed

[177] [439] [171]

6. As is also known for the Siberian peoples, the ancient Kamchadal (Steller, op. cit., p. 83; Krascheninnikof, op. cit., Vol. I, p. 332), and others. The Gilyak method of making thread and cord from nettle fibers will be discussed in this work in a later section dealing with fishing.

with Chinese cotton thread, and for the various quiltings and embroideries the Gilyak use either the latter or the silk thread likewise obtained from the Chinese, depending on the delicacy of the work and the elegance aimed for. I have never seen a Gilyak woman use scissors during her sewing and embroidering, although they know of them, thanks to the Chinese and have a special term (chasa) for them; instead they only use a knife. For smoothing the fabric they use a smoothed piece of wood (pans), which is

3. (cont.)
der Gross-brit. Gesandtsch. in den J. 1793 und 1794, transl. from the English by Hüttner, Vienna, 1805, Vol. I, p. 88. Bazin, Chine moderne, ou descr. hist., geogr. et littér. de ce vaste Emp., Part II, Paris, 1843 (L'Univers), p. 610. Huc, L'Emp. Chinois, Paris, 1854, Vol. I, p. 317. Itier, Journ. d'un voyage en Chine en 1843-1846, Paris, 1848, Vol. III, p. 389. The latter tried to acclimate Urtica nivea along with other, similar plants in France and stated that it has the advantage over all of them in that it needed the least care. According to Richthofen (Zeitschr. der Berl. Gesellsch. für Erdkunde, Vol. V, p. 321), the Koreans also have clothing materials which, judging by their lustre, seem to have been woven out of the fiber of a nettle-like plant.

286 174 17 [126] [714] I therefore conjecture that formerly the Gilyak, like the Ainu, knew how to weave crude clothing fabric out of the fibers of the nettle, and an old specimen plaited out of cords and interlaced whalebone fibers, a sort of mail shirt (Pl. XLIV, Fig. 1), which I acquired from them in the village of Ssabach and which will be discussed later, corroborates me in this conjecture. But whereas the Ainu, generally held back and hurt by pressure and exploitation on the part of the Japanese, persisted, often out of poverty and necessity, in wearing their locally made, crude garments, the independent Gilyak, in contact with the Chinese, very soon learned how to obtain their finer clothing material through barter, and since /404/ there was no lack of material for such trade, in view of the wealth of their region in precious furs, they naturally gave up entirely the manufacture of their own, more laboriously made and nevertheless cruder and poorer, weaving.

[177]

/409 cont./

As is seen from the above description, the clothing of the Amur peoples, to be sure, offers much that is significant and original, but in no way such pervasive peculiarities and differences for the individual tribes that on the basis of it one could immediately /410/ recognize the affiliation of single individuals to this or to that people. The Gilyak, for instance, fundamentally different in origin and language from all the other Amur peoples, cannot be distinguished by their dress from their neighbors, the Olcha, and the latter in turn imperceptibly lead over to the Goldi, etc. Like climatic situations, like conditions with respect to food and subsistence, like ways of life, like cultural influences, and constant reciprocal intercourse have also in the course of time had a leveling effect on the clothing of these peoples and in part reduced and in part wiped out completely the differences that presumably were formerly present.

This is not the case with regard to another aspect of their appearance, the hair style. In this respect, quite the contrary, out of the uniformity that most probably formerly prevailed there developed in the course of time, as a consequence of certain political events, differences which today to a certain extent separate even closely related peoples of the Amur region and make it possible to recognize immediately the affiliation of single individuals to one or another of them.

The Gilyak wear long hair parted in the middle and plaited in one braid for the men or two for the women, which hang down over the back. If it is too short or too sparse to be plaited, it hangs down loosely from the head, which gives the individuals concerned an untidy appearance, and old women a witchlike appearance. A luxuriant growth of hair and a long braid are regarded as adornment, but I did not see the Gilyak artificially lengthen the braid, as the Chinese do, by plaiting in black silk. Baldness, on the other hand, is subject to ridicule. In order to promote the growth of hair, children are shorn from time to time, and occasionally, especially in the case of boys, a tuft of hair is left standing somewhere on the front of the head, tied or plaited, and at the tip provided with a beaded rosette hanging down over the forehead (1). Adults, however,

/415 cont./

southern part of their habitation area, along the eastern slopes of the great Chingan Mountains, around the tributaries of the Nonni, along the Nomin, Ganj, Gujuli, etc., where they live in complete dependence on the Daur and indirectly on the Chinese (4).

4. See p. 94 above.

they also certainly share the hair style of the latter, it gradually disappears going northward, and along the upper Amur and its northern tributaries, where, /416/ in spite of the Treaty of Nerchinsk, they have actually always remained under Russian influence and Russian rule, they have also retained their original and natural hair style, with the hair completely unshorn and either simply hanging down or tied up in a bunch on the crown (1).

1. Gerstfel'ld", "O prikrashn. zhitel. Amura" (Vestn. Russk. Geogr. Obbich., Pt. 20, 1857, Sec. on Res. and Mat., P. 296). F. Buse, "Ocherk" ustovii zemled. v" Amurskom" krae /Essay on the Agricultural Conditions in the Amur Region/" (Zap. dlia chtenitia, izdav. k. Trubnikovym", August-December, 1869, p. 116).

Thus, the way of wearing the hair among all the indigenous peoples of the Amur region is a sign of their dependence on or independence of the Manchu-Chinese, or, on Sakhalin, the Japanese. The boundary up to which the Chinese, among the Amur peoples, or on Sakhalin the Japanese, hair style extends designates at the same time the boundary of the effective rule of the Manchu-Chinese or Japanese over these peoples. It is a political, not an ethnographic border line: in the western part as well as in the eastern part of the Amur region and Sakhalin it runs across the habitation area of the peoples concerned (Orochon, Orochi, and Ainu), only at certain points separates closely related tribes (for example, the Olcha from the Samagir

/416 cont./

and Goldi), and nowhere coincides with the boundary of such fundamentally different peoples as the Gilyak on one hand and the Amur Tungus or Ainu on the other. Inasmuch as the degree of the dependence of the Amur peoples on the Manchu-Chinese or Japanese is of the greatest importance with regard to their whole existence and lives, however, this border line is also of great ethnographic interest.

Like the hair style, there is another aspect of the external appearance which to some extent characterizes individual peoples of the Amur region more than the clothing does -- it is the adornment worn on various parts of the body.

All the natives of the Amur region, and among them the Gilyak, have the use of earrings, or, more properly, ear pendants, in common. They consist either of only a silver or copper wire bent into a ring at the upper end and wound to a spiral shape at the opposite lower end (Small earring, Pl. XXIX, Fig. 7), or of a silver wire bent into the shape of a large ring, on the upper and lower parts of which are strung large glass beads or circular disks of a grayish-white or greenish-white stone (jadeite) and pierced, in the center (large earring, Pl. XXIX, Fig. 6). The men always wear only one earring in each lobe, the women, however, often two and three large pendants, sometimes several inches long, in each one, the weight of which distends the ear lobes far downward. Among Gilyak children I have occasionally seen, besides the metallic ring, a tuft of fox hair worn at the ear lobe, which may serve as protection against the cold as well as adornment. It is noteworthy that, aside from the earrings, the /417/ Gilyak, Olcha, Orok, and, as far as I know, also the Negda wear no other ornament on a head or facial part. Among the Samagir on the Gorin, the Goldi, and the Orochi, however, there is a second and similar ornament, which, however, is not limited to the female sex (1), among

1. Only once, quite as an exception, did Maack (Puteshi. na Amur", p. 224) see this

[See Category 116, p. 1009 - Analyst]

/417 cont./

1. (cont.)
ornament on a male individual, a Goldi from Mylki. I did not come across such a case.

whom, however, it is never absent, so that by it one can immediately distinguish the women of these nationalities from those of the Olcha and Gilyak. This is a nose ring shaped exactly like the small earring described above, but still smaller, which hangs down from the pierced septum to the upper lip -- a most peculiar, ugly ornament and one which in addition impedes cleanliness, in which all these peoples are so deficient anyway. Finally, among the Orochi the same situation is found with regard to the kinds of ornaments discussed as with regard to the hair style: the northern Orochi, such as those on Kaiserhafen Hadshi Bay), correspond in this with the Olcha and Gilyak, but the southern ones, or Ta-che, along the seacoast at least from Gulf Bay downward (2) and along the right Ussuri tributaries, correspond with the Goldi and Samagir, that is, the former wear only earrings, and the latter, those of the female sex, also nose rings. Moreover, one sees among the Orochi women or girls, and sometimes also among those of the Goldi along the Ussuri and on the Amur near the mouth of the Ussuri, just such a small ring in the right or the left nostril (3). From what has been said, it is readily

3. According to Przewalski (op. cit., p. 105) in the right nostril, according to Nadarof (op. cit., p. 78) and Maack (op. cit., p. 179) in the one or the other nostril.

From what has been said, it is readily seen that the custom of wearing nose rings, strangely enough, has spread among the peoples of the lower Amur region only as far as the Manchu-Chinese hair style has been accepted by them; where this has not been taken up by them, there are likewise no nose rings in either the nostrils or the nasal septum. I would not know,

/417 cont./

however, how to explain such a coincidence of the Chinese hair style and the unusual use of nose rings among the natives of the lower Amur region, for, as is well known, the Chinese do not wear such an ornament. Moreover, this coincidence is found only in the lower, not in the upper Amur region. To be sure, the Manchu-Chinese hair style has also spread into the latter, and seven far more than in the former, and yet none of the tribes there wears nose rings, neither the Birar, the Mangeir, nor the Orochon. Thus the custom is limited, on the whole, to only a few of the many Tungus of the lower Amur region and may perhaps be regarded as only a remnant from an earlier time when it was presumably more widespread.

A more common customary ornament among all the peoples of the Amur region, in particular for the female sex, are silver or copper finger rings, several of which are sometimes stuck on one finger, and bangles (Gilyak tyiij) made out of the same material or out of bone, /418/ which are worn above the wrist. On Plate XXIX, Figs. 8 and 9, a few such bangles of Gilyak workmanship made out of copper with inlaid silver disks and small engravings are shown.

Another piece likewise generally widespread in the Amur region is more interesting -- it is the large and strong ring worn only by men on the thumb of the right hand. Among the Gilyak, who call it aam, it is of the shape and size shown on Plate XX, Fig. 5 /in the original, /418/ which the size of the figure has been reduced for the translation/, made of copper or lead, decorated with various figures that are engraved or consist of inlaid brass and silver and provided in the inner circumference with a silver hoop generally soldered and overlapping on the outside. This ring, by the way, is not merely adornment, but has a definite practical purpose. La Pérouse, who saw it among the Orochi (or Olcha) on de Castries Bay, was of the opinion that it serves there as a prop in skinning and cutting up fish (1). This work, however, is not done by the men, but by the women,

1. La Pérouse, Voyage aut. du monde, ed. by Milet-Mureau, Paris, year V (1797), Vol. III, p. 64.

[See Category 116, p. 1025 - Analyst]

/418 cont./

however, is not done by the men, but by the women. As I myself have seen among the Gilyak and as is reported from other Amur peoples (Olcha, Manegir, Orochon) (2), the thumb ring

[113]

2. Maak", Puteshi. na Amur", pp. 75, 207.
Gerstfel'ld", "O prikrashn. zhit. Amura" (Vestn. Imp. Russk. Geogr. Obbich., Part 20, 1857, Sec. on Res. and Mat., p. 296).

is used to draw the bow, to grasp the string better, and, in case of a strong pull on it, to protect the skin of the finger from injury as a result of severe abrasion (3). Aside from this practical

[114]

3. According to Anutschin /Anuchin/ (Luk" i striely. Arkheologo-etnograf. ocherk" /Bow and Arrow, an Archeological-ethnographic Essay/, Moscow, 1887, p. 38), this is the bow pull especially characteristic for the peoples of the Mongolian race, and, according to Morse, in his work, "Ancient and modern Methods of Arrow-Release" (Bullet. of the Essex Instit.), the so-called "Mongolian" method of drawing the bow.

purpose, however, the thumb ring is also a special ornament, since it is regarded as a sign of manliness and is associated with skill with the bow and arrow. No halfway adult Gilyak therefore lacks the aam, and it is the same among the other peoples. Indeed, even where the bow has in large part already been pushed out by firearms, Chinese matchlock guns, or Russian-Yakut rifles, as among the Manegir and Orochon, the thumb ring is still generally worn (4). Here, then, apart from its use in an occasional

[115]

4. Gerstfeldt, loc. cit., and Maack, loc. cit.

flat-fight, it is gradually becoming a mere ornament. And this

/424 cont./

custom of tattooing has always been foreign. As a matter of fact, if the customs of the Tungusic tribes who migrated to the lower Amur in the vicinity of the Gilyak, especially the Olcha, have become assimilated with the Gilyak in the course of time through constant intercourse, mixed marriages, etc. so much as extent that externally for the most part they can no longer be distinguished from them, it is not otherwise conceivable but that they must have also lost their original Tungusic custom of tattooing there. In part directly, in part through the mediation of the Olcha, the influence of the Gilyak extent penetrated even the Goldi and spread farther and farther upstream, so that finally a few scant traces of tattooing still survived only in the most remote part of their habitation area. Whether the branch of the Olcha that migrated into Sakhalin, the Orok, had already lost the custom of tattooing on the mainland or not until they were on the island cannot be ascertained, but in any case the absence of it among them indicates a greater influence on them by the Gilyak than by their other neighbors, the Manegir, among, as we pointed out above -with reference to their hair style and clothing, and as we shall have the opportunity to note in a number of other connections.

On the basis of all this one is justified in concluding among the peoples of the Amur region, on the basis of their total external aspect, the Gilyak present the most individual and significant appearance, which could not fail to have a decisive influence upon the Tungusic tribes living around them.

/425/

Section 6

Food. Animal and Vegetable Foodstuffs. Household and Table Utensils. Luxuries: Liquor, Tobacco

Since all the peoples of the Amur region are fishermen or hunters and only a small part of them living in the closest proximity to the Manchu-Chinese and Daur practice any field and garden cultivation, their food is predominantly animal, consisting chiefly of fish or meat. Vegetables play only a subordinate role

/437 cont./

Asiatic peoples, the Gilyak and Ainu, and must be regarded as a *Ural-Altaic stem peculiar to them since ancient times. Merely the circumstance that it is absent among all the peoples living in the Amur region farther upstream, towards the Ussuri and Sungari, makes it certain that any possible influence from the Chinese, who, as well known, eat everything possible, including dogs, cats, rats, and the like (1), is not remotely conceivable. On the other hand

1. And, to be sure, in China dog meat is eaten not merely by lower people out of lack of any other food, but generally, and even at the best and most elegant tables. Among the many older and more recent reports on this, only the following are to be referred to here: Neuhof, Die Gesandtsch. der Ost-Ind. Gesellsch. in den verein. Niederland. an den Tart. Chan /The Embassy of the East India Company in the Territories of the Netherlands to the Khan of Tartary/, Amsterdam, 1666, p. 273. Ysbrant Ides, Dreijaar. Reize naar China /Three-Year Voyage to China/, Amsterdam, 1704, p. 103. Du Halde, Descr. de l'Emp. de la Chine /Description of the Chinese Empire/, Paris, 1735, Vol. II, p. 138. /441 cont./

252 prepared, but with the difference that, instead of the fish roe,
[197] finely chopped seal-blubber was mixed in with the leaves. The
[197] Gilyaks also use various lichens in quite similar ways, especially the
[192] reindeer moss, Cetraria islandica L. (Gilyak chiwyth) (3), and

3. Among the Olcha: chiry.

a tree moss, Usnea (Gilyak tschwikh), and, to be sure, distinguished a lama (whitey) and piaia (black tschwikh), for food by making soups out of them with the addition of fish roe or seal oil.

Finally, the sea, like the forest, also yields some vegetable food for the Gilyak, especially an edible alga, which they call tschollach (4), and the Laminaria esculenta (Gilyak punch).

4. Giehn, Op. cit., p. 214.

I have seen the latter consumed in the village of Tyk in much the same fashion as the above-mentioned tree moss and other plants, in that, mixed with chopped jukola it was cooked in water, whereupon, when fully cooked, it made a sticky, viscous mass of a white color in the soup. The Gilyak collect and dry the Laminaria in
[192] small stacks for the winter, which they may have learned from
[251] the Ainu, /442/ who, according to Schmidt (1), for their part

1. Op. cit., p. 98.

learned it from the Japanese, who keep the Ainu buy at it and annually send whole shiploads of dried and artificially rolled up Laminaria from Sakhalin to Hakodate and Matsmai.

While the natural vegetable products discussed above are
[262] of great importance for the Gilyak inasmuch as they are avail-
[437] able to everyone, with a little trouble and care, and, though not very nutritious in themselves, contribute essentially to the greater tastiness and variety of their diet, and in times of scarcity when no fish and no animals are caught and the supplies of animal food run low, they may even prevent starvation,

/442 cont./

[262] matters are quite different with respect to those vegetable foods
[437] which they do not produce and which the Gilyak can only
[197] obtain only by trade with the adjacent civilized peoples, the
Chinese, Japanese, and Russians. These foods, a few cereals
[159] and legumes, are to be sure, much more nutritious but on the whole
have less significance for them, and indeed to a certain extent
may even be called luxury items because they are directly available only to those who are better off and not always to them, but rather are eaten only upon certain occasions. In daily life
[262] they are used only rarely or hardly at all by the Gilyak. During
[437] the time of my stay in the Amur region, great quantities of millet
[159] turned, and since these festivals are celebrated rather frequently
[197] and, in keeping with the communistic spirit of the Gilyak, are
attended by numerous participants, the food of this kind, stored
up by an individual who becomes the host for the occasion, are always shared with a greater or lesser number of other and less prosperous Gilyak. On such occasions I have learned in detail the various foods of this kind that are customary among the Gilyak and the form in which they are eaten. As was said, there are not many of them. First come the cereals obtained from the Chinese. The most common and the most popular among the Gilyak is
[159] Chinese, or, as they always say, Manchurian millet, Setaria
italica (Gilyak hadi), and next Chinese barley (Gilyak mudi).
Far rarer and less popular is Sorghum vulgare L. (Gilyak nimu) (2).

[198] 2. The first two have the same designation among the Olcha; the latter is called numa by them and by the Goldi.

Japanese rice, on the other hand, is highly esteemed by the Gilyak, though it is only very rarely found among them. Judin, a very distinguished Gilyak, the host of a bear festival which I attended in the winter of 1856 in the village of Tebech, still had the remnants of a supply that he had acquired years ago from the Japanese (Sisam) on Sakhalin, but there was not enough to set [197] before the numerous guests. As soon as the Russians settled in the

/442 cont./ lower Amur region, in Petrovskoye Sinnoye, Nikolayevsk, and Mariinsk, the Gilyak began to obtain small quantities of various cereals from them. Buckwheat grain in particular found the greatest approval among them, and I saw it served in great quantities during the above-mentioned bear festival of 1856. They also greatly liked the inexpensive Russian rye flour (Gilyak [illegible]), since they /443/ could obtain from the Chinese only small quantities of wheat flour (Gilyak ihaly) at a high price. All the above-mentioned cereals are cooked by the Gilyak to a thick dry mush and eaten
[262] with a spoon or a small stick into a depression made in the groats. Flour
[437] has a variety of uses among them. The principal one is in the
[159] preparation of a kind of cake or small kind of bread. For this purpose, it has fish oil poured over it and is kneaded into a dough -- a work which the women accomplish by taking a mouthful of water and, while kneading the dough, let as much of it as is needed run into it. From this dough, flat, longish, or round small loaves are formed, cooked in water in the large kettle at the hearth, and, finally, broken into pieces and sprinkled with fish oil. They obtain another dish which is very pleasing to the Gilyak palate by mixing
[159] the flour with fish oil and partly crushed blueberries or cranberries
(Empetrum nigrum L., Vaccinium vitis idaea, Vaccinium uliginosum, Ledum palustre, Betula fruticosa, Betula nana, and Betula exilis) (Gilyak [illegible]). Flour and fish oil are also used in the preparation and consumption of the dishes. First, only the ordinary objects of this kind and in daily use will be mentioned, while the special utensils used in connection with the bear festivals will be discussed later at the proper place. As was already stated above, [197] the Gilyak place the flour into a bucket made of birch bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other bowl-[262] fulls needed is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke (Pl. XXXIII, Fig. 1 and 2) Gilyak ohanda and kormulk, respectively). /446/ Similarly [437] a wooden ladle has been given above to the large iron kettle (Gilyak [illegible]). [197] [illegible] in the winter house is embedded in each of

/445 cont./
[243] few Gilyak are familiar with it (4). On the other hand, they are

4. Mamia Rinčô (Siebold, Nippon, VII, p. 190) says that the Gilyak (Smerenkur) on Sakhalin found the sugar that they use to be gave them to try very tasty, but did not ask for more of it.

[123] On the other hand, they are
[243] very afraid of Russian sugar; at the time of my stay there, next to tobacco, it was the main object of their frequent and very impertinent requests. Sugar, which, as a rule, they pushed the children forward and, to arouse sympathy, pretended that they had an eye disease, maintaining that it could be cured only with sugar.
[437] Not infrequently they also begged sugar in Nikolayevsk in order to
[159] add it to their dishes, especially to the aforementioned flour-cakes
[243] and to those prepared with cranberries or bilberries and the like.
They even declared that they would not hesitate to do this to the dishes prepared for the bear festival, if it were available in sufficient quantity, which shows their entirely different attitude toward sugar and salt.

To conclude our statements on the food of the Gilyak, there follows here a brief discussion of their most important implements and utensils used for holding food, particularly, as well as for the preparation and consumption of the dishes. First, only the ordinary objects of this kind and in daily use will be mentioned, while the special utensils used in connection with the bear festivals will be discussed later at the proper place. As was already stated above, [197] the Gilyak place the flour into a bucket made of birch bark and filled with water, on which hangs a couple of bowls for dipping and drinking. The water for this and for the other bowl-[262] fulls needed is brought from the river by the women in pails, likewise made of birch bark, hung on a shoulder yoke (Pl. XXXIII, Fig. 1 and 2) Gilyak ohanda and kormulk, respectively). /446/ Similarly [437] a wooden ladle has been given above to the large iron kettle (Gilyak [illegible]). [197] [illegible] in the winter house is embedded in each of

[See category 116, p. 1013—Ainu 157]

/446 cont./
[416] the earth to the right and left of the entrance, but in the
[412] earth yurt and in the summer yurt it placed on the platform of
the hearth on top of three stones. It always stands on the
[197] ground, and, in accordance with the fish broth for the dogs and
some of the dishes for the people. In addition, however, the
Gilyak also have smaller kettles which they use, those illustrated
[416] in these circumstances, in the earth yurt or summer yurt in the hunting
tent or, when camping, in the open, and which are in part like-
wise of Chinese, in part of Japanese origin, like those illustrated
on Plate XXXIII, Figs. 4 and 5, mauch-wuni (i.e., small kettle)
[416] and kogbi-wuni (i.e., Ainu kettle). To stir and ladle the broth
[412] made in the large kettle large wooden spoons (Pl. XXXIV, Figs.
5 and 6) Gilyak mytch and mitsyr are used, and for smaller
kettles, smaller ladles of iron (Pl. XXXII, Fig. 5, Gilyak kombi).
[197] To prepare and serve meals-both meat and fish-in order to
[416] cut and to serve them to the like, the Gilyak, according to necessity,
use larger or smaller wooden troughs (Gilyak odong and oongi), which are quite similar to those out of which the Ainu feed their dogs
[416] and are sometimes used for this. A specimen of this kind
[159] from the village of Tebach, decorated at the ends with carved
[412] arabesques, is illustrated on Plate XXXIV, Fig. 1. In other
[416] respects, for dishes, such as the above-mentioned flour-cakes,
[159] beans, various berries, etc., served in low, roughly square bowls
made of birch bark, wooden bowls and rims were decorated with
various arabesques; they are the so-called tortanga in Gilyak (Pl.
[323] XXXII, Fig. 8). Like these vessels, which, in accordance with
their use, one might designate as the bowls of the Gilyak service,
[416] so also do the vessels intended for the use of individuals as cups
and plates differ in accordance with the nature of the dish to be
[412] served. If it is only a matter of a few strips of jukola, it is sufficient, as was already mentioned (1), to have a small wooden tray

1. See p. 647 above.

(chachinchuch), on which they are cut up in order to be dipped in fish oil and consumed. Liquid food, like the above-mentioned

/447 cont./
[412] (1-2) and already mentioned, several knives of special shape.
[416] Thus, to hollow out wood, a knife with a fluted, bent blade of
various sizes, the ongi-wuni of the Gilyak (Pl. XXXII, Fig. 4), [412] and is used for the same purpose, a knife with a very wide and very narrow and pointed blade (ibid., Fig. 3), etc. Finally, among [416] the table utensils of the Gilyak the chopsticks (Gilyak tschawig) (1)

1. Presumably borrowed from the Manchurian tachachu. Among the Olcha: alaho.

[197] are known among them, which they have
copied from the Chinese but mentioned, a specimen of
which, from the village of Wanj, is shown on Plate XXXIII,
[416] Fig. 6. Finally, among the Gilyak there is also the imitative
instinct, which readily makes itself felt in particular with regard
to anything Chinese, than to a real need, because they are practically never found in use among them.

As one sees from the above, all the household and table
[416] equipment made by the Gilyak themselves is exclusively of wood
[412] or the birch bark. Earthenware is not found among them at all; they
[416] neither make any themselves nor is there used among them, in
spite of their contacts with the Chinese and Japanese, the porcelain
[416] made by these peoples, at most a single plate or bowl, usually
one or several of the small porcelain bowls used by the Chinese
for drinking beverages, is kept here and there by a well-to-do Gilyak
[197] as a rarity or as an article of value or as an object. The fact that pottery, even
[323] in its beginnings, is completely foreign to the Gilyak, despite
[197] their being exceedingly skilled in other things, for example, in
woodworking and, as we shall see later, at the smith's trade,
certainly merits full consideration, and I am therefore permitting
myself a few remarks about it. In order first to put the fact itself
[197] still further beyond doubt, I must expressly emphasize that despite
my long and various stays among them I never saw a piece of
pottery of any kind in their household and I never heard of any
[197] among them. Hence, some entirely different statements in Mamia
Rinôô's report on his travels on Sakhalin (Krafto) and in the Amur
region were all the more striking to me. He found that the earthen-
[197] ware and porcelain of the Gilyak (Smerenkur) on Sakhalin was

/463 cont./
[197] 5. (cont.)
Russian colonization of the island, therefore
only quite recently -- was by no means the
case at the time of my travels on it, or
Schmidt's and Giehn's.

[197] They did not know how coffee at all and considered it, when they saw
[197] me drink some, "very strong tea." On the other hand, liquor
[197] was, of course, generally known in the Amur region, and, to be
[197] sure, to the Gilyak as well as to the other peoples of the mainland,
under the name (of Malayan-Chinese origin) arakí or arki, also
customary among the Manchu and among all the Tungusic,
[197] Mongolian, and Turko-Tartaric peoples of Siberia (8). Undoubtedly

6. See the glossaries for the above-named peoples in Klaproth's Asia polyglotta. There are, for course, many modifications of this general designation applied to grain and to milk spirits, such as araka, araka, aiaki, etc.

[197] [illegible] undoubtedly
[197] acquaintance with liquor among the Amur peoples dates from the
[197] time of their earliest contact with the Chinese and has spread
[197] rapidly since then. Through the trading trips of the Goldi, Olcha,
and especially the Amur-Gilyak to Sakhalin, Chinese liquor must
[197] have soon been introduced into the Gilyak region. There, to be
sure, had an opportunity to become acquainted with liquor from
another direction, from the Japanese, from whom the Ainu obtained
[197] their liquor, the so-called sake, and learned from them to make
[197] a weak saki themselves (7); but the stronger and presumably cheaper

[197] 7. Mitsui', Ocherk" ogn.-Sakhalina, p. 102. Dobrotovskiĭ, Ainsko-russk. slovar', Preface, p. 38.

Chinese liquor already adopted by them left no space for the spread of the Japanese beverage among them. Mamia Rinôô's report of

/468 cont./ No. 5. Now the Orochi, who carry on barter with his customers and offers them an occasional sip from his little bowl; this is how he is imitated by all well-to-do Goldi, Samagir, Cikiha, or Gilyak who are able to provide themselves with the precious beverage and the utensils required for drinking it, and this is precisely how Mamia Kindi describes the manner in which the Hinerchor on /469/ Sakhalin drink their "arka" brought from the Amur. I also saw the libation performed by a Cikiha, which consists of first moistening the tips of the thumb and forefinger with the liquor and a few drops are sprinkled to the right and to the left, up and down, and toward one's own chest, more or less carefully executed, just as by the Manchu and Chinese on the Amur, also by the Gilyak, Cikiha, Goldi, and even Orochi in Hadda Bar. Thus, the enjoyment of liquor among these people is done in a definite way sanctioned by usage. Even peculiar foreign utensils required for it, and with the observance of certain formalities prompted by superstition. Undoubtedly this circumstance, besides the mentioned above, the great movement of the liquor from a great distance and its high price in the retail business of the Chinese merchants on the Amur, must have had a beneficial effect on the consumption of liquor among the Amur people in impeding and limiting ways and tra'ted them to moderation in the enjoyment of it. Thus, it is not the Goldi to such moderation among them, and especially among the Gilyak; when I knew best, during the time of my stay in the Amur region. Despite the fact that with the settlement of the Russian along the lower Amur, in Nikolayevsk and Mariinsk, a new and very close source for this prized and popular drink opened up for them, there was nevertheless no little drunkenness among them during the first few years. Afterwards that I never came across a single case of it, despite my many contacts with them, not even during the summer months, when I was in attendance. This last seems especially striking to me, but is explained by the fact that, according to their own statements, the drinking of spirits during the heat festival is regarded by them as a great foolhardiness — a conception which may own its origin to the feeling for the

1. (cont.).

the Manchu (damhago) and Nongolo (namachi), is always the same, with very minor variations, among all the Amur peoples, too; thus, among the Goldi and the Gilyak (amgach, namachi, and namachu), among the Gilyak (amgach), among the Aino (amhaku), etc.

Later, after the Manchuian tobacco had already spread among all the Amur peoples and had become an indispensable article for them, Russian tobacco entered the Amur region from the west and north, both as a result of the constant intercourse maintained by the Russian, Chinese, and traders with the Orochon, Mangir, and other tribes of the upper Amur region, and through the Tatsu merchants who in part followed these tribes and in part maintained trading points at which they established relations with them as well as with other peoples of the lower Amur region (2). Nevertheless, up

2. See pp. 160-166 above.

until the Russian occupation of the Amur region in the fifties, Manchurian tobacco was the predominant tobacco among all the peoples there, and it was only after this event that the Russian (Circassian) tobacco began to replace it very rapidly, first and especially of course, among those peoples who also made their own pipe heads from the wood of the Hydrangea paniculata Sieb. et Zucc., which are used by the women in particular (1).

1. Fr. Schmidt, to whom I owe this information, adds that he saw these pipe heads in use even in Kamamai and Mamiur, even though the Hydrangea paniculata occurs only in Amur by the lower course of Goldi living next to the Manchu-Chinese and then, through them, also the sedentary Cikiha and Gilyak farther downstream, after they had become acquainted with the Manchu-Chinese

/468 cont./

wooden piece. The lower piece, bow-shaped, runs into a small bowl-shaped bowl, which is turned upward. The upper piece, or /469/ cylinder, is of metal (brass) only for a chamber, serving as a well-to-do Gilyak strives to imitate the Chinese and to procure for his pipe a fine mouthpiece made of jadeite or perhaps even of chalcedony, carnelian, or nephrite, such as are made in the Sungari region (3), especially in Tsitsihar and Ninguta.

3. Jarabash', "Sungarsk. elop." (Vostc. Sibir., 1874, No. 2, p. 35).

4. The lower metallic piece, with the bowl, is called by the Gilyak in the mouth-piece ilmf, the wooden middle piece connecting them tawamsik.

The greatest correspondence prevailing among all the peoples of the Amur region in the form of the pipe, since the pan making it up always come from the Sungari region, where they are factory-made; only the Gilyak on both sides have differently shaped pipes, because they get them from the Russians, from the Japanese.

Low pots of the same shape among them are made of a tray made hard, quasi-off at the top, into which the tip of the little finger scarcely fitted, and then also one with a larger, bowl-shaped head. In addition, they also made for themselves their own pipe heads from the wood of the Hydrangea paniculata Sieb. et Zucc., which are used by the women in particular (1).

the boat. For this purpose a long and strong switch is stuck into the combination of the stern-board and the bottom board near the rear over the prow, and likewise provided with wickerwork made out of semicircular and horizontal switches, over which reed or birch-bark mats are spread. Furthermore, unlike the Goldi-Gilyak boat, the Manchu-Chinese boat has fixed rowing benches resting on the edges of the lower side-boards and a like mast-bench, through which the square lower end of the mast is inserted into the mast beaters put on the bottom board underneath it and, superfluously, tied with a cord to the mast rear cross-piece connecting the lower side-boards to each other. Finally, on the Manchu-Chinese boat the sternpost, or rudder, is different, in that they are not stuck on prongs, and, accordingly, are not hinged to the boat, but are set into corresponding mortises in a board attached to the upper edge. They have only relatively narrow blades and on the upper end a transverse handle which is seized with both hands for rowing, always done at only one side. The rudder, provided with a blade that bulges toward the bottom, likewise has such a transverse handle. It is being used, when traveling under ordinary circumstances, seems to rest almost immovably, but a slight turn to the right or to the left is sufficient to give the boat the desired direction.

This description will suffice to show that the boat of the dwellers along the lower Amur River and that of the Manchu and Chinese along the Sungari completely correspond in their basic features and their construction, and that the former is, so to speak, only the lightly altered and pared down version, I might say, from the latter. It can hardly be assumed that the Chinese, clinging to their ancient customs, shaped their boat after a pattern borrowed from the Amur peoples standing far below them and provided improvement and additions only in accordance with their needs. And if /474/ there remains only the conclusion, which in fact is much more probable, that, only in Amur by the lower course of the Sungari, the Goldi living next to the Manchu-Chinese and then, through them, also the sedentary Cikiha and Gilyak farther downstream, after they had become acquainted with the Manchu-Chinese

boat on the Sungari as well as on the Amur, began to build their vessels on the same principle and in the same form as they borrowed from that boat only the basic and fundamental parts, satisfying their needs and gave them the small dimensions appropriate to their needs and powers. Indeed, this situation is all the more probable inasmuch as the Sungari Chinese, always intent on exploiting the labor power of the native for their own advantage, had probably long since arrived at the idea of not building their boats themselves, but of having them built by the latter according to a given pattern and in return for small pay, as is done to this day. In particular the lower Goldi and the Cikiha living next to the Manchu-Chinese, those who, whose regions the wood required, tall cedars, is found in abundance, provide the most and the most highly skilled builders of the Sungari Chinese boats and are in the habit of having their people and the other peoples of the lower Amur region. Maximovicz tells us that a Manchu-Chinese boat made to order by the lower Goldi, with an over-all length of eight fathoms and at its greatest width an opening of one and a half fathoms, for which the Chinese merchant had paid 1,000 taels, cost fifteen tall and a foot wide, three fathoms of cotton cloth, and four sacks of millet grain. This is the price, as he adds, which, however, is there as important difference between the Goldi-Gilyak boat and the Manchu-Chinese one, that, though in part it is due to the difference in size. It is in the mode of arranging the oars, since the former has bored oars much so prong, while the latter has ordinary oars resting in appropriate indentations on the sides. I am not aware that the first mode occur among the Chinese or any of the neighboring Tungusian peoples; on the other hand, it occurs generally among the Aino of Sakhalin and Jesso (1) and

1. Siebold, Nippon, VII, Plate XXIII.

therefore may perhaps be an Aino-Gilyak or general Paleo-Asiatic invention or peculiarity, which was imparted by the Gilyak to their Tungusic neighbors along the Amur, the Cikiha and Goldi, and, on account of its usefulness, was also

2: Schrenck—800 E-S (1854-1856) 1881-1895 RX2 Gilyak RX2
Goldi RX3

/474 cont./

transferred to the boat copied from the Manchu-Chinese. The amount of local invention by the lower Amur peoples on their boat is not nearly as large as it might seem at first glance — rather, we see that, with respect to the nature of the river vessels, just as in the construction of the winter houses and in so many other things, Chinese influence has spread from the Sungari over the whole lower Amur region.

Here could it have happened, however, that the so practical and useful boat copied from the Manchu-Chinese pattern and distributed among the lower Amur peoples by the latter (1) remained wholly foreign to the upper Amur region which was under its dominance and inhabited by peoples of related tribes? We can answer this question undoubtedly in the sense of the political policy, often mentioned above, which the Chinese government observed in this region after the departure of the Russians from the Amur in the seventeenth century and which consisted of leaving its upper section as depopulated as possible and of using it by rare, uninhabited stretches from the Sungari region which was especially important to them (1). For

1. See above, pp. 320, 369.

I am inclined to believe that the Gilyak, despite the fact that in most things concerning fishing they may be regarded as the most skillful people, have not taken over the Chinese method of fishing from the latter. Still greater and more characteristic is the conjecture with the Gilyak in the preference of the dwelling in particular the Goldi for catching mugwon and bauxen with the above-mentioned and illustrated (Pl. XLI fig.1017/1, Fig. 8) too, the fact that the Gilyak term for this weapon (nchi) is very similar to that of the Cikiha Goldi (dhogbo) seems to me to argue in favor of a borrowing of it on the part of the Gilyak from these Tungusic neighbors, whereas the much simpler one-pronged harpoon, the tuggu, was probably their originality. In the Sungari region, the Cikiha and Goldi for this method of fishing which is closest to hunting, indeed, in fact is more fish-hunting than fishing, they have hunter-nature closeby to be seen, Moreover, it is intimately bound up with the holiness, ease, and adornment with which they glide over the water in small

2: Schrenck—837 E-S (1854-1856) 1881-1895 RX3 Gilyak RX2
Goldi RX3
OK49

/486 cont./

hunting inherent in them, as in all Tungusic tribes, makes it certain that they will never, or very rarely, use it for the common among the Gilyak. For example, the /487/ above-mentioned method of fishing with a hook attached to a wooden sleep, which is little used among the Gilyak, is very popular among the Cikiha and even more among the Goldi, both on the Amur and in particular on the Ussuri, and, judging by the mining correspondence in the designations for the individual pieces of this fishing apparatus among the former and among the latter (1).

1. For example, the anchor part of this apparatus is called nchikch by the Gilyak, nechakhe by the Cikiha and Goldi; the rope connecting the anchor with the means of it is called nyk by the former, dyka by the latter; the line equipped with the hook and bait is called kiha by the former, kuinai and kuinake by the latter.

/527 cont./

5. (cont.)

Gmelin (Reisen in 1759 and 1774, translated from the English by Hübner, Vienna, 1803, Vol. I, p. 302; Vol. II, p. 58), these are exact copies of the old Portuguese matchlock guns imported to Mexico and therefore are by no means very old.

6. The Gilyak also have two words meaning "ammunition" in general — a meaning which we shall see later, when we come to speak in the following, but also "medicine" and in the general sense of "medicine" — a native-instinctive identification of evasive and deadly agents, medicine and poison.

when I was among the Gilyak, firearms were not used at all, though they were acquainted with them, and, to be sure, from two directions: on the first place by way of those northern and western neighbors, the Russian Tungus, Dogdo, and Samagir, among whom, thanks to Yakut trade, one of the well-known, small-bodied, Russian matchlock guns, called in Yakut ilmek (4) is

4. Accordingly, among the Samagir on the Gorin, the powder also had a name borrowed from the Russian (porok?).

occasionally found, and, on the other hand, by way of their southern neighbors, the Cikiha and Goldi, to whom, though likewise only seldom, one of those often-described, long and clumsy, known matchlock guns of the Chinese

/527 cont./

same time, however, they did not show any particular timidity or fear on the part of the Gilyak, whereas a pistol shot made a great, almost superstitious fear. For example, when I often had threatens them -ith the pistol for various acts of insubordination, they bestowed the opprobrium of a liar on me, and I would bring misery to the entire house, even to the women and children in it. Perhaps it may be assumed that this fear is not great unfamiliarity with the use of this weapon, upon the awareness that it could be brought into action at short range suddenly and unpercived, or, as I am almost inclined to believe, on some other superstitious belief or association of ideas (1)?

1. At this point I cannot refrain from mentioning another and similar superstitious fear on the part of the Gilyak, whereas a pistol shot is felt seemed totally mysterious to me, and it was entirely out of question that I have obtained the key for an explanation of it. The case is also noteworthy because it is evidence of how superstitious and fantastic impressions gained through unusual experiences, especially when they are experienced by a primitive people and how easily they spread, going from mouth to mouth, throughout the entire tribe. I have noted one of those walking sticks from which a long fishing rod can be turned out, and I wanted to show it on one occasion to a Gilyak who was with me at the Shilakpaye post, with the intention of delighting him, especially since the apparatus was unknown and he fishing, I had actually pulled out the tip, however, when the man turned away in horror and implored me not to do the thing any and not to cause any misfortune. Exactly

For this type of work among the Gilyak, in addition to iron (Gilyak wimm), other metals, as far as we ascertained, are also used, especially copper (Gilyak ngyalk, i.e., red), lead (Gilyak tonp), and silver (Gilyak ketsi) (2). The more of the

2. The quicksilver which they saw in my possession was unknown to them and caused great surprise among them, but they immediately gave it the characteristic designation of "onta-nchash" that is, silver-water.

latter that is inlaid in a spear or knife, the higher the value of the piece. Since it is used only for this purpose or to make omamental [illegible] beasts, such as dragons, snakes, and the like, they prefer the Chinese silver above all others as the softest, because pure, and therefore the easiest to fix their purposes (3).

3. A few centuries ago, silver and gold coins in trade, which was still almost unknown to the Gilyak in my time, will be said at the proper place in the next chapter.

The high degree of skill that is expressed in the above-mentioned Gilyak spears, knives, and the like indicates that the forging of iron and other metals is not practiced by the Gilyak for a long time, and the above-mentioned report by Strahlenberg (Stran in agreement with this. Nevertheless, however, they have borrowed this art from one of the two civilized peoples of East Asia neighboring them. The only question is whether from the Chinese or from the Japanese. The circumstance that their relations

/168 cont./
Gilyak (II).

with the latter probably extend back into earlier times than those with the former, in that, as I have tried to show on other grounds (1), before they came to the mouth region of the Amur,

4. See p. 214 above /unannotated/.

they already had a homeland on Sakhalin, where they were directly in contact with the Ainu and thus also indirectly with the Japanese — this circumstance points to the latter as the source of the Gilyak's knowledge of iron and other metals, and as their teachers, even though only indirectly, in the smith's art. And a series of facts corroborate me in this view.

If the one and the working of iron had come to the Gilyak from the Chinese, that is to say, down the Sungari and Amur through the intermediation of the Manchu and Goldi, one would expect in this opposite direction, going upstream from the Gilyak, an increase in skill in the forging of iron. Actually, however, in the direction mentioned there is not only no increase, but, on the contrary, a decrease in the firmness and neatness of the metalwork. For the Orchi, to be sure, may be superior to the Goldi in wooden implements, and especially armours, than their teachers, the Gilyak, but the Goldi are far superior to the Orchi in the art of

5. This is Maack's opinion also /see his Ussuri, p. 174/ and 207).

though they are extraordinarily skilled at many other things, such as bone-building, sewing, embroidery, and plaiting. In this particular, they do something different from the Gilyak in forging in that they use only one bellows, and also accentuate that are not insignificantly (Gilyk) different, for instance, an anvil shaped quite differently, and the like (1). Finally, it is not to

1. See Maack, op. cit., p. 207 and Plate II, Figs. 11, 12, 13, and 24.

/173 cont./
that it is known under the name of "nerm," in which can be recognized without difficulty the above-mentioned Gilyak designation "nemch" shortened in Japanese fashion. He says of it that, although little used, it was greatly esteemed and in ear was the chief decoration of the one chosen as the leader. In the case of the latter statement the imagination of the traveler may have put in a word, but the latter can be perfectly correct. In my time these pieces of armor were not used at all, but, though most of them were in a damaged condition and, indeed, were often to be found only in fragmentary parts, they were regarded as such valuable objects that they gave their owners an aura of extraordinary wealth and respect, and a few of them sufficed for the purchase of a wife. Today, however, they are only rare antiques of fabulously high value. They owe this to their foreign origin, for, according to unanimous statement by the Gilyak, they came from the Manchu, and, as Manda Ilimd also states, are highly prized by the latter nowadays.

It is known from the oldest European reports on the subject (2)

2. Cf. Neubof. Die Gesandtschaft der Ost-Indisch. Gesellsch. in den vereinigt Niederlanden an den Kaiser von China. Übersetzung aus dem Holländ. Leipzig (The Embassy of the East India Company of the Netherlands to the Tartarian Khan and Son Also to the Chinese Emperor), Amsterdam, 1666, p. 294. Also witness, based on Ostiz Tartaryie, second edition, Amsterdam, 1705, pp. 3, 6, 13.

that even the ancient Manchu (Kitatchi) had pieces of armor and helmets, which, like the other Tungus, consisted of iron lamellas placed over one another like scales and connected with one another by pins or fastened to a leather foundation. After the conquest of China by the Manchu such armor and helmets were also worn by the Chinese soldiers, officers, and by the

/180 cont./
Gilyak.

characteristic of the Gilyak is that they adopted the hunting conditions of the lower end of the upper Amur regions is presented by the subtle hunting of the roe ibex and the squirrel pursuit of the otter.

Contributing very essentially to the change from the former to the latter in the upper Amur region, however, in addition to the causes given above, are the handy firearms, the small-bore Chinese rifles (Gilyak ngyalk) which came from Siberia and whose importation and adoption are growing more and more in the hinterland of time. Whereas in the lower Amur region at the time of my stay in it there were no guns at all, with a few minor exceptions (3), these rifles were already in general use among the

1. See p. 868 above.

Orochon, thanks to their immediate proximity to and long association with the Manchu, and among the Nanaigir, who, they were already gradually pushing out the long and unwieldy Chinese matchlock gun, which were not very serviceable for hunting. Since the occupation and colonization of the entire Amur region by the Russians, the spread of good or at least serviceable firearms has made rapid advances in the lower part, which, in combination with the growing number of hunters must lead to a heavy decline in its wealth of sables and other animals in the future. How disastrous the consequences of this will be for the indigenous population of the region living on this wealth is easily grasped and can be judged in greater detail on the basis of the following discussion.

/184 cont./
relative position which the former occupy in the trade with them. Among the Goldi, who are the greatest or lesser Chinese and Manchu influence, and who thus stand in the middle between the Orchi and the Gilyak in the trade relations with them, a tenth part and perhaps even a hundredth part of the ja or the silver ounce cannot give consideration, which makes it necessary for them to giving a price in name also for pentiment unit of value ta or dichin. For the more distant Orcha and Gilyak, however, who, as we shall see, obtain what they need in Chinese goods in larger quantities in State-unit on the Sungari, the tenth and the hundredth part of the ja are of very practical significance -- for they are concerned only with the whole unit of value and its multiples, and therefore they use the tenth part only when it is expressly in making appraisals, but rather it suffices to give only the tenth part. Another concerned, if it should trade any investigations into this question, instead of from the Gilyak to the Goldi, in the opposite direction, starting from the Gilyak to the Orchi, the unit of value upon which their evaluations are based would have been apparent to us yesterday and today, and, in actuality, as it were. Incidentally, the unit of value borrowed from the Chinese, since it is not expressed in the silver ounce ja, but, in fact, it always only in an imaginary quantity for the Amur peoples, and they are able to learn only an approximate idea of it in terms of the number or quantity of Chinese coins of parity and goods or other articles. As it well known, in China only the thousandth part of a silver ounce is used as a monetary unit, and the round brass coins with a square hole in the center (Gilyak tedulu), which are usually strung one and a thousand on a string. On account of their insignificant value, however, the Gilyak pay no attention to them, and, like the variously shaped brass lamellas, they are used only as decorations for women's skirts or occasionally also for the chest and back. Now, the Chinese, in Russian coins, likewise called tschin (dim.), probably "coin" in general) by the Gilyak, have the peculiarity of not counting the silver ounce in a fixed standard in that the ja part very heterogeneous wares involved in it appear in the value to the extent that, with respect to quantity, size, quality, etc., they represent or contain an equal number of units of value and can be exchanged without any disadvantage for

/186 cont./
1. (cont.)
found with respect to the Chinese merchants during my time in the Amur region were Spanish (Mexican) piastres, yen, yuan, yuchuk coins, and even these were always first carefully tested as to their weight with the help of hand scales.

[illegible] ЗАБЛУЖДЕНІЯ ЦЕНЪ ТЫ. ВЫЯСНЯЛ however, the Gilyak very soon also became familiar with the use of their coins (2).

2. Indeed, now they are said to accept even Russian coins as payment. As proof of their great discretion in monetary and trade matters the following incident, which occurred during my stay, might be mentioned. Finally, one morning the last of shares not received

[illegible] Gilyak, who had been close to the Russian crew since their first appearance in the region, made a voyage from Nikolayevsk to Sakhalin in the hope of exchanging and vaxes, evidence of which will be given in the following.

In my room of many and varied inquiries among the Gilyak and my own trade and other relations with them, I was able to learn, for the first time, given in the following table, of both the most important commodities in their trade with the Chinese, Japanese, and in part also with the Russian, and the foremost articles in their life and household, discussed and in part illustrated in the above descriptions. Then, among them,

A table pelt, depending on its quality, has a value of equals 1-2 ja.

A pelt from the Ussuri-Gilyak (pfaidi) . . . equals 3 ja.

1. The j is pronounced soft, like the French j.

A pelt from the black-gray fox (pfaidi) . . equals 3 ja

/186 cont./
after the Nivx or seller. The price or the value of the trade commodities depends, on the one hand, on the greater or lesser demand which they enjoy among the Chinese and, on the other hand, the more or less amount of them which are found among the Gilyak, Orchi, and Goldi, and which in itself determined in turn in large part by their more or less trade carried on by them among one another and with the Japanese. Great changes in the prices of certain commodities nevertheless have taken place in the Gilyak, and after them the other peoples of the lower Amur region, who came in contact with the Russian, besides the Chinese and Japanese, with whom they had ancient trade connections, and the Russian, which has begun in part to compete very successfully with those of the Chinese and Japanese. Of the commodities, therefore, to be kept in mind in connection with the trade relations of the Amur peoples that the Amur region -- the Chinese in the upper and the latter in the lower part of it. But it is noteworthy that these two peoples somewhere come in direct contact with each other except in the one place on the Tugur located outside the Amur region -- a consequence of the above-mentioned trade relations determined by geographical and political conditions in which the upper and the lower Amur region are found with regard to the trade of their peoples, by means of many and varied impulses among the Gilyak and my own trade and other relations with them, I was able to learn, for the first time, given in the following table, of both the most important commodities in their trade with the Chinese, Japanese, and in part also with the Russian, and the foremost articles in their life and household, discussed and in part illustrated in the above descriptions. Then, among them,

/188 cont./
Manchu officials there, in that the privilege of collecting tribute from the Tungus and Gilyak is conferred upon them by the latter, though presumably in return for a suitable guarantee and substantial payment, for which, however, they know how to get ample repayment in the trading. If one looks at their entire trading activity locally outlined above, they can be compared, on the one hand, with the Orchi and Goldi, and on the lower Amur region, and after them the other peoples of the lower Amur region, who came in contact with the Russian, besides the Chinese and Japanese, with whom they had ancient trade connections, and the Russian, which has begun in part to compete very successfully with those of the Chinese and Japanese. Of the commodities, therefore, to be kept in mind in connection with the trade relations of the Amur peoples that the Amur region -- the Chinese in the upper and the latter in the lower part of it. But it is noteworthy that these two peoples somewhere come in direct contact with each other except in the one place on the Tugur located outside the Amur region -- a consequence of the above-mentioned trade relations determined by geographical and political conditions in which the upper and the lower Amur region are found with regard to the trade of their peoples, by means of many and varied impulses among the Gilyak and my own trade and other relations with them, I was able to learn, for the first time, given in the following table, of both the most important commodities in their trade with the Chinese, Japanese, and in part also with the Russian, and the foremost articles in their life and household, discussed and in part illustrated in the above descriptions. Then, among them,

Gilyak household equipment: 1 — bucket of birch bark, and 2 — wooden bucket; 3 — Tiss bottle of Japanese workmanship; 4 — dishes of Manchurian workmanship; 5 — iron ladle out of a scoop; 6, 7 — wooden food bowls and chopsticks; 8 — bowl of birch bark for serving food.

Gilyak: 1 — Old arrow-shaft of the Gilyak; 2 — old Manchurian arrow; 3 — piece of an old Manchurian arrow-shaft; 4 — Gilyak bow with the bowstring on the inside.

/132 cont. /

no doubt that the greater moral austerity of the Gilyak is tied up with character traits in which they excel beyond these tribes, namely, their greater energy, self-control, and moderation, which, as has been pointed on (1), they also show in their

1. See above, p. 718.

drinking of liquor. On the other hand, however, in comparison with the other Amur peoples, the Gilyak were always in a more favorable situation with regard to mortality insofar as their dwelling sites were the farthest from the two civilized peoples of East Asia, the Chinese and Japanese, and insofar that do not have any settlements in Gilyak territory. How demoralizing an effect they have upon the native is evident from the fact that the Japanese and Chinese always come, the former to Sakhalin and the latter into the Lower and Lower Amur region, without their wives and, supplied with liquor and other tempting commodities, try to acquire concubines among the women and daughters of the Ainu, or the Orochi, Goldi, and Oltchi. It was therefore to the advantage of the Gilyak, not merely with regard to taxes, but also in connection with morality, that they remained the Chinese traders entry into their territory, to see that no also evidence of their /132/ intelligence and energy (1).

1. See above, pp. 145 and 948.

With the occupation of the Amur region by the Russian in the fifties, conditions changed, much to the disadvantage of the Gilyak. For the occupation began precisely in their territory and they were the first and the most drawn into close contact with the new civilized peoples approaching them from the south, a contact which, with regard to morality, was not of the detriment to them, as it always is to a primitive people in such instances, and as subsequent reports have abundantly proven. But I shall return to the conditions and situations which I myself witnessed.

/132 cont. /

people who themselves are obliged to bear the heaviest yoke, the Ainu, are the most most involved in this slave trade. Finally, indicating that this deplorable custom of the Ainu and Goldi is rooted in the moral degeneracy to which they have been brought by the oppressive yoke of the Japanese and Chinese on them is the fact that the slave dealers sometimes appropriate the sale of Ainu and Goldi women as slaves to the Gilyak, for which the leading expo of the trade in women is Sakhalin. The Gilyak, on the other hand, who have been been able to preserve their freedom and independence with regard to their peoples, to be note by slaves from the Ainu and Goldi and under certain circumstances they must be considered morally sinful keeping any of their own people as slaves or selling them as such to others. In fact, they were of the opinion that if one of them tried to do so, he /132/ would come to grief, meaning he would perish, thus he would be in constant danger of his life.

On the whole, the condition of male slaves, as well as that of the female slaves, who are always more common, is small among the Gilyak. The principal slaves are the Ainu, and the high price that they can both in direct trade with the Ainu or Goldi and in particular in their sales to the Gilyak, is a strong incentive to acquire a slave in trade then to buy a wife. The Gilyak begin to Udi, for instance, a slave for a wife, and the Ainu woman named Kot, then for his second wife, Mingak from Langr. as noted above, he bought the latter for 40 to 50 rubles, but the former can hire 40 pieces of Chinese silk, which alone amounted to 200 or, or about 400 rubles, aside from other things. In appearance she was far behind her two wives. As will be seen from the following, however, this does not matter at all, in view of the social position of female slaves among the Gilyak. Because of the high price of the female slaves, only very rich Gilyak can afford to keep any, or at most only one, and they are wealthy about 8, or, for instance, Bogin ua. Such a possession seems at strikin to them and is considered by many a Gilyak does not hesitate to sell his daughter to a countryman as a wife in exchange for a female slave and to pay the difference in the Purchase price in some other form

/132 cont. /

example, in the above-mentioned case of Nimlgun, drive one to bloodshed, and thus the interest of self-preservation may keep many one from plunging into the horror sum of a strong and large kin-group. Overchrome and experience members of such a kin group, however, confident in the protective power standing behind their, may be goaded on all the more in their wantonness and may let themselves be carried away in contact acts that lead to blood feuds or that are a direct challenge for blood revenge, as, for example, a raid of the Tamnia-wi Gilyak on Sakhalin by their countrymen on the Amur. On the whole, however, this alone does not nullify the beneficial effects which blood revenge with its rules has among the Gilyak, in that with the legal relations still unregulated, it gives the individual a certain amount of protection, and, to be sure, it strengthens the basis of every social arrangement and development, the family.

Concerning the family relations of the Amur peoples living adjacent to the Gilyak, I have already, and I shall yet, present out at the beginning of this section, can be spoken of here, I must limit myself to a few statements tied in with the above remarks about the Gilyak.

/132/ In the preceding chapters the high degree of equalization that his tribe has attained with the Gilyak and the Ainu, in an analysis of the external life has been discussed — an equalization which must have been the result of a long-lasting contact between the two tribes. This kind of equalization has also taken place with regard to the family relations of the two peoples, which, in fact, become the basis for the more penetrating and enduring manifestation of this assimilation, both externally and internally. And the medium that served and still serves to bring about this equalization may be clearly discerned, namely, the frequent mixed marriages which have taken place between these two peoples since the Gilyak migrated to the Amur and, after the loss of their remnant, settled among them as a subject tribe. Among the other peoples, blood conflicts are unavoidable, although they are controlled between them continually. In this manner the

/132 cont. /

tion at all to the natives and left them with their own institutions and customs as long as they did not disturb the order within the tribal settlements (3). Thus in my time the arrangements made

2. Only after the conclusion of the Treaty of Aigun (1858) and the definitive occupation of the Amur region by the Russians were village elders (kun, ninnun) appointed by them for every village, the Gilyak and the other natives and put under the direct rule of the Russian authorities (cf. reining in the nearest port. Dr. Seelmad, who had already been in the Amur region among the Gilyak in the years 1878-80 (Sibirische Reise, Vol. XII, p. 188, Bibl Index), p. 38) mentions the term "Schulzeiten" for a high official who enjoyed the special confidence of the emperor.

did I hear a Gilyak designate himself as such. It was in the district just of Ulewkach located at the end of the Tymy Valley on Sakhalin and occupied by a married couple, where I was staying during my stay in the Tymy Valley. Nevertheless, but evidently he merely wanted to show off and I was not offer the prospect of a cheerful campfire. So wonder that under such circumstances my guide, who on account of the earlier

/132 cont. /

The Gilyak are typically Tungusic Paleasian and yet to which so much an extent that I never heard them mentioned by them and learned of no Gilyak term for them. On the part of the Russian, however, in my time, at the beginning of the fifties, a firm foothold was held as individual points in the lowermost Amur region, for example, in Petrovskoye, Nikolayevsk, and Mariinsk (1), but they did not pay any atten-

which were to follow (3). This method was, in fact, more in

3. Concerning this, see p. 682 above.

peaceful, for it increased the food supply of the people and saved dog food, the lack of which was already making itself felt at the time.

I never saw or heard of a Gilyak who, upon entering a house, greeted the host, hostess, or any other acquaintance with word or gesture, nor is it done upon his departure. As I gather from conversations with Gilyak, they would find it very odd, this coming and going without any salutation surprised him, too. With me they likewise constantly came and went without a greeting, and I, in turn, did the same. "Good morning" and "goodnight" learned from the Russian. Only in the presence of the Manchu Manin, who was accompanying me, I felt obliged to greet people by dropping on one knee in front of them and bowing their heads, but this is done only in contact with the Manchu and is not only being punished by them, since the Manchu officials in Sanchuan-ti, of Gorbatsi, are accustomed to this and show of adoration.

But what surprised me even more is the fact that the Gilyak never, or at most very seldom, thank one for a favor. I never heard it used by them, either among themselves or to me. Unfortunately, I was not able to make observations, I would like to ascribe this to the incompleteness of our word list, which it in general very poor in expressions for abstract concepts and emotions. On the other hand, it is hardly to be assumed that if they really had gratitude in their hearts, they would not have a word for it and that it should simply have always shaded us. After all, we saw them in all kinds of situations when they received services or help and hospitality offered almost to excess. It is possible that guests who have been sheltered, despite notassignment, by the Gilyak, and who have received a meal and who have been fed along with all their dogs, as the Gilyak do, thank one another, but I never observed it in the case of thanks? It everything based only on national communism or on the certainty of reciprocity in similar cases? With regard to me,

/132 cont. /

in the rear let themselves be taken in tow by the boats and dragged up the hill. During the whole procession the women agree drummed incessantly on their heads. A short pause followed, during which a few games were played in front of the house, such as the above-mentioned roundelays, the competitive jumping, sometimes on one leg, sometimes on two, which I had previously described, and the game of ball, and then the game of bear-baiting, never using the Gilyak began again and continued for into the night. The bear-baiting consisted in the Gilyak, standing with the bear, so to speak, the bear, which, as I mentioned, was tied to a stake, and, in turn, the Gilyak, with a strap tied around the neck, and, in turn, the Gilyak, with a strap tied around the neck, and, in turn, the Gilyak, with a strap tied around the neck

Among the Sakhalin Nivkhi, who differed in their economy and material culture from the above peoples, socialist reconstruction followed a sense of what different patterns. Many Nivkhi went to work in fishing and hunting collectives, and by 1937 the Sakhalin Nivkhi had established a fishing collective farm, the Nivkhi in 1937, fishermen, hunters, and craftsmen had pooled the instruments and means of production—nets, boats, dogs, etc., and were working in a more or less collectivized way. Nivkhi collectives were formed in 1939. A part of the Nivkhi population joined Russian collective farms, other Nivkhi formed their own farms.

As they learned new methods of conducting their economic activities and mastered new techniques of production in the collectives, the Nivkhi began to develop an attitude toward their traditional beliefs and practices. Some people, particularly the young people, the men of the Pioneer Productive Organization, particularly on the sovetschoum, where villages had a communal meeting place, and the women, who had been under more marital spirit, were in old women. The shamans' duties among the Nivkhi were not so well defined as among the Nanai, and the shamans were not so well organized as among the Nanai. Nevertheless, they had a strong influence over their own religious spirits (kekhes). However, shamanism was not greatly developed among the Nivkhi. It is interesting that the shamans did not take part in the clan cults.

Folk Arts

The traditional poetic material of the Nivkhi was related, from the standpoint of its content, to the Nanai and Ulchi folklore. The epic tales, which were the most ancient of the Nanai, were not known among the Nivkhi

Ch. Taksami, student at Leningrad University, at a student ball in the Kremlin palace.

Today the Nivkhi are served by an extensive network of diverse medical institutions; in addition, specialist physicians visit the most remote collective-farm villages. One of the initial tasks of the Soviet government was to bring the children into the schools and to liquidate illiteracy among the adults. Schools were opened in Sakhalin during the very first years after the establishment of the Soviet government there. A group of Nivkhi young people were sent to school on the continent, and adults were taught at centers for the liquidation of illiteracy.

A Nivkhi alphabet was created in 1931. In 1932, the first schoolbooks were published. During the 1933-34 school year, some 300 children were already at school in the Sakhalinskaya Oblast, which meant 86% of all Nivkhi children of school age. It was possible to assure daily attendance only after the establishment of dormitories. Today all children attend school. In the village of Kal'ma there is an elementary seven-year school; in Nogliki there is a ten-year school. A part of the Nivkhi youth (boys) attend trade schools in Komsomol'sk and factory schools in Komsomol'sk and Nikolayevsk-on-the-Amur.

Many Nivkhi with secondary schooling enter higher educational institutions. In 1953, 2 Nivkhi attended Leningrad State University, and 10 studied at the A. I. Herzen Pedagogical Institute. At present, 16 Nivkhi are attending the institute. Among the students there are also women. In 1953, Liza Dekhal' of the village of Pad on the Amur graduated successfully from the A. I. Herzen Institute in Leningrad. The Nivkhi Chuner Taksami of the village of Kal'ma is today doing graduate work at the Institute of Ethnography of the USSR Academy of Sciences. Nivkhi with special training are working today as captains, enginemen on cutters, teachers, librarians and club directors.

The political activity of Nivkhi workers has grown tremendously. Many have risen to leading posts on collective farms and in various institutions; many work as instructors with rayon Party committees and executive committees.

Wide educational work among the Nivkhi has been conducted and is conducted today by the cultural bases established on their territory. The first of these was founded in 1928-29 in the village of Nogliki, at the mouth of the Tym' River in Vostochno-Sakhalinskiy Rayon. The second cultural base of the peoples of the North was founded on Sakhalin in 1946, in the village of Yukovo. These bases have libraries, reading rooms, clubs, seven-year schools for Nivkhi and Evenk children, and also dormitories and boarding schools.

At the amateur concerts on the collective farms, both men and women entertain, singing and performing native and Russian dances. Frequently the songs are created on the spot, impromptu. The collective-farm youth also participate in regional Olympic games.

Theatre arts are also developing among the Nivkhi. In the beginning, the Nivkhi, who had never seen a theatre before the Revolution, were merely spectators at performances organized by Russians. Soon, however, dramatic clubs were organized in the collective-farm clubhouses, and the Nivkhi began to present plays in their own language.

The Nivkhi are great lovers of sports. In former times they did not know how to swim and feared the water. Today the Nivkhi young people enthusiastically engage in water sports. There are now special sports omorochki (canoes) with a single oar, in which young men and women hold speed races.

The Nivkhi have also preserved native sports, such as rope-jumping.

The changed working, living and cultural conditions of Nivkhi life—the collectivization of their economy, their participation in industry, the unification in collective-farm villages of people who had formerly belonged to different clans, and the general rise in their cultural level—all these factors have completely destroyed the old ties and rules, based on the numerous remnants of clan relations which had survived until the Revolution. The old religious ideas, holidays and rituals have lost all their meaning. The greatest change has occurred in the position of women. In former times, the Nivkhi woman was timid and oppressed, and knew only the narrow circle of her domestic duties. She could be bought and sold, or turned out of the house. When she met men, she had to cover her face and turn her back to them. During the early post-Revolutionary years, a great deal of effort had to be applied toward the elimination of survivals of the past. When they attempted to study, many young women and girls were ridiculed by their fathers, husbands and mothers. Some were unable to withstand the pressure and discontinued their studies. It proved especially difficult to overcome the ancient custom of placing a woman in childbed in a special hut, built near the dwelling. This tent was usually cold and damp. The woman had to remain under these conditions for several days without any help,

endangering her own health and that of the child. The force of tradition was so strong that even in 1932 some of the women stubbornly refused to have their babies in hospitals, despite the good care and the free clothing and blankets which were given to the infants. It was only after wide medical-educational work that women began to turn to maternity hospitals. The new understanding of the role and importance of medical institutions has also led many Nivkhi women to go to work in them as attendants and later as nurses, educated at the medical school in Nikolayevsk-on-the-Amur.

Today the Nivkhi woman manages her own life and does not enter into forced marriage. Polygamy, the levirate and remnants of the old group marriage have become things of the past.

476 were forced to take the boat from him for not one of them had
225 a boat suitable for sea voyages.

In the previous examples of the distribution of the quarry
427 we saw that the share of the owner of the boat who also
476 happened to the pilar was precisely the same as that of the
225 other hunters and that he was not specially rewarded for supplying the boat and for his work in connection with organizing and leading the collective.

The last quoted example illustrates the exploitation that arises out of ownership of the tools of labor. The Exploitation is effected under the guise of the particular form of leasing tools. Here the owner of the boat does not participate in the hunt. He rents the boat to others and still gets a share of the quarry which he would get had he participated in the hunt.

471 Going from Kul - which is at the present time the northern-
225 most Gilyak village on the continent - in the direction of the
476 town of Nikolayevsk -na -Amur, until recently the center of
427 capitalist influence on the Gilyaks, we note an interesting
178 phenomenon. In the villages located in the proximity of the town of Nikolayevsk-na-Amur and, consequently, exposed most pronouncedly to its influence, the owner of the boat until recently claimed two shares: one - as a participant in the hunt and the other - as owner of the boat. This represents another forward step in the development [91] of the exploitative relations whose rise we noted in the fishing industry of the Gilyaks of the village Kul. On top of that, the owner of the boat claims shares for his wife and children who take no part whatever in the hunt.

226 The tendency to claim for oneself extra shares of the quarry
439 can be explained by the fact that some time after the founding
177 of the town of Nikolayevsk-na-Amur the commercial value of
427 fish increased. The lower reaches of Amur, one of the world's
476 richest Siberian salmon areas, attracted many people from the fishing industry as well as merchants, who brought up Siberian salmon from the Gilyaks. The Gilyaks of the lower reaches of the Amur, who formerly traded with the Chinese and Japanese began selling Siberian salmon to the Russians; an item of no importance in their trade with the Chinese and Japanese. Owners of zayezdki and seins turned into entrepreneurs supplying whole-sale fish-dealers, Luri, Viderman and others. They began to increase zayezdki and to hire labor from among Russians, Koreans and, especially, Gilyaks who come to them from Sakhalin and from the villages located North of Nikolayevsk-na-Amur. "With a zayezdok as a source of income, the Gilyak turned into a rentier who was always idle and drunk throughout the summer, "says the ardent colonizer

226 and proponent of a policy of oppression of "foreigners,"
439 N. V. Slyunin. (1) It is of interest to note that the new
177
427 1 N. V. Sliunin, Sovremennoie polozhenie nashevo
476 Dal'nevo Vostoika [The present conditions in our Far East], p. 96, 1908, SPb.

471 exploitative relations evolved among the Gilyaks on the basis
427 of ownership of the tools of labor did not produce new forms
476 of distribution. Distribution persisted, as of old, in the form
226 of the hunter's ancient way of dividing the quarry into shares.
177 It was only new claimants of shares who appeared. A new content was given to the old form. The owner of the tools of labor, striving to receive a greater part of the quarry, began to claim shares for members of his family who did not participate at all in the process of production such as wives and children. (2) He would also claim shares for the renting

2. I was told of cases where, on the island of Langer the owner of the seine sometimes included into the artel his young son who was capable only of performing minor tasks. Still, the father would obtain a full share, locally pay, of the quarry for him.

of the tools of labor such as the boat and the seine and even for the use of the bench in the boat (mlət) and of the stick over the door of the house (ŋγəmr-ṭis).

We give here illustrations of the above.

225 According to the Gilyak ¡argun (?) now living in the village
471 Cγarvaγ (Charbakh), back in 1917 or 1918 he and three other
427 Gilyaks from the village Kal'ma as well as fourth one from the village Ṭəlmə went to the lower reaches of the Amur and worked there during the run of Siberian salmon on the island Langer for the Gilyak Armən who was an inhabitant of the island. I often saw Armən in 1931. Armən's brother worked with him. In all there were seven men working. When the fishing season was over, Armən divided the quarry. He and his brother got six shares, while the remaining Gilyaks received five shares, one share per man. The six shares obtained by Armən were accounted for as follows: one share for Armən, one share for his brother, one share for the use of the boat, one share for the use of the seine, and finally, one share each for his wife and his old mother, neither of whom took part in the fishing.. The Gilyak workers got no shares

252 cutting in half the skin on the snout of the sivuch, she peeled
237 it off. The skin peeled off the snout is hung over the door where it stays until, as the Gilyaks say, it is "lost". After taking out the eyes, the old woman cut them and poured their content into the cup containing the whiskers. Then she turned the eyes inside out and cut out first the lens and then the pupil Afterwards, she cut off the noz-nək and put it in a separate cup since it is eaten in raw form.

This done, she cut the meat covering the skull. If the skull was broken by the striker, she picked the bone splinters, sucked them one by one and put them in a separate vessel. Subsequently, the splinters together with the heads are thrown into the sea.

262 [94] If the skull was whole the old woman broke it with a
784 stone. I asked the old woman why she would use a stone rather
412 than an axe to break the skull; to which she replied that it is
252 a sin to use an axe just as it is a sin to cook the brain, for it has to be eaten raw. Brains are not the only items consumed by the Gilyaks in raw form, others are: the back, the heart, the intestines, the kidneys, the wind pipe and the noz-nək.

411 To watch the old woman break the heads of the sivuch with
177 a stone, sink her fingers in each bloody brain and draw it into
252 her mouth with a sob-like sound, I felt returned for a second to the stone-age by time machine. In fact, if we disregard guns recently acquired by the Gilyaks, and iron which they also recently learned to work into the knives using Japanese kettles as the starting material, spear tips, arrows and harpoons, we are back to the stone tip on the harpoon shaft and on the arrow, the stone axe, which is still remembered in their language (1) and we find no Japanese iron kettle. It

1. Cf. our paper - "Gilʃatskiʃe chislitel'nyʃe" ("Gilyak Numerals"), Published by Nauchno-issledovatel'skuĭ Assotsiatsii Instituta Narodov Severa TSIK SSSR, p. 10, 1932.

then becomes clear to us why the old woman uses a stone in breaking the head to get at the brains and why the Gilyaks eat the brains as well as the meat taken from the animal's back, the heart, the intestines, the kidneys, the wind pipe and other parts of the animal - raw. It is then that we see all of the Gilyak mode of life in an entirely different light.

252 Having taken out the brain and having put it in a separate trough, the old woman separated the lower jaw, tied the plant piskər around its middle and put it in the kettle to cook.

7: Kreinovich--26 E-5 (1931) 1934 Gilyak

252 Then she pressed tubers of dry sarana into the openings for
the eyes and nose of the sivuch and put the head into the
kettle.
263 When the heads were cooked, Xitkun, his son and other
177 hunters started to eat. They were served meat on flat
258 wooden dishes. At the same time they were given a small
314 bottle with salt and a tiny cup containing finely cut cheremsha
While one may eat cooked meat with salt, one must not
cook meat or fish with salt. In former times the Gilyaks
had no salt. They learned the use of salt from the Chinese.
In 1926 I was told in the village Chayvo that the ancient
Gilyaks used a solution of ashes instead of salt. I was told
the same thing in 1931, in the village Kul. According to my
informants the ancient Gilyaks burned boughs and stems of
trees thrown up by the sea. They dissolved the ashes of
those trees, saturated with the salts contained in the sea,
in water taken from a well or river. When the ashes settled
at the bottom there remained, as the Gilyaks of Chayvo put
it, "water as clear as alcohol." It is this water which they
used instead of salt. I brought from the village Kul to the
Muzeĭa Antropologii i Etnografii a wooden plate of the an-
415 cient Gilyaks, black with age. This plate, which was sold
263 to me by old man Tujun, was specially made for seal meat.
In the sides of this "plate" were carved two tiny cups which
as Tujun informed me, would be filled with salt water for
dipping pieces of meat in it.
On the following day, after the meat was taken off the
782 heads, the Gilyaks prepared them for throwing in the sea.
225 The heads are dumped in the sea by women and not by men-
hunters. As we shall see, it is also the women who bring
pay to the fire. Xitkun prepared tiny white, thin shavings
of qosk-ʼeks 'rowan.' These shavings are called iugrusps.
He handed the shavings to his wife Hemanɣ. The old woman
stuck the shavings in the nasal openings in the heads of the
two sivuchs and smeared them with cowberry juice. Then
she tied the lower jaws to the heads of the sivuchs using
stalks of burdock-pes. In a row with the skulls lay jugular
vertebrae (ma t) and bone splinters from the broken skulls.
The heads were placed on a board. The other wife of Xitkun
took the board with the heads and the mug containing the
eyes and went towards the sea. I followed her. Standing at
[95] the very edge of the water she threw the heads of the
sivuch into the sea as far away from the shore as possible.
next she threw the contents of the mug into the sea as far
as possible and then she threw into the sea the skull

he food of the Gilyak, in the local and

174 mainland among Goldi as well as Manchurians. It is more likely that the first Gilyak who emigrated to the mainland from Sakhalin, took over the building methods as well as the language from the Goldi, and that the later ones who remained in closer contact with their native country, adopted the building methods of the Goldi and Manchurians but kept their own language.

The Russians became acquainted with the Gilyak as early as the middle of the 17th century when the first bold Russian pioneers traveled along the Amur. At that time there were also supposed to have been occasional bloody animosities. The Gilyak themselves, however, no longer know anything about this, unless perhaps there are accounts in rare legends which may be known by only a few. The majority know nothing of their own history and I was not even able to ascertain whether there was not someone still living among them who might tell me something of their antiquity.

161 The population of the Gilyak can be only approximately de-
● 177 termined, because, up to the present time, these people do not even pay yassak, and thus there can be no official methods set up to observe the shifts in their population. According to the estimates of the ispravniks (officials) the number of Gilyak of the Nikolayevsk district (1) and the

1. From the coast up-stream to Mariinskoye (270 versts from Nikolayevsk).

ispravniks, but instead I asked the traveling fur dealers whose business, when all is said and done, would give them a greater interest in this question than the ispravniks would have. According to their opinion, there may be about 3000
161 Gilyak on the island of Sakhalin. The entire race of Gilyak
621 (exclusive of the Negidal) may thus comprise some 8000 souls. I believe the figure is not too large for, although the Gilyak villages are small and present a diminutive appearance, they are [100] relatively densely populated. One may assume that one house shelters no less than 12-15 persons. From a rough calculation which I made in the year 1880, there were about 900 persons in nine villages extending from the coast to the village of Vaida (30 versts above

161 Nikolayevsk.
621 Of the two sexes, there are fewer women, as far as may be judged on the basis of several examples. Thus, among 90 accurately counted Gilyak (1) there were 50 men and 40

1. This count was taken of the population in the houses in which a halt is made along the winter road to Sakhalin, namely, in the villages from Vasin Mys to Chëmi.

women. It has been proved that the same is true among other primitive tribes of Russia. As far as age distribution is concerned, there are not a great many children, but also
163 not very few. Large families of children which frequently occur among the Russian settlers here, are not to be found among the Gilyak. Nevertheless, the birth rate is not so small that one might see in it a cause for a decrease of this tribe. Among 240 persons of both sexes from various villages, I found, for example one-third of them were children of 0-10 years, which just about equals the condition existing in Western Europe.

161 Although nothing has been done in the way of gathering
● 177 regular statistics on the Gilyak tribe, there is nevertheless no doubt that the tribe has diminished since the Russian occupation of the country. Some villages are now only half as large as they were. We find a repetition here of the same sad phenomenon which we also observe in other countries where civilization and a natural state are contiguous. The more direct causes of this decrease I shall consider below. [RCH: see category 116, p. 249]

II. The Country of the Gilyak

133 The lower Amur valley and Sakhalin are mountainous
312 countries. The mountain ranges of the mainland belong to the so-called Tatar range, Sikhote-Alin, which covers the region between the lower Amur section, the Ussuri, and the sea. The Amur whose lower third flows northeastward becomes even more gigantic here than farther up-stream. It is one and one-half versts wide; the depth varies, but even in low water large steamers can travel up and down without difficulty. At Nikolayevsk (60 versts from the ocean) sea-going vessels lie at anchor that do not draw over 12-14 feet [101] but even the largest could enter if it were not for a short, shallow stretch (sand bar). In stormy weather the Amur has such high waves that the river steamers must seek shelter along the shore, and people get sea-sick, just as

291 pipe-like pants (gari) made of seal-skin. The upper part of these are not fastened like regular pants but are held to a strap belt by a few thongs. In fall and spring some of them wear these gari made of padded Chinese cotton. Under the gari they wear a pair of regular linen pants which reach to the knees. Instead of wearing stockings, they stuff straw into their torbassa. Straw is a poor heat-conductor, and the same is true of seal-skin. These boots are also water-proof
● 177 if they are properly sewed. The Gilyak's bodies and arms
291 are covered with a short jacket made simply of dog skin with the fur on the outside. This jacket is sewed like a shirt and has a slit on the left side of the chest, which can be buttoned up. The shirt does not have a collar, the neck and back of the neck are covered by a cap. The color of the jacket differs with the color of the dogs, but the all-black ones are most sought after as gala attire. Sometimes this jacket consists of coarse gray Russian cloth, or only the upper half is of cloth and the lower half of unscraped seal-skin, but this type of jacket is worn more frequently between seasons. The jacket is tied with a belt on which hang various necessary implements, such as the knife, tinder, needle box, etc. Under this outer jacket they wear another, not cut like a shirt, made of blue Chinese cotton, fastened by means of bulbous, Chinese buttons. Under this, many of them wear a coarse linen shirt. Head, neck and back of the neck are covered with a cowl-shaped cap made of dog skin. In very cold weather they also wear fur gloves, with the fur on the inside, and the outside sewed with fish skin; these are fastened with a little band at the wrist.

294 They now sew their clothes with needles and a coarse
439 thread, both of which they buy from the Russians or the Chinese. Formerly they used home-made implements.

291 Women's clothes are very similar to men's. The Gilyak
301 women also wear gari made of skins, which are fastened
531 around the hips with straps. Their shirts, coats and jackets [109] are usually longer than those of the men. The hem of their coats are often sewed with intertwining figures made of sheet brass. They themselves make the figures with the aid of a file. Stylish ladies also wear bracelets which are soldered over an ordinary hearth fire fanned with a bellows. In general the women love to affect a certain neatness of attire. They have aprons for gala occasions, which also have brass ornaments. Their caps, fish-skin boots and torbassa are sometimes decorated with ornaments made of colored cloth, and particularly their gloves are thus decorated. They

291 wear huge pewter ear-rings, five centimeters wide, which
301 are decorated with colored glass beads. Pewter and beads
531 are bought from the Chinese, but they make the ear-rings themselves. Around their necks the women wear beads of colored glass, on these are sometimes hung little wooden amulets representing human figures.

177 Pipes and tobacco pouches are so much a part of the Gilyak
276 personality that I am tempted to give them space here. Their
531 pipes are of Chinese origin and have the uniform shape of the Manchurian pipes. The stem is about an ell long, made of black horn which has been turned with a lathe; the mouth piece is of jade. The cup-shaped brass bowl of the pipe is no larger than a hazel nut. On their belts they wear a bone spike, ornamented with scrolls, which is used as a pipe cleaner. Their tobacco pouch is tied with strings to a disk of walrus tusk which is also decorated with curlicues, and this is fastened to the upper button of the jacket. As soon as they have finished their smoke, they stuff their pipe and tobacco into the slit in their jacket.

V. Food and Diet

261 If the Gilyak is short on provisions he eats only twice a day. He endures hunger relatively easily, he can hunt or pursue other activities for two days without any kind of food, only on the third day does he feel weakness and discomfort. On the other hand, as soon as the hour of plenty is at hand, he undoubtedly eats five times a day.

It would be difficult to say how much nourishment a Gilyak takes but in general they are blessed with a good appetite. From an eye witness I learned that once two Gilyak on a winter journey consumed one pood (about 16 kilograms) of frozen sturgeon in one day [110]

251 Their staple diet consists of fish: sturgeon, various types
262 of carp, whiting, but particularly salmon and mainly kita (salmo longocephalus) and gorbusha (salmo gibbosus). A freshly-caught fish is eaten raw, but the greater part of the salmon catch is dried for the cold season. For this purpose the fish are cut lengthwise and are hung about six feet from the ground; by means of air currents they become a dried non-rotten substance. This is the so-called sukola. The kita provides the bulk of these winter stores, and the fish appears at the end of summer. The fish caught in winter are stored in a frozen state and eaten thus. (1) Sukola is also the main

1. The Russians of Siberia also eat frozen

578 out somewhere in the taiga for a whole year, the consensus
586 usually favors them and the first husband must abandon his claims. In recent years many Gilyak have resorted to a
177 special ruse in order to make sure of their wives. Such
586 chaps who are probably not of the best and who may thus be
797 faced with the prospect of eventually being deserted by their wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

171 Child training. Toward the end of her pregnancy, a
844 woman is taken out of the house for 10 (1) days and brought to
183
343

1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman
854 returns to her house she undergoes no "purifying" ritual.
515 The bathing of the newly-born is also done in the impro-
302 vised lying-in establishment, and it is given its other baths there.

577 As far as deceit is concerned, it is very rare among them-
426 selves but is practiced against Russians. The cheating
609 usually consists in a Gilyak asking for a loan of money from
186 a Russian, promising him fish, sable, etc., in return and then not reappearing. However, one is not justified in assuming from this that the Gilyak have two different moral standards, which would contradict our previous statements. The discrepancy may be much more simply explained. To sell something at too high a price to a Russian or to take his money and not return it, - such things many Gilyak take the liberty of doing because they think Russians in general are mightier and wealthier than themselves and they feel that for this reason they would be forgiven. But more frequently they are motivated by the feeling that civilized persons would be the first to cheat them. Russian and Chinese merchants often played nasty tricks on them, in fact it has happened that a Gilyak lost all patience and control and hurled himself on his shameless creditor in order to make an end to the latter's
577 ever-increasing demands. It is actually surprising that,
609 having been taught by such masters, the majority of Gilyak
177 nevertheless refrain from cheating, and this fact is highly appreciated by decent Russians. Often I heard peasants of neighboring villages say: "The Gilyak are in general more honest than our sort, especially those who live in distant villages [225], for they do not even permit themselves to cheat strangers." (1) However, one must

1. I myself had the following experience. I bought some ear-rings from a Gilyak woman and gave her a ruble in paper money because I had no change. The woman took the money with some astonishment. Somewhat later when the little steamer with which I had arrived weighed anchor, the woman suddenly appeared rowing toward me in a boat and called out to me that the ear-rings were "not silver, just ordinary ones". Obviously she did not want to be taken for a swindler.

not believe that the peasants are generally dishonest; on the contrary, they are an upright people, which

77 makes the comparison even more valuable. Unfortunately,
09 there have been cases where Gilyak have been wronged
77 by decent people, for example by soldiers who had before that behaved properly. The causes for that may be found in the peculiar manner in which the uncultivated individual regards strange peoples. He is to a certain extent inclined to regard foreigners as outlaws. However, this fact has in recent times been badly misused and misinterpreted by some philosophers. We have pointed out how the Gilyak themselves were able to put themselves in the place of strangers as well as fellow-tribesmen, and to sympathize with them. But one must remember that, where strangers are concerned, moral impulses such as compassion, the sharing of pleasures, the sense of justice, etc., more than ever make room for the egoistic impulses. Everything that tends to repress understanding and sympathy-greed, vindictiveness, etc. - breaks out more easily if one is
77 face to face with strangers. The Gilyak unfortunately
82 put their worst foot forward in their first acquaintance
27 with the civilized world. The French missionary, Le Brunière, who in the year 1848 came from China by way of the Amur and the Ussuri to the Gilyak was robbed and murdered out of pure lust for booty. But this case was and has remained an exception. The village of Vaida (32 versts from the present city of Nikolayevsk-na-Amure) still has about 200 inhabitants; at that time it was larger by a third, and seven or eight men took part in the crime, of which none is living.

Actually murder seldom occurs. Most cases are caused by quarrels over the fair sex. The relatives of the murdered one formerly resorted to revenge; now, however, they usually file complaints with the Russian administration. [226]

48 Prostitution in its real sense does not exist; however
37 passing amours are not too much forbidden. A Gilyak
44 woman whose husband is away probably lets herself be persuaded by a passer-by, and the husband himself is not too much offended, provided only that there are no consequences. In general, virginity and chastity have a certain value, but minor transgressions are not taken very seriously. However if a woman gives herself completely to a stranger she is persecuted.

48 On Sakhalin it happened that the Gilyak meant to kill such
37 a Helen who lived with a Russian soldier and bore him
84 a child.

Sodomy, onanism and similar perversions seem to be un-
39 known among the Gilyak. Those whom I questioned about them regarded me with astonishment and did not know what I was talking about.

14 As for modesty, it varies according to the type referred
34 to. In sexual matters it is not very pronounced, as we have already pointed out. First of all, the crowded way in which people live together does not permit such delicacy; however the Gilyaks try to hide their love-making from strangers. Their natural functions they do not exactly perform in the open, but they are not particularly ashamed in front of members of the opposite sex. Men as well as women squat in urinating. Women, at any rate younger women, guard against exposing their bodies before strange men. I had some difficulty in persuading them to do this when I was taking body measurements.

77 It is impossible to study the more subtle expressions of
437 modesty in all their forms, but it seems that the Gilyak are
83 most of all ashamed of being taken for thieves and cowards.
576 Their entire character and cycle of habits is such that fawning and self-degradation are foreign to them. They do not make much of genuflection, but do it largely when they are forced to. Thus those Gilyak who decide to travel up the Sungari to the Chinese with their fur must, as a matter of course, bow before the Chinese officials. And probably the Chinese are responsible for teaching them such humiliating expressions of veneration. [227]

735 Begging is practically non-existent among the Gilyak. The
273 only specimen one can see begging is the so-called Vanika-Gilyak, a degenerated half-idiot who goes begging along the streets of Nikolayevsk-na-Amure and who long since has deserted his countrymen. He is also the only one who can be seen in a drunken state, swaying and noisily roaming about. In general drunkenness has not taken root to such an extent that there are professional alcoholics, and this is probably partly because Gilyak cannot have spirits whenever they want, for it necessitates a trip to the Russians. But they love liquor very much, and unfortunately it is to be foreseen that this habit will become wide-spread.

563 hopes, merely from an ungovernable yen for liberty and
177 diversion, although they know they will be only too easily
recognized and will only earn a more severe punishment.
563 The hardships and dangers which these unfortunate ones
609 must sometimes endure, especially in winter, are hair-
177 raising and some of the stories which they tell as though
they were nothing unusual, sound like epics. A large
number of them perish. One of the dangers which they mu
guard against in the Amur country and the Transbaykal is
persecution at the hands of the natives, in which activity
particularly those kinsmen of the Huns, the wild Buryats
on Lake Baykal, distinguish themselves. To them, a
brodyaga is as good as wild game, they aim at him where
they meet him, and take whatever they find on the dead ma
They do this with all assurance for they know that the dee
will not be investigated. In recent times this bestial custo
has also crept in among the Goldi and the Gilyak. The
brodyagi themselves gave the impetus to these animosities
Most of them are perfectly docile, peaceable human being
who are glad if [229] they are left alone, and are therefore
little feared by the Russians themselves; they are given a
night's lodging, a hunk of bread, and no one thinks of notif
ing an official. Now among these "unfortunate ones" (1)

1. This is what they are called by the Siberians, some of whom are themselves descendants of exiles and have had experiences of their own which corroborate the words of Staël "tout savoir c'est tout pardonner".

there are sometimes real villains who cannot conceal thei
wolf-like nature. Furthermore, among deportees there a
not infrequently to be found people who are simply patholo
cal, suffering from homicidal mania, who belong anywhere
but in a penal colony. Such ugly customers make trouble
when they escape. There have been cases where entire
Gilyak families were murdered even by those who were
hospitably received by the natives. As a result, it is easy
to imagine that the Gilyak also began playing a different
tune. After such precedents, greed and rapacity may now
and then also have arisen in the soul of the savage, even
though such a refugee would not have been carrying much.
Thus the brodyagi now avoid the native villages, and if the
are forced to pass near-by, they go in bands and take

28 order that he may not squander the property. On Sakhalin,
83 only the sons inherit the parents, and the daughters are
married off. If after the death of the parents only one
daughter is left behind, she usually gets part of the estate
upon her marriage, the rest is kept by the relatives who
took care of her. In any case, if the bride has a dowry,
the man has no right to it; he can get hold of it only by
going against the wishes of his wife.

28 In the matter of succession, it is true, the procedure is
not everywhere and always [232] the same, but in general
one can draw the following conclusions from what has been
said: a) the children take precedence over other relatives;
b) the brothers take precedence over their sisters, pro-
vided the latter marry and thus share the fortune of their
husband; c) the joint usufruct of the estate on the part of the
nearest relatives is very common; d) women may inherit
and have their own property, but in general they are not
left as much; however, they have the right to be supported;
e) widows can demand their own share, but usually they be-
come joint owners of the estate along with their children.

65 The Gilyak are all of one class. There are no privileged
51 classes or families. There are families, now and then, who
7 are held in great esteem because of wealth, courage, or
because their ancestor was founder of the village, but they
have no real privileges of any kind. Such families also
have family names (which are handed down by the males);
many Gilyak, however, have only one single name to which
is added the name of their village, to distinguish them from
outsiders. Some of them, whether they are baptized or not,
are given this or that Russian name besides their Gilyak one,
and by this name they are known even among their fellow-
tribesmen. These "Petkas," "Mikitas", etc., are usually
intelligent lads and understand Russian.

7 In like manner, there are no slaves, nor have there ever
4 been any among these people. Only personal qualities,
6 either bravery, wealth, age, or intelligence, give the individ-
ual a certain significance. Wealth may be regarded with a
certain esteem, since it is usually acquired as a result of
real superiority, - either courage, industry or judgment.
Toward aristocrats of wealth a certain external ceremony is
occasionally observed. If such a person comes for a visit,
both he and the host bow after a fashion, whereupon he holds
up his cheek to be kissed; he himself does not kiss the other.

567 However, there are no forms or obligatory expressions of
554 esteem of any kind. In general, a kiss, bow, or hand-shake
576 are, as we said, not often used by Gilyak.

Beside the aged, the rich, and the brave, shamans are
756 especially esteemed, but here again we see reflected the
184 respect [233] which is paid a superior mind. The shamans
do not form a separate, exclusive class but live like other
people, but they draw an additional income from their craft.
It frequently happens that the shaman is also the son of a
shaman and has, in a manner of speaking inherited his
"science". Some, however, become students of another
shaman for a considerable sum, still others become
impromptu shamans whenever the "power" descends on
them. Women can also become shamans, as we have said.
It is arranged so that large villages have their own shaman,
whereas several smaller ones fall within the territory of one
shaman.

The work of these priests is probably rooted partly in
self-delusion, but in any case there is a considerable addi-
tion of intentional deception.

756 Fortunately they themselves, although smarter than the
576 rest, are not very superior, and can therefore not teach the
554 people anything very harmful, nor have they been able to
make a privileged place for themselves. The shaman's
advice is sought where every-day experience does not prove
adequate, but the counsellor is not generally treated with
great veneration. Most of the shamans are received without
any kind of greeting, only famous ones are met with a bow;
beyond Sofiyskoye there was even one before whom the whole
house went on its knees when he appeared at the door in or-
der to perform his magic. In general the shamans not only
enjoy a certain esteem, but they are also feared. Neverthe-
less, there are cases where people refused to pay a
shaman because of his false predictions and his ineptitude,
and sometimes shamans are even flogged. Their magic
practices will be considered later.

622 Finally, there are the "starosti" (1), that is, elders who
177

1. This is a Russian word.

are appointed by officials. They are, however, not actual
mayors; they have nothing to say and are scarcely more
than intermediaries through whom the official gives his
orders to the community, for these starosti speak Russian
well and are in general intelligent people. [234]

527 the natives of the Amur. An old Goldi who finally obtained
361 them gave them to his daughter when she married a Gilyak
534 from Kola. The daughter probably left them to the community, for now they do not belong to an individual, but they are regarded as sacred. During the bear festival they ring incessantly, and on other extraordinary occasions the shamans make use of them in different ways.

527 Finally, many visitors of the bear festivals are also to be
524 seen playing cards and checkers. Both games the Gilyak
177 have taken over from the Russians and Chinese, but the
777 Chinese passion for it they have fortunately not imitated. They do not play for money, and they play without great emotion. Russian as well as Chinese cards are used. (1)

1. The Chinese playing cards are about seven centimeters long but only two centimeters wide, and are decorated with various figures. About 120 cards are used in the game.

Finally, we must add that, according to the belief of the Gilyak, the village in which the most bears have been celebrated and consumed, has the greatest prospect of abundance. The pelt and the skull of the dead animal are kept and represent a sort of talisman.

527 Occasionally the Gilyak also have a pig festival, that is,
782 the comsumption of a pig (if they can get hold of one) is accompanied by ceremonies. The pig is not brought into the house through the door but through the window; on the floor, besides the pig, are placed all kinds of delicacies, such as millet porridge, berries, etc., as well as all the idols that the people happen to have. [238] Then the idols are bowed to and the feast begins.

On the island of Sakhalin there is a festival known as cheung which falls around Easter. It consists merely of a feast, at the beginning of which bits of food are thrown in all directions, probably in order to ask the gods for abundance.

764 The burial ceremony is identical with that existing among the ancient Slavs (1), that is, the corpses are burned. The

1. The Arab Ibn-Foslan who traveled through present-day Russia in the years 921 and 922 witnessed cremations among the tribes living on the banks of the Volga (called Itil by him). Spiess, Vorstellungen vom Zustande nach dem Tode. 1877.

825 and if he gets caught, he is killed. But even after that he is
789 handled with respect, that is, his corpse is laid before the
278 house of the idols and left there until it begins to decay. Besides the skin, the bones and the gall are immediately sold, for the former are held by the Gilyak to make a man brave, and the latter is used for all kinds of medicaments.

776 Of the numerous spirits whom the Gilyak are supposed to
782 know about, some are good and protect man, but the majority are more or less evil, and must therefore be propitiated with gifts. The chief of the evil ones is called Kins (on the island of Sakhalin: Kinsh) and to a certain extent corres-
778 ponds to the devil, Ahriman, etc. of other peoples. "Spirit"
782 and "idol" are both called kegn, for the idols are not only
532 symbols, but at times also the dwellings of the spirits or kobolds. Usually they are kept in the storage huts and only hauled out on special occasions. If an idol is "heavy" it means that its inhabitant, the kobold, is at home, but when it gets "lighter" than usual, the spirit is roaming about somewhere. The offerings here also consist of millet, tobacco, etc.; very often the face of the idol is smeared with cranberry juice, which seems to have a powerful effect. Wood chips are also hung around its neck. The idols have different appearances. A guardian spirit, for example, [24] lives in a wooden cone that is placed somewhere in the vicinity of the yurt when it is built. If the yurt must be taken down, the idol remains, and at the new dwelling a new one is made. Some idols are crude imitations of humans, others have the shape of a bear and are sewed into bear skin, still others have the shape of a bird, etc. Some human-like idols represent children, others old people. Some have hands and feet, others only a head which sits on a body showing a navel. Small idols are sometimes worn as talismans. These also usually have human forms, but some look very
789 different. Thus the talisman against a difficult birth is a
844 figure carved of wood, representing a double acorn.

Besides the idols, there are some more or less strange-
778 looking objects not made by the Gilyak themselves, which
782 have a mysterious significance for them. Such an object
177 stands on the so-called Tyr (1) about 80 versts from

1. From the Gilyak village Tyr.

Nikolayevsk-na-Amure. On a high, precipitous river bank a Bhuddist temple formerly stood; of this only a few stone pillars remain, bearing Chinese and Mongolian inscriptions.

*114 especially great significance to the confirmation of the existence
595 of group marriage in the Gilyak material. In view of the tremen-
[113] dous methodological significance, we present these remarks by Engels in full. "In recent times," he writes, "among certain rationalistic ethnographers, it has once again become fashionable to reject the existence of group marriage. Therefore the following account, which I translate from Russkie vedomosti (Moscow, the fourteenth of October, 1892, Old Style), is of great interest. It not only explicitly confirms the existence of group marriage, i.e., the right to mutual sexual intercourse between a certain group of men and group of women, but it gives an example of a form of it which closely borders upon the punalua marriage of the Hawaiians, i.e., the most developed classical form of group marriage. While the typical punalua family consists of a number of brothers (uterine or more distantly related) who are in marital cohabitation with a certain number of uterine or more distantly related sisters, we see on Sakhalin Island that a man is married to all the wives of his brothers and all the sisters of his wife, and this means, if we examine this phenomenon from the female point of view, that his wife has the right to sexual intercourse with the brothers of her husband and the husbands of her sisters. The distinction from the typical form of the punalua marriage is therefore only that the brothers of the husband and the husbands of the sisters are not necessarily the same people. I must note that this case confirms what I wrote in Proiskhozhdenie sem'i /The Origin of the Family/, 4th ed., pp. 28-29: "This group marriage hardly looks as terrible as the imagination of our Philistines, accustomed to prostitution and brothels, pictures it." "The savages living in group marriage certainly do not lead the dissipated life that these Philistines lead under the cover of secrecy.

/xxvii/ "This form of marriage (at least in the cases still met in practice) differs from a free pair-marriage or polygamy only in that sexual intercourse is permitted by morals in a number of cases which, under different conditions, involve stern punishment.
● [178] The fact that the exercise of these rights is dying out in practice proves only that this form of marriage itself was long ago condemned to die out, as is confirmed by the infrequency of the traces of its existence."

/17 cont./

174 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in
174 a colder climate. The most typical proof of this kind is a remnant
171 connected with their winter abode -- the dugout. The Gilyak dug-
342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

342 There are also times when the smoke opening in the Gilyak
796 yurt once again performs the function of a door as among the
● 178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt; through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu
[177] yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited by us is actually a
[192] remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

342 /18 cont./
796 (kuzind and jugynd), which is fully consistent with the manner of
● 178 entering and leaving through the smoke opening.
192

I shall not at this point speak of any other aspect of the
171 arctic way of life. I shall mention only the remarkable fact that
174 riding on dogs (we encounter it among the Yukagir, the Chukchee,
492 the Eskimo, the Aleut, the Koryak, and the Kamchadal) is undoubtedly a characteristic peculiarity of the purely arctic way of life adopted by the natives of the Amur region, the Ainu, the Goldi, and the Orochi, from the Gilyak. The Gilyak term "tu" -- dog sled -- became the property of both the Ainu and the Tungus tribes. The priority, as it were, of the Gilyak in this respect is clearly revealed in everything. The Ainu and the Tungus tribes (the Goldi and the Orochi) have adopted from the Gilyak not only the term and the principle of conveyance on dogs, but also the details of building the sled, the ways of sitting on the sled (astride, with the feet on ski along the sides of the sled), the harness of the dogs, and driving them. It is remarkable that among the reindeer Chukchee, among whom dog-raising is preserved only in legends, the Gilyak way of sitting on the sled (astride) has been preserved to the present. The same way of sitting was habitual among the Kamchadal as well.

In connection with this hypothesis, it is interesting to compare a very widespread legend.

173 Among the numerous legends that I have collected about
174 the origin of the Gilyak clans, I have frequently encountered a
133 legend about how this or that clan came to Sakhalin on the so-
[614] called "hovykh." By "hovykh" the Gilyak mean everything that is carried on the current of a river or sea, for the most part clods of earth or tundra turf broken off from the bank, and also floes of ice which are carried on a sea current. One such hovykh is still pointed out on the eastern shore of Sakhalin in Nyyvo Bay, where it formed a minuscule island opposite the settlement of Takrvo.
[614] It is alleged that a part of the clan now living in the settlement of Tangi on the western shore appeared on this hovykh. There is nothing impossible about conveyance on a hovykh. It not infrequently happens that during the spring hunt for seals a sudden

/24 cont./

157 for whom the outward severity is only a mask concealing a nature that is acquainted with passions.

291 /25/ The winter clothing of the Gilyak, of both men and women, consists of a fur coat of dog skins, the fur outward, and fur leg coverings and boots of sealskin in the Chinese fashion. Besides this, the men wear skirts of sealskin descending from the belt to the knees, not for the sake of adornment, but to protect the fur coat from wear and damage while sitting on the ice, in the snow, etc. The winter costume is very imposing. In a black coat of dog fur fitted at the waist, against whose dark background the pale-gray skirt made of the skins of young seals stands out in gentle contrast, in finely sewed boots with narrow toes, in a hat of fox paws and with earlaps, in fur gloves covering the sleeves -- the Gilyak makes a fine, dashing impression.

[178] In summer the national costume of the Gilyak (now falling completely out of use) consists of a peasant's cloth coat, armyak, made out of fish skins and trimmed on the edges with designs. In recent times a summer garment of colored daba or American drel' has come into style. The women's summer garment is much more imposing: light and flowing dresses made of colored imported materials, mostly red in color, with beautiful decorations along the edges, cockle shells sewed on, and all sorts of rattles which sound at the least movement. Only the large boots completely disproportionate to the length and size of the legs and tightly stuffed with hay, which replaces stockings, spoil the lightness of the figure of the woman, giving her a heavy, awkward look.

136 Now a few words about the material conditions of life of the Gilyak. A remarkable affair. The very condition that has such a [133] fatal influence on the nature of Sakhalin, namely, the cold northern current, this ruinous condition has made human existence [226] possible in this rugged country. It is this that in certain seasons and with astronomical precision brings masses of salmon and other fish that travel in masses upstream to spawn, filling the rivers and streams to such a degree that one can obtain the fish in any amount by means of a simple, sharpened stick, a method to which I myself resorted during hungry intervals in my travels. This [172] abundance of fish and the ease of obtaining them explains the strange fact that -- as the marks of the excavations made eloquently show -- in this rugged country the existence of primitive man was possible at a very remote time.

/37 cont./

582 601 daughter of the father's sister is not permitted. In the predilection shown by the Gilyak for such a marriage, the almost religious-reverential attitude toward a custom which at one time was indubitably a universally binding, religio-social requirement is 582 perceptible. Every woman, as soon as she bears a son, approaches 584 her brother, if he has a daughter, with a request for the engagement of their children. The ceremony of engagement consists in the binding of the arm of the bride with a piece of dog hair by the child-groom or by his father (a symbol of being carried away on dogs and also an echo of the totem /38/ cult of the dog). When the bride reaches five or six years of age, often even earlier, she goes to the home of the groom, with whom she grows up and is educated until she enters the period of maturity, when, without any ritual, 582 she in fact becomes his wife. The degree to which the principle of 614 compulsory marriage exclusively with women from the clan of one's mother is still strong may be seen from the fact that, if even one clansman of the clan, let us say, A, took his wife from the completely alien clan, D, that is quite sufficient for all the women of the first clan to become forbidden to clan D, because the fact, even though unique, of the moving of women from clan D into A makes the first (D) the clan of the mother, into which the marriage of women from clan A is forbidden. In this case, how- [125] ever, "numbers" may testify most eloquently. During the census [601] that I made specifically for the study of the structure of the Gilyak family and clan, I was impressed from the very first days by the abundance of married (i.e., other-clan) women in each clan who called each other "sister" and "aunt," and not only in name, but who had actually been taken from one clan, namely, from that one from which the given clan had taken its women (the clan "of the mother") from ancient times.

582 If this regulation of marriage survives to such an extent even 178 now, in spite of the obstacles mentioned by us that lay in its way, then without doubt it was originally universally accepted, and even if all traces of it had disappeared in the contemporary customs, sufficient proof of its existence remains in the kinship terminology preserved up to the present in all its originality and recreating with extraordinary objectivity the old regime which gave rise to it.

/38 cont./

582 178 It is not difficult to understand even the raison d'être of this institution which at first glance is strange and confusing.

582 614 Such a binding regulation of marriage conformed as much as possible to both the basic principles of the clan and the individual feelings of the separate heads of families. The clan, at its base, rests on the principle of blood unity. In an agnatic clan this unity will most ideally be attained if all the wives of the agnates are taken from one clan close in blood and, of course, from the clan of their ancestress. This not only satisfies the formal principle of the unity of blood, but confirms the unity of the cult of the ancestors in both lines, so important in the eyes of primitive man.

If we now turn our attention to the psychology of the individual members of the clan, it /39/ fully coincides with the clan where the sons, in accordance with the general rule, remain within the clan and take their wives from outside. It is natural that every mother prefers to have as a wife for her son a woman very close to her by blood and furthermore to assemble within her family women from that clan from which she herself comes. She cannot, however, marry her son to the daughter of her sister, for her sister is either a wife of her husband or of his brothers, and consequently the daughter of the latter is either an own sister or an agnate of her son; all that remains is to marry him to a daughter of her brother, as has become established in reality. For the entire aggregate of the women of a clan it is of tremendous interest that they are all of a common origin and feel behind them the solid protection of the whole clan from which they come.

Such a marriage (of a son to the daughter of his mother's brother is equally in the interests of the father, who thus marries his son to a kinswoman (praplemyanitsa) of his mother. Since the sister of the husband also desires, in turn, to marry her sons to the daughters of her brother, a mother cannot marry her daughters to the sons of her brother, and, thus, an exchange marriage, i.e., an exchange of women, between two such families was impossible, just like a marriage within a family.

These were deciphered by Klaproth and the Archimandrite Avvakum. One inscription reads: "Temple of eternal peace", the other is a Tibetan translation of the Sanskrit sacred formula: "Om mani padme hum", i. e., "O jewel in the lotos! Amen!" The temple was supposed to have existed in the time of Genghis Kahn. Neighboring Gilyak come to these pillars and offer sacrifices, that is, they decorate them with wood chips, pour millet or spirits on the earth, etc. Thereupon they promise themselves an abundant yield of fish.

Near the village of Vaida high above the water is to be seen a thin, dry tree trunk parallel to the water level and jutting out of the steep rock wall, with branches radiating out in a circle. This tree trunk is held to be sacred by the Vaida-Gilyak. It is also often decorated with wood chips and above its roots, on the edge of the river bank, the bear festival is held. The above-mentioned church bells also belong to the sacred objects. [RCH: see category 116, p. 237] [242]

Almost all Gilyak believe in a future life, which may be gathered from the customs relating to the burial ceremony. Life in the hereafter is pictured exactly like the present life, except that it has neither age nor death. A deceased aged person regains his youth there, a married couple is united anew. There is neither hell nor paradise. (1) The

1. A similar belief is said to exist among the natives of Kamchatka.

fate of evil persons differs from that of good ones only in the fact that the souls of the former do not immediately reach that world, but must roam about on the earth for a while, usually in the form of an animal, particularly a dog. This is the Gilyak purgatory which certainly cannot be called the most absurd idea of purgatory. "The beyond" is put not below, but above somewhere in heaven.

However, even among these savages there are sceptics, or rather unbelievers. Thus a Sakhalin-Gilyak, after a pause, told a visiting Russian priest who sounded him out on religious matters: "What business of ours is God! If we have enough sable and fish we shall live, if not, we must go hungry." Another Gilyak in the vicinity of Sofiyskoye positively denied immortality in speaking to Russian peasants, pointing to a fish and saying: "just as this fish will disappear if I put it to death, so also man disappears."

755 softly or whispers magic formulas, walks back and forth
534 like a pendulum, far into the night. Sometimes he leaps
over a burning pile of wood, or he makes the sick person
755 run about if he is able. Some shamans impress their public
786 with more difficult tricks. They appear laden with chains,
778 whirl about like mad, and in a state of ecstasy may hurl
themselves into the fire and make believe it does them no
harm. Narcotic drinks are not given, but the sick person
sometimes gets certain herb infusions from which the
shamans expect healing effects. The magic feats are
corroborated with various prescriptions relative to the
spirits. For instance, an idol in the shape of a human being
is placed next to the sick person, its face smeared with
cranberry juice, and the sick person himself has wood chips
hung around his neck, etc. Or the shaman orders that the
clothes of the sick person be hung out in the woods and that
he be [244] dressed in others. This is done in order to
outwit the kobold who saw him only in his old clothes.

755 This medical magic is usually begun in the evening, at
789 twilight, when the imagination is more active and also when
deception can be more easily concealed. The shamans also
seek to consolidate their authority by means of various
magic tricks that otherwise have no practical meaning. For
instance, they swallow knives and needles. Not long ago
there lived a celebrated magician near Sofiyskoye who
gouged out his eyes and thrust a knife into his belly, which
was afterwards excreted. He was later exposed in these
juggling tricks by an itinerant Russian merchant. It was
shown that the knife blade, instead of penetrating his belly,
disappeared into his pants and passed into a receptacle.
After that the magician was completely discredited.

789 Finally, there are a few superstitious practices we must
372 mention. If a Gilyak goes on a journey he must drink some
271 water in the yurt shortly before he leaves; he does the same
thing as soon as he has returned. The hearth fire is also
to a certain extent sacred for the Gilyak; it is not carried
outside and the Gilyak do not like to have a traveler light
his cigar at it and then leave the house.

177 This chapter is also the place to say a few words about the
797 baptized Gilyak. There are not many of them, but no one
knows exactly how many, first of all because many of these
"Christians" let themselves be baptized several times, in
the city, for instance, as well as by their village divine.
From this we may see how much they really understand of
their new religion. We have said before that they regard

177 baptism a means of guarding against abduction of their
797 women. Those who are baptized live just like the unbaptized ones, their children are usually not baptized, and their corpses are cremated. Their fellow-tribesmen by no means persecute them. A baptized Gilyak is regarded by the others somewhat as though he had shared in some special acquaintance.

302 XVI. Intellectual Development, Time-Computation,
305 Legends.

The Gilyak count to quite a high number: 2000, 5000 and more, but of course they almost never use such high figures. The Gilyak year is half as long as the real one: winter which probably lasts half a year, is regarded as a whole year, the [245] remaining year being regarded as another one. Moreover, there are special names for the four seasons.

321 The Gilyak know how to find their way by the stars, and the Big Dipper and pole-star are their guides. They seem to have no particular assumptions with regard to the characteristics of the heavenly bodies. From some I heard that the sun and moon were inhabited by people. I could not learn anything definite about whether they might not be "the beyond". It can only be said that the other world is somewhere up above, not under the earth, as with the ancient Greeks.

305 The Gilyak do not count their years. Only of quite young
561 people one can hear it said approximately how old they are. Older people cannot remember their age and immediately say: "the Gilyak does not count his years". This means his own age, for with them there is no question of chronology or history.

173 The majority know nothing about their past. But from
181 several intelligent Gilyak I heard that once "a long time
721 ago", there was a war between the Amur-Gilyak and those of Sakhalin; that the latter came with a great many boats, but were defeated. There is also a tradition on Sakhalin which has it that three or four generations ago a long war raged, whose cause was the abduction of a woman. It is difficult to say whether this war is the same as the one of which the Amur-Gilyak tell. In any case, the long intervals between such wars testify to the peaceableness of this tribe. The Gilyak knew nothing of fighting with the first Russians who arrived.

In answer to the question whether they had always occupied their present settlements, most of them answered simply: "I do not know". However, I heard from one of

173 them that the old people had told him that one part of the
181 Gilyak came across the ocean, the other, from above, that
721 is, from approximately there where the city of Blagoveshchensk lies. May we not understand this to mean that they crossed over from Sakhalin and that the first immigrants mingled with the Goldi who were already to be found on the Amur?

153 If one asks how intelligent the Gilyak are, it may be said that for savages they are rather intelligent. In the arts, however, they are very backward. They know how to draw or carve various animals. The figures are coarse, but nevertheless [246] recognizable. Music and poetry are absolutely embryonic, but at least they like to hear music. Their memory for places and persons is astonishing. If a Gilyak meets a stranger somewhere, he recognizes him instantly after many years, and at the same time recalls all kinds of minor circumstances accompanying the original meeting. In languages, too, their memory is not bad, at least many of them speak Russian, but the reverse is not true. It is, however, doubtful whether the Gilyak's memory would be adequate for systematic instruction. In instruction the different facts cannot be directly understood but must be interpreted from the words of another, and thus a certain
212 imagination and judgment are needed. For a time there was
872 a school in the village of Mikhaylovskoye where Gilyak children were taught to read and write. This they learned very well, but nothing else was taught. The Gilyak, of course, do not have their own writing.

153 Curiosity and a desire for knowledge are average. The
609 former I judge in comparison with other uncultivated peoples whom I had the opportunity of observing, especially the Bashkir. The latter are so intrusive in their curiosity that they give the traveler no peace. Of course, the Gilyak also gather around a stranger who stops at their yurts, but not in great numbers; they keep at a certain distance and soon disperse. If they come into the house of a Russian, they look about them with curiosity but they do not immediately reach for everything that strikes them and do not ask for presents. In this, as in many other respects, they are decorous people.

153 If I must praise them in this connection, I must also say
821 that their desire for knowledge is not sufficiently matured
177 that they would be interested in the main springs of culture. It seldom occurs to them to ask a Russian about a machine, about economic questions, nature, institutions, religion,

153 etc. If such topics are brought up, however, one may
821 converse with the more intelligent of them for a short time.
177 As an example of a philosophical discussion with a Gilyak, I should like to quote the interview of a Russian priest (1)

1. The deceased V. Kasansky.

with a Sakhalin-Gilyak who maintained he had observed nothing of God's ways. After [247] a religious discussion the Gilyak suddenly asked: "and why do the Russians say that the earth moves around the sun, when what we see is exactly the opposite?" "Do you have lice in your hair?" was the priest's counter-question. The Gilyak became somewhat embarrassed, but admitted that occasionally he had them. "Good", replied the witty priest, "now if such a louse sits in your hair and sees nothing but your hair, and then goes walking about, it begins to think that it alone is moving, but that your head is standing still. And yet your head, meantime, might be gliding along with you in your boat. Even so is it with us lice on earth: the earth may be moving and we may not be aware of it." The Gilyak grinned but did not reply to the extemporaneous astronomical proof of the little father.

147 XVII. Sickness and its Treatment.

838 In general, the Gilyak are healthier than civilized people. Their endurance of cold and hunger is amazing. To go without food for a few days and yet continue the hunt in the taiga, or to stand for hours up to their chests in the coldest water - all this is nothing to them. Moreover, weakness in body structure, congenital defects, paunches, bad teeth, etc. are seldom found among them. Hermaphroditism was the only deformity that was known to me.

164 Constitutional illnesses and later sicknesses did not have many representatives. I did not find cancer, tuberculosis and scrofula. I saw two cases of leprosy in father and son in one village; another son was healthy. Syphilis occurs, but rarely, in isolated cases, and near cities and military posts. In any case this disease does not have the significance among the Gilyak that it has gained among the native Kamchadals. In spite of the fact that they are hardened toward wind and weather, they suffer rather frequently from rheumatism. Toothache is rare.

bold that they nibble at the clothes that the inhabitants are wearing on their body. Jakobsen was told that they even gnaw at the fingers of the little children.

171 The clothing of the Gilyak of the male and female sex is gen-
291 erally like that of the Goldi; they also use the same materials:
177 fish skin, hides and Chinese or Russian cloths. The festoons customary among the Goldi women (see above, number XI, p. 173) [see Goldi source 18: Genest--Analyst] do not exist among Gilyak women; the latter generally seem to be interested less in gracefulness than durability in their clothing. The curious belt worn not only by the Goldi but also by the transitional people mentioned repeatedly earlier, is also in use among the Gilyak and with the
177 same appendages as there. It might be mentioned right here, also,
372 that, aside from stone and steel for lighting a fire, matches are already in use with them in boxes which are either made by the
171 Gilyak or imported from the Russians. The arms of the Gilyak
411 are the same as those of the Goldi. Everywhere they still use
531 bow and arrows, knives and lances, and the last-named weapon often appears in beautifully worked models with inlaid figures of
227 silver or copper. For fishing they use nets which they make them-
411 selves, angling hooks and harpoon-like instruments which at
501 times have three to four spikes. To move on the water they use larger boats and skiffs made of birch bark which go by the name
492 of amerotscha; on land they travel in winter by narrow sleds to
231 which are harnessed eight to ten dogs. For that reason one will find a large number of dogs in the Gilyak settlements just as in the Goldi villages. These dogs are highly vicious and on occasion even dangerous for the stranger.

171 During his brief stay among the Gilyak, Jakobsen was of course
751 unable to form a judgment of their character; nevertheless his
301 experiences are sufficient to make the following assertion: The Gilyak are no less superstitious than their neighbors. The amulets (1) against diseases which one so often encounters

1. Be it noted on this occasion that Gilyak virgins wear rings on their chests as amulets and no offer however high can induce them to sell them. All the same, our traveller was able to acquire such a ring from an old Gilyak who had stolen it. The latter did not dare to offer it for sale to Jakobsen in the village itself, but met him on the river to conclude the bargain there. The traveller believed in this case that it would be permissible to silence his conscience and to enter upon the bargain.

15
14 Analyzing this table, we see that 1) all the women in c
A have been taken, by generations, from clan V, which me
that Andrei's mother is a sister of Vasilii's father, and conse
quently Andrei and Vasilii are cognate cousins. 2) Similarly
clan V, Vasilii's mother is a sister of Stepan's father from cla
S, and consequently Vasilii and Stepan are cognate cousins,
3) in clan S Stepan's mother is the sister of Andrei's father fr
clan A, and consequently Stepan and Andrei are cognate co

Thus, not only are each pair of spouses, one to the othe
male and female cognate cousins, but the ancestors of each
are, one to the other, cognate cousins. In a word, the foun
of all three clans are close, blood kinsmen married to femal
cognates of the same degree of kinship, and each generation
marries cognates of the same degree of kinship as its fathers
mothers. This is a clear example of how weak the terms ex
ogamous and endogamous are: the exogamy of the Gilyak c
does not exclude marriages between close kinsmen. It turns
that endogamy prevailed within each phratry; each of its
branches was exogamous.

15
14 Such was the original scheme. Time and circumstance
emigration, depopulation, the dispersion of clans, an accid
78 scarcity of women in the mother's clan, and other such caus
naturally led, on the one hand, to a deviation from this syst
and, on the other hand, to corrections, whose aim was to
reconcile the old norms with the new demands of life. All t
superstructures, if I may express myself thus, have quite con
fused the genealogical systems and the marriage norms, and
usually happens, the categorical imperative, weakening in
respect, becomes more widespread in another. Due to exter
conditions, the rule to take one's wife from the clan of one'
mother weakened, but, on the other hand, the prohibition
against giving wives to that clan (albeit completely alien fr
which someone, even a most remote clansman of the given
took his wife has received the most widespread interpretatio
(on the presumption that it is the clan of the mother). From
this the following has become established:

by Gilyaks, even though the majority of them would not think of concerning themselves with such a disgraceful hunt.

XIII Economic and Social Conditions.

Among Gilyak there is no question of a body of laws, to say nothing of written statutes. Nevertheless, common law which functions in place of fixed statutes is equitable and just. The shadow of a prerogative may be felt only where it is accompanied by real qualities. But even the preponderance of natural talents is very modest; the race consists of individuals among whom the capabilities as well as the assets which are given them by nature are pretty evenly distributed.

There are "rich" and "poor" Gilyak, but these terms must be interpreted in a very limited sense. A wealthy man who is in a position to support three to four wives is a rare exception. The "rich" man, besides having a greater number of wives, possesses objects which have a certain value, such as "beautiful" clothes [230], many and good dogs, etc. and sometimes quite useless objects which are kept merely for effect, as, for instance, lengths of cloth of gold (which in Greek churches are used for various decorations). The above-mentioned clumsy lances belong to such luxury articles. There are many rich men who keep on hand a couple hundred silver rubles in a box.

Contrariwise, there are very few Gilyak who are not capable of supporting a single wife or even themselves. Such individuals are either sick or alcoholics, for there are no actual reasons for external poverty: fish, game, wood, berries etc., are everywhere to be found, but of course one must obtain them with one's own efforts. A scarcity of fish is a rare exception among the Amur-Gilyak. It happens in those years in which the kita is scarce (this usually coincides with very high water). The Sakhalin-Gilyak often have reason to complain of a scarcity, for there the various species of salmon, even in ordinary years, do not come up the rivers in such numbers. On the other hand, they have more bears, and thus the island Gilyak are in a position to trade young bears for dried fish with their mainland kinsmen. If there are not enough fish, the Gilyak eats cedar nuts, berries, game, etc. All these are of course only a poor substitute, but in any case we cannot speak of actual

/43 conc./

Since at the present time it is not always possible for all laymen to take their wives from one clan, the clan of the mother, certain members of some clan (M. for example) are obliged to take their wives from other clans. And so, on the strength of the old presumption that the clan of the wife of a clansman is the clan of his mother, all these clans for several generations become prohibited for all the women of clan M. for whom marriage into these clans is not allowed. And this is not all. This prohibition, in essence having lost its former raison d'être, is applied not only /44/ to that clan of which some members have married, but also to a third clan, C. which, in turn, takes wives from M.

In the Gilyak terminology of marriage this prohibition is etymologically expressed thus. Clan A., giving women to clan M. is called the ajmak's (father-in-law) of the latter, while in relation to clan N., which in turn takes wives from clan M. it is — i.e., clan A. is called nyma ajmak's (distant father-in-law); and so the prohibitions lying on clan M are carried over to clan N. i.e., clan A may not take women not only from M. but also from N. The degrees of prohibition, however, do not extend beyond the ajmak's of the second degree.

The entire future evolution of the Gilyak family and clan lies in the history of the origin of the prohibition. In what way could this widespread prohibition arise? We saw that the Gilyaks were not afraid of marriages within distant degrees of kinship. This means that the reason must be some other one. As a matter of fact, in the face of the inevitability of cases where it is impossible to take wives from the clan of the mother, the Gilyak, conforming to the religious imperative, should have, in such cases, considered the most suitable clan that one from which at least the clan of his mother took wives. And, if unable to take them from it, he went to that clan from which this latter took wives. i.e., went by degrees to the ajmak's of distant degrees of kinship, just as within the clan of the mother. In this second case, however, in the family of the mother's own brother, he went to the daughters of the first, second, etc., cousins of the mother. Thus, the distant ajmak's clan were, as it were, reserve clans of the

/44 conc./

mother, but it is natural that practically it was inconvenient to extend the prohibitions to the ajmak's of all degrees of kinship; and it was only necessary to extend the ajmak's of the second degree, to which the prohibition was limited. But with the appearance of this prohibition, the tri-clan phratry ceased to identify itself with the clan of blood — exclusive marriage within three clans became impossible, because in a tri-clan phratry (see the table) clan A. the ajmak's of the first degree for V and of the second degree for A: consequently, the women of clan A cannot marry into clan B. It is necessary to add to the phratry a fourth clan, D (Dimitri, Dar'ya). let us say. The changes that occurred in our phratry considered in the first degree, in the second degree, would now be Dmitri's clan D. taken, while the latter would have as his wife a sister of Andrei (clan A). These changes, however, the prohibitions undoubtedly spread to the ajmak's of more distant degrees. The phratries naturally /45/ had to consist of an ever greater number of clans. If the Gilyaks were, then, due to the reasons mentioned above. it is necessary in the selection of wives to resort to completely alien clans. the phratry has naturally lost its former, strictly closed position.

It is not hard to imagine how much genealogical information one must have to make this complicated, confused system. in order to correctly decide. in each given case. on the right to marry an ajmak's clan. And. actually. if anything this constitutes a whole science. to which a Gilyak dedicates himself from his earliest childhood.

IV.

Some Conclusions from the Norms of Gilyak Marriage

I have already said that Gilyak kinship nomenclature and their norms of marriage in general do not represent an isolated case. As analogous nomenclature and analogous phenomena of group marriage are found among a case of primitive peoples in the most remote parts of the world. But the details that I

/149 conc./

III.

The Classificatory System of Kinship and the Norms of Marriage

Now we shall see to what degree the aforementioned kinship system corresponds to the contemporary norms of sexual intercourse and marriage.

Among the Gilyaks, at least at the present time, we cannot speak of any kind of general prohibitions against exogamistal sexual relations.

Sexual relations with a woman in the eyes of a Gilyak is a completely natural, simple and natural act, like any other natural act, satisfying a certain natural need of man. Prohibitions and restrictions apply only to definite circles bound by agnate or cognate relations. Outside of these circles there is no regulation or centure of sexual behavior, either on the part of public opinion or on the part of religion, or on the part of the prohibited circles, sexual relations out of wedlock have only one restriction: the reaction of the one or the other party concerned. Sexual relations with a married woman or women of a certain /150/ locality, may be aggrieved at an alien man, and he will pay a certain fine, or the husband may in a territory not his own, which, by the way, happens very infrequently, and Hammurabi code and Mosaic laws are not involved. A stranger caught in flagrante delicto with a married woman is slain at the scene of the crime; such was the custom at least until the most recent times; only the fear of penal repression has begun to restrain some from impulsive slayings, which are beginning to be replaced by duels and ransom. The woman suffers less in such cases. They bear her thoroughly, but the affair never goes so far as killing her; in the first place, because, as we shall see further on, a woman is always considered the cognate of her husband, and, in the second place, because she is an article of value, being taken out her husband dearly, and furthermore she is a necessary worker. In any case, the matter is not settled without repression, bloody

/155 conc./

women increases correspondingly in these clans of father-in-law, because in each of the clans of father-in-law there are clans of wives — ajfgs. Nevertheless, the extension of the prohibitions in the clans of ajmaks's of the second degree is thus naturally brought about within a small-sized tribe, with a population of scarcely four and a half thousand, entirely understandable contents, leading to some limitations of the strict principle, namely, that the prohibitions at the second degree do not go back further than the clans of ajmaks of the third degree, and, if one clan or another takes wives from many clans, then the prohibitions are limited to the clans of ajmaks's of the second, and, in acquired women than children, then even in the second generation the limitations fall away. The clan of jaf, for example, takes wives from many clans, called yuk, remains. From the kinship nomenclature we know that a man from jaf takes as his women from different clans of women, namely, on the one hand, to the clan of wives of his ojfa (descending line), and, on the other hand, to the clan of wives /156/ of his afzh, i.e., of his younger brothers (nuns), and sisters of these wives. As concern the clan of wives of his ojfa, there are no prohibitions in examining the prohibition between persons of the ascending generations and the wives of those of descending ones. The prohibited clans are only those of the second degree of ajmaks's. From the kinship terminology we know that with respect to the clan of wives of his afzh, he is an ajmak's in relation to the clan of the C. clans. These secondary clans, in distinction from the first, are called nyma (distant), for example, nyma ajmakh -- distant father-in-law, nyma yngl -- distant son-in-law /yzat/.

Finally, in view of the fact that at the present time it is not prohibited for various persons of one clan to take wives from various clans, each such marriage establishes in relation to each new clan a new ajmak's, and, in the ajmak's-yngl terminology, i.e., each clan as a whole can be the ajmakh and yngl of a whole series of clans.

/188 conc./

such circumstances, it would be necessary for a considerably large number of the population who are not well-to-do to remain unmarried. And it is just for this reason that there is the right to marriage with persons of the clan of afzh; about which we spoke above appear as a corrective. In the first rank of those available to the Gilyak are the daughters of his mother's brother, next their relatives, cousins, and, finally, any daughter in general of that broad clan of persons whom the Gilyak calls ajmakh (father-in-law).

We shall now consider the nature of the relations of these latter with their son-in-law /yzat/yal, and it is clear, therefore, that relations between the Gilyaks and their wives, among the daughters of one's own ajmakh, is surrounded by the most favorable conditions. In an extreme case, a man may take a wife from the clan of his father-in-law. But in view of the generally small number of women in comparison with the number of men, this extreme case, logically consistent system of marriage, like every religious rite, is a fetish of ancient times, and, in the present time, it is a fetish of extended norms. On the other hand, under the influence of the religious imperative of exogamy and has greatly weakened the traditional matrimonial relations, even this prohibition has lost its strength. But there is a point there appears on the scene another powerful corrective to the inherited matrimonial relations. Marriage, absolutely, delimited right to sexual intercourse between classes of ga and afzh. We turn next to this right.

Marriage. Though the prohibition and obligation of individual marriage in the classes ga and afzh, have been considerably shaken by the inevitable influence of both historical conditions and the conditions of life, the religious imperative of marriage, the right to sexual intercourse between persons of these classes, continues to be preserved in full strength. This right, it is true, does not carry with it a definitely compulsory character. A woman cannot be coerced into sexual intercourse either by her kin or by her ga. It is not even allowed that the father, brother, or husband of a woman propose to the daughter [illegible] [illegible] [illegible]

/220 cont./

cian to change residence and to withdraw more and more from their business. Before they can do so, in the course of a few years, whole clans—family after family —in search of more advantageous hunting and fishing grounds, moved to the most remote regions, from the Tyn'o Tanalia (in the territory of the Aino), to the Amur, etc. Discord between classmates and was play a specific role in the dispersion. In the chapter on the history of the clans we shall see what a huge role these factors played in the shuffling and distribution. A clear illustration is presented by the history of the three clans that we introduced, from /221/ the southernmost outlying districts of the Gilyah territory, bordering on the Aino, they migrated first to the Amur region, then to the Aino territory, near Cape Marii, and from there a part of them moved to the lower reaches of the Amur and, finally, to the middle Amur, almost in the environs of Khabarovsk, where they become completely Gilyahized. It is true, all the numerous branches of this so-widely scattered clan, although they have not even preserved any clan name among themselves, have remained exogamous up to the present, but to continue their old physical mobility has become completely impossible for them. To a greater or lesser degree, such phenomena are taking place in other clans. The principal reason why in real life, just as in the epos, it happens again and again that a Gilyah must travel hundreds of verst to find a wife from the proper clan, but such individual acts of heroism cannot be performed by everyone, and wily-willy there remain exceptions. Most often such a lone person is obliged to have himself adopted into an alien clan and so marry the widow of a member of the adoptive clan and thus completely separate himself from his old pleasry.

If it is not just unmarriageable individuals who move, but whole families, then their offspring willy-willy begin to enter into mutual unions with the native clans.

/220 cont./ Cases of mothers-living brother who the wife became even rarer. In the world of the epos, such marriages are "so terrible and unnatural" that they are almost the usual thing. More than a hundred years ago, Maxim Kimo Mandal Mangi, who had moved to the Tyn'o Tanalia (in the territory of the Aino), to the Amur, etc. Discord between classmates and was play a specific role in the dispersion. In the chapter on the history of the clans we shall see what a huge role these factors played in the shuffling and distribution. A clear illustration is presented by the history of the three clans that we introduced, from /221/ the southernmost outlying districts of the Gilyah territory, bordering on the Aino, they migrated first to the Amur region, then to the Aino territory, near Cape Marii, and from there a part of them moved to the lower reaches of the Amur and, finally, to the middle Amur, almost in the environs of Khabarovsk, where they become completely Gilyahized. If it is not just unmarriageable individuals who move, but whole families, then their offspring willy-willy begin to enter into mutual unions with the native clans.

VI.

The Dynamics of the Destructive Conditions

/222/ Of all the conditions mentioned which are destructive to the pleasry (emigration, population growth, the exploitation of economic equality, seasonal expeditions, the most powerful factor is the depopulation of the pleasry. Earlier, as we have said above, catastrophic depopulation which strikes the individual clans unequally. How much this factor leaves operative on the surviving clans? Let us recall the third table of our four-clan pleasry. Let us suppose that clan A has died out or there are only a few persons left in it, and this is the clan from which clan C took women. We shall consider the first case, where clan A has died out without a trace. What happens then? What has to do with the exogamy of the epoch clan C, which used to take wives from A, and B, which gave wives to clan A? Of course, first of all, the members of these clans will search for new exogamic partners in the pleasry itself, in which only pure marriage is possible.

/224 cont./

But clan C may not take women from D, because the latter is a forbidden clan. Clan B may not give women to clan C because between two clans is not allowed in any case; on the same basis, clan B cannot give women to clan D. These two remains but one solution, that C take women from B. This solution, in addition, has all the advantages of exogamy for both clans. First of all, these two clans formerly did not stand in a marriage relationship to each other. In addition, C, after the disappearance of clan A, is in the closest on the mother's side (for /225/ clan A took women from this clan and supplied women to clan C), and, finally, clan B is the father-in-law of C, although of the second degree, so that, after A, it is the most closely related to clan C. The otic obstacle to the lawfulness of this compromise is that clan C, due to the fact that it gave its women to B, is in turn, tunna ashkath for clan B and thus does not have a right to take women from B. In a word, it seems that with the pleasry's becoming a three-clan one. The only solution is as follows: the marriage of clan C with B, the one, I, which would give its women to D and take women from C. This new clan for the pleasry may appear, as in North America, where, in the case of /226/ the four clan into two fictitious clan (in this case, C would divide itself into two halves, one of which would be in the role of clan D). We have no data on this either in contemporary practice or in legends. But there is another way out. This pleasry of depopulation strucs all the other pleasrias at the same time. And it was easy to find a single clan, a remnant of a destroyed pleasry, which in turn was seeking to unite with a pleasry. That such a solution was the most practical is seen not only from the practice in contemporary life; it follows from the nature of the case. Clan A, died out, but again and again pleasrias can lose not one, but two or three clans, and then they are inevitably obliged to begin rather the co-optation of separate clans into the pleasry, or the merging of different alien clans among themselves to form a new pleasry.

/224 cont./

In just this way, under exceptional conditions, it is true, the fundamental law of exogamy is violated, but only in this, that once it was breached in this way, it had to spread more and more and more. Under the influence of the depopulation of the pleasry outside of the old pleasry, because, if not lawful, at least a completely acceptable phenomenon.

Now we shall consider the second case, where clan A does not die out completely, but only its pleasry becomes sharply thinned out in people. On account of the shortage of women in clan A, a part of the men of clan C where obliged to take their wives, as in the first case, from the closest lawful clan, namely, from B, but in the case where, as in the first case, clan C, after A, is the closest, B becomes just second to C. The otic obstacle to the lawfulness of this compromise is that clan C, due to the fact that it gave its women to B, is in turn, tunna ashkath for clan B and thus does not have a right to take women from B. In a word, it seems that with the pleasry's becoming a three-clan one. The only solution is as follows: the marriage of clan C with B, the one, I, which would give its women to D and take women from C. This new clan for the pleasry may appear, as in North America, where, in the case of /226/ the four clan into two fictitious clan (in this case, C would divide itself into two halves, one of which would be in the role of clan D). We have no data on this either in contemporary practice or in legends. But there is another way out. This pleasry of depopulation strucs all the other pleasrias at the same time. And it was easy to find a single clan, a remnant of a destroyed pleasry, which in turn was seeking to unite with a pleasry. That such a solution was the most practical is seen not only from the practice in contemporary life; it follows from the nature of the case. Clan A, died out, but again and again pleasrias can lose not one, but two or three clans, and then they are inevitably obliged to begin rather the co-optation of separate clans into the pleasry, or the merging of different alien clans among themselves to form a new pleasry.

/225 cont./

merely of the latter. Life, it is true, has somewhat softened the rigor of the prohibition: in some clans at the present time the prohibition covers only those members of clan who are actually living in the pleasry. Formerly, evidently, the prohibition embraced all the members of both clans; even in its variants mentioned above, the prohibition lands unavoidably one way or another to some cases of marriage outside the pleasry.

The case which we have just discussed is by no means unique. It is quite typical for the pleasry and for the daily life of the Gilyah at the present time. As an illustration of this, we can use the legal case which we have analyzed earlier, with the consequences that follow from the marriage of two clans, one of which came into the pleasry from one tsa is from the ashmakh clan and the other from the yungi clan. It is of interest to repeat here that in this case group marriage among women is also lacking, because, in fact, the children of these marriages are considered tyen and cannot marry each other.

Thus, the depopulation and the thinning out of the people of a clan leads to the following extremely important consequences: 1) allowing free marriage to a woman not from the clan of her husband is a kind of free marriage. In the epos of the contemporary Gilyah, marriage from the ashmakh clan to the yungi clan is called a kind of "free" marriage, and the more favored marriage for each individual is a marriage with a woman from the clan of her husband, in which case bride price is not only not required, but is not even allowed. Free marriages are rather pseudo phenomena, which destroy the customary norm for only a moment and then are spontaneously drawn into the rate of the old norm. This comes about in different ways. In some cases a man may not marry for one or another reason from his mother's clan. In the case of the Gilyah, it is not allowed to take wives from the old clan of his ancestors. In other cases, if for some reason a man is obliged to begin rather the co-optation of separate clan into the pleasry, or the merging of different alien clans among themselves to form a new pleasry.

/226 cont./

rarely, according to the old norm, the daughter of the mother's brother. Finally, in some cases the descendants of the old clan, which gave wives to the clan of the bride, in the new clan of the father-in-law, depending on circumstances, may be considered lawful and not considered lawful. It may happen that not merely two, but many more of these cited cases are accumulated in the course of time in the bride price became, in turn, a powerful factor for the spreading of the institution of the free marriage.

The bride price is a very strong and powerful temptation for violating the old norms, even in cases where there was no necessity for violating the old norms.

For poor people, daughters became capital, and the rich, who could pay the bride price, were interest in one direction, it develops the strength of its age-old inertia with great pressure, and, finally, the bride price, becoming a necessity allowed marriages outside the pleasry, having allowed the possibility for marriage with the children of marriages in the pleasry, it has extended the whole system of regulations based on the principle of the bride price-in-the-clan which even sporadically enter into marriage relations with the clan.

This amalgamation of the old institution with the new institution of free marriage, the amalgamation of the old norms and prohibitions have made not only the kinship terminology, but also the character of the group marriage unusually complicated and confused. Under the old system, when marriages were arranged from one particular clan, the picture of the group marriage appeared entirely clear and simple: in each generation all the "brothers" of one clan participated in a group marriage with all the sisters of the same generation in the other clan. For this reason in views of brothers and sisters, the relations, clan of the husband of sisters called each other brothers, for both groups were such in reality.

/227 cont./

With the appearance of the institution of free marriage, the relationship between the two groups ceased to be so perfect. Great clans, i.e., complete strangers to each other, and, if the clan of wives, the clan of the husband of sisters called each other sisters and become the group wives of their husbands-brothers. In exactly the same way, classwomen-sisters may be married to men from different clans, and nevertheless they continue to call each other sisters, strangers to one another, will have group rights to their wives. Thus, the group marriage, profoundly altered, preserves the kinship terminology, profoundly altered, preserves the kinship terminology, profoundly altered, preserves the kinship terminology

/228 cont./

the parent of his to each other, with this difference, that the collective of sisters, upon marrying into different clans, would be broken up into several groups, as in the punalua family, while the collective of brothers, always remaining in the clan, would be preserved in its entirety. And since the Gilyak family is the one that most has survived in the punalua family, it is natural that the Gilyak terminology be the most complete forth of the Turanian system. Actually, we find in it classificatory terms that must have existed in the Turanian as well, but which were lost with the loss of the system of marriage. For example, in the Turanian form which Morgan once considered the most complete, namely, the Tamil, he was extremely important classificatory terms -- "husband" and "wife" -- are not found.

The Tamil system, according to Morgan, developed under conditions where brothers lived in polygamous clans, and sisters had common husbands. Correspondingly, in the Tamil system, a man calls by the same father, not only his own father, but also all the brothers of his father, and he calls not only his own mother, but also all her sisters his mothers; in like fashion, he calls all the children of the brothers of his father and of the sisters of his mother, brothers and sisters. Corresponding to this, there must have also existed a general term "wife," by which a man would designate not only his own wife, but also her sisters and the wives of his brothers, and likewise a general term "husband," by which each woman would designate both her own husband and his brothers, and the husbands of her sisters.

In reality, these general terms do not exist either in the Tamil or in the Iroquois systems. Thus, among the Tamil, a man calls his wife an mainavi, the wife of his brother, anainu, or mainavi, the sister of his wife or husband, an anainu; there is the same lack of correspondence with the term "husband" (1).

1. See the table in Morgan.

/381 cont./

although in such cases in several places on Sakhalin there is already a mere question of bride price, though, to be sure, a very insignificant one.

XIII.

Marriage Terms and Survivals of Maternality

The terms used in the Gilyak language for designating the act of getting married are quite characteristic in a sociological sense.

Like Old Aryan and contemporary Russian, the Gilyak language has no common term for both sexes, such as the English "to marry," French se marier, German "heiraten", on the contrary, in the Gilyak language, in this case, there is a special term for each individual of each sex.

When a man is involved, the verb gend, ingend (not get) with the addition of dhanh (woman) or ar-kzd (wife) is used; thus, gend dhanh, gend ar-kzd, literally "to get a woman is involved, an entirely different verb is used -- ayind (not ayin), which means literally "to obtain a husband or wife" -- person, or ny -- husband, or, without the addition, simply ayind (1) (or -- him 4 avind).

(1) Besides the term of the eastern dialect; the terms are the same in the other dialects, with the usual dialectal peculiarities.

What is the basic meaning of each of these individual terms gend and ayind?

/382/ In the first case, the fact, the male term gend, its basic meaning is entirely clear. This is one of the most frequently used verbs in the Gilyak language, signifying "to take something" and "to buy." With regard to marriage,

/383 cont./

/ghentsinin/, with the wife moving into the house of her husband. -- It is interesting that this meaning of the word disappeared from the consciousness of the people to such a degree that often for the expression "to get married" there is added to the verb ayind the verb ttind, xvin ttind, which would mean literally: "to take a bride." Ttind and xvin ttind are used in the same sense, based perhaps on childhood years with him, and upon attainment of sexual maturity begins marital life.

This fact indicates that the meaning of the verb ttind is explained by many reasons, but the basic reason amounts to a timely strengthening of the marriage relations. In a few years another such lawful claimant may be born or grow up, the son of another sister or female twin cousin. Furthermore, in the course of time the economic situation of both sides may change. The father of the bride may become needy and be endowed by a bride price from the outside. There are cases, of course, where the counts becoming betrothed are of different ages, the bridegroom, for example, may be a grown lad, while the daughter of the bride /383/ is just an infant, but the procedure is exactly the same. A Gilyak boy acquaintance, Pitem, a lad of twelve, married in this fashion his five-year-old cousin, the daughter of Imun, aged, who was living with his uncle Ungvaxtan, his father, and began actual cohabitation with her when the repented his first menstruation to him. But it also happens that a child-wife remains in the house of her parents and moves to her husband's house at the first appearance of menstruation, but no formalities are required for this move, the initial agreement is considered a public act, known to all. "All Sakhalin knows of this," a Gilyak of my acquaintance, who had betrothed his little daughter to the son of his sister, said to me with great pathos. In such marriages not only is bride price not, as a rule, paid, but even no ceremony of it. There is timely an exchange of gifts, but even this is not an official ceremony. Such is the simple arrangement in cases of betrothal of the children of male and female first cousins,

/387 cont./

In another poem, in response to the demand of the bride-groom, the father-in-law makes only one condition: "You will not go back before tomorrow!" He then orders his slaves to prepare a bite for the couple and, turning to his daughter, said: "Eat together with your husband!" That woman -- the wife with our Gilyak. Having eaten, they went out, situated, entered, arranged the house of her young husband, slept with him in the same bed, passed her childhood years with him, and upon attainment of sexual maturity begins marital life.

Such a marriage is called /ghentsinin/ and its conditions are explained by many reasons, but the basic reason amounts to a timely strengthening of the marriage relations. In a few years another such lawful claimant may be born or grow up, the son of another sister or female twin cousin. Furthermore, in the course of time the economic situation of both sides may change. The father of the bride may become needy and be endowed by a bride price from the outside. There are cases, of course, where the counts becoming betrothed are of different ages, the bridegroom, for example, may be a grown lad, while the daughter of the bride /388/ is just an infant, but the procedure is exactly the same. A Gilyak boy acquaintance, Pitem, a lad of twelve, married in this fashion his five-year-old cousin, the daughter of Imun, aged, who was living with his uncle Ungvaxtan, his father, and began actual cohabitation with her when the repented his first menstruation to him. But it also happens that a child-wife remains in the house of her parents and moves to her husband's house at the first appearance of menstruation, but no formalities are required for this move, the initial agreement is considered a public act, known to all. "All Sakhalin knows of this," a Gilyak of my acquaintance, who had betrothed his little daughter to the son of his sister, said to me with great pathos. In such marriages not only is bride price not, as a rule, paid, but even no ceremony of it. There is timely an exchange of gifts, but even this is not a

/389 cont./

of my children and your children also be akhmakh'i. If you do not give your daughter to my son, you will completely break off old ties, and I will be angry." Then appeared the long-awaited exchange of gifts, and the marriage was completed.

After such a ceremony, rarely does anyone refuse his duty, even though this obligation entails the loss of property, for in such cases they either do not give a bride price, or they give a very small one, if the akhmakh is not an ancient one.

Unorthodox forms of concluding marriage. The most varied forms of marriage are observed among the Gilyak nationality. In the class of akhmakh'i. One of the causes was the depopulation of the clans from which they took wives, which compelled them to marry women from other clans and tribes, and perhaps the most important, was an economic one, brought about by the increase of the number of the people of the tribe. Fact, a contract which gave impetus to the development of hunting pursuits for commercial exchange. Objects which formerly had no value, such as the skins of the sable and fox, became objects for which one might obtain not only objects of luxury, such as ornaments, but, perhaps, even food and clothes. Hence, the increase of the number of the people of the tribe. Gilyak clearly remember the time when sables and foxes used to run around fearlessly in great numbers near the Gilyak dwellings, and they could, if they willed, have bagfuls of pelts, /390/ /footnotes 2 and 3 at the bottom of the original text p. 268, referring to Sternberg's Materialy, p. 84 and pp. 87, 88, respectively are not indicated in the text./

Orthodox forms at the present time. Now, as we see, firmly rooted in every Gilyak there is the consciousness that only an orthodox marriage, i.e., marriage from the clan of akhmakh'i, from the clan of the mother, is lawful, "pure." Even on the Amur, where the old forms have especially lost a quantity of luxury objects. Self-interest and beating appeared upon the scene, as well as the desire to excel others

/364 cont./

/ghentsinin/ "pure." And thus /365/ they go around the entire village, meanwhile pulling on the tendon. Then the thief begins to cut the tendon with a knife. A short goes up, it happens that the thief dies from it.

As such is taken also in conventional matters. Before the eyes, in a village where the Nivkh'ski tribe lived, Gilyak is allowed to be bailed; they eat raw yukola.

A stick (xv) -- about an arshin in length with a human chibbisi

If the matter reaches the point of breaking the stick, then they pay some ransom. Thus, in the Gilyak language, a particular balagan of the Mika-y-Tvish'i (the settlement of Kzgu, 1896). Children, Gilyak children, who are brought up in such sexual maturity makes two bride. Women piece both ears in order to get in earnings (ner-ki), formerly men also pierced their ears, but now they do not. Women wear a special belt, the girdle to menstruate. During menstruation the woman puts on her clothes inside out and does not sleep with her wife. Women are also polygamous, but not with her sister, or therefore the thgurmah "the sister of the husband" (1).

Among the Kekhal (Orochi) a man who has two wives accommodates a guest under one blanket.

Among the Gilyak, who live on the Amur when it begins to break up, in order not to blow up the opening of the river. Gilyak, who live on the Amur, have a special tradition: "Women in winter the mother spends one and a half days in it, in summer -- three days.

One must not cry out during delivery -- a sin. The husband at this time does not go anywhere. If a child has died during birth, the woman must not travel on the river or sea for a whole year -- there would not be any fish. For a month before childbirth, it is not permissible to bind anything tightly or to drive in a nail. Women are polygamous, but not with her sister.

During difficult deliveries they open up boxes, tear off patches, and unscrew their rifles. The newborn baby is washed with cold water. The midwife is not paid. Until the umbilicus healed, the

/370 cont./

in the wife half to death. Even his /371/ wife, in such cases, does not stop the husband, however, although the ceremonies are not fully corresponded to reality, it does so all but fully. Even now, every Gilyak has marital rights (it is not considered a sin to the husband of his wife, and the husband has authority and to all the sisters of his wife. Only the elder brother is deprived of this right with his younger sister. The modern method of securing a wife gradually worked itself out from the old clan arrangements, from the collective and individual abduction of women from another clan and the subsequent reconciliation by means of a ransom, transformed in the course of time into the modern bride price. But even today the custom of the abduction of women is seen among the Gilyak of both Sakhalin and the mainland. In part it is a conscious survival of the past, and in part, particularly in the contemporary form of marriage, in part a reaction against the purchase of wives, not possible for every Gilyak. When a Gilyak comes to his bride", wrote, either in jest or seriously, the husband and father of the wife's sister. Thus, the contemporary individual is a pseudo-marriage is a pseudo-marriage, in which the old and the powerful remnants of the old /372/ order of clan marriage persist. Thus, in the Gilyak language, a brother and sister are "Punalua family," which still exists in the first half of our century on the Sandwich Islands (Hawaii) where, as among the Gilyak, each husband has several wives, sometimes without his wife's sister entered without limitations. And, what is still more remarkable, just as the husband of many and the wives of many brothers in the Punalua family called one another punalua (companion, one's half, comrade, friend) -- the word which gave the name to the institution itself, so among the Gilyak these categories of people call one another "nanih" (the word signifying literally what punalua means among the inhabitants of the Sandwich Islands). South, down to the smallest detail, is the astounding similarity of primitive institutions of peoples living in different parts of the world and separated by oceans.

/273 cont./

no one, and this demonstrates how widespread, even universal, it was in quite recent times. The Gilyak tradition tells were fought principally on account of the abduction of women, and they developed into a kind of blood feud by way of payment of a ransom. The entrance of the Russian into the Amur region has led to a considerable decrease in the number of abductions. No matter what efforts accompany the abduction of a woman, the display of a proper bride price is an effort will inconvenitently result in the return of the abducted woman. Thus, the prevailing mode of obtaining wives has become that of purchase. The price paid for a woman is known to the Russian under the term ясак. The bride price is ordinarily paid in article, money, and labor. In the bride price they give boats, kettles, guns, spears, fur coats, pieces of silk material, dogs, and, finally, money. The size of the bride price is in proportion to the wealth of both sides, the age of the bride, and her domestic talents. A woman who is a "good housekeeper" in the full sense of the phrase among the Gilyak is one who understands the culinary arts well, sews garments and footwear well, is industrious and meek. In general the purchase of a wife is a rather expensive affair, and it is usually paid only in considerable bride price. One Gilyak from Kitzhtro paid for his wife with two Japanese sentes (one large one, coming 60 rubles), one spare silk silver footwear, 10 dogs, 10 kettles, 10 dogs, and, in addition, took down his father-in-law's summer yurt, after which the wife was irretrievably abducted. An extremely characteristic method of acquiring a wife, one which recalls /275/ the Biblical story of the service of Jacob for Leban, is that of labor. Some clanless Gilyak will work in a family for several years, and as his reward he will receive the sister or daughter of the master. When the head of a family is a middle-aged man and has no sons, he takes unmarried clanless men as his agnes, instead of a bride price, to share with him all the economic labor for a certain period or for the entire life of the father-in-law. The Gilyak, in contrast to a complete pauper, fishes and kills seals, and all this contributes the common

/276 cont./

inheritance. Only with relation to the daughter does the father enjoy a despotic authority, regarding them as commodities to be disposed of as deeply as possible, although in practice this authority is considerably relaxed by the sincere affection of the daughter for her children. The considerable independence of the sons is determined by the fact that they are acquiring the means of existence, by far fishing with the small nets used by the Gilyak, the co-operation of only two men is requisite; consequently, on this respect the existence of large family households is not caused by necessity. Thus, the prevailing mode of obtaining wives has become that of purchase. The price paid for a woman is known to the Russian under the term ясак. The bride price is ordinarily paid in article, money, and labor. In the bride price they give boats, kettles, guns, spears, fur coats, pieces of silk material, dogs, and, finally, money. The size of the bride price is in proportion to the wealth of both sides, the age of the bride, and her domestic talents. and other objects. In the second case the adversaries fight it out with cudgels until one side admits defeat. The Gilyak are most proficient at wielding cudgels. The Gilyak study this art from childhood, and the children give themselves up with passion to this noble exercise, even to strength or forty sexes nights. In their civil relationships, as a general rule, the Gilyak display veracity, fidelity to their word, and conscientiousness. /284/ Unfortunately, the destructive influence of the rascally propriation of the Amur region has begun to extend even to the most remote Gilyak settlements. The Gilyak have begun to drink vodka at Nikolayevsk, and it is enough to entmoh whole settlements in decent and in beast Gilyaks and whole sets of complicated lawsuits. The court and mediation of the classmen, still exerting authority within the clan, are quite in decay. In the second, prior to the quarrel is between members of different clans, the Gilyak have the common clan of meeting to a mass assembly of [illegible] of different clans for the resolution of mutual disputes. But at the present time this institution is losing its strength, since the Russified Gilyak, who are simultaneously both the chief culprits of dissension and lawsuits, deny to its respect and competence. The Russian administration is going to intervene in this case of the court of "ясак" and honorable men by sanctioning the "biliary-strelkin" by election, regulating the time of their meeting, the mode of their conduct, etc. And a first condition is that the "biliary-strelkin" be of various clans. Observation has shown that the Gilyak are able to elect men intelligently and to appreciate the importance of the elected court sanctioned by the Russian administration.

g very valuable and are estimated at 200 rubles. It has
pened that the owner of such a shield has pawned it to a
sian merchant, but as soon as he got some money,
ght it back.

X. Marriage and the Rearing of Children

Men who have reached middle age are seldom unmarried,
it is even rarer to find married men with four or five
es, for this requires a certain amount of means; besides,
re are too few women. The beginning of a [126] marriage
uires the payment of a ransom (kalym). This does not
sist of money, but of certain necessary items-weapons,
sleds, etc. An average kalym amounts to 200-300
les. There are no special marriage ceremonies, but the
ding celebrations which must also be paid for by the
legroom last a rather long time, -a week or more. Be-
s millet, fish and tea, a great deal of alcohol is con-
ed.

curious, although not altogether unique custom are
rriages between four and five year old children. As soon
he parents reach an agreement, a boy and girl are pro-
nced man and wife. The father of the boy pays the kalym
takes the girl with him, in order to bring her up with
"husband"; sometimes, however, she remains a few more

Sakhalin

/350 cont./

177 themselves give a reason other than the scarcity of iron for this.
325 As recently as a generation ago a steel was a valuable thing, /351/
572 and sometimes an entire clan possessed a single communal steel.
Even at the present time rubbing wood against wood is regarded as the most sacred method of obtaining fire -- a method used in
177 burning the deceased. All the other borrowings are just as much to the credit of the Gilyak as the borrowing of the long-range British rifle is to that of the Turk, but by their consequences these borrowings have inextricably bound the Gilyak with culture... But let us return to that on which their civilization stopped.

262 Even at the present time, the basic food of the Gilyak is
241 the ready products of nature -- fish, fowl, berries, roots; he
● 181 is as yet incapable of helping nature along and accelerating her
492 creation of foodstuffs. He does not plant or sow, or raise domes-
252 tic animals for meat. This is the fundamental feature of a
415 "savage" state. Moreover, Gilyak traditions of times when
323 water was boiled in troughs by means of hot stones and their
194 memories of wooden dishes coated with clay, and the absence
173 of any memory of clay dishes, convince us that the Gilyak have never been acquainted with even the most elementary form of the art of pottery. This again is a feature of the condition of "savages." Along with these, we have another fact -- the training of dogs for sled travel -- a trait which raises them one step to the first stage of barbarism (to use the terminology of the authoritative writer, Morgan). The most characteristic fact, however, in the question of the cultural level of the independent development of the Gilyak, a fact which is decisive and makes possible broad ethnographic correlations, is their family-clan institution, which I have studied in great detail.

Tungus ROS
Southeast Siberia RN

G
T
304 /424 cont./
171 custom of tattooing has always been foreign. As a matter of
177 fact, if one considers that the Tungusic tribes who migrated to the lower Amur in the vicinity of the Gilyak, especially the Olcha, have become assimilated with the Gilyak in the course of time through constant intercourse, mixed marriages, etc. to such an extent that externally for the most part they can no longer be distinguished from them, it is not otherwise conceivable but that they must have also lost their original Tungusic custom
Gi of tattooing there. In part directly, in part through the mediation
304 of the Olcha, the influence of the Gilyak system penetrated to
171 the Goldi and spread farther and farther upstream, so that finally
177 a few scant traces of tattooing still survived only in the most remote part of their habitation area. Whether the branch of the Olcha that migrated to Sakhalin, the Orok, had already lost the custom of tattooing on the mainland or not until they were on the island cannot be ascertained, but in any case the absence of it among them indicates a greater influence on them by the Gilyak than by their other neighbors, the tattooing Ainu, as we pointed out above with reference to their hair style and clothing, and as we shall have the opportunity to note in a number of other connections.

G On the basis of all this one is justified in concluding among
● 181 the peoples of the Amur region, on the basis of their total external
177 aspect, the Gilyak present the most individual and significant appearance, which could not fail to have a decisive influence upon the Tungusic tribes living around them.

/425/ Section 6

OOC Food: Animal and Vegetable Foodstuffs. Household and Table Utensils. Luxuries; Liquor, Tobacco

SS Since all the peoples of the Amur region are fishermen or
262 hunters and only a small part of them living in the closest prox-
171 imity to the Manchu-Chinese and Daur practice any field and garden cultivation, their food is predominantly animal, consisting chiefly of fish or meat. Vegetables play only a subordinate role

Tungus
Goldi

SS /500 cont./
492 of Sakhalin, in that on the former, among the Orochon and
184 Reindeer Tungus, the reindeer serves only as a riding and pack
Gi animal, but on the latter, among the Orok, it serves also as a
492 harness animal, and in this its use joins that of the dog.

SS As dwellers on a great river and its tributaries or the sea
501 and its coastal rivers, all the peoples of the Amur region are
184 more or less oriented toward moving and traveling from place to
484 place by water for the purposes of fishing, hunting, trade, and communication. The diverse nature of the waters on which they dwell, however, makes necessary a multiplicity of vessels for staying or moving on them. In comparison with the dog sleds, always built after one and the same pattern, the boats used by the Amur peoples are very different in form and nature; but it must be stated at the outset that the actual forms adapted to the character of the waters are repeated with minor variations among all these peoples and only a few of them bear a peculiar national stamp.

G None of the Amur peoples spends as much time on the
501 water as the Gilyak, who for the most part live by fishing and
484 who are inclined by their genius for trading to undertake long
(226) river and sea voyages. Nevertheless, in spite of the fact that in large part they live along the sea and obtain their food from it, they are by no means bold and skillful mariners and hunters of marine animals, who in small, easily maneuverable vessels, like, say, the Aleut in their bidarkas, /501/ would be inclined
G or able to battle the high ocean waves. Principally concen-
361 trated around the lower course of the Amur River, which offers
● 181 them, in addition to an extraordinary abundance of fish, a natural and easy route of communication with their close and more distant neighbors as far as the Manchu-Chinese along the Sungari, and, on the other hand, favored by the nearness of a large island stretching immediately in front of the Amur mouth, which cuts them off from the open sea and, with its long meridional expanse, gives them a bridge, so to speak, to Japan, the Gilyak, on the contrary, in their over-all pursuits

/501 cont./

for subsistence as well as in their nature and character, are timid, circumspect, and cautious river and coastal navigators. And the single vessel serving the Amur Gilyak as well as the coastal Gilyak for fishing and for their communication and trading voyages matches this. It is a keelless, shallow-draft boat in no way equal to the high waves of the sea, and essentially consists of only three long boards, forming the bottom and the two side-walls, to which, for closing off the front and rear ends, a few small boards are joined. The most significant and characteristic feature of it is that the bottom board projects toward the front quite a distance beyond the prow (see Pl. XXXVIII /see p.1018/, Fig. 1). It is not level, but curved in such a manner that it goes deepest in the middle, but gradually slopes upward toward both ends.

In order to learn more about the construction of the boat in greater detail, let us follow it as it is produced by the hands of the Gilyak. When the three long boards, each necessarily consisting of one piece, with which the boat is to be put together have been readied, by means of an ax, from the trunks of Picea ajanensis Fisch. (Gilyak twissjk) or the larch (Gilyak koi), and their upper surfaces properly smoothed with a knife, the bottom board (Gilyak moch), about 3-5 fathoms long and one to one and a half feet wide, is given the above-mentioned necessary curvature. For this purpose it is placed with its two ends on two low trestles erected on level ground, each of which consists of two crossed poles driven diagonally into the ground. The unsupported center of the board sags, but, in order to achieve the proper curve, it must be pressed down farther until it touches the ground, which is done either by weighting it with stones or, more simply, by having one or two people sit on the board. It is fixed in this position with a pair of knee timbers driven into the ground on either side and gripping the board from above. Now the two side-boards (Gilyak arp), each about two feet wide and with their lower edges beveled to correspond to the bottom board, must now be accurately fitted to the latter at a certain obtuse angle and temporarily held in this position.

/613 cont./

If one surveys all of the above-described trade activities of the Gilyak, he will not hesitate to acknowledge that they are a people extremely gifted for trade by nature and completely dedicated to it. Too indolent to obtain by hunting the means for trade with the neighboring civilized peoples on a larger scale in keeping with their inclinations, they know how to win them from the tribes neighboring them, who are more skilled at hunting, by means of trade indefatigably pursued from small beginnings. Thus enriched, they undertake, in spite of their primitive means of locomotion, long trade journeys to the Sungari and to southern Sakhalin, to the "Manchu" and to the "Ssisam," and since they exchange the wares and products of the one for those of the other, they serve as middlemen between the two greatest civilized peoples of East Asia, the Chinese and the Japanese. This latter activity of the Gilyak permits comparing them with another Paleo-Asiatic people, the Chukchee, who, likewise only poor hunters, but animated by a great genius for trade, roam over the northern tundra and cross the Bering Strait in order to trade for the furs bagged by the Eskimo in the Yukon territory with the commodities of the Russo-Siberian merchants, and, conversely, along the Anjui, the latter for the former, and so in the polar north they act as trade intermediaries between Europe-Asia and America (3). None of the Siberian peoples can be compared, with regard to its trade activities, /614/ to these two Paleo-Asiatic peoples, except perhaps the Olcha, whose strongly developed genius for trade, however, as we shall see in a moment, must be traced back to the influence of the Gilyak.

3. Concerning this trade of the Chukchee, see the detailed and exhaustive account by Matjuschkin /Matiushkin/ (in Wrangell's /Vrangel'/ travel account, Russian edition, Vol. I, pp. 331 ff.), Ditmar (Bull. de la cl. hist.-philol. de l'Acad. Imp. des sc. de St. Pétersb., Vol. XIII, 1856, pp. 129 ff.; Mél. russes, Vol. III, pp. 39 ff.), and others.

None of the Siberian Peoples Can

/646 cont./

people who themselves are obliged to bear the heaviest yoke, the Ainu, are the ones most involved in the slave trade. Finally, indicating that this deplorable custom of the Ainu and Goldi is rooted in the moral degeneracy to which they have been brought by the oppressive yoke of the Japanese and Chinese on them is the fact that the latter themselves sometimes negotiate the sale of Ainu and Goldi women as slaves to the Gilyak, for which the trading trips of the latter furnish them the opportunity. The Gilyak, on the other hand, who have best been able to preserve their freedom and independence with regard to these peoples, to be sure buy slaves from the Ainu and Goldi and under certain conditions sell them again, but they most decidedly abhor keeping any of their own people as slaves or selling them as such to others. In fact, they were of the opinion that if one of them tried to do it, he /647/ would arouse such indignation among his countrymen that he would be in constant danger of his life.

On the whole, the number of male slaves, as well as that of the female slaves, who are always more common, is small among the Gilyak. The principal reason for this is the high price that they cost both in direct trade with the Ainu or Goldi and in particular in their resale by the Gilyak. It is much more expensive to acquire a slave in trade than to buy a wife. The Gilyak Ssogin in Kuik, for instance, paid far more for his slave, an Ainu woman named Kot, than for his second wife, Malguk from Langr: as noted above, he bought the latter for 155 ja = 310 rubles, but the former cost him 40 pieces of Chinese silk, which alone amounted to 200 ja, or about 400 rubles, aside from other things. In appearance she was far behind his two wives. As will be seen from the following, however, this does not matter at all, in view of the social position of female slaves among the Gilyak. Because of the high price of the female slaves, only very rich Gilyak can afford to keep any, and whoever has one is usually very boastful about it, as, for instance, Ssogin was. Such a possession seems so enviable to them that in order to obtain it many a Gilyak does not hesitate to sell his daughter to a countryman as a wife in exchange for a female slave and to pay the difference in the Purchase price in some other form.

/667 cont./

that the Gilyak expression for "to be indebted" or "to have debts" -- a concept which must be very familiar to the Gilyak in view of the conditions prevailing among their neighbors, the Goldi and the Ainu -- escaped both Glehn and me, in spite of our otherwise quite copious word lists.

Be that as it may, the help given to a poor Gilyak in distress by his richer fellow-villager, business friends, or other acquaintances does not consist of their getting this or that on credit, but of being given free (Gilyak pai) what is needed to maintain life. And, to be sure, this is done as a consequence of the national-communistic spirit, which, more or less peculiar to all primitive peoples, is in no slight degree inherent in the Gilyak. More, however, than among other peoples, the Tungusic tribes, for instance, the communism of the Gilyak is strictly national, that is, active only within the tribal boundaries, which is conditioned and nourished by their sharp linguistic differentiation from all the neighboring tribes and their intense national consciousness. Furthermore, the mind of the Gilyak, so much oriented toward trade, gain, and the increase of property, sets certain limitations on it, for it by no means puts all goods at its service without distinction, but rather only those which Nature herself provides in sufficient quantity and in a condition practically ready for use, and therefore labels, so to speak, as common property. The Gilyak regard as such primarily the products which the sea and the rivers furnish them in quantity, fish, seal, and the like, as well as, next, the dog, fed almost exclusively on these products and indispensable even to the poorest because of its fur, and, finally, what the local forest furnishes them in nourishing or refreshing roots, berries, and other vegetables. It is taken for granted, therefore, that in case of need the rich Gilyak will give to his poor fellow-villagers and other fellow-tribesman who approach him for help as much of his supplies of the products mentioned (fish, seal, etc., and dog furs) as is required to satisfy their most urgent needs in food and clothing. And as long as his supplies of these are not exhausted, no one will perish from hunger or cold. It is quite

/686 cont./

But wealth does come into consideration to the extent that it does among the Gilyak, and those blessed with it do not enjoy nearly as much esteem, moral influence, and popularity as among the latter. But the reason for this, too, in large part is again the greater industriousness and gain-seeking of the Gilyak. If one of them acquires a certain amount of wealth, he continues unceasingly to try to increase it by buying new furs in the neighborhood and on trade voyages, through which his name and reputation /687/ will become known far and wide in the country. The Olcha, on the other hand, are decidedly of a more indolent and more easily satisfied nature in this respect.

Another social trait that distinguishes the Olcha from the Gilyak is that their communism does not work merely within the boundaries of tribal affiliation nearly as much as is the case among the latter. And this is explained by the fact that, while, to be sure, they are most like the Gilyak in their way of life, their customs and practices, on the other hand they are surrounded by closely related Tungusic tribes with whom they have many character traits in common and whose dialects are readily intelligible to them. Thanks to this considerably lessened national consciousness, the individual man, to be sure, finds among them, in case of need, no such support by his more prosperous countrymen as among the Gilyak, but, on the other hand, a decidedly milder and more humane spirit than among the latter prevails over the whole.

Evidence that the Olcha, and likewise the Goldi, Samagir, etc., do not limit their communism to such narrow tribal boundaries as the Gilyak is given by the hunting customs already discussed above (1). On the Gorin, for instance, the Olcha,

1. See p. 910.

Goldi, and Samagir have their hunting tents, but these stand open, with their household and hunting equipment, to all hunters, regardless of what nationality they are, with the tacit presupposition that no pilfering of the hunting booty or implements

Having bathed the bear and teased it to their satisfaction and dressed it in it, they tie it between two posts and leave it alone. It generally uses this respite to give in to the inevitable, now fastened to the ground with its paws for a lair.

The feeding of the bear continues for several years, until the cub becomes a well-fed, large beast, and then they begin the prefestival preparations. This means extensive preparations. For several days, one will have to feed and entertain with all kinds of delicacies, not only clansmen and villagers, but also a great number of guests from other places and, /81/ in addition, the numerous dogs on which these guests came. All this requires trouble, work, and great expense, because, besides dishes of local products, purchases of rice, bread, flour, tea, sugar, and vodka or Chinese grain vodka are made. Here is displayed that remarkable clan organization of the Gilyak, so impressive in its harmonious combination of social solidarity and individual freedom.

There is no compulsory organ to assemble products, to compel, demand, or command. Consciousness of its obligation to participate in the common religious affair, each family works with all its might, not out of fear, not from conscience, cooks all sorts of dishes, helps with the chores, and contributes to the mite, according to its means, toward the expense of the purchases. The money and supplies are handed over to the master of the bear, who, of them without control. No one reprimands anyone, for each one strives to make the festival come off most brilliantly. Several days before the festival, which is generally celebrated in February, a different kind of work begins — the building of an arena for the killing of the bear. The arena consists of a small stamped-down plot of ground, in which, depending on the number of bears that are being killed, is placed one or several pairs of sacred trees-posts hung with inao and covered with complicated ritual carvings; a bear is tied between them. Up to this plot of ground is stamped a long, narrow alley, on both sides of which, in two rows, are set up 30 pairs of young trees; the first 15 pairs are fir; the other 15 are purple willow.

/83 cont. /

/70 cont. /

slain bear; but the head is always respectfully divided among the clansmen to whom the bear belongs. This eating must be looked upon, not as a simple act of eating, but as taking into one's body the mighty qualities of the bear. A woman, for instance, cannot partake of the heart of the bear, which imparts courage. A sullen-gully completely useless to her, and therefore such eating, as aimless, must be offensive to the bear.

Thus the religious significance of the bear festival amounts to the following: 1) feeding the bear and /71/ the sentiment security and protection from evil spirits — a very important matter if we take into account the views of the Gilyak with of local and the origin of sickness and of death (see below); 2) eating the "deity" imparts strength; 3) the soul of the slain animal, pleased by the honors, may independently and through its "masters" do good things for man; 4) it — and this is of the utmost importance — is an envoy, a transmitter of all kinds of gifts to the "master of the mountains," on whom the welfare of the Gilyak depends. With regard to this point, it is important to remember what we said about clan gods. Every clan has clansmen among the "mountain people," i.e., clansmen who perished in the past fell in a fight with a bear and were then taken into the clan of the "master of the bear." Every such clansman in turn becomes a small "master," a god-protector of them without control. No one reprimands anyone, for each one strives to make the festival come off most brilliantly. Several days before the festival, which is generally celebrated in February, a different kind of work begins — the building of an arena for the killing of the bear. The arena consists of a small stamped-down plot of ground, in which, depending on the number of bears that are being killed, is placed one or several pairs of sacred trees-posts hung with inao and covered with complicated ritual carvings; a bear is tied between them. Up to this plot of ground is stamped a long, narrow alley, on both sides of which, in two rows, are set up 30 pairs of young trees; the first 15 pairs are fir; the other 15 are purple willow.

/107 cont. /

Finally, if one keeps in mind that the term "sin" embraces not only prohibitions in the formal sense, but also the obligations, the performing and treating as a commandment, then the Gilyak's religion acquires a broad general sense. becomes the expression of the principle of unity of the circle of clan obligations in general. The significance of this principle is all the greater because of the fact that in the eyes of the Gilyak obligations and prohibitions are by no means formal juridical norms, observed through fear of punishment; but religious imperatives, rigorously performed out of the feeling for self-preservation. For the Gilyak there is no difference between religious, sexual, and social prohibitions; all are equally religious, and to satisfy the dictates of the religious means to be concerned about the benevolence of the gods, about the elimination of the machinations of the enemies of life, etc., that is to say, to feel concern for one's self-preservation. Not to fulfill them, keeping in mind the whole clan background of the cult, means not only to destroy oneself, but the whole clan as well. Hence the great importance of this principle as a cementing agent of the clan union. Hence, on /108/ the other hand, it becomes comprehensible as to why the clansmen, constantly contributing human nature, constituting immense self-control, are carried out, not through compulsion, but as the natural dictates of instinct. Consider, for example, with what strength the sexual instinct is. In general, in matters of the sexual instinct the Gilyak, both men and women, follow their natural inclinations with complete freedom; there is no chastity either before or after marriage. Their only concern is not to become victims of jealousy. There is no question of any feeling of self-restraint. Nevertheless, despite the complete sexual license from our point of view, the Gilyak observes complete chastity with respect to persons of the prohibited categories. Adultery is unknown to him; the adulterer is a monstrosity, an exceptional case, almost never encountered. The same is true of the prohibitions of parents and the male and female sisters. Left face to face, will go for whole days enduring the torments of silence, in the most urgent necessity exchanging rare businesslike phrases in

/108 cont. /

impersonal form, although by temperament these are far from taciturn people. Of course such self-control is the result of upbringing and training in a complicated system, but it never would have reached such a high state of self-restraint if it were not for the general consciousness of the destructive effect of such individual infraction on the welfare of the clan.

The religious sanction of prohibitions and obligations and the lively consciousness on the part of one and all that "sin is communal" explains to us the most amazing aspect of the clan structure, the presence of the social organism and the almost complete absence of the element of compulsion, authority. But more about this later.

Such are the basic features of the clan. By them one can judge its all-embracing role in the life of the Gilyak. It embraces a man from birth to death, giving him all its content. It surrounds him with intimate bonds of kinship from both the side of the father and the side of the mother. It unites with a living bond the living generation with the departed ones. It guarantees to man an individual marriage and conjugal rights outside of it, and after his death it provides for his widow and children. The clan ensures his life and the inviolability of his family against encroachments by a member of another clan, ready as one man to rise to the defense of the trampled rights of a clansman and to avenge for his guilt to a member of another clan. It feeds him when he is hungry, it pays the debts of the insolvent, it assists in the payment of the bride price and of blood money.

/109/ In the benevolence of the clan gods, in the clan sacrifices, man finds the higher protection and the strongest guarantee of his welfare. The clan is the school of moral training, the school of duty, of social co-operation and abnegation, and, finally, in the clan, man finds the highest pleasures and the most intimate consolation in the most bitter miseries of life — the noisy joys of festivals and preparations for felicity in the world beyond the grave.

/116 cont. /

Or: one or another family is temporarily impoverished. There is no special /117/ organ that must take care of them; if necessary, because the family will bring them aid and assistance in any house they choose, even of the most distant clansman, until the hard times change. And this is idle otherwise to anyone, for it is a rare thing for someone not to be hospitality not to offer it to someone else from time to time.

Suppose it is necessary to arrange a troublesome and expensive clan festival. There are neither collections nor contribution, no organization for the reception of guests, and so on. Each person prepares as much as he can according to his conscience, each bears his share of the labor, and only the man who is little richer than the others takes upon himself the trouble of the arrangements. Everyone takes to his house the prepared viands and purchases; they meet at his house to dine in the complete harmony.

During the bear festival, dozens of additional persons assemble from all sides. For several days it is necessary to feed not only the people, but also their many dogs. How much trouble, how much expense! Nevertheless, everything is arranged simply and to the general satisfaction of all. Each guest prefers, of course, to stay with the one who is closest to him in kinship or sympathy, where they take him in, not as a duty, but because they want him; but in any home at all every arriving guest finds a sincere, cordial reception, because during the days of festive enthusiasm everyone wants to display his sympathy and to have broad intercourse with new people.

Hunger has appeared, the specter of terrible misfortune, which can carry off the whole population of a village! All the hungry ones who have not succeeded in dispersing to more fortunate clans gather at the home of the man who still has some supplies, and the laws of hospitality are just as strong on this black day as in days of plenty.

/117 cont. /

But the worst of calamities — a clansman has been slain! Woe is inevitable! ... The whole population takes to arms. There is no regular leader, no elder, and no election. The natural leader has long been known and acknowledged by all; it is the bravest and luckiest of the clansmen; it is the so-called "master," "ez" — all eyes are turned toward him!

And in a moment the equal among equals suddenly becomes a military leader, given orders, distributes weapons, fixes the time of the march, etc.; they obey him as they would a dictator. If this natural leader has died or been killed, everyone knows the one most worthy to replace him.

Suppose a civil dispute has arisen between clansmen or between /118/ representatives of different clans. There are no established persons who are official mediators and conciliators. Very often the accuser is himself judge and executor of the sentence. Once the defendant has refused to carry out his obligation of his own free will, the accuser, not waiting for a judge, unhitches a dog from the team of the debtor or climbs into the storehouse in order to take for himself something equal in value to his claim. And the accused considers this to be the right thing. Of course, such a method is not always possible. But even then the affair works out perfectly well without the powers that be. It is enough for the offended party simply to address himself directly or through a khlaj-nivukh (see above) to one or two authoritative individuals—"masters" from the clansmen of the offender, and the matter is very quickly settled. They go to the house of the offender, who is usually escorted by his closest kinsmen, and sometimes by a khlaj-nivukh. Even outsiders gather. From the hearing of both sides and the opinions of those present, an opinion which is accepted by the majority assumes the strength of a verdict. Usually the offender submits voluntarily; otherwise, the managers of the affair proceed to the offender's storehouse and remove an adjudged amount.

/119 cont./

*G14 615 [182] are constanding ya'i become leaders of the tribe for life, or hereditary tribal leaders, leaders of troops, vikings, or founders of dynasties.

But in the clan life of the Gilyak such individuals do not yet make claim to anything of this sort. Their role is still too insignificant and in any event incidental in comparison with the complex functions of the clan, whose mechanism and life are based on the value and initiative of the integrated personality of each individual. What is the /120/ ya'i not that integrated personality in the higher manifestations of individuality? The influence of the ya'i is therefore purely factual, moral; between him and the power of his clansmen there is no abyss which would be intellectual or aesthetic sense, while the higher fraternal bond of the religio-social union of the clan towers over and dominates all.

*G14 615 [182] Such is the mechanism of clan life. In real nimbyng is the comprehensive development of the personality, together with an integrated religio-social world-view. Organized power is completely absent. Although invisible behind all this, and without any claims to power, elements of authority exist, these elements are without form; they appear on the scene in an elemental fashion, spontaneously, and not at all as constant elements of authority which would justify the free manifestation of personality into the background, but these elements nevertheless do exist. There are three of them.

*G14 615 [182] Above all there is the ishnat, the clan, i.e., the whole totality of the adult clansmen, or at least all those who are present at a given moment, which, having no head or regular assembliat, ordinarily appears suddenly on the scene when some serious problem demands its interference and, once the problem is resolved, disappears from the scene as suddenly as it appeared.

/120 cont./

*G14 615 [182] Then there are the hejmay, the elders, all of whose authority consists in the solution of most problems of cult and tradition. They play a certain role at the time of the clan festivals, at which they are generally the principal managers; they are, after a fashion, the priests of the clan. They do not, however, wield any influence or possess any actual significance in the other important manifestations of the life of the clan.

*G14 615 [182] Finally, the third element of authority is the ya'i. Under favorable conditions, there could develop out of these three elements those diverse forms of power which in various combinations prevailed among the tribes, the council of the elders, patriarchs, priest-kings and military leaders, dukes, vikings, kings, and so forth; we find among many semi-cultured peoples at the present time, and in the history of the history of all nations which are civilized today. But among the Gilyak these elements are only embryonic, and it is hardly fated for them ever to receive an impetus toward further development.

/121/ VIII.

Interclan Relations

The clan, however, is not a self-sufficient institution, and a man's life and fate are not bounded only by the clan to which he belongs by birth.

[198] Each clan, by the basic principle of its matrimonial law, is bound by marriage ties with four other clans, the ishmal'k and yngi clans. Between these clans is formed the bond of blood kinship, so important in the eyes of primitive man, the bond of common origin through the mother (the male ancestors of all four clans and the representatives of each of their generations are reciprocally first cousins through the mother), and the same bond of fraternal ties of natural intimacy which are engendered by generations of women tying these clans together in an uninterrupted chain of marriage unions.

/124 cont./

*G14 615 [182] [illegible], very young, unmarried, and it is difficult to say what happened to their feelings later on, but the mere possibility of such examples illustrates boldly the relations between members of matrimonial clans.

The principle of mutual aid between members of matrimonial clans is reflected in the right of inheritance, to which, despite the strict agnatic basis, there is only one exception, namely, with regard to the pandi'y; by a will, as we already know, the yngi can obtain the son "thagun" (i.e., going for the bride price), while the ishmal'k can obtain the fur "thagun" (going toward the bride's dowry). This rule, which reduces the bride price to the simple formality of taking it from one clan and giving it to another, must be considered, as an important indication of the fact that originally among the Gilyak the bride price did not bear the character of payment for a wife, but rather was a form of religious ransom. But for what?

The fact is that under the Gilyak norms of marriage the bride price is in general a strange anomaly. According to, once marriage /125/ from the clan of the mother is a religious obligation, and even preferable between the children of brother and sister, how can there be any talk of payment or ransom for the bride? Obviously the rise of this institution must have been due to some recent change in the marriage norms. This change is obvious: it consisted in the fact that in some instances when marriage from the clan of the mother was impossible, it became necessary to take wives from a strange clan, but this clan, in its turn, was obligated to keep its women for its own lawful yngi and therefore,could only accede to giving away its women by marriage it with some act of pious deception of the bride, which would at the same time be profitable for the father-in-law. By analogy with the religious ransom in cases of revenge (see above), there thus arose the institution of the bride price, satisfying both the interests of the father-in-law and dreams about. But these noisy, populous festivals are strictly regulated. Besides clansmen, only yngi are invited, and these have the right to invite their own yngi but ishmal'k

/125 cont./

*G14 615 [182] violated its own law, protected itself by another fiction: the whole clan of the "unlawful" father-in-law received the title of ishmal'k and became, in this case, a lawful clan for marriage unions. As such instance increased, the bride price, whose exclusive genesis had been forgotten, became the general rule in all marriages, even with lawful clans.

Such, perhaps, was the origin of the bride price among other peoples as well.

[198] A major weighty factor which consolidated the bonds between matrimonial clans is the participation of the pandi'y in the bear festival.

[198] In the sense of cementing interclan relations it plays almost a greater role than the Olympic games for the tribal unification of the Greeks. The bear festival taken place every winter, now in one, now in another settlement, while in popular settlements a rare winter passes without a festival. Attendance at such a festival involves no difficulties. The sled, which every household possesses, is harnessed, and off they go; the rest is not the guest's worry.

Everywhere on the road, as in the village where the festival is held, his dogs will be fed and he himself will be treated to the choicest dishes. And in return for the small annoyance of travel there is a whole array of high social gratifications: [198] in the first place, the very rite of the festival - the procession, the shooting at the target, the killing, the skinning of the bear, etc.; then, meetings with the ablent and most respected representatives of the tribe; finally, the attention /126/ of the women, who are, in the end, compelled only accede to giving away its women by marriage it with some act of pious deception of the bride, which would at the same time be profitable for the father-in-law. By analogy with the religious ransom in cases of revenge (see above), there thus arose the institution of the bride price, satisfying both the interests of the father-in-law and dreams about. But these noisy, populous festivals are strictly regulated. Besides clansmen, only yngi are invited, and these have the right to invite their own yngi but ishmal'k

/126 cont./

violated its own law, protected itself by another fiction: the whole clan of the "unlawful" father-in-law received the title of ishmal'k and became, in this case, a lawful clan for marriage unions. As such instance increased, the bride price, whose exclusive genesis had been forgotten, became the general rule in all marriages, even with lawful clans.

Such, perhaps, was the origin of the bride price among other peoples as well.

We already know the general nature of relations of these latter with their son-in-law /yat'ym/, and it is clear, therefore, that obtaining an individual wife among the ankal, among the ankal'ym of one's own ishmal'k is prohibited by the most favorable conditions. In an extreme case, a man stands a sure chance of getting the widow of his brother.

But in view of the generally small number of women in comparison with the men, and considering the fierce competition within each clan of yngi for their ankal and ankal'ym, the conditions of an extreme avidity for the bride price, which has developed under the influence of commercial relations and has greatly weakened the fraternal matrimonial relations, even this privilege can often be a nudum jus. But at this point there appears on the scene another powerful corrective for the individual marriage -- the yngi performs the ceremony of the "trampling of the threshold" (see above). Such things are not formalities for primitive man; they strengthen the ties of kinship with the highest sanction and religious authority.

But these ties are not limited only to occasional "sustenance" hospitality, invitations to hunts, and festivals.

They go still further, rising in their intensiveness to the power of a true clan bond. When a man has few clansmen, or he gets along badly with them, he leaves his native settlement and goes to live in-law, does not carry on with a definitely the way, there are so few settlements made up of inhabitants belonging to one clan; everywhere /127/ clansmen are intermixed with their yngi or ishmal'k. But these ties prove of

/168 cont./

such circumstances, it would be necessary for a considerably large number of the population who are not well-to-do to remain unmarried. And is it right here that the institution of the right to marriage with persons of the clan of ankal'ym about which we spoke above appears as a corrective. In the first rank of those available to the Gilyak are the daughters of his mother's brother, near their collateral sisters, and, finally, any daughter in general of that broad clan of persons whom the Gilyak calls ashmalk (fathers-in-law).

We already know the general nature of relations of these latter with their son-in-law /yat'ym/, and it is clear, therefore, that obtaining an individual wife among the ankal, among the ankal'ym of one's own ashmal'k is prohibited by the most favorable conditions. In an extreme case, a man stands a sure chance of getting the widow of his brother.

But in view of the generally small number of women in comparison with the men, and considering the fierce competition within each clan of yngi for their ankal and ankal'ym, the conditions of an extreme avidity for the bride price, which has developed under the influence of commercial relations and has greatly weakened the fraternal matrimonial relations, even this privilege can often be a nudum jus. But at this point there appears on the scene another powerful corrective for the individual marriage -- the yngi performs the ceremony of the "trampling of the threshold" (see above). Such things are not formalities for primitive man; they strengthen the ties of kinship with the highest sanction and religious authority.

But these ties are not limited only to occasional "sustenance" hospitality, invitations to hunts, and festivals.

They go still further, rising in their intensiveness to the power of a true clan bond. When a man has few clansmen, or he gets along badly with them, he leaves his native settlement and goes to live in-law, does not carry on with a definitely the way, there are so few settlements made up of inhabitants belonging to one clan; everywhere /127/ clansmen are intermixed with their yngi or ashmal'k. But these ties prove of

/178 cont./

*G25 [illegible] The right to sexual intercourse with the wives of brothers has proved to be such an ordinary idea among the Gilyak that they are not able to imagine an order of things whereby a woman could be the private property of one man. The Gilyak regard the right to marriage with persons of the clan of ankal as about which we spoke above appears as a corrective. In the first rank of those available to the Gilyak are the daughters of his mother's brother, near their collateral sisters, and, finally, any daughter in general of that broad clan of persons whom the Gilyak calls ashmalk (fathers-in-law).

[198] We already know the general nature of relations of these latter with their son-in-law /yat'ym/, and it is clear, therefore, that obtaining an individual wife among the ankal, among the ankal'ym of one's own ashmal'k is prohibited by the most favorable conditions. In an extreme case, a man stands a sure chance of getting the widow of his brother.

But in view of the generally small number of women in comparison with the men, and considering the fierce competition within each clan of yngi for their ankal and ankal'ym, the conditions of an extreme avidity for the bride price, which has developed under the influence of commercial relations and has greatly weakened the fraternal matrimonial relations, even this privilege can often be a nudum jus. But at this point there appears on the scene another powerful corrective for the individual marriage -- the yngi performs the ceremony of the "trampling of the threshold" (see above). Such things are not formalities for primitive man; they strengthen the ties of kinship with the highest sanction and religious authority.

But these ties are not limited only to occasional "sustenance" hospitality, invitations to hunts, and festivals.

They go still further, rising in their intensiveness to the power of a true clan bond. When a man has few clansmen, or he gets along badly with them, he leaves his native settlement and goes to live in-law, does not carry on with a definitely the way, there are so few settlements made up of inhabitants belonging to one clan; everywhere /127/ clansmen are intermixed with their yngi or ashmal'k. But these ties prove of

/178 cont./ By one of the fictions, I observed several cases where jealous men moved to an isolated place immediately after the wedding, in order to avoid the competition of their brothers. Thus, the settlement of Sakli-Kotan, the southernmost Gilyak settlement on the amur shore, was founded by such a jealous man; when I visited it in 1897, I found there only in founder with his numerous descendants, and my Gilyak companions made not a few jokes about him, but he was invulnerable -- his wife was of an age when women are well beyond suspicion. But such cases are exceptional, and all the more exceptional are cases of a man leaving his native brothers on account of jealousy. In order to avoid them, only an observance of tact is demanded. Such cases are possible when an individual wife and a husband are bound by the bonds of decency and tact: when a woman begins to run after her sweetheart publicly, disappears from the home, and completely disregards her obligations as a wife and husband. In such cases it is sometimes necessary for the sweetheart to move out of the house of his brother or even out of his village, and the woman sometimes gets a scolding. I never saw a case of a couple of times in northern Sakhalin. Usually, however, the relations between two are quite peaceful. If the older brother gets a little angry, it is always without any consequences. Any active reaction is considered a sin. It is considered a great sin to challenge one's brother to a duel out of jealousy. I personally never happened even at least to see such cases. I happened to find out about one such case from B. Piłudski, but this was a completely /180/ exceptional instance. A certain Lokhmatka, a young Gilyak also very well known to me personally, a very poor lad, but one who enjoyed unusual success with the Gilyak women, allowed himself to live openly with the wife of one of his tum. According to the Gilyak custom, as I have already said, publicity in such cases is not allowed. It is allowed in exceptional cases, when the husband is outstanding and rich, possessing many wives. But Lokhmatka, however, was a thriftless Gilyak, everlastingly in debt to everybody, lighthearded, and undistinguished by any

/180 cont./

Such instances must not be regarded as a general phenomenon, however. Along with the factor of heightened sexuality and sexual freedom, other, restraining factors are also acting. Among the married women, such factors are maternity, economic cares, and, finally, among both married and unmarried women, such feelings as love and bashfulness. In general, however, sexual disinclinations play no small role in the life of the Gilyak, not only in a sexual sense, but also in a psychological sense as well. Offhandly the Lovelaces either do not maintain households at all or, if they do, maintain their sweethearts in a separate house in life and in poetry one constantly comes across sharp reproaches and the revilling of the young by the older people for the work in question, and the contempt of the young. But furthermore the Gilyak themselves attribute childless marriage to disinclinations. But the sadder of all the consequences of sexual disinclinations are nervous disorders specific for the Gilyak, such as myanchelak among both men and women, and illnesses connected with the loss of psychic consciousness (self-control /given in-English/) are the result of disinclinations, which furthermore, among women, is accompanied by the disappearance of the signs of the sexual sphere, and the latter, in turn, lead to the appearance of hysteria.

Side by side with the wide sexuality and sexual freedom described above, the feeling of love still plays a great role in the life of the Gilyak. The word corresponding to our term for love, of -mund, denotes both sexual love and love in general, for children, friends, etc. There is a special term for reciprocal love -- ofmurlk, and for marriage for love -- ofmurlk, vayynd. There are also some other terms for love, for example, hynd and others, but there are no special terms for "beloved" /mata/, "beloved /lemata/, ofmurlk /221/ one can say ofmla ulgyum, i.e., "man whom I love," but in the language of lovers the beloved designate each other either by the terms "husband" and "wife," or

3 general precautions. Nevertheless, it happens that now
9 and then one of these unfortunates is shot down in the woods
7 by Gilyaks, even though the majority of them would not think
of concerning themselves with such a disgraceful hunt.

1 XIII Economic and Social Conditions.

1 Among Gilyak there is no question of a body of laws, to
say nothing of written statutes. Nevertheless, common law
which functions in place of fixed statutes is equitable and
just. The shadow of a prerogative may be felt only where
it is accompanied by real qualities. But even the preponder-
ance of natural talents is very modest; the race consists of
individuals among whom the capabilities as well as the
assets which are given them by nature are pretty evenly
distributed.

6 There are "rich" and "poor" Gilyak, but these terms must
5 be interpreted in a very limited sense. A wealthy man who
is in a position to support three to four wives is a rare
exception. The "rich" man, besides having a greater num-
ber of wives, possesses objects which have a certain value,
such as "beautiful" clothes [230], many and good dogs, etc.
and sometimes quite useless objects which are kept merely
for effect, as, for instance, lengths of cloth of gold (which
in Greek churches are used for various decorations). The
above-mentioned clumsy lances belong to such luxury arti-
cles. There are many rich men who keep on hand a couple
hundred silver rubles in a box.

5 Contrariwise, there are very few Gilyak who are not
8 capable of supporting a single wife or even themselves.
6 Such individuals are either sick or alcoholics, for there are
1 no actual reasons for external poverty: fish, game, wood,
berries etc., are everywhere to be found, but of course one
must obtain them with one's own efforts. A scarcity of fish
is a rare exception among the Amur-Gilyak. It happens in
those years in which the kita is scarce (this usually coin-
cides with very high water). The Sakhalin-Gilyak often have
reason to complain of a scarcity, for there the various
species of salmon, even in ordinary years, do not come up
the rivers in such numbers. On the other hand, they have
more bears, and thus the island Gilyak are in a position to
trade young bears for dried fish with their mainland kinsmen.

If there are not enough fish, the Gilyak eats cedar nuts,
berries, game, etc. All these are of course only a poor
substitute, but in any case we cannot speak of actual
"famines" here.

177 baptism a means of guarding against abduction of their
797 women. Those who are baptized live just like the unbaptized ones, their children are usually not baptized, and their corpses are cremated. Their fellow-tribesmen by no means persecute them. A baptized Gilyak is regarded by the others somewhat as though he had shared in some special acquaintance.

802 XVI. Intellectual Development, Time-Computation,
805 Legends.

The Gilyak count to quite a high number: 2000, 5000 and more, but of course they almost never use such high figures. The Gilyak year is half as long as the real one: winter which probably lasts half a year, is regarded as a whole year, the [245] remaining year being regarded as another one. Moreover, there are special names for the four seasons.

821 The Gilyak know how to find their way by the stars, and the Big Dipper and pole-star are their guides. They seem to have no particular assumptions with regard to the characteristics of the heavenly bodies. From some I heard that the sun and moon were inhabited by people. I could not learn anything definite about whether they might not be "the beyond". It can only be said that the other world is somewhere up above, not under the earth, as with the ancient Greeks.

805 The Gilyak do not count their years. Only of quite young
561 people one can hear it said approximately how old they are. Older people cannot remember their age and immediately say: "the Gilyak does not count his years". This means his own age, for with them there is no question of chronology or history.

173 The majority know nothing about their past. But from
181 several intelligent Gilyak I heard that once "a long time
721 ago", there was a war between the Amur-Gilyak and those of Sakhalin; that the latter came with a great many boats, but were defeated. There is also a tradition on Sakhalin which has it that three or four generations ago a long war raged, whose cause was the abduction of a woman. It is difficult to say whether this war is the same as the one of which the Amur-Gilyak tell. In any case, the long intervals between such wars testify to the peaceableness of this tribe. The Gilyak knew nothing of fighting with the first Russians who arrived.

In answer to the question whether they had always occupied their present settlements, most of them answered simply: "I do not know". However, I heard from one of

173 them that the old people had told him that one part of the
181 Gilyak came across the ocean, the other, from above, that
721 is, from approximately there where the city of Blagoveshchensk lies. May we not understand this to mean that they crossed over from Sakhalin and that the first immigrants mingled with the Goldi who were already to be found on the Amur?

153 If one asks how intelligent the Gilyak are, it may be said that for savages they are rather intelligent. In the arts, however, they are very backward. They know how to draw or carve various animals. The figures are coarse, but nevertheless [246] recognizable. Music and poetry are absolutely embryonic, but at least they like to hear music. Their memory for places and persons is astonishing. If a Gilyak meets a stranger somewhere, he recognizes him instantly after many years, and at the same time recalls all kinds of minor circumstances accompanying the original meeting. In languages, too, their memory is not bad, at least many of them speak Russian, but the reverse is not true. It is, however, doubtful whether the Gilyak's memory would be adequate for systematic instruction. In instruction the different facts cannot be directly understood but must be interpreted from the words of another, and thus a certain
212 imagination and judgment are needed. For a time there was
872 a school in the village of Mikhaylovskoye where Gilyak children were taught to read and write. This they learned very well, but nothing else was taught. The Gilyak, of course, do not have their own writing.

153 Curiosity and a desire for knowledge are average. The
609 former I judge in comparison with other uncultivated peoples whom I had the opportunity of observing, especially the Bashkir. The latter are so intrusive in their curiosity that they give the traveler no peace. Of course, the Gilyak also gather around a stranger who stops at their yurts, but not in great numbers; they keep at a certain distance and soon disperse. If they come into the house of a Russian, they look about them with curiosity but they do not immediately reach for everything that strikes them and do not ask for presents. In this, as in many other respects, they are decorous people.

153 If I must praise them in this connection, I must also say
821 that their desire for knowledge is not sufficiently matured
177 that they would be interested in the main springs of culture. It seldom occurs to them to ask a Russian about a machine, about economic questions, nature, institutions, religion,

18

2

/277 cont./

583 of safety from evil magical influences) and social, as a symbol
182 of friendship, analogous to the exchange of gifts upon the conclusion of ceremonial brotherhood. We see from the rites which are observed when the bride moves to the home of the groom that the Gilyak give a socio-religious significance to such symbolism of new relations.

And it is also possible that into the concept of bride price there was introduced an element not only magical, but also purely religious. Giving a woman in marriage to a clan not orthodoxly prescribed was taboo, and every violation of a taboo, according to the logic of primitive man, should be atoned for in some way -- if not by blood, then by valuables. Bride price from this point of view appears to be tribute for appeasing the souls of the ancestors offended by the violation of the clan taboo. By this
686 alone can one explain why the Gilyak react just as strongly to the
687 nonpayment of the bride price for a woman as they do to the slaying of a clansman. The obligation to receive satisfaction in this case, as in the case of a killing, extends to the third generation in the whole clan.

583 For the sake of obtaining this, persons are ready to take the
686 same risk and deprivation as in carrying out an act of blood re-
538 venge. The heroic exploits of such persons who have undertaken long and dangerous treks into the most remote places are one of the most common subjects in the epic works.

583 The objects used for bride price and the conditions of payment.
472 An object that is part of the bride price is usually a particular kind of valuable, an object sui generis, the so-called shagynd
[439] (E.D.), shygynd (W.D.). These are valuables which are predominantly obtained from the Chinese and Japanese by trade. Among these objects are: Chinese silk garments and pieces of material, Chinese fur-coats, several articles of nephrite, Manchurian spears inlaid with silver, Japanese sabers, and also big, cast-iron kettles. Besides this, objects of this class include fox and sable fur-coats and feminine articles of adornment. In
[194] ancient times, evidently, axes, too, /278/ at first stone, later

182 /354 cont./
614
796 5. The members of the clan are bound together by common
[574] sacrifices and festivals. The "festival of the bear," known to everybody, is held, not by an individual settlement, but by the clan, even though /355/ guests from other clans are invited to take part. The bear is bought by someone in the clan, but all the expenditures in connection with the festival are covered by the clansmen. These expenses often reach a sum of several hundred rubles. Clansmen assemble from all directions, as well as great numbers of specially invited guests from other clans, who have to be entertained and fed for many days, and not only they, but their numerous dogs as well, devour a great amount of food during the festival. The opinion that the bear festival has a religious character or that the bear is considered to be divine or a spirit by the Gilyak is completely unfounded. The bear festival is purely a
[224] clan festival. Naturally, there were times when a successful attack on a bear, an attack conducted in those days collectively, by the whole clan, was a real triumph for the clan, which devoured the huge beast at a common feast. Since the attack on the bear was most conveniently made in winter when the sleeping animal was captured in his lair, the custom of celebrating this holiday in winter was perpetuated. The experience of centuries evolved a full ritual for the festival, which, like everything old, assumes in the eyes of the barbarian the character of something sacred and inviolable.
[782] All the sacrifices during the festival are made, not to the bear, but
[776] to the god of the taiga, the master of the bear -- "Pal'-nivukh."
[825] It is also understandable that the bear itself has acquired a position of honor: Its meat cannot be thrown to the dogs, it cannot be eaten with seasonings, etc. "Pal'-nivukh" himself will exact revenge for such offenses, ordering other bears to bite especially
[562] hard. To sum up, the bear festival is a clan festival, and, on this basis, women, as the nonpermanent element of the clan, are not present at the killing of the bear, although they
614 participate in the eating of it. The fire in the stove in which
372 the meat of the bear is cooked is started only by the clan
[252] steel. A touching custom among the Gilyak is

/362 cont./

614 Thus it is that kinship and social bonds attach the Gilyak
182 to his clan. Without some particular need the Gilyak will not abandon the settlement of his clansmen, the tombs of his clan. No matter where the Gilyak may grow rich, he finally returns to
[177] his homeland. The writer has seen Gilyak who had become completely Russified, who had grown up in service among the Russians, but who, having married, settled down and returned to the settlement of their clan. And this is so easily done. The Gilyak does not find it absolutely necessary to construct a yurt, since in any yurt of his clan there will always be two to three square arshins on the plank bed for the family of a clansman. He does not even need a boat and a net; he will always find owners of these things, with whom he will go fishing on a basis of equal rights. The inevitable affiliation of every Gilyak to the great clan union has placed an indelible stamp on his entire spiritual make-up, on his character, customs, and intellectual
[155] development. The custom of judging all jointly, this necessity of entering into the interests of his clansmen, this mutual responsibility in matters of vengeance, these communal festivals and sacrifices, this fraternal bond of numerous fathers, brothers, and children, and finally the necessity and practice of living in large yurts together with dozens of one's fellows -- a necessity that compels the Gilyak to live continually in the eyes of others -- all this must have developed a social, communal, loquacious, serious character, sensitive in matters of honor.

342 Enter one of the large winter yurts, which are so frequent
354 in the north, enter one of these anthills on a winter's evening,
521 and you will be pleasantly surprised. The huge yurt is lighted up only by the flame of the stoves; in the far corners it is completely dark, but you will hear the sedate conversation of the old men, the loud talk of the middle-aged, merry laughter, the jokes and music of the youth. Here boredom has no place...

766 /368 cont./
ceremony is not observed, namely, when a person falls victim to a bear. There is a whole ritual for such cases. I shall be brief. Immediately after receiving news of the Gilyak's misfortune, they set out in search of the bear, following its fresh tracks. After they find and kill the bear, they place the slain person astride it and solemnly carry the bear and its ill-starred rider to the settlement. They immediately begin to /369/ build a large balagan in which they place the bear and its rider. The balagan is enclosed on all
[782] sides; they leave only small openings in which are placed small
[769] troughs with sacrifices, which are at first renewed very often and then less and less frequently (in a year). This epopee is fully completed only in the third generation, in the presence of the clansmen of the slain man, with the final sacrifice of several dogs at
182 the source of the local stream. The meaning of this whole procedure
766 is, I think, the following. The bear is killed in conformity with the principle of revenge (the kindred bones must be raised). The posture of the slain man (astride the bear) is the symbol of the triumph of revenge. Leaving the slain man in the pose of a rider and honoring his memory for generations stem from a desire to crown the brave members of one's clan with a halo of fame. It may be that all this is done for the edification of the youth. Sacri-
[782] fices are made to Pal'-nivukh, in this case to propitiate him so that such misfortunes will not be repeated in the future. This example shows, incidentally, that the Gilyak are very far from regarding the bear as a god. The last respects paid a person who has drowned are also accompanied by a special ritual. He is burned, it is true, but without fail on the seashore. The boat in
614 which he drowned is no longer used. In the presence of the entire
[782] clan a rich sacrifice is made to Toll'-nivukh on the shore. A new yurt is built, in which the parents of the deceased or one of his brothers settle. Again in this case, the procedure is to foster contempt for danger, and, on the other hand -- to propitiate the capricious god of the sea.

797 In conclusion I must say a few words about the spread of Christianity among the Gilyak. On the entire western shore I have met only two baptized Gilyak, who took the "sacred"

/633 cont./

583 It is to be seen in part from the preceding that the custom
121 of wife purchase has, on the whole, a beneficial influence upon a
182 primitive people. Even though, to our minds, it involves an in-
[562] sulting disregard for human dignity and the personal rights of the woman, /634/ in that, in relation to the man, it makes her simply a commodity, nevertheless it exerts some moral pressure upon the men. For, above all, it forces them, through activity and industry, to acquire the means to buy a wife and to found a household of their own, and thus it puts an effective curb on premature marriages. Moreover, as we have seen, through the material obstacles that it puts in the way of polygamy, it promotes monogamy. And, finally, it provides the wife with both a guarantee of good treatment on the part of her parents, for a well-fed and well-supported girl can be married off more easily and at a higher price, and, in particular, some protection against rough mistreatment on the part of the husband, for what is bought with difficulty and at some expense is as a rule, among primitive people in particular, more highly prized and better cared for than that which is attained without effort and for a low price or even as a gift. Thus, among primitive peoples, the bride price to
[562] a certain extent constitutes a corrective for their lack of esteem and spiritual appreciation of the wife, and the higher it is, the greater its effect is bound to be, and the more favorable the prognosis for the marital and family relations of the people concerned. To what extent this may be true among the Gilyak, beyond the above-mentioned prevalence of monogamy among them, we shall have occasion to learn from the following observations.

583 On the other hand, it cannot be denied that the higher the bride price, the greater the temptation for poor but enterprising young men to avoid paying it and to gain possession of a wife by a ruse or force. Indeed, among the Gilyak the abduction of women is by no means rare. According to their own statements, it almost always takes place by prearrangement between the two parties, the abductor and the one to be abducted. In order to carry it out, the man appears, as if by chance, in the house

/867 cont./

735 different, however, when it is a matter of goods which Nature
421 furnishes mankind only sparingly and which must be wrested from her, so to speak, with toil and effort, as, for example, sable and other precious animal pelts as well as everything which is obtained by trade by means of the latter from the Chinese, Japanese, and Russians. It would never occur to a Gilyak, be he rich or poor, to consider them likewise as common property and, accordingly, to sacrifice them in cases of need to the common good or to demand that this be done. In addition, these goods, in contrast to the first ones, and not exempting the cereals, tobacco, and the simplest Chinese or Russian clothing materials, are merely luxury goods without which he can still
[182] very probably maintain life if need be. Thus, the extremely active instinct of the Gilyak for trade and acquisition and their endeavor to preserve /668/ and add to their property form an effective counterweight against the communism and prevent the lazy, and therefore poor, from living at the expense of the industrious and wealthy, even though without denying him, in case of need, what is absolutely required to sustain life.

342 The Gilyak also take account of the communistic principle
421 in the matter of shelter or the dwelling, which, in a region with
423 long and severe winters like their homeland, is of no less importance than food and clothing for the maintenance of life. How and to what extent this is done can be seen from the following. It has already been mentioned above that the Gilyak, in an apparently quite irrational fashion, do not evaluate a structure as large and, in some respects, complicated as their winter-house, built according to the Chinese pattern, half as high as a simple, always much smaller storehouse (1). This can be explained by

1. See pp. 937-943 above.

the fact that the former, in spite of its size, yields a considerably smaller direct income than the latter, and this, in turn, rests on the fact that the dwelling is in part of communistic origin and

23 /697 cont./ From now on
175 it belongs, so to speak, to the whole village, for all its members
[421] have to attend to its care and feeding and, accordingly, are entitled to participate in the forthcoming festival in its honor, ultimately ending in its death and the consumption of it. The
● [182] bear festival, then, in a very eminent sense is a communistic festival which unites all the individual members of one village community and therefore understandably represents the climax of the social and co-operative life of the Gilyak. The original owner of the bear, the man who bought it or who arranged for its capture, has only the right to determine the time when the festival is to take place and to direct it, always, of course, within the limits of traditional practice. Similarly, as the host,
[574] he may make the feast a more or less opulent one by adding culinary delicacies other than the ones furnished by the bear and, accordingly, to invite to it relatives, friends, and acquaintances, even of a foreign tongue, living beyond his village. Finally, after the festival is over, the skin of the bear goes to him.

231 The feeding of the captive bear by all the inhabitants of the village takes place in accordance with a previously established order. The food given to it, through the little window in the prison consists exclusively of fish in a raw or dried state (jukola), mossj, i.e., a mush made of ground fish-skins or cut-up jukola, fish or seal /698/ oil, and red bilberries or cowberries (1),

1. Concerning its preparation, see p. 671 above.

and water, which in summer may be given to it in liquid form, but in winter only as ice or snow. The long spoon (Gilyak nichyr) illustrated on Plate LI /p.125V/, Fig. 2, is used for presenting the food, in particular the mossj and the water. From time to time, but only rarely and chiefly, no doubt, for the purpose of cleaning the cage, the bear is taken out of it. For this procedure, however, which I witnessed in the village of Tschomi on the Amur-Liman, it must be partly bound again. This is done by carefully pushing apart a couple of the boards on top of the cage, throwing a noose round the neck of the bear still in the cage, and shackling its

614 parties to agree. When agreement was reached, the khlay-nivkh came to the
627 offending clan with men of the victim clan, fully armed, and a duel was enacted between the representatives of the two clans. Then each clan representative killed a dog, and peace was considered established. After that, the ransom was paid. It consisted of coats of mail, spears, silk materials and other valuable objects.

The Nivkhi had a classificatory system of kinship. But, in distinction to
601 the Tunguso-Manchurian system, the specific term of kinship among them applied always to persons of one, rather than different generations. As Shternberg showed, the classificatory system of the Nivkhi reflected even in
[108] his time the existing marriage norms. The Nivkhi retained until the end of
[595] the 19th century some remnants of group marriage. These relations were possible only for persons of the same generation, and were categorically forbidden among persons of different generations.

All the members of a clan were divided into four age groups: 1) grand-
614 fathers and great-grandfather (atak); 2) fathers (ytyk), their brothers
561 (tuvng), the husbands of the mother's sisters and the brothers of the husbands of the mother's sisters; 3) brothers and sisters (tuvng); and 4) children (ola).

175 Trade ties with China and the transformation of fur-hunting, and later of
439 fishing, into economic activities directed to commercial ends stimulated
614 the disintegration of the clan order among the Nivkhi, which occurred
184 first among the Amur Nivkhi. The latter had early begun to trade with
● 182 the Manchus. Nivkhi merchants sailed up the Sungari to San-hsing, and bartered furs and beluga backbones for tea, tobacco, fabrics and metal articles. They also bartered with the Ainu, the Japanese and with other neighbors. Members of the Tungusian, for instance, were for a long time the middlemen between the Sakhalin Nivkhi and the Ainu. Thus, long before
[556] Russian colonization, the Nivkhi began to be divided into rich and poor.
[595] The rich could have several wives and 3-5 slaves. The rich man's bride-
[567] price always included large quantities of imported valuables. But commodity relations developed slowly, since exchange was only in the medium of furs and, to a lesser extent, fish. The mass of the Nivkhi continued in a subsistence economy.

175 Slaves did only housework. They could set up their own households
567 and marry free women. The slave's descendants of the fifth generation were considered free. On the whole, slavery was not widespread among the Nivkhi and was of a patriarchal character.

175 At the end of the 17th and in the 18th centuries, the Manchus established
648 among the Nivkhi, as well as the Nanays, the posts of khalada— clan elders,
622 and gasyanda—village elders.

After the middle of the last century, the disintegration of the Nivkhi
175 subsistence economy proceeded more rapidly. After the Nivkhi had finally
178 become a part of Russia, slavery disappeared; a new form of exploitation
433 appeared, in the institution of "half-shares." Nivkhi who lacked the imple-
[567] ments of production fell into the position of "half-sharers." The catch was divided according to the number of participants, but those who used the implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox
771 Christians, but their views remained animistic. They thought of the island
771 of Sakhalin as an anthropomorphic creature; similar ideas were held about
[573] rivers, mountains, rivers, water, earth and cliffs. The killer whale was in "their thinking an yz'—a "master" of other animals. Almost every natural phenomenon had its yz'. The chief of these were Pal-yz'—the "master" of the mountains and the taiga, and Tayrandz, or Tol'yz'—the "master" of

177 Many Nivkhi with secondary schooling enter higher educational institu-
648 tions. In 1953, 2 Nivkhi attended Leningrad State University, and 10 studied
873 at the A. I. Herzen Pedagogical Institute. At present, 16 Nivkhi are attending the Institute. Among the students there are also women. In 1953, Lisa Dekhal' of the village of Pad on the Amur graduated successfully from the
[463] A. I. Herzen Institute in Leningrad. The Nivkhi Chuner Taksami of the village of Kal'ma is today doing graduate work at the Institute of Ethnography of the USSR Academy of Sciences. Nivkhi with special training are working today as captains, enginemen on cutters, teachers, librarians and club directors.

177 The political activity of Nivkhi workers has grown tremendously. Many
648 have risen to leading posts on collective farms and in various institutions;
42 many work as instructors with rayon Party committees and executive
[64] committees.

Wide educational work among the Nivkhi has been conducted and is conducted today by the cultural bases established on their territory. The first of these was founded in 1928-29 in the village of Nogliki, at the mouth of the Tym' River in Vostochno-Sakhalinskiy Rayon. The second cultural base of the peoples of the North was founded on Sakhalin in 1946, in the village of Yukovo. These bases have libraries, reading rooms, clubs, seven-year schools for Nivkhi and Evenk children, and also dormitories and boarding schools.

[52] At the amateur concerts on the collective farms, both men and women entertain, singing and performing native and Russian dances. Frequently the songs are created on the spot, impromptu. The collective-farm youth also participate in regional Olympic games.

[545] Theatre arts are also developing among the Nivkhi. In the beginning, the Nivkhi, who had never seen a theatre before the Revolution, were merely spectators at performances organized by Russians. Soon, however, dramatic clubs were organized in the collective-farm clubhouses, and the Nivkhi began to present plays in their own language.

[526] The Nivkhi are great lovers of sports. In former times they did not know how to swim and feared the water. Today the Nivkhi young people enthusiastically engage in water sports. There are now special sports omorochki (canoes) with a single oar, in which young men and women hold speed races.

● [182] The Nivkhi have also preserved native sports, such as rope-jumping.

The changed working, living and cultural conditions of Nivkhi life—the collectivization of their economy, their participation in industry, the unification in collective-farm villages of people who had formerly belonged to different clans, and the general rise in their cultural level—all these factors have completely destroyed the old ties and rules, based on the numerous remnants of clan relations which had survived until the Revolution. The old
177 religious ideas, holidays and rituals have lost all their meaning. The
648 greatest change has occurred in the position of women. In former times, the
562 Nivkhi woman was timid and oppressed, and know only the narrow circle of her domestic duties. She could be bought and sold, or turned out of the house. When she met men, she had to cover her face and turn her back to them. During the early post-Revolutionary years, a great deal of effort had to be applied toward the elimination of survivals of the past. When they attempted to study, many young women and girls were ridiculed by their fathers, husbands and mothers. Some were unable to withstand the pressure and discontinued their studies. It proved especially difficult to overcome the ancient custom of placing a woman in childbed in a special hut, built near the dwelling. This tent was usually cold and damp. The woman had to remain under these conditions for several days without any help,

225 The sketches do not include all the details of the beluga hunt. Mytka's account, dictated to me on June 29, 1931, in the village Puir, supplements the sketches. We give here a faithful translation of his account.

"During the ebb tide the belugas head inshore. After the tide receded, he gathered his friends (and said): 'Let us go after it (in the sea).' We went in pursuit. When the beluga headed out to the fairway we chased it back to a shallow. When it could not go any further the man at the prow who held a harpoon got ready and waited for it (the beluga) to appear (to come up). When it broke the surface, he lanced it. Then he threw the float. We let the beluga drag the float. When it got tired we approached it and lanced it a second time. Then we came close to it and hauled it to the side of the boat. We hooked the beluga and hauled it (out of the water). Then he hit it with a lance (that is, pierced it) (2)

2. The Gilyaks kill the beluga by lancing it in the area of the respiratory orifice.

When we killed it we tied a rope to it and hauled it ashore.
225 While we were hauling it, the old woman came down to the
533 shore and began striking the board with a stick. (3) When we
824
● 182 3. Only in Puir do they welcome the caught beluga by such music. I have not observed this custom in any other village.

brought it (to the shore), we came up to the shore prow first. (4) Having untied the beluga, we hauled it to the shore

4. Usually the Gilyaks come up to the shore stern first, but when they bring a beluga, they come prow first.

[112] and pulled it out. We put the board on which the woman was beating under the head of the dolphin. The old men sent the youths to gather dozgon grass and piskar plant. (1) Then we

1. The Amur Gilyaks "feed" the plant piskar to all captured sea-animals such as sea-lions, seals, and belugas. They put this plant in the mouth of the killed animal (cf. our article "Morskoĭ Promysel

533 Gilyaks of the Village Kul] Sovetskaia Etnografiia,
824 1934, no. 5.).
182

225 fed the head of the dolphin. Then we came down (to the
476 shore) and the old men cut up the dolphin. [113] When they cut it up, we called all the people (ordered them to come), spoke to them, and made each one of them take (let them take) his share. We gave less to the "sitting" men (that is, those who did not participate in the hunt). (1) We gave more

1. The Gilyak Shurman, from the village Lyangr, told me that they divide the beluga into equal parts. Only when they kill two--three belugas do they give somewhat greater shares to the hunters.

to those who went to sea. After they had taken away their
225 shares, we cut up the head (literally, broke it up). After we
782 cut up the head, in the evening, we sent the young men to cut
778 some birch wood; we sent them to cut some rowan-trees. Then we got some rowan shavings and put them in the respiratory opening. We cooked some cereal and put it in the sea-dish [Russian, Morskoye blyudo] We prepared some berries and put it in the sea-dish. Then we sent the children to bury the head. When they were ready to go, an old man went with them. They put the head down on the place where offerings to the sea are made. (2) They took the eyes

2. Near each village, there is a separate place from which offerings are brought to the sea.

out of the head and, having dug a hole in the ground, they put the eyes in the center (of the hole). (3) After they buried

3. In the village Puir the eyes of the beluga are "buried" on the place where offerings to the sea are made. In other villages the eyes and the head are suspended in a birch tree.

the eyes, they scattered some rice and berries in the sea. Then they carried the head to Elzəs. (4) They hung the head

4. Elzəs--a place where the heads are "buried". Each clan has its own elzəs. When they kill a beluga, they

and went down again. Then we got a young man to take a white stone and put it in the sea-dish. Then we returned and went home. When we came home we put the stone in the fire place." (6)

6. The stone which they put in the fire place is a payment to the master of fire for the successful outcome of the hunt (cf. our article "Morskoi Promysel Giliakov Derevni Kul', [Sea fishing among the Gilyaks of the village Kul]).

182 The methods of beluga hunting as described by the Gilyak
225 Mytka in his account and pictured in his sketches are characteristic of the village Puir and partly of the village Lyangr. The hunt proceeds differently in other places. [114]

The account of the Gilyak Khor (from the village Chomi(?) telling of a beluga hunt undertaken by him and his friend in 1930 supplies us with enough information to enable us to distinguish between the methods used by the Khor and those described above.(Khor's account was written down by me in the fisheries of Dzhaori in 1931) [For Mytka's account, see category 225, pp. 111-113; for Kor's account, pp. 114-116--Analyst.]

225 We present a translation of the account, striving to com-
103 municate the spirit of the original.

"During a run of herring, the four of us, two adults and two children, went in a boat to the Big Cape (Pila-krə) to hunt for belugas. When we approached the whirlpool (Polx), we came ashore and took out our things. The animal (that is, a seal, a beluga) was swimming up (1) to the shore. The

1. Literally: "rose up to the shore."

children heated tea, and we took the harpoons and went up.

584 the parents of the bride a male dog, not, however, a female.
585 It is not permitted to remove the fillet, since it is considered
[601] testimony of betrothal. From this moment on the children are considered husband and wife, and they address each other with these terms. Usually in such cases the young wife moves to the house of her young husband, sleeps with him in the same bed, passes her childhood years with him, and upon attainment of sexual maturity begins marital life.

58 This haste to conclude a marriage between children is
182 explained by many reasons, but the basic reason amounts to a timely strengthening of the right to marriage. In a few years another such lawful claimant may be born or grow up, the son of another sister or female first cousin. Furthermore, in the course of time the economic situation of both sides may change. The father of the bride may become needy and be seduced by a bride price from the outside. There are cases, of course, where the cousins becoming betrothed are of different ages; the bridegroom, the son of the sister, may be a grown lad, while the daughter of the brother /262/ is just an infant, but the procedure is exactly the same. A Gilyak
585 of my acquaintance, Pletun, a lad of about 20, married in
[582] this fashion his five-year-old cousin, the daughter of Iksus, took her into his house at once, commenced to sleep with her, and began actual cohabitation with her when she reported her first menstruation to him. But it also happens
[675] that a child-wife remains in the home of her parents and moves to her husband's house at the first appearance of menstruation, but no formalities are required for this move; the initial agreement is considered a public act, known to all. "All Sakhalin knows of this," a Gilyak of my acquaintance, who had betrothed his little daughter to the son of his sister,
585 said to me with great pathos. In such marriages not only is
583 bride price not due, but there is not even any question of it. There is merely an exchange of gifts, but even this is not at
[178] all obligatory. Such is the simple arrangement in cases of
[184] betrothal of the children of male and female first cousins,

/276 cont./

583
431

years regularly sent him rice, tobacco, and tea, and divided with him all that he obtained in the way of objects of consumption. Besides this, he had given a large dowry of clothing, furs, and ornaments.

[626] return a gift of equal value to the bridegroom. A Gilyak who breaks this custom becomes a general laughingstock. Besides the gifts to the groom, it is also the father's obligation to provide his daughter with a dowry equal in value to the bride price, and the dowry is in essence as much a gift to the daughter as it is to her husband, who is freed from the great expense of expenditures on his wife.

Thus, it is clear that, at least among the Gilyak (among other peoples, too, there is much reason to think) (2), bride

[171]

2. Incidentally, among the Turkic peoples and the Shoshoni Indians, where marriage actually has the character of buying-selling, giving presents to the groom is just as obligatory as it is among the Gilyak.

price is not at all a replacement for marriage by abduction, as has been asserted up to now by many and considered to be
583 axiomatic until very recently. In the legal consciousness of the Gilyak, marriage accompanied by bride price is not an act of buying and selling, either; evidence for /277/ this is the fact that it is positively not allowed to buy wives from one another.

583
182 It remains for us to answer the question, why is there no bride price in the orthodox marriage? The fact is that in this last case marriages are concluded between persons who are bound by common blood both on the side of the father and on the side of the mother; the marriage is sanctioned both socially and religiously. But when marriages are concluded between alien clans, the exchange of gifts plays a role both magical (a mutual guarantee

*174 60 Why, for example, do the wives of the most distant tuvn, although they may be completely alien to each other, call each other sisters? Why do I, a man, call my father-in-law, although he may be a complete stranger, my "mother's brother," and under the same conditions a woman call her mother-in-law the "sister of her father"? Why, if I am a man and marry a woman who is a complete alien to me and to my clan, from that moment on do all the sisters of her father, even the unmarried ones, become my mothers, and no one from her clan can marry the women from my clan?

[614] Why is it that the women of my clan cannot marry into not only that clan from which anyone from my clan takes a wife, but any clan from which this latter clan takes wives? In what way could the apparently paradoxical fact that a man can have male and female agnates (sons, daughters, brothers, fathers, and mothers) in clans completely alien to him have *174 58 60 come about? This confusion and apparent absurdity can be explained only by the fact that the primitive, simple, and logically consistent system of marriage, like every religious ● [183] norm, has created around itself by a peculiarity natural to it a fabric of extended norms. On the other hand, under the [178] influence of historical conditions and the conditions of life, it underwent a gradual extension and complication, while at the same time the kinship terminology, as an element which by its own nature, in view of its formality, was distinguished by its extreme stability, remained unchangeable. What was the scheme of primitive marriage like? In certain places in our exposition we have already discussed it. Now we must elucidate this question in all its fullness. The detailed analysis both of the prohibitive and of the permissive norms of marriage that we made in the preceding chapter has shown that these norms completely correspond to the kinship terminology; in other words, the whole intricate Gilyak kinship terminology is nothing more than an automatic registry of the marriage system. [178] This faithful registrar, so stable in the face of all change,

/278 cont./

583 554 735 chance to establish an independent economy. But there is another side to the coin -- it is almost impossible for a poor man to settle down with a family, and, consequently, an independent economy. But to a certain degree the rights of group marriage and the possibility of leading a common domestic life with his brothers come ● [183] to his rescue. Everyone's dream, however, is to settle down with [614] his own family. Usually the clan in the persons of the well-to-do [476] clansmen comes to the rescue of the poor man. But not every clan has rich people, and, besides, there are persons whose clan has died out. The only solution then is to obtain a wife by work. Usually such a transaction is entered into by a family in which there are no offspring of the male sex, and it is as though the son-in-law were declared an adopted son, although, as a member of another clan, he cannot be an actual heir. Methods of 583 554 452 735 lightening the payment of the bride price are practiced: a wife is purchased in small installments with yearly payments until her majority. But also in the purchase of an adult, /279/ installment buying is sometimes practiced, depending on the contract. A 583 735 554 curious means of paying the bride price is the case of payment with the bride price of a future daughter. I know of such a case. The Gilyak Kanka married the sister of the young boy Pletunka. He did not pay a bride price, but he promised to support his widowed mother and to hand over to him the bride price of his own future daughter. And the agreement was fulfilled. Pletunka was about twenty years old when Kanka gave his own daughter in marriage, and he handed over the whole bride price to Pletunka.

583 614 [627] As a matter of principle the bride price belongs to the clan. At a difficult moment of life, for example, if it becomes necessary to pay blood money, each clan-member takes part with his shagynd. But usually the bride price is distributed among the brothers, although not proportionately; the youngest, as heir to the house, usually receives the smallest share. Besides this, the elder brother buys a wife for the younger brother before his own marriage, so that the younger brother does not need the ooo shagynd for bride price. Along with the distribution of the bride

First - the pila appropriates the first sivuch killed
hunt; second - this appropriation is effected under
of a religious ceremony.
784 This latter circumstance clarified for me the es
225 number of taboos among the Gilyaks.
● 183 Thus, for instance, young hunters (as well as w
626 supposed to observe a number of taboos in connect
262 meat of a bear. At the same time old hunters need
those taboos. This is not the place for the enumera
tabooed parts of the animal which the young hunte
as women) are not supposed to eat. We shall only p
explanations given by the Gilyaks concerning some
terdictions. Thus, for instance, the young hunter m
the heart of a bear, otherwise he will sustain a hea
as soon as he comes on a track of a bear. And one
hunting bears with a heart so afflicted. The young
not eat the tongue of a bear, otherwise the bear wi
to death during an encounter. "Therefore tongue ol
can eat." These instances illustrate the manner in
Gilyaks rationalize their taboos.

It would be ridiculous to look for special meani
these taboos and their explanations. The meaning of
and their interpretation is simple--the taboos ser

784 from young hunters and women the fact that the old hunters
225 who play a leading part in the hunt appropriate the tastiest
183 parts of the quarry under the guise of religious interdictions.
626
262 Taboos regulate the relations between the old and young
784 hunters as well as the relations between the male and female
462 parts of the clan.
868 Thus, in the very same year of 1931, in the village Carvax
183 (Charbakh), the old Gilyak Kozin and ə isk (Agiska) informed
626 me of interesting taboos pertaining to a number of objects used by children in their games.

A boy must not play with a yoke or with a board used by women in cutting leather and cloth (tans-kəlmr). Also, a child must not play with a woman's cutting knife (tan-dago).

"When I was little Kozin told me, old men would not permit to put a yoke on a boy's shoulders. That was Uit ('taboo,' 'sin'). If a boy hit the legs of another boy with a yoke or a cutting board, then when he grew up and went hunting in the taiga, he might not be able to walk well." Agiska told me that he will have no luck in hunting.

Agiska told me that a girl should not play with arrow, bow, or spear, for these implements will not bring luck (in local Russian - farta). If a woman or a girl were to step inadvertantly over a spear or arrow, the arrow will not go deep into the body of the bear and will not stick. That is why girls are not supposed to play with those implements.

These taboos indicate that already at an early age children are prepared for definite tasks; that boys must not - if only in play - have anything to do with implements used by women in their tasks and that, conversely, girls mustnot use implements used in their tasks by men. These taboos are seen to legitimize for both men and woman, virtually from the time of birth, the distribution of labor existing among the Gilyaks.

462 [88] The women of a clan perform the most onerous work which
614 from the point of view of men, is least respectable. Until recently it was the slaves who did this work for the Gilyak rich. The women must carry water, chop wood, feed the dogs, row (notwithstanding his wife's advanced stage of pregancy, the husband tends the rudder; the man is supposed to tend the rudder and the woman to row; the opposite would be disreputable and inadmissible for a Gilyak hunter), prepare food, make clothes, shoes and perform a number of other onerous tasks some of which are regarded as detrimental to the dignity of a hunter.

The males of a Gilyak clan are hunters, providers of food. They procure food for the whole clan. They procure fish, bear

462 and seals. They distribute the quarry. They play the leading
614 part in the economic, social and religious life of the clan and in no one of these areas do they permit women to play
614 a part equal to their own. Women play a subordinate part in
562 the productive activity of the clan; they collect plants, roots and berries. Woman cannot play any part in the social life of the clan for they do not belong to the clan from the very time they are born, and when they grow up they are given away, in fact sold, by the hunters to some other clan. The clan that takes the woman, i.e. the clan of the son-in-law (ore) become dependent upon the clan of the father-in-law (apak). Also, women play no part in the religious life of the clan.

527 Women are not permitted to be present during more im-
562 portant moments of the "bear holiday", for the bear hunt is
784 a matter for men-hunters and not for women. Not once in their life are women permitted to eat the better cuts of bear meat. They are only allowed to eat some meat of the poorer cuts. Women must not be present at offerings to the spirits of the woods and of the sea which help the hunters, for hunting is a man's job. As mentioned above, a pregnant woman must not come to the sea shore while the men are hunting seals, otherwise the ice would disappear and the hunters would return home empty handed, etc., etc.

784 The taboos mentioned above are a religious-magical super-
462 structure on the labor distribution according to sex. One
626 should look for explanations of these taboos in the relations
183 among different groups of people in primitive society rather than in religion.

In legitimatizing this distribution of labor, the taboos turn the female part of the clan into slaves of the male part - the men-hunters.

Without further dwelling on these problems we merely indicate that there is no mystical element behind the taboos. The mystical content is often added in order to befuddle and to enslave people and to keep from them the essence of germinating exploitative relations among men. This is illustrated by the example of the tuaj where the pila attempt to assert his title to a sivuch is made covertly rather than openly, under the guise of a magical-religious ceremony.

However, we now revert to our topic.

225 Having killed a sufficient number of seals, the hunters,
422 loaded with their quarry, return to the village. On arrival
476 the pila distributes the quarry. At this point it becomes apparent that the sivuch, which is the pila's legal property and whose blood he used in feeding the tuaj, is included in

115 [97] Since little has been published about the Gilyak up to the
121 present time, I took advantage of my visit of several years duration in the Amur country to study this small tribe somewhat more in detail. All races are of interest, not only in themselves, but because they furnish material for advanced scholarship. If the professional ethnologist should find something in this sketch which can be used for the purpose of such comparative study, it would give me great pleasure.

The material I present here is based largely on my own experiences and investigations, but in part it is based on notes which I gathered from those Russians who had frequently come in contact with the Gilyak. I was always careful to question several people about each subject, for the sake of greater accuracy. The statements, moreover, usually coincided. (1)

1. For my reports about the Gilyak on the island of Sakhalin, with whom I had little personal contact, I am largely indebted to a physician who lived there: Dr. A. Lebedev.

101 I. Geographical Distribution and Population.
131 The tribe of Gilyaks (2) which belongs to the Mongolian
182

2. The word is usually written "Giliak" but because the "g" is hard in pronunciation, I added the "h". [RCH: The author througout spells the word Ghilakin.]

race lives partly on the island of Sakhalin, partly on the continent, in the coastal region of East Siberia, that is, on the lower Amur and on the sea coast around the mouth of this river, as well as on the De Kastri bay and the Kaiser bay. On the latter, the Gilyak are found only sparsely and more temporarily. On the island of Sakhalin they occupy the northern half, especially the Tym river valley, and the east and west coasts. In the summer they occupy one or another place, according to where fishing [98] is best; but in winter they always go back to their villages.

On the lower Amur the true Gilyak are to be found only as far as the village of Bogorodskoye, 150 versts up-stream from the city of Nikolayevsk. From Bogorodskoye up to the Amur tributary of Gorin, that is, from about 51 degrees north latitude, there lives a people that may be considered a cross between the Gilyak and the Goldi. They call

101 themselves "Mangun" (1), sometimes also "Chedé". The
131
182

1. "Uni" means "river" in the language of the Goldi. The name "Amur" seems to have derived from the Goldian designation for water: mu.

former means "river people"; the latter, "the lower ones" The Russians regard them simply as Gilyak and know no other name. Beyond the Gorin, the Goldi begin to appear, but they are also found scattered among the Mangun-Gilyak. The latter differ from the Goldi in certain external characteristics and customs, and from the true Gilyak in their burial ceremonies and in their language which is nothing more than the somewhat modified language of the Goldi. Among these Mangun are to be found, here and there, some nomadic Orochon and Tungus or Sofiysk-Gilyak, as they are usually called in those parts (from the town of Sofiyskoye on the Amur).

On the river Amgun which flows into the Amur from the left side at the so-called Tyr, about 80 versts above Nikolayevsk live the so-called Negidal who are considered a mixed race of Gilyak and Tungus. They speak Tungus, and in their way of living rather resemble the Gilayk who do not, however, recognize them as kin.

The following is the picture: 1) The full-blooded Gilyak live on the island of Sakhalin (northern half), on the continental coast, and on the Amur as far as Bogorodskoye; but they fall into two sub-groups of which the island Gilyak differ from the continental ones only slightly in language and in the way in which they build their dwellings. 2) The second group are the Mangun who are probably a mixture between Gilyak and Goldi and who have little more than their language in common with the Goldi. 3) The third group of Negidal is no longer very closely related to the Gilyak and will therefore not be considered in this essay.

174 We do not know how long the Gilyak have occupied their present habitations [99], but we surmise that they came to the mainland from Sakhalin.

The Goldi consider themselves the original inhabitants of the Amur country, but among the Gilyak it is frequently assumed that they formerly all lived on the island of Sakhalin. And, as a matter of fact, if the opposite were the case, the Sakhalin-Gilyak would probably have brought along with them the more complete type of dwelling which is common on the

513 heads. Their cover consists of skins, sometimes also of a coarse military cloth.

182 The houses of the Sakhalin-Gilyak are differently arranged.
342 They have neither stoves, nor chimneys, nor windows. The floor is somewhat below the surface of the ground; in the middle of it is a box-like open hearth made of pressed clay, and above this is an opening in the roof. In windy weather the houses are usually full of smoke.

314 A Gilyak house is lived in only during the cold and colder
342 parts of the year; in summer, however, those who do not go
484 off on longer excursions move into the airy storage hut. This
592 consists of boards, and stands on poles in order to protect it from rats. [115] On their expeditions the Gilyak often make themselves huts of birch bark, and they carry along with them wide and long pieces of bark. It is scraped, and softened in hot steam. They also make baskets, small dishes, etc. of this.

A Gilyak house seldom serves but one family; usually several of them live together, sometimes as many as eight or nine.

531 VII. Transportation Methods,
Boats and Dog Sleds.

There are two kinds of boats. The regular one is usually made of fir or cedar wood. It is rather narrow, but very long, about six to seven meters and has no keel. The steering end is rounded, the opposite end, pointed. Lengthwise it consists of three planks, one of which is the floor, the others, the two sides. The floor board projects out at the prow, the two side boards are shorter than it and are joined by two small cross-boards; the projecting floor board softens the impact in landing and serves to tie up the vessel. The boards are joined with wooden pins, the cracks stuffed with moss which on the inside is covered with thin wooden strips and fastened down. There is no rudder; instead they use a short steering oar which is used alternately on the right and left sides. The ordinary oars are shovel-shaped; the wider end is cut in the shape of a lyre. There is a small bar fastened to the edge of the boat for each oar, against which it is braced. The rowers sit on low, narrow cross boards. Sometimes a mast is raised and a sail is set. The latter consists of fish skin or sail cloth. These boats go very rapidly but easily overturn.

The Omorchka is a small narrow canoe made of birch bark; inside, the frame is supported by a double row of lashing of the same material, which runs criss-cross. Usually only one person sits in this canoe and rows with a double oar, both right and left.

764 dead one is brought or carried into the woods, accompanied by relatives and friends. He is placed on a pyre where he is burned in three or four hours. The skull and the extremities usually burn faster than the spinal column. The mourning relatives stand around the fire. In token of their sorrow the women let their hair hang loose, the men sometimes cut theirs short. The ashes are gathered in a vessel and placed in the "death house". The latter is an ordinary yurt in design, but very small, somewhat like a large doll house. Beneath it the clothes, the pipe, and the weapons of the deceased are buried. Sometimes, however, the clothes are also burned. The favorite dog is killed but not burned; it is consumed by the mourners. On Sakhalin, if the deceased was a wealthy man, all the dogs which brought his sled to the funeral pyre are killed; poor people content themselves with burning the sled.

There is no special place for the death houses; they stand by themselves all over the woods, not too far from the village. On certain days the relatives assemble here for a funeral rite. Millet, a stuffed pipe, and such things are placed in the little house through the window, and all who are present break into loud lamentation.

764 The above-described burial ceremony is customary only
182 among the true Gilyak, that is, on the island of Sakhalin and on the mainland along the Amur up to Bogorodskoye. The Sofiyskian Gilyak lower the bodies without a coffin into a crypt. The deceased is given his best clothes for the journey besides a bowl of millet, a stuffed pipe and some spirits. At the head-and foot-end [239] stakes are driven, on which hang his weapons and other objects. For these graves there is
766 also no particular place. Sometimes, instead of being bur-
182 ied the corpses are put in open cradles made of wicker and suspended from trees. This is supposed to be done when there are epidemics, and thus the very thing that should not be done is done. However, since these death cradles are isolated and hung up at a great distance from the villages, the miasmas resulting from decomposition are probably not harmful.

XV Weltanschauung and Religion.

771 The Gilyak do not generally like to speak of transcendental matters. One is advised by some of them to ask a shaman for information, since he knows better. Others, on the contrary, answer the given questions like disinterested persons, that is, they say the shaman maintains this or that, but a certain scepticism is apparent. The Gilyak are

183

183 NORMS--native and scientific definitions of custom (e.g., as ideal patterns, as ranges of variation within limits, as statistical inductions from observed behavior); positive and negative norms (e.g., folkways, taboos); verbalized and covert norms; investment of norms with affect and symbolic value (e.g., mores, idealization); discrepancies between ideals and behavior; configurations of norms (e.g., culture complexes, institutions); etc. See also:

Legal norms	671		

/115 cont./

555 556 156 and the chosen one cannot either evoke envy or pride himself on his advantages (1).

1. The following example can serve as a good illustration of the outlook of the Gilyak on the origin of personal wealth. On the western shore of Sakhalin the wealthiest man in my time was a certain Gibl' from the village of Tangivo. He had, in effect, a fine intelligence and was an able hunter and an energetic man. Moreover, he was aided by his acquaintance with the Russian officials, whom he served in the capacity of supplier of furs and collections. But the Gilyak logic saw the cause of his extraordinary wealth in a quite special circumstance: that he once found far away in the hills under a log a piece of some kind of substance, a magic talisman, sent to him by the gods.

[789]

* 614 156 [454] ● [183] His protectors, sending him the beasts of the taiga and the fish of the water, are the common genii of the clan. To hoard one's wealth, not sharing it with one's clansmen, would be equivalent to appropriating for oneself that which belongs to one jointly with all, and the highest ambition of such a man is to display his benevolence and generosity to those around him.

Such are the economic relations, producing a whole personality equal to others in preparation and knowledge, /116/ excluding the possibility of mutual slavery, and creating for each person a healthy atmosphere of consciousness of his own freedom and self-determination.

156 771 But the greatest wholeness is given to a person by his socio-religious world-outlook. The basic axiom of everyone is that all his existence and welfare are completely in the hands of the gods, in particular the clan gods, who shower their beneficence not on

/116 cont./

156 771 one but on all. Any attempt to monopolize the gifts of the gods must inevitably incur just punishment by the common benefactors of the clan.

* 614 771 182 156 ● 183 Everything that religion and clan wisdom prescribe for gaining the beneficence of the gods is a blessing for each, and to carry out their dictates means only to take care of one's self. It is the same with all the prescriptions of clan regulations, be they sexual norms, rules of revenge, or religious rites; any infraction of them on the part of one is a common "sin" and is destructive to all.

All more or less important acts of social life, even including sacrificing one's self in a battle of vengeance for one's clansman, are categorical imperatives of a religious world-outlook which neither allow hesitation nor require compulsion. All of the instincts for self-preservation are in complete harmony with the religious ideas. By an act of revenge, a man protects his own security, but he thereby also fulfills a religious duty by appeasing the spirit of the dead man, which is able to inflict punishment if it remains unavenged. And so it is in everything...

156 * 614 182 A healthy, integrated, comprehensively developed personality with an integrated religio-social world-outlook, creating a perfect harmony of the personal and social interests and the driving forces of life -- such is the hidden, but mighty mainspring of the clan mechanism.

Observe how, without any regulation or organs of compulsion, but with only the desire of an individual, the complicated mechanism of clan life operates.

* 614 768 182 Suppose a clansman with a family dies. It is necessary to provide for his family, to preserve his property until the heirs reach maturity, and it is necessary, in order to avoid disputes, to decide to whom the widow of the deceased shall pass. There are no judges, there are no authorities, but, a short while after the deceased has been buried, the nearest clansmen assemble, have a short discussion, listen to the claimants, and the one they decide upon will be the husband of the widow and the father of the orphaned children.

During

* 835 /184/ my residence of many years among the Gilyak, despite careful questioning, I heard of only two or three instances of clear violation of the prohibitive norms. The most outstanding of these instances took place in the settlement of Tamlevo, where a young Gilyak, after the death of his father, lived for some time with his young stepmother, purchased by his father shortly before his death. This incident shocked all Sakhalin, and he was spoken of as some kind of monster. Another commonly known incident involved the young Gilyak, Pavlinka, who married a woman from the clan of his ymgii, i.e., from the clan that took its wives from Pavlinka's clan. But Pavlinka was a considerably Russified Gilyak who had served in the police service and regarded the customs of his people superciliously. Another Russified Gilyak, Allykh, from the settlement of Tamlevo, after the death of one of his younger tuvn, compelled the gathering of clansmen which was deciding, as was customary, to whom the widow of the deceased should pass, to award her to him, although he, as an aki (elder brother), had no rights whatever to this. But these cases are the exception and evoked an energetic reaction from the community.

[177]

177 * 835 587 768

684 In the first two cases the violators had to go into voluntary exile, i.e., settle outside the settlement and lead a lonely existence, with all the deprivations of clan blessings associated with ostracism. But, we repeat, these were quite exceptional cases bound up with psychics changed under the influence of an alien culture (1).

[177]

* 835 ● 183 587 768 [931]

1. There are exceptional cases of another kind when the marriage norms are disrupted for the sake of upholding other norms which are considered even more important by society; this occurs during an epidemic, when a husband is not found for this or that widow according to the principles of the levirate.

/184 cont./

* 835 ● 183 587 768 [614] levirate. Then, in order that the woman remain in the clan of her deceased husband, she is given, according to the decision of the clan council, to any clansman of an ascending or descending degree of kinship with her late husband.

684 * 835 Ordinarily the very idea of sexual connection with persons of the forbidden categories evokes an instinctive disgust.

[776] In the rare instances where feelings of love arise between such persons, the Gilyak regard it as the inspiration of an evil spirit, as a phenomenon unnatural not only in men, but in beasts. We have seen that in such instances they even slay a fornicating dog. The attitude toward people is entirely the same. Ordinarily lovers in the forbidden categories slay themselves by mutual agreement or under the direct urging of their relatives. In one last song of such an unhappy pair, the woman sings of how /185/ her elder sister called her a "bitch" for her love for her uncle, and called the latter a "devil," and how all -- her mother, father, and sisters -- urged upon her: "slay thyself, slay!" Incidentally, the object of her criminal passion, her uncle, could be of her age, could grow up far apart from her, and the love between the criminal pair might seem perfectly natural in our eyes.

[825] [K2] [533]

* 835 The feeling of sexual repulsion toward persons of the forbidden categories has been transformed into an instinct, like the very similar feeling toward one's mother or own sisters in our society. The impression of an instinct is also produced on us by that amazing ability of the Gilyak to suppress in himself the feeling of jealousy, an ability which he manifests when the question of the group-husbands of his individual spouse arises. Without these instincts, or in any case the noteworthy virtues of self-control and self-restraint, the realization of the sexual norms would be impossible; unrestrained jealousy would result in the destruction of group

4 Pregnancy, Childbirth and Miscarriage among the
3 Inhabitants of Sakhalin Island (Gilyak and Ainu).
3 by Bronislaw Pilsudski

I. The Gilyak

The house of birth.

Among the Gilyak the act of birth is considered unclean and therefore is never allowed to take place in the yurt, their home. That is why not only in summer, but even in winter during the worst periods of frost and snowstorms, the woman in labor is led to a hut built especially for her near the home. The choice of the place makes it clear that the Gilyak feel no respect for the act of birth, for the hut mentioned above is built in the bushes which serve as a privy for the
2 women. The location of these bushes is always
1 definitely fixed, and no man would ever walk in that
3 direction. The boys are strictly forbidden to run or to look around there, and they are warned that they will contract a disease called taremynd if they step into a trace of women's blood. The disease begins with a paralysis of the hands and feet, the afflicted person loses the ability to move, loses weight and finally dies, for the disease is incurable.

4 As soon as the labor pains start the woman is
3 brought into the lan-raf or the "house of birth". This "house of birth" is erected hurriedly at the very last moment. Built of wooden boards roughly put together and covered with old bark from fir trees, it looks more like a dog house than like the room destined to welcome a new inhabitant of the world longingly expected by his parents. In the eyes of the Gilyak there is no conflict between the affection and love of the parents for the newly born child and the severe, if not cruel welcome, it is given. The child will go through a hard, more than Spartan education, and its life will be full of worries and hardships in a neither opulent nor gentle nature. This is why no Gilyak even comes to think that the first entrance into the world might be easier and more wholesome for the little guest if it took place in the presence of other people under other and better circumstances.

Tungus RU5
Ainu AB6
Sakhalin
Southeast Siberia RX1

G 101 144 /1 cont./

As for the Gilyak, although anthropologically they have been assimilated to a considerable extent with the surrounding nationalities, in many features of their material culture and especially in their social structure they stand equally far apart from the Tungus peoples and from their neighbors, the Ainu. Finally, T G 131 197 /2/ in one respect both of the latter groups are distinct from the first one. The Gilyak and the Ainu occupy strictly delimited, almost continuous territories (the Gilyak in north and central Sakhalin and on the banks of the estuary and mouth of the Amur; the Ainu -- on southern Sakhalin and on Lake Esso); furthermore, the dialectical distinctions of each of the languages of these peoples are so insignificant that all the members of a tribe easily understand one another, and therefore among each of these peoples a full awareness of its national unity has been preserved. The peoples of the T 131 197 Tungus group, on the other hand, have separated from one another and are dispersed over the entire, huge region, and certain divisions of them speak dialects considerably different from one another.

Furthermore, they differ considerably among themselves in their way of life as well, so that, in spite of all their linguistic, T A 121 anthropological, and historical kinship, they fall into separate, ● 184 small groups, aware of their tribal individuality.

These separate nationalities, separated from one another spacially, historically, linguistically, and, finally, in the realm of material culture, need classification. Such a classification is S T G 121 all the more necessary because certain groups introduced into the ethnography by Schrenck as distinct nationalities actually do not exist.

But on what basis are they to be classified?

Easiest of all would be to construct such a classification on S 121 433 the basis of the economic way of life. If we ignore the southern group -- Manchu, Daur, and Solon, who have little to do with the Russian Priamurye /Amur region/, where they have no significance territorially, then all the remaining nationalities could be divided into two large groups -- some have a reindeer economy, in other words, they are a group of nomad -- reindeer-breeders, such as the Tungus proper, Orochon, Sakhalin Orok; the other

/135 cont./

*601 197 process of mixing between the Gilyak and their neighbors, one can only be surprised that these kinship terminologies turn out to have so little in common.

The etymologies of the Gilyak kinship terms themselves testify to this uniqueness of the Gilyak terminology with great palpability; the greater part of them can be traced all the way back to their original roots, which points to their firm stability over a long period of time (1).

> 1. This cannot be said with regard to many historic peoples. Thus, for example, as the famous Turkish specialist, V.V.Radlov /W. Radloff/, has reported to me, among the Turks, judging by Orkhon and Uigur monuments, the kinship terminology, starting from the tenth century and with the exception of one or two terms, has changed completely, even in such forms as father and mother, and so forth.

*601 We shall adduce a few examples. Thus, the group "ytk" -- father, "atk" -- grandfather, uncle on the mother's side, "ytik" -- grandmother, "ychkh" -- old man, husband, "achkh" -- aunt, sister of the father, "ut-ku" -- man, (western dialect) have a common root "ut, yt" -- body; the group "ymic" -- mother, "ymg:i" -- son-in-law, son of the sister, "um-gu" -- woman (western dialect) have the common root "um." Further, "an'g:ej" -- wife, from "an'kh" -- female; "az'mych" -- beloved, husband, man (western dialect), from "av" -- male and the verb "mych" -- to be, to become. The group "shank, shankh, rankh" -- woman and "ranzh" -- sister, etc. is of interest.

*601 Dialectal differences in kinship designations remain to be ● 184 discussed. These differences are of a minor nature. In the 197 fundamental terms there are either no differences whatever,

/135 cont./

*601 or the differences are of an insignificant phonetic character.
●184 Thus, for example, "ytk, ymk" -- father, mother -- are
197 completely identical in all dialects; "ruvn, tuvn" -- brother (eastern dialect) are slightly changed to "ruf" in the western dialect; "og:la, og:lang" in the Tym' and the eastern dialect of Sakhalin are equivalent to "o:la" in the western dialect. In cases where the terms are completely different phonetically, this is due either to borrowing from very near neighbors, as in the previously mentioned "app" and "ivy," or to the formation of corresponding terms from different synonyms common to all dialects. Thus, for example, "shankh" -- woman in the eastern dialect has been formed from the common word "an kh" -- female, and "um-gu" -- woman in /136/ the western dialect has the same root as the common word "ym(k)" -- mother; in exactly the same way "ut-ku" -- man in the western dialect has the same root as "ytk" -- (father), and the corresponding az'nych in the eastern dialect is from azh -- male, etc.

[104] In the table of kinship nomenclature and the explanations for it, we shall give the terms according to dialects and territories, indicating in parenthesis the dialect of the Amur with the abbreviation (A.D.), the dialect of the Tym' -- (T.D.), the dialect of the eastern shore of Sakhalin --(E.D.), and of the western (W.D.). From here on in the text we shall always use the first of the synonyms of the eastern dialect.

*601 Now we proceed to the explanation proper of the kinship
614 terminology. We only forewarn the reader that the Gilyak
104 reckon kinship through the male line and that the agnatic
[61] family is only a cell of the strictly organized, exogamous, agnatic clan. We also ask the reader to remember that at the mention of this or that term without any special indication of whether it is used by males or females we shall imply that these terms are used identically by both sexes; in other cases the sex of the speaker will be specifically indicated.

/137 cont./

614 the contrary, designate exclusively
615 relationship either through the mother
602 or through the wife, but under no con-
*601 ditions on the father's side. Kinsmen
114 through the father bear the name already mentioned by us: k:khal, k:khal-n'ig:yvyn.

Thus, relationship
614 by marriage and cognate relationship are completely identical
602 concepts among the Gilyak. We shall see how this has come
614 about upon examining the marriage norms. Now, let us pro-
*601 ceed to an examination of each category of kinship separately.
602 Agnate kinship, kinship within the clan. Within the clan the Gilyak distinguish only three lines: 1) the ascending generation "the generation of my fathers"), without distinguishing between direct and collateral lines, since the brothers of the father are called by the same term as own fathers; they only distinguish the generations of the ascending line; 1st generation, 2nd, 3rd, 4th, 5th, etc.;

2) the descending generation ("the generation of my children"), in which by children is understood not only the descendants of the speaker and of the whole class of his own brothers and collateral brothers of all degrees, but all the subsequent descending generations of these persons;

3) within each generation the lines of collateral kinship, embracing the class of brothers and sisters (own and collateral), the so-called class "tuvn."

In addition, in each generation of clansmen the class of husbands and wives is distinguished.

The class of brothers and sisters ("tuvn"). For a better understanding of what is to follow we shall begin with that class called tuvn (2). The peculiarity of this term consists first of

● [184] 2. A term borrowed from the eastern
[197] dialect; in the western dialect it is ruf.

/139 cont./

*601 The Gilyak who speak the western dialect, i.e., the
●184 Gilyak of the continent and the western shore of Sakhalin,
197 especially beginning from the settlement of Vaaz and to the north of it, use the same terms, "ytk" and so on (1), to

1. A full enumeration of the terms-synonyms is given below in the table.

designate, besides own father, all his male tuvn, i.e., his own and collateral brothers and, in addition, all the husbands of the sisters of his mother, while in certain places, specifically in the settlement of Tamlevo and to the north of it, together with "ytk" and its synonyms still another term is used to designate the brothers of the father -- "pilang," corresponding in meaning to the analogous Tungus a'ga -- elder. Another group speaking the eastern dialect draws a distinction between "brothers" (tuvn) younger than the father, and "brothers" (tuvn) older than the father. It is for the first that it uses without distinction the terms ytk -- father and pilang -- elder, while for the second it uses the term atk, i.e., the same as the designation for grandfather. In colloquial language, and especially in texts, this group also uses without distinction the term "father" (ytk and its synonyms) both for own father and for all his "brothers" (tuvn). This is reflected with special vividness in the customary use of the term "father" in the plural; for example, n'ytkhun -- plural of ytk, father -- literally -- "my fathers," signifies "father" and his "brothers " (tuvn), without distinguishing ages. From this one may conclude that the first form of a single term for the designation of the father and his "brothers" is more ancient and was at one time dominant, but was squeezed out under the influence of changes in the sexual norms.

The class of mothers. While in the terminology of the foregoing class there are differences between the eastern and western Gilyak, both groups are completely in accord with
000 respect to the class of mothers. Every Gilyak, man and woman,

/139 cont./ Every Gilyak, man and woman,
*601 uses one and the same term for "mother" (ymk and synonyms)
● [184] not only for his own mother, but also for the following groups of persons: 1) all the "sisters" /140/ (female tuvn) of his mother; 2) all the wives of the "brothers" of his father (1);

[197] [563] 1. The sole exception that I found during the time of the census in the settlement of Kol' was one case in which the wife of the older brother of the father is called by the Tungus term yvej, which is explained by the presence in the settlement of persons of Tungus origin.

3) all the wives of his father, i.e., his stepmothers; 4) outside the clan: all the "sisters" of persons of the akhmalk class (concerning this, see below).

[197] The class of "wives" within the clan. The designation most in
[184] use for wife in both dialects is an'kh, an'g:ej. Within the clan
[614] the Gilyak gives this name, not only to his official wife, but also to all her "sisters" (i.e., female tuvn), to the wives of al his elder "brothers" (i.e., aki), and, finally, to all the sisters of the wives of these last. To the wives of the class of younge "brothers" (as'kh) the Gilyak gives the name of jokho, jokh /s yokh, p. 76/, the same term which the father-in-law or moth in-law applies to his or her daughter-in-law /nevestka, "daug in-law" or "sister-in-law" in Russian/. Only an insignificant
[197] number of Gilyak on the Amur, due to their proximity to the Olcha, took from the latter the special designation ivy for the wives of all brothers without distinction (2).

2. Among the Olcha, a man calls the wife of his older brother yvy.

It is especially characteristic that "wives" of the tuvn clas no matter who they may be by origin, call one another "sister" (tuvn), and, depending on the age of their husbands, one calls

usually favors them and the first husband must abandon his claims. In recent years many Gilyak have resorted to a special ruse in order to make sure of their wives. Such chaps who are probably not of the best and who may thus be faced with the prospect of eventually being deserted by their wives, have themselves baptized by a Russian priest, because they know that, according to the Greek religion, marriage must be permanent, and they would consequently, in case of desertion, be entitled to the ispravnik's protection. However, it is doubtful whether this maneuver will help them much in the long run, for such baptized individuals who later have no intention of keeping their Christianity alive, are soon forgotten in official circles. No one knows who or where they are, the wilderness is vast, and looking for them is more than troublesome.

If the abducted woman had had children by her first marriage, these usually remain with the father. [129]

Child training. Toward the end of her pregnancy, a woman is taken out of the house for 10 (1) days and brought to

1. The duration of this exile is not the same everywhere. From some Gilyak I learned that eight days sufficed; on the island of Sakhalin, however, 12 days were given.

a hut made of birch bark, in which a small fire is burning. This custom which is known to exist among other primitive peoples, for instance among the Ostyaks, is, up to the present, very strictly observed by the Gilyak even in winter during the most severe cold, as a result of which the newly-born child often freezes to death. Conceivably a child which survives such a test must be strong. The mother also proves by this what rigors these people are capable of enduring. During her entire stay in the hut only women are permitted to come to her, often she must be her own mid-wife. No one could tell me the actual meaning of this custom: most probably it cannot be explained on the basis of "impurity" of the woman, but it is related to another superstition of which we shall speak later, and which was originally perhaps some hygienic regulation. That no mystical idea of "impurity" underlies it may be seen from the fact that when the woman returns to her house she undergoes no "purifying" ritual.

The bathing of the newly-born is also done in the improvised lying-in establishment, and it is given its other baths there.

548 On Sakhalin it happened that the Gilyak meant to kill such
337 a Helen who lived with a Russian soldier and bore him
584 a child.

Sodomy, onanism and similar perversions seem to be un-
339 known among the Gilyak. Those whom I questioned about them regarded me with astonishment and did not know what I was talking about.

514 As for modesty, it varies according to the type referred
334 to. In sexual matters it is not very pronounced, as we have already pointed out. First of all, the crowded way in which people live together does not permit such delicacy; however the Gilyaks try to hide their love-making from strangers. Their natural functions they do not exactly perform in the open, but they are not particularly ashamed in front of members of the opposite sex. Men as well as women squat in urinating. Women, at any rate younger women, guard against exposing their bodies before strange men. I had some difficulty in persuading them to do this when I was taking body measurements.

177 It is impossible to study the more subtle expressions of
437 modesty in all their forms, but it seems that the Gilyak are
183 most of all ashamed of being taken for thieves and cowards.
576 Their entire character and cycle of habits is such that fawning and self-degradation are foreign to them. They do not make much of genuflection, but do it largely when they are forced to. Thus those Gilyak who decide to travel up the Sungari to the Chinese with their fur must, as a matter of course, bow before the Chinese officials. And probably the Chinese are responsible for teaching them such humiliating expressions of veneration. [227]

735 Begging is practically non-existent among the Gilyak. The
273 only specimen one can see begging is the so-called Vanika-Gilyak, a degenerated half-idiot who goes begging along the streets of Nikolayevsk-na-Amure and who long since has deserted his countrymen. He is also the only one who can be seen in a drunken state, swaying and noisily roaming about. In general drunkenness has not taken root to such an extent that there are professional alcoholics, and this is probably partly because Gilyak cannot have spirits whenever they want, for it necessitates a trip to the Russians. But they love liquor very much, and unfortunately it is to be foreseen that this habit will become wide-spread.

623 XII. Councils, Jurisdiction, Duels, Prosecution
681 of Criminals

Meetings and councils are seldom held. If they are, they

/148 cont./

husbands of the sisters of the father-in-law /wife's father/; the elder brother of the husband (among the eastern Gilyak).

V. The wives of the brothers of the mother and their tuvn; the wives of fathers, grandfathers, etc. of the brother of the mother; the wives of the sons of the brothers of the mother; mother, grandmother, etc. of the wife; mother, grandmother, etc. of the sister of the wife and her tuvn in general; grandmother, great-grandmother (on the maternal and paternal side).

VI. Son or daughter -- children; the children of all the brothers -- tuvn (if "I" am a man); the children of the sisters (if "I" am a woman); the children of sisters (tuvn) of the wife; the children of the sisters of the wife of the brother; the children of daughters of the brothers of the mother and their tuvn.

VII. An'g:ej, an'kh (to the north of the Amur), an'kh n'um-gu (Amur).
Other designations: shank, shankh, ran'kh.

VIII. Jokh, jokho.

IX. Pu, ivn (E.D.).
Pu, if, o'kono (W.D.).
Other designations: ychikh, a'zmych, utgu.

VII. Wife; sister of the wife; wife of the elder tuvn; wife of the son of the sister (tuvn) of the mother; daughter of the brother of the mother and all her tuvn; in certain places on the Amur they also call the wife of the elder tuvn, ivy.

VIII. Daughter-in-law /nevestka/; wife of the younger brother (tuvn).

IX. If "I" am a woman: husband; son of the sister of the father; tuvn of the son of the sister of the father; husband of the sister; elder tuvn of the husband.

Deviations: 1. On the continent to the north of the Amur, they call all the tuvn of the husband alike, pu, ivn.

2. Likewise on the western shore of Sakhalin in the settlement of Tamlevo and farther north, all tuvn of the husband -- o'kono, also jori; on the Amur -- o'kono, n'orej. Conversely, among the eastern Gilyak they always call the younger brother of the husband, as distinct from the elder, atk, edr:, even er: (see group IV).

/155 cont./

835 614 women increases correspondingly in these clans of father-in-law, because in each of these clans there is a whole new [178] [161] class of wives -- an'g:ej. Nevertheless, the extension of prohibitions to clans of akhmalk'i of the most remote degree has naturally brought about within a small-sized tribe, with a population of scarcely four and a half thousand, entirely understandable constraints, leading to some limitations of the strict principle, namely, that the prohibitions at the present time do not go back further than the clans of akhmalk of the third degree, and, if one clan or another takes wives from many clans, then the prohibitions are limited to the second generation, and, if an acquired woman dies childless, then even in the second generation the limitations fall away.

835 The class of jokh. Finally, one more class prohibited to men, called jokh, remains. From the kinship nomenclature we know that a man gives this name to two completely different classes of women, namely, on the one hand, to the class of wives of his og:la (descending line), and, on the other hand, to the class of wives /156/ of his as'kh, i.e., of his younger brothers (tuvn), and sisters of these wives. As concerns the first class, we have already noted its prohibited character in examining the prohibition between persons of the ascending generations and the wives of those of descending ones. The prohibited character of the second category is not so absolute. From the kinship terminology we know that with respect to the wife of the elder tuvn various forms of designation are practiced [184] in various places. In several places on the Amur, on the coast of the mainland, and on the northwestern coast of Sakhalin (if "I" am a male) one and the same appellation (an'g:ej -- wife) is used for wives of the younger as well as of the older brother, and in such places sexual intercourse is permitted with all wives of brothers. But this arrangement is not the dominant one; the dominant arrangement must be considered that of designating the wife of the elder tuvn as an'g:ej, i.e., the same name that one gives to one's own wife,

/140 cont./

601 the other nankh and as'kh -- older "sister," and, conversely, -- younger "sister."

The class of husbands. The class of husbands corresponds to the terminology of the foregoing class -- "wives." Within the 14) clan of her husband the woman gives the name of "husband" (pu, ivn, o'kono, etc.), not only to her official husband, but also to the representatives of the class of his "brothers" (tuvn), with, however, the following variations. The eastern Gilyak 01 and a part of the western Gilyak differentiate between the 84 younger "brothers" (tuvn) of the husband and the elder ones; 97 a woman calls the former pu, ivn, o'kono, i.e., as her own formal husbands, and she calls the latter atk. The Gilyak of northern Sakhalin and the shoreline of the continent do not differentiate between the younger and older brothers of the husband, calling them alike pu, o'kono. Only the Amur Gilyak have a special uniform designation for all the brothers of the husband -- n'orej (= n'i -- my + orej -- husband), a term which sounds like the Goldi kinship term oro.

601 The class of the descending line. The class of the descending 14 line within the clan, the class og:lang, og:la, is completely defined by the foregoing terms of the class of fathers and mothers. Within his clan every man gives the name of og:la, not only to his own children born of his official wives, but also to all the children of his "brothers" (tuvn), just as /141/ a woman gives the name og:la not only to her own children, but to the children of all the "brothers" of her husband without distinction; but the term og:la is applied not only to the first generation of individuals, but also to all the generations in the descending line, not only one's own, but also those of the whole class of tuvn. Thus, the Gilyak gives the one and the same term og:la not only to his own children and agnate nephews, but to all of their descendants, i.e., grandsons, great-grandsons, etc. Here we see the same phenomenon that we find in the terminology of the ascending line, where the one term "atk" defines all the generations above father and mother.

*601 602 /147/ The terms of kinship in a figurative sense. It is curious how the kinship terms are reflected in the terms used between persons who are not married to each other -- sweethearts. It seems that terms are often transferred into this area from the [197] [184] matrimonial terminology. Thus a woman calls her sweetheart o'kono (husband, in the western dialect), az'mych (man, husband, in the eastern dialect), ivn (groom), navkh (from the terminology of the group of father-in-law and son-in-law [837] /zyat'/). It is very interesting that the unrelated wives of "brothers," and, jokingly, men who have an extramarital relationship with the same women, sometimes call each other by this last term, as well as by the term akhmalk, while the terms navkh and akhmalk in practical life have taken on the meaning of "comrade" or "participant in a common affair." Thus, the term "navkh" by its meaning in these cases entirely corresponds with the famous Hawaiian term punalua in the family group which takes its name from this term.

*601 As a result of our survey of the kinship termonology, we find among the Gilyak a typical classificatory system of kinship.

Summing up the terms for agnate and cognate kinship, we get the following scheme. (See following page.)

/172 cont./

2 know, an ymg:i is the closest person to an akhmalk and to his wife. An ymg:i is a preferred hunting companion summer and winter. He is the dearest guest; they serve the most delicate dishes to him. He makes them still happier for a special reason. With their clansmen-brothers the akhmalk'i /173/ and their sons can neither converse nor joke, but the ymg:i is a legitimate interlocutor, with whom they may make merry to their hearts' content. And in such surroundings there 6) are dozens of maidens -- his an'g:ej, with whom he may openly converse, joke, and, when the opportunity presents itself, have sexual intercourse.

Now we shall turn to the relations of the pu with their 35 82 married an'g:ej.

From the kinship terminology we know that a man's 4] married an'g:ej include, first of all, the individual wives of his "brothers" (tuvn), which, among the Gilyak speaking the western dialect, refers to all tuvn, while among the Gilyak speaking the eastern dialect -- only to the elder; further -- all the married "sisters" of his own wife; finally, the married sisters of the wives of his tuvn -- a huge category, including many dozens of persons distributed throughout the 35 territory of Gilyak settlement. Concerning the last two groups -- the wife's sisters and the sisters of the brothers' wives -- one must make the following reservation: usually, in agreement with the general norms of Gilyak marriage, the sisters marry persons of the class tuvn alone, so that with regard to the sisters of the wife and the sisters of the brothers' wives a general rule concerning the wives of "brothers" operates. But, due to deviations from the traditional norms, it may turn out that the sister of one's brother's wife or the sister of one's own wife is married to a completely alien man, or even to someone who is an accidental akhmalk (1).

82] 14] 1. An accidental akhmalk is what I call a man from a clan from which one of the kinsmen of the speaker has

/173 cont./

*835 614 582 by chance taken a wife secretly, rather than from the clan from which all the kinsmen usually take a wife.

601 *835 ●184 614 In these cases the norms of sexual relations, and the terminology as well, are not the same. Among the majority of clans, in both cases sexual intercourse with these women is legitimate, the participants call each other pu and an'g:ej, and their children call each other tuvn and the sisters of their mother and their husbands correspondingly "mothers" and "fathers." But among other clans, mainly among clans who are neighbors of the Ainu, the arrangement is different. If the sister of a man's wife marries his akhmalk, then sexual intercourse with her, as in general with the wife of an akhmalk, is absolutely prohibited, and, instead of an'g:ej, the man calls her achk (mother-in-law). But if she marries a completely alien man, then the relations between them are as between aliens, i.e., sexual intercourse is not considered a *835 sin, but neither is it legitimate. What is remarkable, however, is that the offspring of both families are in all cases, even in such /174/ relations, considered to be tuvn (brothers) (1)

*835 601 1. I shall give an example which depicts very well both the relations of such tuvn (i.e., the children of sisters whose husbands are aliens to each other) among themselves and their mutual relations towards their wives.

Wremgin and Hibl are individuals of two different clans (k:khal), one from the clan Fan'gi, the other from the clan Khoi, but their mothers were tuvn, i.e., sisters from one and the same clan. And

/174 cont./

*835 601 nevertheless, notwithstanding the fact that their fathers and they themselves are persons of alien clans, they call each other tuvn, because their fathers were married to sisters and had the right to sexual intercourse, and, as tuvn, they do not dare to converse or joke with each other (see below, the prohibitions); their wives are considered ymk (mothers) to their children, and Hibl, as the younger, has the right to sexual intercourse with the wife of Wremgin.

*835 down to the third generation, and this shows best of all that the old order dictated that the sisters of a Gilyak's wife be the wives of his brothers.

Thus, the question of the relations between a Gilyak and his married an'g:ej in practice comes, in the main, to the same thing as relations with the wives of his "brothers" (tuvn).

601 ●184 *835 614 As we have said, and as is evident from the kinship terminology, some clans strictly differentiate between the wives of older and of younger tuvn, and others make no distinction at all between these categories; in some -- only the wives of the older tuvn, in others -- all the wives of tuvn without distinction, are considered an'g:ej of each of the tuvn, but in both cases the right of these pu and an'g:ej to sexual intercourse is indisputable.

Among the western Gilyak, who make no distinction between the wives of brothers, they formulated this right for me repeatedly in the following, more than clear expressions: "with the wife of a younger brother (his) older brother is allowed to have sexual intercourse" ("good"); a younger (brother) is allowed to have sexual intercourse with the wife of an older (brother) ("good").

/175 cont./

*835 839 wives for a time, the married men enjoy their group rights just as broadly as do the bachelors. And it must be said in general that the character of the relations between pu and an'g:ej is largely determined by the conditions of cohabitation.

*835 832 Under the conditions of living in different villages, the relations between them can naturally be only sporadic. Very often in such cases the group spouses know each other only by hearsay, but, upon meeting each other, they usually come quickly to an agreement and form fleeting attachments, for which they are quite eager, both the men and the women, not laying claim upon each other to any particular sympathy, love, or such. There is nothing easier than to come to an agreement with such a pu or an'g:ej whom one meets by chance; one need merely touch the breast of a woman in the passageway or out of doors, or make the stereotyped proposal, "Let's smoke a little together," in order to convince oneself of the strength of one's chances for lovemaking. Sometimes the matter is simply settled by means of winks alone.

*835 [593] In a place where the individual bachelor pu and their wives, an'g:ej, are in permanent residence, firm attachments are often established, accompanied not only by regular sexual relations, but often also by deep sympathies and /176/ affection, which nevertheless do not hinder the woman from properly fulfilling her conjugal obligations with regard to her individual husband at the same time, even feeling a real affection toward him. Such relations quite often create extremely interesting situations. Two, or more rarely three, brothers, notwithstanding their complete economic independence, giving each of them the opportunity to acquire his own individual wife, nevertheless live together, having one common wife. The official [595] spouse of this woman is considered to be only the oldest brother, who has actually acquired her with the rights of an individual spouse, but, with the tacit consent of the wife, she is in reality a common wife; this is well-known, not only to outsiders, but ●[184] also to the children of the brothers-spouses. One encounters [556] such situations also in the richest and most respected families.

/188 cont./

602 and between the women and the elder tuvn of their husbands
[601] on the other. As is well known from the kinship terminology, the individuals of these groups call each other by the prohibitory terms jokh and atk. These last terms are likewise used by daughters-in-law and mothers-in-law to designate each other.
602 Between them, as between the individuals of the prohibited
• 184 categories, once again psychic intercourse is not permitted, although not with uniform strictness everywhere. Among some, for example, among the Gilyak of the estuary of the Amur, neither conversation nor jokes are allowed. In other places business relations are allowed, but jokes and conversation are forbidden. The prohibition of psychic intercourse does not exist between sons-in-law and mothers-in-law.

602 Now how the prohibitions are realized in life remains to
[192] be explained. The Gilyak themselves classify the psychic forms of intercourse between prohibited categories with the terms: indynd (to look, khërnd (to converse, to talk), lerund (to joke, play, play pranks), and vakrund (to quarrel, dispute, revile). But not all of these four forms are applied equally between all the categories. Thus, we have seen that the father is forbidden only lerund (jokes, playing pranks) with his daughter, but he is permitted to converse with her and all the more to revile her. The prohibitions on "looking in the face" -- indynd -- on the contrary, are in effect only between "brothers and sisters"; lerund applies with equal rigor between all categories. There remains the prohibition khernd. This term embraces two concepts: conversation and discussion, and business relations. The first are absolutely forbidden: /189/ one can get along without conversations, and besides conversations may lead further. It is another matter with business conversations; sometimes it is absolutely impossible to get along without them. Thus, for example, the elder brother frequently takes the place of the father in relation to the younger brothers, and it is impossible to avoid having dealings with him; therefore in extreme cases the younger brothers may address the elder brother. Brief direct

/261 cont./

584 the parents of the bride a male dog, not, however, a female.
585 It is not permitted to remove the fillet, since it is considered
[601] testimony of betrothal. From this moment on the children are considered husband and wife, and they address each other with these terms. Usually in such cases the young wife moves to the house of her young husband, sleeps with him in the same bed, passes her childhood years with him, and upon attainment of sexual maturity begins marital life.

58 This haste to conclude a marriage between children is
182 explained by many reasons, but the basic reason amounts to a timely strengthening of the right to marriage. In a few years another such lawful claimant may be born or grow up, the son of another sister or female first cousin. Furthermore, in the course of time the economic situation of both sides may change. The father of the bride may become needy and be seduced by a bride price from the outside. There are cases, of course, where the cousins becoming betrothed are of different ages; the bridegroom, the son of the sister, may be a grown lad, while the daughter of the brother /262/ is just an infant, but the procedure is exactly the same. A Gilyak
585 of my acquaintance, Pletun, a lad of about 20, married in
[582] this fashion his five-year-old cousin, the daughter of Iksus, took her into his house at once, commenced to sleep with her, and began actual cohabitation with her when she reported her first menstruation to him. But it also happens
[675] that a child-wife remains in the home of her parents and moves to her husband's house at the first appearance of menstruation, but no formalities are required for this move; the initial agreement is considered a public act, known to all. "All Sakhalin knows of this," a Gilyak of my acquaintance, who had betrothed his little daughter to the son of his sister,
585 said to me with great pathos. In such marriages not only is
583 bride price not due, but there is not even any question of it. There is merely an exchange of gifts, but even this is not at
[178] all obligatory. Such is the simple arrangement in cases of
• [184] betrothal of the children of male and female first cousins,

/262 cont./

583 although in such cases in several places on Sakhalin there is
585 already some question of bride price, though, to be sure, a
178 very insignificant one.
• 184

XIII.

Marriage Terms and Survivals of Maternality

195 The terms used in the Gilyak language for designating
196 the act of getting married are quite characteristic in a
58 sociological sense.

Like Old Aryan and contemporary Russian, the Gilyak language has no common term for both sexes, such as the English "to marry," French se marier, German "heiraten"; on the contrary, in the Gilyak language, in this case, there is a special term for the individuals of each sex.

When a man is involved, the verb gend, khgend (root ge) with the addition of shankh (woman) or an'g:ej (wife) is used; thus, shankh gend, an'g:ej gend. When a woman is involved, an entirely different verb is used -- avind (root av), with the corresponding addition of nigyvyn: -- person, or pu -- husband, or, if without the addition, simply javind (1) (je -- him + avind).

[197] 1. I choose the term of the eastern
[184] dialect; the terms are the same in the other dialects, with the usual dialectal peculiarities.

What is the basic meaning of each of these individual terms g:end and javind?

/263/ As concerns the first, the male term gend, its basic meaning is entirely clear. This is one of the most frequently used verbs in the Gilyak language, signifying "to take something" and "to buy." With regard to marriage,

/266 cont./

194 reverence with which they approached a settlement where,
611 according to them, one of their female ancestors had once
614 lived.
186

In several places to this day, to a question about origin, the Gilyak point to the places from where their mothers and wives came. For example, in the settlement of Nyyvo at the mouth of the Tym' river on the eastern coast of Sakhalin, they reply to the question about the origin of the inhabitants of that settlement, "We are Nyurskie," i.e., come from the settlement of Nyur, which is on the northernmost tip of Sakhalin, and, when I asked for an explanation of this strange answer, it was explained to me: "Because we take wives from Nyur."

Thus, these people reckoned their origin according to the place of the homeland of their mothers, for, as we saw above, the wives of the Gilyak are taken predominantly from the clan of the mother. I shall introduce still another interesting remnant.

553 Usually at the present time children are given names
• 184 according to the clansmen of the father. Such is the general rule, but there are still places (for example, the settlement
614 of Nanivo on the west shore) where they give names accord-
611 ing to the brothers and clansmen of the mother; thus, it is as though the children were members of the mother's clan.

602 All these are remnants which are entirely out of line with
611 the agnate organization of the contemporary Gilyak clan,
194 but they are remnants which are intimately bound up with the present-day psychology of the Gilyak. For the Gilyak them-
[582] selves they are not remnants; this is made clear mainly by
[614] the marriage norms, according to which spouses are cousins, the children of brother and sister, and the members of each clan preferably take wives from one and the same clan, so that the psychologies of paternity and of maternality cross each other, and in the main between male and female lines there does not exist that gulf which is present in those agnate organizations where the Gilyak norms of marriage are not in effect.

/268 cont./

585 In another poem, in response to the demand of the bride-
538 groom, the father-in-law makes only one condition: "You will not go back before tomorrow!" He then orders his slaves to prepare a bite for the couple and, turning to his daughter, says: "Eat together with your husband!" That woman ate with our Gilyak. Having eaten, they went out, urinated, entered, arranged the bedding and lay themselves down under the same blanket, and went to sleep. On the following day that old man said: "You shall set out in five large boats loaded to the top with nothing but valuables" (1) /see footnote 1 above/.

Another example. The hero of a poem arrived in a
538 town with many people, and, when he went into the center
584 yurt, a woman was alone there. This woman said: "O, guest,
585 from where have you come?" Our Gilyak said: "I have come to take you!" This woman said: "If you wish to take me, go to my father, talk it over!" Our Gilyak went out, went into a yurt; an old man, an old woman were there. This old woman said: "You are a man from where?" Our Gilyak said: "I have come to take your daughter!" That old man rose: "Well then, prepare mos' feed my son-in-law." Our Gilyak left, he came to his wife: "Your father said that we both, having come as guests in the evening, are to eat mos'." His wife: "All right!" That evening they went visiting, having eaten mos' they left; having had a good sleep, they arose, ate, and then went back (i.e., with her husband to his village). /Footnotes 2 and 3 at the bottom of the original text p. 268, referring to Shternberg's Materialy, p. 84 and pp. 57, 58, respectively are not indicated in the text./

582 Orthodox forms at the present time. Now, as we see, firmly
[581] seated in every Gilyak there is the consciousness that only an orthodox marriage, i.e., marriage from the clan of akhmalk'i, from the clan of the mother, is lawful, "pure."
• [184] Even on the Amur, where the old norms have especially
[178] undergone change, to the question about the marriage norms they will say to you first of all: "It is necessary to take a wife from the fathers-in-law -- the root of one's birth" (i.e.,

/271 cont./

The bride is customarily represented by the father a mother, but for the final decision the attendance of repre sentatives of the clan is required. The latter, both those of the bride and of the groom, intervene in the negotiati but their participation is rather passive. In resolving the question, aside from the consent of the father and mothe the wishes of the brothers play a part. Frequently the wi of the latter are decisive. Here is a remnant of maternal In the epos the role of the brothers stands out in sharp rel In one story which I wrote down, a father, when his son i forms him of his intention to give his sister in marriage, plies: "Do thou but think upon it only after hearing the counsel of your younger brothers!" It is noteworthy, also that the role of the mother, despite the fact that women generally /272/ do not participate in community affairs, no smaller in matrimonial affairs than that of the father. This, however, is the case only on Sakhalin; on the Amu the wishes of the bride are not considered, although the negotiations are conducted in the presence of the maiden sits silently in her accustomed place among the trunks wi her dowry and waits for the decision concerning her fate. Ordinarily her role begins when the matter has already be decided, and it only remains for her to submit. And if s does not have a lover to whom she has promised herself, if the bridegroom is more or less attractive in appearance ordinarily tosses off the laconic phrase: "Since you wish t is it for me to contradict!" But it may happen that the m upon the appearance of the matchmakers with the brideg immediately runs away and does not return until the depa of the matchmakers, and then the matter frequently ends naught (1). The bride, however, appears on the scene a

[171]

1. It is interesting to note that among the Negda, whose customs, as a result of ancient matrimonial ties, are as a rule similar to those of the Gilyak, considerable differences were noticed by me.

/308 cont./

has cuckooed for a long time, drinks water from a cup. Go well, live well, (observe) the law of your fathers, the law of your mothers, the law of your elder brothers. Go." These words are said at the ordinary funeral repast.

After a while they buy a bear, feed it for two years, and then hold a bear festival. If a kinsman of the deceased does not buy a bear, he is treated with contempt and reviled -- "man ikandis." What sort of a person are you? Your mother brought you up, cleaned up your excrement. A good man does not even abandon his pryski like that." One cannot be tried for such a vilification. One's clansmen always help one to hold a bear festival.

The woman cannot marry until the major funeral repast is over.

They inter a baby up to a week old on a tree, up to half a year old -- in the ground. If a child who died before he was three days old were cremated, his mother would not have children for a long time.

On the Amur four little fish with roots are placed over the grave.

During nla-dash (smallpox epidemic) the dead are not cremated, but must be buried in a grave.

Drowned persons. Uighyf -- the plot on where a drowned man has been pulled out. When a man has drowned, he is cremated, and on the third day they make a tolo'ir, i.e., a cup for sacrifices to the master of the water, a trough, and a kiqun -- a cup for the drowned man; mon' is placed in the trough, in the cup -- red currants. They pity the man; they select two or three /309/ brave men, put the deceased in a boat on the bank there by the water, and place a kiqun nlch, a Chinese bottle, and one rose-willow branch standing to the height of a man. At this point one man says: "Kettle, boil, steam, rise, move upwards, you, rose-willow branch, widen, make a good covering so that the devil does not see the Gilyak."

/311 cont./

Before becoming a shaman -- pokhtyrdz-cham -- a shaman who can lead a soul into the next world (from pokhtyrdz-- to lead a soul into the next world), he is ill and tormented until out of his mouth come pulk (Gold tulin) -- a shaman's copper mirror, tovol (Gold pdzhin) -- a piece of copper for a shaman's fumigating smoke, then homs -- murk', and, finally, a lakhch -- a knife of palm /pal'my/. The lakhch of the Gilyak shaman is his own work, but he does not have horn, and he buys pulk. Ur'mu keldr -- the spirit protector of the shaman, ajami among the Goldi, lives in the ur' of the shaman. Ur' -- one of the three souls of the shaman, literally, the pith of a tree.

VIII.

Beliefs and Rites Connected with Hunting and Fishing

Chédzigr-turi, toigo. Chédzigr -- tree (a larch) which is placed in the taiga beside the hunters' balagan and before which they sacrifice to the master of the sky. Every year they place a new chédzigr, but the old one cannot be burned, it is only mached with one's hands. /312/ If it falls down by itself, it will be carried to a storage place -- chédzigr nan'gof (1). In the

1. In another place it is said that the chédzigr is not repaired until it falls down.

/312 cont./

Only representatives of the clan, k:khal n'akhr, gather at the place where the chédzigr stands. They bring rice, buds, a pig, and vodka. Before the tree there is a bench /labax/ for dishes. The pig is slaughtered, and its blood is sprinkled around with the comment: "Ej, indyl! -- god, look!" No images of any sort are made on the tree.

The tree is also a road. Everybody gives to the tlyn'lush; the sacrifice goes along the tree, then along the thread which goes from the tree and serves as a trail. They stay a fire in order to tar the pig. They do not feed the fire, but they do protect it, do not stamp it out. It is absolutely necessary that the sun shine during a sacrifice, and therefore it is occasionally necessary to wait. When a balagan is placed in a new place, they make a new chédzigr.

Tlyrokh -- Sacrifice to the sky. Everyone assembles in one yurt. Early in the morning they set out in search of a larch (for the chédzigr), while the women prepare various dishes; then the tree which has been brought in made fast, and all the dishes are carried in Chinese or Japanese dishes. There are villages where this tlyrokh is never made; in Tevsh only a red dog pazgi shanj. is slaughtered instead of a pig and a cock. They tie it up to the chédzigr, strangle it, cut out the heart and throw it upward, treat one another with vodka, and rub the chédzigr with vodka. They celebrate once a year in January -- January moon. The "word" during tlyrokh: "n'ongarja kinyngoch; hungoja", kholafti, lyygoja", i.e., "please, that I live well, that there be no sickness."

Then they make a new bowl (ban'gar), place it on the ground, and put the sacrifice in it. Shl, a stick, and a cross-bow (narrdzr) are placed there; the "word" (prayer) is not said, and they quietly leave. At home they "make" a fire, and when everything is cooked, all the sacrifices are placed between comfortable branches and then placed between two forked pieces of wood (nuurg'k'vsh); the fork is thrown into the fire and chédzigr taken back. This fork is placed under the head at the end of a yurt to protect against the milk'a (the evil spirit). In /313/ the

/328 cont./

The favorite dog, "pryski" (every man has his own pryski) is brought to be present at the funeral ceremony, and then it is taken away to the yurt, tied to the place where the dead man slept, and fed from his bowl for three years -- if it is a man, and four years -- if a woman. After this it is sold or given as a gift, but they cannot keep it.

Even where cremation is practiced, insane persons after death are buried directly into the ground.

Ady-Tymr, if they suspect that a person died from magic, two men with rifles are sent at night to stand guard at the place of cremation. Birds appear first, then hares and foxes and then the ezmi-mans, rubbed with clay against arrows. He comes to eat the man, and if they do not kill him, then the others will die.

On the day following the cremation, when the fire has died out, firewood and boards are strewn on it, and on top a dog skel deliberately broken; sometimes small pieces of it are kept (as souvenir).

Where the deceased are buried and not burned, they are placed in a coffin. Anyone can make a coffin of boards or from a boat -- two boats. It is carried out through the door and placed on the dog sled, which in both winter and summer is carried on the arms. The required objects are placed in the coffin, some as models. Those who go along do not put on their festive clothes. The pit which they dig must accommodate the coffin up to the lid. There is no crying; kissing the deceased is a sin. It is not required that everyone throw earth into the grave. No sign are set up. Dogs are killed on the grave, but they are not fed beforehand, nor are tmu put on them. The skin is immediately removed from the slain dogs and hung on a stick, while the meat is boiled right there, but it is eaten by few, and others throw it away. Bones and so forth are thrown over his grave. The Gilyak is not afraid of the deceased. When "good food happens," the deceased are fed for about half a year.

/547 cont./

stepe, then he can be killed. The game continues even after the king is taken. If the old man moves back, then a soldier may still him with a cheng; if there are two cheng in a row, then the king can come back (1).

1. I offer a variation of the game, recorded by me from the words of the Amur Gilyak Mladyan, a student in the Institute of the Peoples of the North in Leningrad.

The one who begins to play after the chong comes up moves his soldier on the middle line of nests, in accordance with the number of moves which have come up (by the upper surfaces of the cubes), the appropriate number of rests, starting from the right. Then his partner does the same on his side, and when his soldier comes to land on the spot of a soldier of his partner, which is already standing there, he takes it.

After one of the partners has moved to the end of the battle line, he can, on future moves, cross over to the line of the enemy (his partner) and knock out his soldiers, and when he reaches the end of that line, he is considered the winner.

In spite of the fact that the above description differs from the description of the Sakhalin game of cheng in Shternberg, we print it, for it may facilitate an understanding of the above-described variant of the game, although this latter differs considerably from that described by Mladyan. S. Sh.

/370 cont./

his wife half to death. Even his rum, in such cases, does not escape without a severe lecture, while among the Amur Gilyak even the rum finds no mercy. But such bloody vengeance is absolutely required only when the seducer is caught in flagrante delicto. Fear of Russian justice has weakened the force of this bloody custom, and frequently in such cases the matter ends with a sound thrashing. The modern method of secuting a wife gradually worked itself out from the old clan arrangements, from the collective and individual abduction of women from another clan and the subsequent reconciliation by means of a ransom, transformed in the course of time into the mamaliak bride price. But even today the custom of the abduction of women exists among the Gilyak of both Sakhalin and the mainland. In part it is a corrective against the coercion of womanly sensibilities in the contemporary form of marriage, in part a reaction against the purchase of wives, not possible for every Gilyak. When a Gilyak comes to like a woman, either a maiden or a married woman, and for one reason or another it appears impossible to obtain her in a peaceful manner, /371/ he arranges things with a group of his clansmen, and one fine day (usually in the summer) when the men are out of the yurt, the boat of the abductor draws near the settlement, and, profiting by the absence of the men, they bear away the desired woman. Abductions sometimes take place by preliminary agreement with the woman, or sometimes without her assent and even against her will. Abductions, of course, produce counter-abductions, even with an armed hand if there be of one instance where a group of 14 men armed with spears and guns broke into the yurt of the elder of a settlement at night and bore away a woman, but in the event of failure the matter ends with reconciliation and the payment of bride price. Not infrequently the abduction is performed by the father of the woman himself, or at his instigation, in those instances where the son-in-law does not fulfill all the conditions of the bride price and at the same time does not voluntarily return the woman he has purchased. To this day the Gilyak regard the custom of abduction as a normal phenomenon; it astonishes no one and is censured by

/379 cont./

with a feeling that is strange for people with a primitive mode of life. There is fear and respect and even reverence in this feeling. That a rich man should inspire fear and respect is a thing easy to understand, but the feeling of some sort of reverence has its own peculiar source, not completely alien, however, to our understanding. In primitive society the rich man ordinarily had his personal talents to thank for his material success -- hence the respect for him. But since all human success is at the same time a gift from the gods, the rich man also stands out as their favorite, their chosen one. The degree to which the Gilyak are inclined to attribute supernatural origin to the rich man is shown by a widely diffused legend among them concerning a certain Tungus, still living today, who amassed his wealth by unscrupulous exploitation and robbery, a legend which affirmed that this virtuous man /380/ had secured his wealth thanks to a golden bowl which descended upon him when he was hunting in the taiga. And this golden rain was, of course, a favor from the god to his favorite.

Since the Gilyak were in the habit of exchanging their wives in a peaceful manner, /371/ he arranges things with a group of his clansmen, and one fine day (usually in the summer) when the men are out of the yurt, the boat of the abductor draws near the settlement, and, profiting by the absence of the men, they bear away the desired woman. Abductions sometimes take place by preliminary agreement with the woman, or sometimes without her assent and even against her will. Abductions, of course, produce counter-abductions, even with an armed hand if there be of one instance where a group of 14 men armed with spears and guns broke into the yurt of the elder of a settlement at night and bore away a woman, but in the event of failure the matter ends with reconciliation and the payment of bride price. Not infrequently the abduction is performed by the father of the woman himself, or at his instigation, in those instances where the son-in-law does not fulfill all the conditions of the bride price and at the same time does not voluntarily return the woman he has purchased. To this day the Gilyak regard the custom of abduction as a normal phenomenon; it astonishes no one and is censured by

popularity of debt obligations among the Sakhalin Gilyak consists, first, in the fact that there is no period of expiration with regard to debts (complaints about the payment of debts incurred 30-40 years before arose not infrequently), and secondly that in the event of the death of a debtor and his creditor, relatives or after the death of these persons, the clan, in the person of the clansmen, answers for the debts. The fund from which debts are made good, in the event of nonfulfillment of the conditions of a

/385 cont./

or adolescent, living apart from their parents or not, and therefore "household" are counted separately, and, secondly, widows and widowers, and, finally, the children, and also orphans (brothers and sisters) who live as a single household.

The total population is 1,041, of which 541 are male and 500 female; the adults (including adolescents) number 678; there are 363 children; of widowed persons, and 6 male polygamists (four of these have three wives each and the rest two each). See each separately for the same individuals who have only one wife each (3). The number of children who survived birth in 1915, while the number of those who died at birth in 1917, so the rate of infant mortality is 2.5 percent (5%). See

4. For lack of a better method, the number of children was ascertained by asking each married man the questions: (1) how many of his children were living; (2) what sex and age, child was called out and written down one by one) and how many were absent; (3) how

115 individuals, i.e., one-ninth of the adult population, have the right to Nikolayevsk. The settlements richest in seals and dolphins are Tamlyev, Vakvo, Pemyr, and Tangi; the last is also richer in sables than the others. Potatoes are raised by Gilyaks in Khoe and Tangi. In the settlement of Tyki, the Gilyaks have made a respectable fortune; the settlement among them of at least one Russian with whose help they could raise potatoes, and also keep a herd of cattle. Tyki is known for several other reasons. In the first place, starting from this point the Gilyaks are coming to hunt sables because of the overwhelming competition from the Tungus who have hunted the sables in the vicinity of the settlement and now pursue them on their reindeer. Before the appearance of the Tungus, the Gilyaks were very careful in hunting wild deer and sables. In the second place, beginning at this settlement one notices a progressive improvement in the construction of the winter yurts. In Tyki the Gilyaks rent for little above the ground, it has windows made of fish skin, and in one yurt even of glass. In the middle of the yurt, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters storehouses yurts with half a floor, and, finally, one and a fifty-yurts pipe heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and run along the wall under the plank bed serve mainly to heat these latter. The smoke goes through a subterranean passage into a high-yurt pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by the Amur Gilyak and in the Tatar Strait (Nivkhi, Mayr), from whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the tundra, and occasionally over the mountains. In the last settlement of Pemyr the coast becomes more elevated, and, beginning at the summer settlement of Mu'vo, it strikingly

/330 cont./

The question now arises as to which one of the two types of winter houses described above prevails among the Gilyak in the various parts of their territory. At the time of my stay in the Amur region (1854-1856) the earth yurt was almost exclusively confined to Sakhalin, but there it far predominated over the Chinese cover-yurts. The east coast of the island and the Tymy Valley had only the earth yurt (1). On the west coast of Sakhalin,

1. Minsi'i /Mimul/ statement (Cohen's* ord. Sakhalin v' ustiv-khan, otnob. /Agricultural Sakhalin/ Sakhalin Island/, St. Petersburg, 1875, p. 134).

as far as it borders on the northern part of the Sea of Japan, i.e., from Pilla-vo, the southernmost point of the Gilyaks, to Pogbobi, there were also only earth yurts (2). But from there northward, in the Tymy Valley, in the middle of the island, and in one case even at Pilla-vo, in the middle of the island, instead of a smoking hearth, one finds a chimney-like stove with a pipe. Farther on, beginning with the settlement of Tengi, one encounters storehouses yurts with half a floor, and, finally, one and a fifty-yurts pipe heating system which resembles our steam heating. The horizontal stone pipes which lead out from the stove and run along the wall under the plank bed serve mainly to heat these latter. The smoke goes through a subterranean passage into a high-yurt pipe which is made of a hollow tree trunk especially adapted for this purpose. A similar system of heating is used by the Amur Gilyak and in the Tatar Strait (Nivkhi, Mayr), from whom it may have been borrowed.

As to the character of the region, the maritime sections of the western coast are mostly tundra-like, with sparse vegetation. The road runs partly along the sea, partly through the tundra, and occasionally over the mountains. In the last settlement of Pemyr the coast becomes more elevated, and, beginning at the summer settlement of Mu'vo, it strikingly

along the Liman and the Sea of Okhotsk up to the northern tip of the island, there were villages containing sometimes of earth yurts, sometimes of Chinese yurts, and at times both types of dwellings occurred between one village. Yurts (2) had have not been in this part of Sakhalin, but have collected detailed information on the subject to it, as well as on the number and character of their yurts, from, among others, Gilyak coming there, who visited me at the Nikolayev post in the company of Tuberbaeck-Gilyaks friends of mine (3). A few years later

/331 cont./

collect. Accordingly, at that time, to begin with, three villages, each consisting of a single earth yurt, still lay to the north of Pogbobi, the northernmost point, from the east we encountered the first Chinese winter-yurt, which, however, was in turn followed by four villages, each consisting of one earth yurt. To the south of Tymovskoye, which contained one earth yurt and one Chinese yurt, beginning with Tulbej (1),

1. In Gilehi it is called Jordzin-tig-vo,

there is a series of villages which consist only of houses of the latter type. This, as has been said, is the most populous part of Sakhalin. With the exception of Tymovskoye, which belongs, in my time notorious for its predatory population, and, according to the Gilyak, numbering over 12 houses (2). The last of these

2. Gilehi found only nine. The great number of houses in Tymovskoye is explained by the fact that it is located by its name, for tanzik, tamlanch, or tamlanzch means "numerous" in Gilyak.

Schedoyl villages on Sakhalin, lying in an uninterrupted row, in which everything is repeated only that part of the Sea of Okhotsk. Gilehi did not go northward beyond this village and gives only earth yurts for the remaining part of the west coast of Sakhalin up to the northern tip of the island. According to my information, however, the Chinese winter-yurt also predominates there, for after a small yurt (Ulbej village, Mulelkov-yo (in Gilehi, Mayr), there follows Pilla-vo with one earth yurt and one Chinese yurt, which was formerly probably larger, and then there are two more (schedoyl villages, Tymi-vo (in Gilehi, Ngyr), Ngyrv-vo (in Gilehi, Ngyr), of which is quite large (five yurts) and does not lie far from the northern tip of the island (Pogbobi village, which I unfortunately it to me). According to its location on the small bay which Kimarasam called Nadeshda Bay, Ngyr-vo must be the same village that this navigator visited in 1805. From his quite detailed

2: Schrenck—470 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/332 cont./

there are certainly no longer any earth yurts. Along the bays of Tagur and Udhan, where Middendorf became acquainted with the Gilyak, they lived in the winter, as I have seen from his hand-written notes (1), in exactly the same type of houses as on the

1. In his travel report, too (see Beitr. zur Kenntn. des Russ. Reichs, Vol. IX, Pt. 1, p. 47), he mentions the "functional pipes carrying heat under the sleeping benches in the houses" of the Gilyak

Liman and Amur. It therefore cannot be assumed that matters are different in the area between Kuji and Udhan Bay, the only stretch for which we do not have eyewitnesses accounts. The Gilyak, then, apparently have no winter houses set on level ground, but otherwise of exactly the same type, outside and in, than those resting on piles (1). The air that the Gilyak have in

1. The large village on Nadeshda Bay at the northern tip of Sakhalin (Ngyr-vo) is called Ngyrv-vo (p. 467 above), which was visited by Shrenck, who, however, mistakenly wrote on piles. See his Reise um Lyn Baikal, Vol. II, p. 182.

/332/ Among the Gilyak of the mainland the Chinese winter-yurt predominates to a much greater extent than the earth yurt on Sakhalin. Indeed, in my time there was only one earth yurt left, which presumably has since disappeared: it was the small earth yurt of Ekhach, Mulelkov-yo (in Gilehi, Mayr), three fallow villages the Amur. I visited it in March, 1856: it was located at some distance from the Chinese winter-yurt of the same place and was connected with it by a long, low passage. Its roof was flat and, of which is quite large (five yurts) and does not lie far from the northern tip of the island (Pogbobi village, which I unfortunately it to me). According to its location on the small bay which Kimarasam called Nadeshda Bay, Ngyr-vo must be the same village that this navigator visited in 1805. From his quite detailed

2: Schrenck—525 E-5 (1854-1856) 1881-1895 RX2 Gilyak RX2

/333 cont./

as far as the humidity of the air is concerned, it is even greater than that of the open seas and the accordingly frequent fogs and rain. Thus, if the Gilyak on Sakhalin build their summer houses raised piles, it is because they know that they are safe there against the first menace and in addition have other important reasons for building such dwellings. I think that one of these reasons is their desire, beginning, late especially the wind, are warmer than those resting on piles and therefore can be moved into earlier in the year and can be occupied longer in the autumn. The first circumstance, /336/ however, is of importance in particular for the southern part of the Gilyak area of Sakhalin, where the Gilyak are forced to move into their winter yurts earlier in the year by the melting snow. It was in this southern part that I encountered the Gilyak winter houses at level ground. In Tangi I found it occupied as early as February 8/20, and in Arkai on February 28 (March 11), when it was still winter in Dal'ny Vostok. In Tymi, it was still occupied on February 27 (March 10), although I stayed in it because the two Gilyak women who had accompanied me contracted a mild case of a great confluence of Gilyaks. This latter summer house, in contrast to several others built close to the shore, was farther from the sea, beside the road, and was built on the ground resting on piles. See his Reise um Lyn Baikal, Vol. II, p. 182.

On Plate XIII's summer dwelling of the Amur Gilyak is shown, and, to be sure, a yurt in Iako, the summer residence of the Gilyak on the Amur, which is built on a structure resting on piles, about three fathoms wide and four to five fathoms long, and has rather steep roofs. The walls are made of thin beams which, as in the case of the winter houses, are not joined at the ends, but are somewhat pointed and are stuck into the grooves of the roof beams. The roof is covered with bark and with boards, which are held together by poles fastened crosswise. On a notched log which is placed on the roof there are two small

The bride is not present during the betrothal, the mother has the absolute right of veto, and the kinsmen play no role.

last moment, when the bridegroom arrives to take her home
84 with him. The disregarding of wishes of the daughter is not
74 at all, I believe, the result of the newer stage of marriage accompanied by bride price, where the parents have motives of self-interest in the choosing of a bridegroom; it is rather a remnant of the orthodox marriage, where from her very childhood a girl was destined by obligation for one definite person or limited group of persons, and there could be no question of full freedom of choice, all the more because the marriages were actually concluded soon after birth.

84 The procedure of betrothal. In the procedure of betrothal among the Gilyak we find features which are repeated with remarkable similarity among the most diverse peoples. The procedure of betrothal is a true diplomatic war surrounded by a whole series of military stratagems. In serious cases, when the matter involves a very wealthy and renowned girl, the matchmakers try to catch the other side unawares and at first conceal the object of their coming. Arriving at the house, they say that they are passing by. Casually they bring out vodka from their travel provisions. The unsuspecting hosts readily accept the treat, and, when they are in a good mood, the matchmakers begin to recall that they are old friends of the host, that he has never refused their requests, and they hope that in the future they shall not meet with refusals. The host, suspecting nothing, promises zealously to assist them with everything at his disposal. And here they take him at his word and come to the point. /273/ He can no
75 longer decline, for he has given his word. In order that the host may not repudiate his promise, the matchmakers have taken timely, precautionary measures to invite witnesses.

/273 cont./

1. This is exactly the way the Gilya
explain the motives for the father's
deprecatory opinions of his daughter.
I think, therefore, that Iokhel'son w
wrong in explaining this custom among the Koryak as a preventive against possible future complaints (The Koryak, 739).

/274/ But it may happen that the father will
any sign that he is gratified by the attitude of the
makers toward the inadequacies of his daughter.
the objections are exhausted, he suddenly fires th
which the Gilyak commonly utters when he wants
short a disagreeable conversation: "I know nothin
through the pipe clenched in his teeth. And afte
pause he angrily declares: "Ask my wife what sh
it is not my business." Then they begin to regal
of the bride, who, after long excuses, in turn fin
the laconic phrase: "Why do you ask me? Let th
583 cide!" Finally, the negotiations move to the bus
584 of the bride price and dowry. In this connection
184 are different on Sakhalin and the Amur. On the
where the people are more mercantile, the bride
ashamedly enumerates down to the slightest deta
of the bride price.

On Sakhalin they are more modest; at first
only two or three objects, the most valuable ones
expected bride price, and after that they only ha
secondary valuables. But in both places the proc
the negotiations is carried on in an elevated atm

/298 cont./

614 A bear festival is held also for other reasons, /299/ for
796 instance, for reconciliation with one's son-in-law /zyat'/, k:khal
606 or alien. If a person offends his son-in-law, for example, in
629 making a purchase, he keeps silent, and the k:khal keeps silent, but they will continue to sulk until a bear festival is held by the offender for reconciliation (urla lytnydz).

796 A bowl, hyl, for the head is necessary for each new bear
415 festival. The head of the bear is always placed in a new bowl, while the old one is used for meat and the like. Anyone can prepare a dish for the bear festival. The bowl for the meat is bound with the penis of the bear. A bowl from which the bear is fed for the last time in the yurt, and always on the side opposite the door, is called pukstov-n'ir.

796 When a brother gives his sister a bear as a gift, he himself
431 is not permitted to bring it; he must come after it with pomp.
[231] The bear is greeted with zadz-chadz music. When the master feeds his bear for the last time, he says to it: "U'rur humyjá! Wingan úrur humyjá--live well! When you go, live well."

The gift giver does not shoot the bear and departs as soon as the festival is over, without even tasting (a morsel), while he must bring with him mos' and all kinds of dishes.

796 When a bear falls sick, then they hold pylng-tvysk and prepare uig, mos', from all sorts of delicacies and all sorts of berries.

Luk: -- a dog which has been born specially for the uig.

[782] When a dog is sacrificed, its skin, head and bones are laid
[184] in a wooden frame near the lezing where the bones of the bear are placed. Some clans hang bear heads on trees. This place is called k:ork ngangof.

V.

Slaves

567 The son of a slave remains free to the neck (i.e., his head
[196] is free), his grandson -- to the belt, his great grandson -- to the feet; in the fourth generation -- the descendants are "pure."
[683] Then he is a k:khal, i.e., a kinsman of the master, and if anyone
[614]

/505 cont./

above-mentioned forward continuation of the bottom-board, which, in other situations, is to very useful, contributes no little to the combustion-resistant of the boat, and also against the current. Finally, it also affects the method of landing stationary among the Gilyak, Orcha, Goldi, and generally among all the other Amur peoples with the same type of boat: this is always done with the rear end of the boat, which is not very easy in high waves beating against the shore, because the boat must then first be put with the bow against the waves in order to be lifted by them and carried towards the shore. The Gilyak, /506/ of Olcha, etc., lands in such a way that he merely sits down on land with his boat, as it were.

To conclude these considerations, I give here the measurements of an ordinary, medium-sized Gilyak boat at 1 tooth long from a specimen in the village of Kalgho, from which the above-mentioned illustration was also made:

Length from the tip to the rear edge of the steersman's seat	25'..
Width at the steersman's seat	3'.6"
" from edge to edge in the middle	1'..
" " " " " at the bow, immediately in front of the prow board	2'.2"
Width of the bottom board	1'..
" " steersman's seat	1'..
Depth of the boat in the middle where it is the greatest	1'.6"

The length of a paddle-oar is about 7 feet, that of the steering-oar 1 1/4 feet; the width of the blade on the latter, 4 inches.

I never saw boats other than the type described for the Ulchi either on the Amur and Ussuri or on the west coast of Sakhalin, and Middendorff does not mentioning them on the coast of the Sea of Okhotsk. In the interior of Sakhalin, however, the material and in place shallow Tymy River, quite a different vessel is used, a boat hollowed out of a single tree-

/506/

trunk. I saw such a boat (Gilyak nio-mup) (1) in the winter in the village of Tkhyut, standing on a trestle next to the yurt and with the snow carefully removed from it. It was about 20 feet long, widest in the middle, and narrowing toward the two ends — the rear end, finally, flattened, horizontally and round-shaped, the front end provided with a small tip. On the edge on either side a strip of board in the side was attached, so essential to their purpose, to edge to edge at a distance of about two feet apart, cross-strips were fastened, which undoubtedly, like the knee timbers at several places in the Ulchi boat, served to give the side walls more stability and power of resistance. Perhaps the boat was not quite so old anymore and needed such supplementary bracing. It did not have any out-prongs on the edges, such as the Amur boats had, and, accordingly, the oars lying nearby had the holes for setting them on such, but otherwise they were of the same form as on the Amur, except that the blade was not as wide. These boats are certainly also propelled, especially over shallow places in the river, merely with the help of poles, as the Ulchi and Goldi do with their similar boats. Middendorff, and as it does also among the Turgusic peoples of the Amur region with their birch-bark boats, uses no nails, screws, etc., /507/ only trees with soft wood, namely, poplar, are used for making such boats (1). The Tymy Gilyak use the bahanin poplar

1. Cf. Steller, op. cit., p. 56, 75; Kirschenninikof, Op. cit., Vol. I, p. 257.

(Populus suaveolens Fisch., Gilyak ermingh), which they specifically designated to me as the best wood for boats. According to Schrenck, the Aru of Sakhalin hollow out of the trunks of the same tree canoes, which they use for communication on the rivers and short voyages along the seacoast, while for

/524 cont./

not appear in larger numbers in de Castries Bay until fall, that is, toward the end of August or the beginning of the September.

Farther to the north, in the Amur-Liman, I was told by the Tschonti Gilyak, unfortunately without any reference to dates, that herring, the tengi-mup and the kalgi-mup, in winter, were to be found among them, but the latter in numbers insufficient for their needs, so that, as has already been mentioned (4), when the fish migrates, they, like the Gilyak from

4. See p. 647 ff. above.

Tangi, Arkai, and other places along the west coast of Sakhalin, set out for the Tymy River on Sakhalin in order to provide themselves with larger quantities of winter supplies there. Later, there data for the southern coast of the Sea of Okhotsk, to the northwest of the Amur-Liman, are found in Middendorff. As the list given by him for the dates of the migration of various fish and especially of the species of salmon at the mouth of the Amur and the Ussuri, Middendorff says, on the other hand, there are no salmon there, as on the Amur, except that Salmo ussuri is also to be found in these waters. These boats are certainly also propelled, especially over shallow places in the river, merely with the help of poles, as the Ulchi and Goldi do with their similar boats. Middendorff, and as it does also among the Turgusic peoples of the Amur region with their birch-bark boats, uses no nails, screws, etc., /507/ only trees with soft wood, namely, poplar, are used for making such boats (1). The Tymy Gilyak use the bahanin poplar

1. Cf. Steller, op. cit., p. 56, 75; Kirschenninikof, Op. cit., Vol. I, p. 257.

(Populus suaveolens Fisch., Gilyak ermingh), which they specifically designated to me as the best wood for boats. According to Schrenck, the Aru of Sakhalin hollow out of the trunks of the same tree canoes, which they use for communication on the rivers and short voyages along the seacoast, while for

/543 cont./

throughout the second half of August and did not decrease until early the 20th (3). For the Gilyak living along the Tymy River, and

3. Ibid., p. 1181.

FOR THE GILYAK LIVING ALONG THE TYMY RIVER, AND ESPECIALLY along its upper course in great density, September is therefore chiefly the month that brings them the greatest quantity of fish, which, in addition, is essential to their economy, as it which, traveling to meet the ascending fish, they devote themselves entirely to fishing and the preparation of supplies for the winter. The Gilyak living on the Amur, however, which could not be by the Tymy Gilyak, that among them not August, but September was the month of the fish-catch. Perhaps the beat was not quite so long. For the Gilyak living on the Amur, the fish-catch in fact in comparison with it, is designated only as nymchi-mup, "little month." Thus, as a result of somewhat different natural conditions, a shift in the names for the months customary among the Amur Gilyak taken place there (4). Whether this also holds true for the Tymy Gilyak, for

4. The shifts or other differences in the names of the rest of the months that occur among the Tymy Gilyak in contrast to those among the Amur Gilyak the will be discussed later where appropriate.

/543 cont./

just as in the case of fishing, so also in these two branches of work the Gilyak stand far among all the others in the north. In particular the small group of the Ingimul Gilyak is one of the localities there frequently visited for hunting seals by all the mainland Gilyak living along the coast, in fact, in winter, however, the enterprising Tschonti Gilyak also go south of the Amur-Liman into the Manzia-Hsiai Strait and to the northern end of the Sea of Japan, as well as to the opposite coast of Sakhalin, where I saw them staying, for example, at Pogholti, for this purpose. Scarcely less than in the rest of the Amur-Liman, seal-hunting is also practiced immediately at the mouth of the Amur, at Tschchachach, Kaldo, Kaldo, and Pogholti, where in particular the small island of Uflut is an especially favorable spot for it.

Accordingly, in the Gilyak, all the species of seals of the Amur-Liman also enter the Amur River, with the sole exception of the ushi-mup (1). Phoca caspica Pall., that is, the ordinary seal, are said to go only a short distance from the mouth, whereas the younger ones go as far as Tschchach. In any case, Ph. sibirica (2) (yangr-mup) and Ph. vitulina (3) (called gigh-mup by the Gilyak, gidachna by the Olcha, goes farthest upstream. It is therefore the most important species of seal for the Amur Gilyak. One sees its more or less detailed practice in with special seal-hunting skill and success. I cannot say anything further about one of these places, Langr, located on the west coast of Sakhalin, which, according to Glehn (5), is merely the

1. See p. 467 above.

summer village of the Gilyak of Tulbo. /545/ The other one, however, Langr, located on a small island in the entrance to the Amur-Liman from the Sea of Okhotsk, which I have visited myself, seems fully to justify its name and the conjectures

/544 cont./

bantering with them. Tschonti plays the same role in the southern Amur-Liman as Ingimul in the north. In winter, in particular the small group of the Ingimul Gilyak is one of the localities there frequently visited for hunting seals by all the mainland Gilyak living along the coast, in fact, in winter, however, the enterprising Tschonti Gilyak also go south of the Amur-Liman into the Manzia-Hsiai Strait and to the northern end of the Sea of Japan, as well as to the opposite coast of Sakhalin, where I saw them staying, for example, at Pogholti, for this purpose. young (Ph. vitulina (3) /1022/, Fig. 1), on which the ordinary harpoon-point (nangr), equipped with a long strap, is set. At its rear end, the shaft is provided with a small tip, and the point is joined to a pole (Gilyak ilta) 10-13 fathoms long and made up of several pieces (1). Thanks to such a length of the handle, an

1. On the island of Uflut, from which much seal-hunting is carried on, I saw such a pole lying flat, which was 40 paces long.

attack on the shy and cautious animals can be made with this weapon from a considerable distance. For this purpose, the whole weapon is carried on the shoulder and, when the seal, slowly and carefully with its tip toward the seal coming on a rose or otherwise in view, by the hunter lying hidden as much as possible in the boat or on the shore, is within the range of the dart and a sudden forceful thrust suffices to drive it into the animal's body, which then, by means of the long strap attached to the harpoon, is pulled toward the boat or onto the shore and clubbed. At places frequently visited by seals the Amur Gilyak also customarily fasten one or more dead seals to a post set up even into the river bed at an appropriate distance from the drone in order to lure the seals out of the water and then kill them from hiding with the birch held in readiness (2).

2. The drawings for the woodcut on the following page and for those presented on pp. 791, 793, 780, 781, and 820 were made by the curator of our Anthropological-Ethnographic Museum, Mr. Fr. Rauscher, in part from the original sketches made on the spot by my travel-companion, Mr. Poliwanof, in continuing of my diary of the journey, and in part from the pertinent objects in our museum. I therefore take this opportunity to express my sincere gratitude to him.

/562 cont./

also a man or one old she-bear with its one or two-year-old cubs is found in the lair. In this case, the all too dangerous battle to capture the old animal is usually not even undertaken, but rather it is shot from a long distance, and the cubs are fettered and led into captivity. The bears killed in the winter lairs in this or some other way are, to be sure, likewise eaten by the Gilyak, /563/ but, as far as I know, without special festivities, and this is not merely because the procedures, so very essential in this connection, are not conducted with the imprisoned bears, must naturally be omitted, but rather perhaps also because the bear meat is not to be found in the homes of the Gilyak, and, to be sure, again those of the Amur River, occupy a central and intermediary position, so to speak, in contrast to the other Gilyak groups, namely, as a result of the fact that the occupation of the Amur region in the 50's by the Russians started at the Amur and the first settlements were founded in Gilyak territory, in particular the Nikolayevsk post, which for some time remained the headquarters of the Russian administration, from which the first exploration of the lower Amur region and of Sakhalin took place.

If one calls to mind the violent and bloody resistance with which the Gilyak opposed the Russian freebooters in the seventeenth century (1) and considers that by nature they are by no

1. See pp. 218-227 above.

means as good-natured, docile, and indolent as the Tungus, but rather, far to the contrary, are malicious, spiteful, and deceitful while at the same time energetic and even ready to risk their life if humiliation or greed are involved (2), it might be surprising

2. The killing of de la Brunière by the Gilyak mentioned above (p. 575, note 1) is evidence of this. Shortly before the arrival in the Amur region, the crew of a

2. (cont.)

whether that had run aground in the vicinity of the northwestern tip of Sakhalin or had been blown out to sea by the especially notorious Gilyak from Tymkinsee and the boat was plundered. In 1885, among the Gilyak of Poghabi, I saw a boat from Nogai by number and an English inscription, which presumably came from it.

that the occupation of the tax territory achieved by the Russians with very few means in the beginning of the 1850s was such a peaceful manner and without any bloodshed. Undoubtedly the love of revenge is dormant in the Gilyak to a high degree very emotionally contributed to this. The possibility of being able to exchange the Russian settlements as consumers of products of which they had an abundance, and for which they otherwise could find no markets, such as fish, gutta, furs, etc., for various articles greatly covered by them, especially material for clothing and tobacco, which was much particular sense, cheaper than, and the great advantage that they were able to draw from this trade by their indeterminate, cleverness, and skill kept suppressed the suspicion and fear that the newcomers and their rapidly growing numbers and strength aroused in them. The Nikolayev port soon became the most important trade center of the Amur Gilyak, which, thanks to the entire trade *Fishi* that the latter maintained with their fellow-tribesmen along the line of Ohkhonsk and on Sakhalin, as well as with the Aino and the Tungusic Amur people, many Russian goods, which were widely distributed in the region. Nevertheless, in my time among the Gilyak of Sakhalin, the Russian Amur people of the Gilyak Amur Bay, already destroyed again, there were not yet any Russian settlements, there was a suspicious and hostile attitude toward the Russians, which made it necessary for the traveler to be on his guard constantly against actual attacks. In the evening, when they sat around the fire blazing in the yurt, I repeatedly heard them argue about the Russians who had come into their

/121 cont. /

and, in the conviction that I did not understand them, express the opinion that they were now only exploring the country, yet as I had not yet shot any pheasants or a hare and to path out of it and destroy all the Gilyak. At some places, at in Tyk, Dul, and the uppermost Tymy villages, they sometimes even demanded with threatening gestures and basically in that they did not want to permit me to stay in their yurts or to make a fire on their hearth for the preparation of tea; and refused to sell me the necessary food for my dogs from their supplies. The latter had never been seen by me or no fun here, because it could not be overcome by threats with pistol in hand, a day could. These to their purchase for trade, however, I was always able to put an end to them: one or another of them certainly could not resist the sweet attitude which I carried with me and produced apparently without design, and, if not one tainted to compensate and made a small gift, the ice was so broken and offers rained down from all sides, so that I soon had the necessary and also a supplement for the opening of trade, however, agreement was always also reached on all other matters. The Gilyak are much practical sense, clever-ness, tenacity, and skill in trading. Only articles of lower practical utility were not in demand, such as, on the other hand, anything new and unusual, no matter how striking, is, to be sure, gazed at and admired (with the frequently repeated exclamation of "ai-ai-ai-ai") accompanied by striking the head with the palm of the hand), and even accepted as a present, but never bought. Of their own wares they always offer the inferior pieces first and go up to the better one, in the course of which they praise them and also do so, on the other hand, in trade, everything points to a people skilled and experienced in trade, and how great they are the advantages of the Gilyak in trade, I shall bring more detailed statements.

I should also add that all trade in the Amur region, and hence also that of the Gilyak, is only better and no money is used among them, nevertheless, the Gilyak, nevertheless, has absolute, numerically definable value for all the articles playing a role in

Tungusic neighbors, who are more skillful and active in hunting, and the Amur Gilyak, who have the main dealings with the Tungusic people, are also the most active and enterprising in trying along the lea of Ohkhonsk and on Sakhalin and by from them the desired furs, which they then sell, in turn, to the Tungusic tribes, are the life and soul of this entire trade, through which Chinese wares are also brought from Manchuria and basically in the Chinese (a one-liner bale, for example, cam 1/3 to among them, a red dear or silk bale, around 1/3 to among them). Life the fun, the principal products from fishing also have a higher price among the Gotoh than among the Gilyak (a large example, for example, cam 10 in among the former), on the one hand because the Gilyak at the Amur Tungusic people, and, on the other hand because they are towhere near as productive in this respect as the Gotoh, and, on the other hand because they are Cossack and vegetation (hence of various kinds), however, seem to be always and everywhere in the Amur, and, hence, the ice was so thick greater proximity to the agricultural Chinese and because they also have more extensive and productive fishing, the opening of trade, however, agreement was always also reached on all other matters. The Gilyak are much practical sense, clever-ness, tenacity, and skill in trading. Only articles of lower practical utility were not in demand, such as, on the other hand, anything new and unusual, no matter how striking, is, to be sure, gazed at and admired (with the frequently repeated exclamation of "ai-ai-ai-ai") accompanied by striking the head with the palm of the hand), and even accepted as a present, but never bought. Of their own wares they always offer the inferior pieces first and go up to the better one, in the course of which they praise them and also do so, on the other hand, in trade, everything points to a people skilled and experienced in trade, and how great they are the advantages of the Gilyak in trade, I shall bring more detailed statements.

Incidentally, immediately after the arrival of the Russian, the value of the Chinese (Manchurian) tobacco rapidly sank in the eyes of the Gilyak, since the far stronger Russian (Virginian) tobacco is much more to their taste.

The Gilyak are interested in trade with the Amur people in trading with the Chinese common of animal skins, and in particular sables, the, and, and, in the same way, and, in the same way, and, in the whole, only *Fishi* clumsy and not very industrious hunters, they may, and, in the Gilyak trade, and, in the same way, and, on a large scale, think of pre-ating this commodity in the larger quantities possible, not only by hunting, but in another way (hence used to their nature. To Gilyak they trade with their

At 30 ja by the Gilyak, according to Schrenck, 1854-1856.

steals through from Puli along the deserted left bank of the Amur to the bigge ne the Gilyak, who live in the Amur region, on the right bank, inhabited by the Gilyak, because they, as they themselves told me, will not pass over the mountain ridge south of Poghabi and 25 years ago killed one who ventured it. Whether they ensured this hostile attitude toward the Chinese in Manchuria in order to defend themselves against the domination of the Manchu-Chinese or in order to duke it off is still uncertain, but in any case it is greatly to their advantage commercially. For the rule that is Chinese common of animal skins, and in particular sables, the Gilyak, Gotoh, Samagir, and other peoples of the lower Amur region or regular and the Manchu-Chinese wholesale, also trade between them and the Manchu-Chinese wholesalers also they may, and, in the Gilyak trade, and, in the same likewise only on a large scale, think of pre-ating this commodity in the larger quantities possible, not only by hunting, but in another way (hence used to their nature. To Gilyak they trade with their

/124 cont. /

the mountains remains remote to the Aino. Thus, the trade in Chinese commodities on Sakhalin rests almost exclusively in the hands of the Gilyak and Gotoh, and, in the same way, the Aino grow almost famous for it their own purposes. As we have already seen, the Gilyak interesting trade in the Far-bearing animals particularly sought by them and hunted successfully at home, and, in the Gilyak, and, be chiefly concentrated in the hands of the Sakhalin Gilyak. The greater quantity of fur-bearing animals is undoubtedly captured by the Orok, running in part upon them in the mountains, in part, in winter, impelled to forced by their nomadic life, as well as by their, on the whole, carefree and lighthearted character, *Fishi* and the Gilyak in exchange for the yield from their fishing and hunting of sea animals and are in previous processed from the Gilyak, and, in the same way, they buy eagle tails from their countrymen in order to use them in trade with the Tungusic people, and, thus, they are greatly in their debt. Gilyak, in a yurt in which one of the three mentioned village of *Pelu*, in a yurt in which one of the three mentioned village of *Pelu*, in a yurt in which one of the three mentioned village of *Pelu*, in a yurt in which one of the three

The Amur Gilyak, and in part also the Tchonta Gilyak, are not greatest lovers in animal skins for trade with the Chinese, on the Gilyak, and, in the same way, and, in the forest (healthy in the northern part of the island, along the Limas and the coast, and in the southern part, south of the Poghabi and along the upper course of the Tymy River, without there being any strict division of these trade areas between them. It is strange that the Sakhalin Gilyak, unlike their aforementioned countrymen, do little moving skins and almost never come to the mainland, to say nothing of their undertaking more distant trading trips, but, on the contrary, they prefer to remain near neighbors on the island, the Orok and the Aino, and, in turn, let themselves be supplied with the Chinese commodities, certain by them, too, tobacco, liquor, cloth, and the like, by the central Gilyak, who, in turn, receive the Chinese goods (hence only rare) room beyond the Limas in order to approach the Chinese traders in Puli along the Tymi-Chenlach route, and, finally,

/124 cont. /

trade will be discussed separately later, also we have here between the Gilyak and the Aino, and, in the same way, on the Chinese, and which furnishes them the means for the former.

As we pointed out in the preceding paragraph above (1), there is along

1. See pp. 142 and 144.

the lower Amur, in the Ocha and Gobil area, a number of centers at which Chinese merchants may temporarily or even more or less permanently, and which were very obviously chosen by the Gilyak for their trade with the adjacent tatar tribes and especially to acquire from them the precious fur. They are coming in the Gilyak, and, in the same way, and, in the same way, and, in the same way

der Russ. Reiches /Contribution to the Topographical Knowledge of the Russian Empire/, Vol. III, St. Petersburg, 1786, pp. 557 and 559), just as among the Samoyed of the great tundra (lembi-jiri); see A. G. Schrenck, Reise nach dem Nordosten des europ. Russlands /Journey to the Northeast of European Russia/, Dorpat, 1848, Vol. I, p. 537, where the eagle arrives as the earliest migratory bird, January among the Ostjak (Falk, op. cit., p. 466).

In the Tymy Valley I heard January called ŋiu-ŋaŋ: a designation which Glehn, obviously erroneously, like the one for December (anj-ŋaŋ), ascribes to November. According to my information, on the other hand, the name customary on the mainland and along the west coast of Sakhalin for the last-named month, tio-ŋaŋ, is transferred to December by the Tymy and Tro Gilyak, with which Glehn, who calls it tutio-ŋaŋ, seems to agree, and which would be quite analogous to the aforementioned shifting of names. The name anj-ŋaŋ, i.e., "year month," or perhaps "year-closing month," which I heard the Amur Gilyak use for December, may be easily explained by the observation, which probably did not escape them either, that in this month the sun reaches its lowest position above the horizon and from then on begins to climb again. Finally the most fluctuating and uncertain name is ŋiu-ŋaŋ, which remains uninterpretable to me and which, according to my information is supposed to designate April on the mainland and on the west coast of Sakhalin, June in the interior and along the east coast of the island, but, according to Glehn's inquiries, May. The last two assertions, however, are evidently based on an error, for they contradict the events of Nature which the Gilyak themselves mentioned to me as characteristic for the individual months. Thus, they said /678/ that ainail-ŋaŋ (April) is the month when the ice breaks up on the Amur, May -- the one

/715 cont./

1. (cont.)
put in the way of making sketches during the bear festival, only one bear is pictured on our plate, which is sufficient for comprehension. But there were two of them in Judin's house.

the second shelf of the ŋtagbre, under each bear, lay the pelvis belonging to it and a few fish (Cyprinus carpio, Gilyak pilemgat), which were put before them for food, as it were. At the sides of the rack, from the little fir trees and branches decorating it, hung pieces of fur from previously consumed bears and all kinds of prettefully carved wooden spoons and bowls, the purpose of which will be discussed later, as well as numerous zach. In another house in the same village, where the owner of the third (medium-sized) bear lived, there was the same arrangement and decoration in the interior, but the ŋtagbre was smaller, therefore, the more elaborately decorated, and only one bear's head looked down. It is always left to the owner, if he has two or more bears, to erect either a special ŋtagbre for each one or one common one for all and therefore correspondingly wider.

When everything is prepared and decorated in the house as required, the transfer of the bears' heads from the lŋag into the house takes place. This had already preceded the arrival of Mamen. Dittmar and Brewin in Tebach. But as they later learned, and as I myself had heard from the Gilyak, it is done in the following way. The oldest Gilyak of the village, "cheimar," i.e., graybeards, lift the bear's head and skin out of the lŋag, carry it around the house three times on a path made through the snow and decorated here and there with peeled sticks, curled wood-shavings, and fir branches, and then stop in front of a window in the transverse wall opposite the bear hearth. The frame of this window has been removed, and through this opening, not through the house door, the bear is carried into the house and directly in front of the hearth dedicated to it, in order to warm itself first before it is lifted to the ŋtagbre as the place of honor. At this window,

/721 cont./

on it raw and cooked bear-meat and several strips of bear fat, as well as a small heap of fine wood-shavings (zach). This was the first bear meat that was eaten. The portions were very ample, and gradually everybody present in the house or newly arrived participated in the meal. Indeed, even the women and children received their share of it, in that a few young people walked among the diners with bowls of a special shape (Pl. I, /p. 1250 /, Fig. 5, and Pl. II /p. 1251 /, Fig. 1-- called ani-tymvk (2) in Gilyak)

2. The ŋ in this word is to be pronounced soft, like the French r. The bowl is called ani-tymvk because of its similarity to a hand (tymvk).

and collected contributions to be divided among the women and children. The quantity of bear meat and fat consumed that day was therefore very great. What was left over of the portions /722/ that the guests had, they wrapped up in the fine wood-shavings and in fir branches and took home -- a package that the Gilyak are said to call mŏpt (1).

1. A designation which I myself did not hear.

The gnawed bones, on the other hand, were put back into the kettle from which the cooked meat had been distributed. As the meal came to a close, an old man with a fir branch in his hand stationed himself at the door of the house and, gently striking each one, drove out everyone passing through it who had eaten bear meat and fat -- an act which was supposed to be a sort of punishment for the mistreat committed against the bear. Once outside, however, those who came out were less gently treated, for here they were greeted with a cross fire of snowballs with which the boys pelted them, while the women drummed vigorously on the suspended beams. An identical meal with a similar aftermath also took place in the house where the owner of the third bear lived. Here, too, just as before, quantities of small individual heaps of food -- sturgeon, mosj, etc. -- were put out

Gold; RX3

/732 cont./

which were strung in a row by means of the Foramina vertebralia on the branches of the brush, and beside them hung Goldi birch-bark bowls and baskets, such as are found also on the grave sites of deceased human beings and which apparently were offered as a sacrifice to the manes of the slain bear.

It is not to be assumed that the Gilyak of Sakhalin differ essentially from their fellow-tribesmen on the mainland in their basic ideas about the bear and the festival dedicated to it, especially since we must think of how the Gilyak spread, that, having come to Sakhalin from the mouth of the Amur, they found a home there for a long period, and only then, oppressed by the Ainu, migrated back to the mainland for the greater part (1). In individ-

1. See pp. 214 /untranslated/, 247 /untranslated/, 889, and 892 of this work.

ual phases of the festival, on the other hand, there are very considerable differences between them, determined chiefly by the different methods of construction and the different ideas of dwellings of the continental and the Sakhalin Gilyak.

As plain as the exterior of an earth-yurt of the latter is -- a low, conical, snow-covered mound somewhat blackened at the top by the smoke streaming out -- its external decoration for the bear festival is just as shabby. As a rule, only one or two young fir trees, stripped of their lower branches, are stuck in the snow at the entrance to the yurt, with a few ringlet-shaped, curled wooden-shavings hanging down from them from crowns and from the branches of neighboring shrubs. Only when a bear has been eaten in the same dwelling a few weeks or a month previously or even in the course of the year is its skin used for the exterior decorating of the yurt, being spread over a long and sturdy branch stuck obliquely into the snow and sometimes supported by a small railing, and in front of it is put a bundle of wooden curls (zach) (2).

2. See the woodcut, p. 1180.

I saw this, for example, in Tyk, Dul, Jwlk, Pud-wo, and elsewhere along the /732/ west coast and in the Tymy Valley of Sakhalin. If

/732 cont./

Bearskin hung up near the yurt.

animates all primitive peoples may have resisted any change in the traditional ceremonies, but gradually these must have been greater utilization of the advantages which the new housing offered to them by its position on level ground and its greater spaciousness also for the celebration of the bear festival and this could not have taken long for a people with such practical talents as the Gilyak. If one sees the Amur Gilyak lead their bears, temporarily displayed in the houses, out through the door and immediately back in again many times, apparently without any purpose whatsoever, and stroll around with the bear in the fashion from house to house from the entire village, it gives the impression as though, with their traditional memory, so to speak, of the limitation that was formerly imposed on them in this respect and within which their fellow-tribesmen on Sakhalin still find themselves today they revel in the enjoyment offered to them by their present /723/ dwellings, which are more suitable for the bear festival. As a matter of fact, this custom seems to be only the manifestation of joy and satisfaction gradually becoming more conscious in Amur Gilyak, which have the change in the construction of their dwellings which has taken place in the course of time.

Another difference in the bear-festival practices determined by the different dwellings of the continental and the Sakhalin Gilyak and the Sakhalin Gilyak pertains to the transfer of the bear's head from the lŋag into the yurt. Among the former this is done, not through the door, but always through one of the windows of the house. In Tymy, Tro, Nivx, Ulx, Tebach, and Kalnaj, dogs were always only through the smoke vent, which, aside from the door, is generally the only opening in it leading to the outside. I therefore suspect that among the Sakhalin Gilyak, too, this transfer taken place, not through the door, but through the smoke vent, which would scarcely be possible in the Gilyak houses built in the Chinese fashion, and therefore the continental Gilyak are obliged to use the window opening instead of the smoke vent, which is also much easier. I think that consideration of this circumstance of Ainu with regard to the Sakhalin Gilyak is to be found in the fact that over a yurt in which a bear has been eaten the skin of the animal consumed, immediately after the meal is finished, is spread over a pole jutting

/733 cont./

adjacently from the smoke vent and with a bundle of curled wood-shavings hanging from its tip, such as I saw in the village of Tyk. Here, the toad carved out of birch bark probably also remains on the smoke vent, while the bear's head and skin is lowered through the smoke vent directly onto the platform of the hearth.

In the meantime, in the interior of the yurt there, the rack for the bear's head, made, just as on the mainland, out of unpeeled alder poles and richly decorated with fir branches, has been readied. It stands close to the rear end of the hearth platform in the passageway between it and the rear bench, or bench of honor, that, in a place which corresponds exactly to the one which it occupies in the Gilyak houses built in Chinese fashion. Since the hearth platform in a large earth yurt is quite spacious, two separate fires can be kindled on it, corresponding to the two hearths in the tschadyf, over which the kettles used to cook the bear meat as well as for preparing the other dishes have been in the yurt beams. The fire closer to the bear rack is the kotr -- or tschchyf (1) -- tur, the bear fire, in which fresh branches of fir

1. As the bear is usually called on Sakhalin.

trees, and especially of the cedar shrubs so common in northern Sakhalin, are burned during the preparation of the bear meat and also at other times during the bear festival on account of the popular fragrance.

The wooden curls (zach), being regarded as a symbol of holiness, purity, and inviolability, are an essential ornament in the interior of the earth yurt. They always hang down in a long bundle from the center of each of the four crossbeams supporting the conical roof, and as the time of the bear festival there number is increased by four new ones, which /734/ are put in the four corners of the yurt. In the Gilyak houses, on the mainland one usually sees only two of them, and not always even these, suspended from the two supporting posts of the house, but their number seems to increase as one approaches the Ainu, among whom they are used under the name inau-

/734 cont./

I was present at the bear festival in Tyk when the meat of the animal was shared by being eaten, that is, toward noon of the second act. Parts of the dismembered animal were still lying on the bear rack, and among them the skull already cleaned of the muscle meat, which I tried to buy, in vain, of course, from the owner of the animal. Several Gilyak busily eating their portions still sat on the benches, others were either crowding around them or in the passageways between the hearth and the benches, each one trying to snatch a piece of meat or there with his knife. One of the members of the household was collecting contributions from the diners: in a little trough in order to give them to the women and children, and similar troughs with pieces of bear meat were carried to the other yurts of the village. Even among the Amur Gilyak, when this time comes during the bear festival, festivities usually cease, and here not a trace of them remained -- everybody milled around informally in the narrow space. A meal of Manchu-Chinese products, cereals and legumes, such as it customarily served to guests in Tymy, seems to have prevailed in Tyk, and this also to have preceded the eating of the meat, since the host and owner of the bear evidently was not one of the well-to-do and only a little of these products reach Sakhalin, and that only through the Amur Gilyak and Oltcha. Under these circumstances it was understandable that in Dul, where soon thereafter a bear festival was celebrated amid a great conflux of participants, a subsequent celebration took place immediately afterward for the gratification of the latter. In which, besides other food, dogs were eaten, as I already had been mentioned above (1) in connection with the discussion

1. See pp. 661 and 662.

of cynophagy among the Gilyak.

It struck me that on Sakhalin there was nothing to be seen of any of the collateral entertainments, such as dog races, all kinds of games for young and old, etc., which customarily accompany the bear festival among the Amur Gilyak. In summing up, one may conclude that among the Sakhalin Gilyak, especially in the region with earth yurts exclusively, that is, along the

/734 cont./

northern part of the Sea of Japan, the Sea of Okhotsk, and in the Tyms Valley, as a result of their greater wealth and poverty circumstances, as well as their smaller and less suitable dwellings, the bear festival has remained far behind the development that it reached among their fellow-tribesmen on the Amur, where on such occasions inhabitants of various, sometimes even remote villages flock together, and animated life and activity prevail among them, and that therefore it does not have nearly as much social significance among the former as among the latter.

/735/ For the purpose of comparison let us now cast a glance at the bear festival of the Ainu of Sakhalin and Jesso /Yesso/. Isolated reports about it reach back to the seventeenth century and in the Japanese literature perhaps even much further. Detailed account of the whole festival have been given by Dr. B. Scheube with regard to the Ainu of Jesso (1) and by Mesrt. Rudanofskij (2)

1. Dr. B. Scheube, "Bärenkultus und Bärenfeste der Ainu /The Bear Cult and Bear Festival of the Ainu/" (Das Ausland, 1881, No. 16, pp. 303-308, from the Ainthuell der deutsch. Gesellsch. für Natur- und Völkerkunde Ostasiens, 1880, No. 22.

/742 cont./

it is not the general custom to wear idols around the neck. Often they are used as talisman, but seem to represent hair, and, in that case, strings tened to the wooden piece by similar little bands of bark. Plate knotted in a ball and the like, which is put around the tick mark's LIII /p.1253/, Fig. 2, shows such an idol. Several such idols neck on the advice of the shaman and worn even after recovery. stood in a little house made out of boards and covered with hoze Such an amulet is called ngif and kini: from Judin in Tebach I grass, which is shown on Plate LIII /p.1253/, Fig. 3. These idols obtained an amulet in the form of a carved bow with a human face were named for me by the Allof Gilyak as tybyx. The Gilyak (see Plate LVII /p. 1257/, Fig. 9). (Bm. I, pp. 57, 58.)

3. Gilyak. The village of Pogbobi on the west coast of Sakhalin. In one yurt I saw my host cut long curls of wood -shavings off a stick. When these were quite voluminous, he cut off the whole bundle from the top of the stick and tied it together there. This zach was intended for a sick woman in the yurt, who had pains in her chest and sat there coughing and complaining. The zach was tied round her neck, and she tucked the ends carefully in her bosom, pressing them against her body. This was supposed to be a remedy. In fact, after the had received this medicine, the woman stopped groaning and behaved very cheerfully during the rest of the time. Thus, in this case, as often happens, a superstition may have a curative effect. The zach is therefore still used on Sakhalin as an amulet /743/ against sickness and seems to take the place of the various forms of idols and similar figures which are used for similar purposes along the Amur and Liman. (2 W.R. II, p. 6.)

4. Gilyak. The idol in human shape illustrated on Plate LIII /p. 1253/, Fig. 4, was named for me by the Gilyak as myiir. It is distinguished in shape by having only one arm; the other one was omitted intentionally; I was unable to learn what the circumstances were with regard to this representation. This idol, too, is carved by a shaman, or upon the advice of one, for warding off sickness. I acquired it in the village of Kulk. In the same village among the belongings of the Gilyak that had been put away for the summer in a storage chamber, I found carved idols of another kind, but likewise of human shape. They were cylindrical pieces of wood, on one side of which was a crudely represented human face. The upper end of the wooden piece is conically pointed and bears a sort of cap of thin strands of bark, which hang

/743 cont./

down to the forehead in front, but over the entire wooden piece in back and seem to represent hair. Lower down, in the shape of a stage

/792 cont./

the disaster. Since then the once large village of Chala has had only a few inhabitants. (2 S.R. I, p. 39.)

Among the Chela I saw an idol-belt, a nawuchu, provided with various sawa or representations of idols, to be worn around the body as an amulet against sickness (Plate LX /p.1260 /, Fig. 3). On either side of the leather belt two makes (mhalda), likewise of leather, were sewed on lengthwise, and between them on either side a fox carved out of wood was attached in the same direction. In front, in the middle, there was a toad of leather and on it a human figure in wood. The most interesting thing on the belt, however, was the representation of the khai (chai) of the Gilyak in wood hanging below the toad and the human figure, the imaginary animal with which I became acquainted among the Gilyak in Chiara and which is also carved by the Olcha as protection against sickness. The great similarity between the Gilyak kagn and the sawa of the Olcha is very striking and leads to the conclusion that there is a similar correspondence in the religious concepts and ideas of these peoples. (2 S.R. I, pp. 32-33.)

Shamans

/756 cont./

of all his bindings and alive again. With the words, kiunchek via, kiunchek via! (?) which he calls out to each kagn, the shaman now

"Perhaps kaunchu = out! viii = let us go! - according to the Gilyak name for the kagn, the shaman now Grube.

/792 cont./

banishes all kagn from there again, it is quiet in the yurt, the shaman performance is over, and the fires in the hearths may be reinlaid. (2 S.R. I, pp. 58 and 59.)

32. Gilyak. In the village of Tyk on Sakhalin, there are likewise shamans among the Gilyak on Sakhalin; moreover, they are said to have the same instruments of their art as those on the mainland, drum (kanfi), shaman's belt (Olcha jangsa), etc. (Plate LXI /p. 1261/, Figs. 2, 4). (2 W. R. I, p. 10.)

The large village of Tymovsk on the east coast consisting of at least ten yurts, is said to have a shaman who was famous among the Gilyak. (2 W. R. II, p. 7.)

33. Samagir. One evening I heard the sound of drums in the village of Ngkghu. I was told that in the neighboring yurt the Shaman's drum was beaten, and I went there immediately. There was no light in the yurt, and even in the two hearths there were only glowing embers, in front of which women and children were crouched. The dull tones of the drum, accompanied by a melancholy and monotonous singing, resounded from a remote, dark corner of the large, dim room and occasionally became so powerful that the whole yurt rumbled. Accompanied by my guide, I sat down on one of the sleeping benches and listened for a while to the eerie music. When I inquired as to why there was no fire in the yurt, I was told that the shaman sounds were meant for a sick woman in the yurt and that no fire was permitted in connection with this. And, indeed, when after a time the flames were fanned in the hearths and the night-lamps were lighted in the yurt, the drumming and singing instantly ceased. I now approached the shaman, who was sitting on one of the sleeping benches. Next to him lay the sick woman, a pan of coals (ischalacen) with dying

/789 cont./

rolf next to the kakk, is supposed to represent a dove (kitut) or a cuckoo (kaunchu). The dove is for a man, the latter for a woman. The dove or the cuckoo is also involved with the small stick with the bowl, in which berries and the like are placed as food for the bird: hence the designation tutut-ngir and tutut-ngir or pyk-ngir and pyk-ngir, the dove or cuckoo bowl, for these sticks. The representation is the same for both birds, for it only most crudely shows a bird's head by means of a couple of notches. The word pitnyui, on the other hand, designates another item in the raff. It is a small framework of little sticks (**), on which hang berries,

** According to the appended, very cursory sketch, a triangle attached to a stick, on which various articles are hung.

tobacco, etc., the purpose of which remains unknown to me. On the tuchan-ngar, Judin said, six feathers are placed for a deceased man and eight for a woman. Since these are supposed to be a means for the more rapid journeying on of the soul, perhaps this takes into account the difference in physical strength and - according to the Gilyak view of women -- also the difference in psychic energy of the two sexes. The tutut or pyk is supposed to have almost the same purpose as the tuchan-ngar, which is very probable on the basis of the explanation given by Judin concerning these objects. (Bm. I, p. 87.)

56. Gilyak. Near the village of Tacht (on the right bank of the Amur) I already erected raff twice very close to the bank and close to it a pitnyui, i.e., a storage chamber for the raff, which is therefore called raff-njo on Sakhalin. It consist of a small roof which rests on two poles, similar to a small dovecot. It rood is higher than the raff. Under the roof of the pitnyui, berries, fish, and the like are hung for the deceased.

In Kalm (on the right bank of the Amur), I found an extremely elegant raff which a rich Gilyak, Kimtkan, had erected in memory of his wife, a daughter of Judin's, and his daughter. On the outside it was provided with carvings and arabesques of various kinds. The /770/ carvings, painted black, red, and white,

/770 cont./

represented various animals, bears, horses, hares, cocks, and ducks (Plate LXIX /p.1269 /).

On the inside the raff was very opulently equipped. The usual articles in it, kakk, pyk-ngir, tchan-ngar, were so luxuriously made that they could hardly be recognized. The former was completely covered with a multicolored cloth, which bore brass ornaments such as the Gilyak women have on their robes, corresponding to the purpose of the kakk, namely, to carry the clothing for the deceased. -- Do the rags on the kakk perhaps come from the garments of the deceased? Very probably, since these rags are called okch, fur. -- A small Manchurian bowl served as pyk-ngir. The floor of the raff was covered with a fine reed or straw mat. Aside from the articles mentioned, there also lay in the raff a great number of birch-bark bowls (with berries, etc.), neatly stacked up, a small box in which lay a tobacco pouch and a pipe, another pipe which was for Kimtkan's daughter, and the like, and, finally, the braids of the two deceased women, cut off at the roots and wrapped in birch bark were preserved here (*).

* See p. 615, where raff is to be read instead of rakk.

Kimtkan himself took out the articles and showed them to me, evidently, however, without thinking much about the dead. Moreover, he had now replaced his late wife with three of them. Near the raff there was the cremation site of a corpse and next to it stood the raff that were similar. The raff is never erected directly over the ashes of the deceased, but apart from them (**).

** The reports concerning this, collected by the author in various places, differ in part from one another; cf. 47 /p. 1227/, 48 /p. 1227/, 51 /p.1233/.

Kimtkan's deceased, for example, were cremated far in the forest, and their ashes were there, while the raff stood here near

/771 cont./

years, and consequently also the visin to it for a cure. The ashes of a person killed by an ant (tiger and leopard) is taken to a special burial house, supplied with food, and the latter is used as a memorial. (Bm. I, pp. 58, 59.)

58. Gilyak. Between Hokh and Kalm (on the right bank the Amur), I pasted on the bank the tomb of a Gilyak who had met misfortune in the river. Here stood a small low house, in the manner of all Gilyak graves, surrounded by birch-bark baskets and bowls of various sizes, which were strung on the adjacent brush. This is the usual general custom of the Gilyak for designating the grave sites of persons and animals (bears, etc.). Near the tomb there was a raff, probably the one in which the accident had occurred (**). (1. S.R. I, p. 7.)

** Cf. Pl. LXVII /p.1267 /.

59. Gilyak. The inhabitants of the villages of Kuk, Ho and Tachilvi (on the right bank of the Amur) are said to inter their dead near the Tachi River, a close of Taur-wa and villages up to Chiare (incl.), cremate them and erect raff for them. I personally saw many raff in Chiare. In the villages named, however, the population is part Tunguzic. (2 S.R. II, 8.)

60. Gilyak. Near My (on the Amur-Liman) I saw a fresh Gilyak grave. The raff was not yet erected, the ashes (of the cremated corpse) were covered with boards set vertically and horizontally, and at each of their two ends there was wood and ings (zach). (2 W.R. II, p. 38).

61. Gilyak. If a Gilyak is murdered, his corpse is likewise (like all others) cremated, but no raff is erected over the ashes in the forest; instead, a wagn is set up (***). It is made out of

*** See Appendix 22 /p. 1206/.

tree trunk which is dug out of the soil with the roots. The various root-branches serve to represent the head, arms, and legs of the

/674 cont./

them, even without being inhabited. Their designation of spatial distances in terms of days of travel or the number of night-rests is usually, under normal weather conditions, quite accurate. The Gilyak naturally used this system of designating distance by the time required to cover the stretch during their first encounters with the Russians for information about the distances in their country. Therefore, in this case, too, even before I learned the Gilyak expression for "to sleep" (k(ch)otsch or k(ch)ontsch), I came across the word borrowed from the Russian and only suitably Gilyakized, esspanytsch (from the Russian sspatj), with the derived verbal form esspara, essparor, etc. Under unfavorable conditions, however, during stormy weather, heavy snowdrifts, etc., the designation according to days of travel is very uncertain and fluctuating, for it depends merely on how much one /675/ trusts the capacity of himself or his dogs, and that is always very little, because in such cases the Gilyak generally prefer not to move from the spot.

It is most difficult among the Gilyak to set a date somewhat further in the future on which something is to happen, if they are pursuing their activities undisturbed in their own surroundings, for these usually take such a regular course that a mistake in the number of night-rests that have passed is all too easily possible and always more likely than the opposite. The Gilyak, indeed, also observe the various phases of the moon, and, to be sure, in a very careful fashion, and they have special designations for the full and new moon (long tscharntsch--is full, and l. mutsch--is dead), the waxing and waning moon (padywu-l. and muiw-l.), the half moon and the quarter moon (l. putytsch and l. per(ch)kotsch), and the waxing or waning of these phases of the moon (padywu-l. putytsch and muiw-l. putytsch, or padywu-l. per(ch)kotsch and muiw-l. per(ch)kotsch)--but for the above-mentioned purpose of predetermining a definite day, this is only an approximate method, and if the sky is overcast for any length of time, as it by no means rarely is in the Amur region, it does not work at all.

The Gilyak divide the year into twelve months (1). But

1. Among the Eskimo it has 13 months,

/675 cont./

1. (cont.)
and the time from one new moon to another is called taktuk, like the moon itself. Klutschak, Als Eskimo unter den Eskimos /An Eskimo among the Eskimo/, Vienna, Pest, Leipzig, 1881, p. 208.

these have several different designations, not merely in one and the same place, but also in various parts of the Gilyak area. In particular there are those used by the Gilyak of the Amur River and the Amur-Liman, the west coast of Sakhalin, and the south coast of the Sea of Okhotsk, and, on the other hand, the others used in the interior and along the east coast of the island, by the Tymy and Tro Gilyak. I shall give them next as I noted them myself after repeated inquiries and shall later add a few remarks.

List of the Gilyak Names of the Months:

	on the mainland and the west coast of Sakhalin	in the interior and on the east coast of Sakhalin
January . . .	Tscham-long	Klu-long.
February . .	Karr-long	Tscham-long.
March	Tschrad-long	Karr-long.
April	Arkail-long	Tschrad-long.
May	Walten tengi-long, also Kopengwa-l. and Kittägtsch-l. (2) . . .	Pittun-long.

2. In the Gilyak word-list compiled by Dr. Grube the last two terms have erroneously been applied to April instead of to May: see the appendix to Vol. III of this work, pp. 44, 58, 59, and 120 /the appendix

/675 cont./

2. (cont.)
referred to is not included in the book translated here/. Tschrad-long (March) is likewise erroneously identified with July (op. cit., p. 108).

/676/

June	Tengi-wota-long, . . . also Pota-long	Arkail-long.
July	Matschn-tschrar-long . .	Tscho-taghr-l
August . . .	Lygi-wota-l., also Pilja-tschrar-l., and simply Pilja-l.	Matschki-long
September . .	Ngarwi-long, also Tschitsch-ngar-long	Pilja-long.
October . . .	Oni-lami-long, also Pottschawo-long . . .	Ngadgho-long
November . .	Tlo-long	Kawekö-long.
December . .	Anj-long	Tlo-long.

Unfortunately, Glehn does not indicate in which of the two above-named parts of the Gilyak area he learned their nam for the months. According to him, they run as follows:

January, February, March } just as according to me.

April . . . Pitul-long.

May . . Arschkai-long.

/676 cont./

805 114

June . . Tingi-long and Tingivata-long.

July, August, September are not given.

October . . Iging-long and Mugiti-long.

November . Klu-long and Anj-long (in the north).

December . Tschlo-long.

114 184 805 From the fact that the first three months in Glehn bear exactly the same names as I noted down according to statements of the Gilyak of the mainland and the west coast of Sakhalin, I venture to conclude that he, too, inquired about them there. The same is true for June, whose name refers to the mass migration of the tengi-tscho (Salmo proteus), which, according to him, is called tingi-tscho. The other names of the months found in Glehn, however, seem to me to have been learned among the Tro Gilyak.

805 184 [122] My knowledge of the Gilyak language does not extend far enough to explain all the names of the months given above. For only a few of them shall I venture a word or two of explanation. It could readily be assumed that they are based upon especially striking natural phenomena and conditions characteristic of the month concerned, which, however, with regard to time, might now and then differ considerably in the habitation area of the Gilyak. This happens particularly in the case of the mass migration upstream of Salmo lagocephalus in the Amur and in the Tymy River on Sakhalin and calls forth among the dwellers along the latter a corresponding shift in the names of the months as compared to the Amur Gilyak, as I have already mentioned in detail on another occasion (1). In a similar manner, /677/ the

1. Pages 819-823.

/677 cont./

805 184 Tymy Gilyak shift the designations current on the Amur for January, February, and March one month ahead -- a shift for which I could not find an explanation. According to the sound

805 184 825 of the word, tscham-long (January or February) means eagle-month, karr-long (February or March) crow-month, since the former seems to be named after the white-tailed eagle (Haliaëtos albicilla), and the latter after the raven-crow (Corvus corone). Both birds play a not unimportant role in the superstitious ideas

[439] of the Gilyak, and the former, moreover, also in their trade with the Japanese (1), but it is a mystery to me why these particular

1. See pp. 668, 669, and 883 above.

months are named after them. During the winter the white-tailed eagle even leaves the mainland and northernmost part of the Gilyak territory because of the lack of fish for its special diet, and at this time of year it holds out only on the northern coasts of the Sea of Japan, where the ice is often broken up by storms, and in the interior of Sakhalin along the upper Tymy River which does not freeze in winter (2). There the white-tailed eagle is

2. See pp. 226 and 227 of Vol. I of this work.

indeed an impressive sight in the midst of the snowy landscape at a temperature falling below the freezing point of mercury. But in this respect January and February are alike, and the shift of the designation current on the Amur for the former month to the latter one by the Tymy Gilyak is not explained at all by this. Could it be that the name "eagle month" is foreign, perhaps of Chinese

000 origin (3)? In the Tymy Valley I heard January called klu-long --

805 825 171 113

3. Among the Chulyma Tatars and the Baraba inhabitants March is called "eagle month" (kutschugen-ai and kutschigar-ai, resp.) Falk, Beytr. zur topograph. Kenntn.

225 of a small board equipped with a harpoon-tip, attached to a stick from 10 to 30 meters long. The lykh was lowered into the water; the hunter hid himself nearby in his boat or on the shore. When he caught sight of his quarry, the hunter carefully directed the lykh at it and quickly drove it into the animal.

224 As compared with its role among other Amur peoples, hunting played a 22 smaller part among the Nivkhi. The hunting season began in autumn, after the end of the fish-runs. At this time bears come down to rivers to treat [184] themselves to the delicacy of fish, and the Nivkhi awaited them with bows or guns. Sometimes they set crossbows for them. In winter, they hunted bears with spears. The bear season was followed by the sable-hunting season. Sable and certain other fur animals (otter, lynx and marten) played an important part in the Nivkhi economy. The Amur Nivkhi went out every autumn in their large, heavy boats made of boards, to hunt sable in Sakhalin, returning from there only in early spring. This was due to the abundance of sable on Sakhalin. The Nivkhi set numerous traps along rivers and on fallen trees which served the sables as crossings.

224 The main weapon in hunting was the gun, which in the early 20th century [177] replaced the compound Nivkhi bow with its horn covering. However, the bow [178] was preserved in the bear festival and in children's games. Squirrel and foxes were hunted with dogs. Crossbows were set for both small and large animals.

241 Agriculture already began to appear among the Nivkhi in the middle of the 19th century, when they first learned to plant potatoes. Individual Nivkhi had carted goods in the past and hired out for work in other capacities.

326 Already, before the advent of the Russians, there were expert smiths in some of the villages, who reforged Japanese, Chinese, and later Russian metal articles for their own needs; they made knives, straight and curved, adapted to wood-carving; arrowheads, tips for harpoons, spears, and so forth. The smiths used double bellows, an anvil and hammer. Pieces of massive chains preserved from the past speak of the high skill of the old smiths.

326 The Nivkhi widely employed silver and copper inlay on spear-tips. The 889 old men wove ropes from bast and nettle, built sleds and made dog-harness.

Men's work included fishing, hunting, making the tools required in these 462 occupations, including tackle and means of transportation, the preparation and transportation of firewood, and blacksmithery. The women processed the skins of fish, seal and dogs, prepared birchbark for various uses, sewed and ornamented clothing, made birchbark utensils, gathered plant products, did the housework and took care of the dogs.

177 By the time the Far East was Sovietized, commodity relations were quite 433 strongly developed among the continental Nivkhi. The old forms of collective production and distribution had almost entirely disappeared under the impact of the increasing property differentiation. Many fishermen and hunters who lacked the necessary gear were compelled to hire out as lumberjacks and other hired laborers, transport goods, etc. The smallness of the income from fishing made the Nivkhi turn to agriculture. Fur-hunting played an insignificant role among the Amur Nivkhi. The catch of seal, white whale and sea lion went mainly to fill the needs of the hunters and their families. Fishing was done by cooperative parties usually consisting of 3 to 7 persons. Workers were also hired, on a half-share basis. Some Nivkhi worked during the fishing as hired laborers, processing the fish.

184 Fishing was also highly important among the Sakhalin Nivkhi; but in 22 addition, they widely engaged in hunting sea animals, bears, sable, etc.

The food staple of the Nivkhi was always fish, most often jerked; yukola 262 took the place of bread. Meat was eaten rarely. Food was prepared with

614 parties to agree. When agreement was reached, the khlay-nivkh came to the 627 offending clan with men of the victim clan, fully armed, and a duel was enacted between the representatives of the two clans. Then each clan representative killed a dog, and peace was considered established. After that, the ransom was paid. It consisted of coats of mail, spears, silk materials and other valuable objects.

601 The Nivkhi had a classificatory system of kinship. But, in distinction to the Tunguso-Manchurian system, the specific term of kinship among them applied always to persons of one, rather than different generations. As Shternberg showed, the classificatory system of the Nivkhi reflected even in his time the existing marriage norms. The Nivkhi retained until the end of [198] the 19th century some remnants of group marriage. These relations were [595] possible only for persons of the same generation, and were categorically forbidden among persons of different generations.

614 All the members of a clan were divided into four age groups: 1) grand 561 fathers and great-grandfather (atak); 2) fathers (ytyk), their brothers (tuvng), the husbands of the mother's sisters and the brothers of the husbands of the mother's sisters; 3) brothers and sisters (tuvng); and 4) children (ola).

175 Trade ties with China and the transformation of fur-hunting, and later of 439 fishing, into economic activities directed to commercial ends stimulated 614 the disintegration of the clan order among the Nivkhi, which occurred 184 first among the Amur Nivkhi. The latter had early begun to trade with 182 the Manchus. Nivkhi merchants sailed up the Sungari to San-hsing, and bartered furs and beluga backbones for tea, tobacco, fabrics and metal articles. They also bartered with the Ainu, the Japanese and with other neighbors. Members of the Tvabing clan, for instance, were for a long time [556] the middlemen between the Sakhalin Nivkhi and the Ainu. Thus, long before [595] Russian colonization, the Nivkhi began to be divided into rich and poor. [567] The rich could have several wives and 3-5 slaves. The rich man's bride price always included large quantities of imported valuables. But commodity relations developed slowly, since exchange was only in the medium of fur and, to a lesser extent, fish. The mass of the Nivkhi continued in a subsistence economy.

175 Slaves did only housework. They could set up their own household 567 and marry free women. The slave's descendants of the fifth generation were considered free. On the whole, slavery was not widespread among the Nivkhi and was of a patriarchal character.

175 At the end of the 17th and in the 18th centuries, the Manchus established 648 among the Nivkhi, as well as the Nanays, the posts of khalada— clan elders 618 and gasyanda—village elders.

622 After the middle of the last century, the disintegration of the Nivkhi subsistence economy proceeded more rapidly. After the Nivkhi had finally 175 become a part of Russia, slavery disappeared; a new form of exploitation 178 appeared, in the institution of "half-shares." Nivkhi who lacked the implements of production fell into the position of "half-sharers." The catch 433 was divided according to the number of participants, but those who used [567] the implements of others had to yield half of their share to the owner.

Before the Revolution, the Nivkhi were officially considered Orthodox 771 Christians, but their views remained animistic. They thought of the island 772 of Sakhalin as an anthropomorphic creature; similar ideas were held about trees, mountains, rivers, water, earth and cliffs. The killer whale was in their thinking an yz'—a "master" of other animals. Almost every natural phenomenon had its yz'. The chief of these were Pal-yz'—the "master" of the mountains and the taiga, and Tayrnadz, or Tol'yz'—the "master"

9. Hawes--199 1-3 (1901) 1903 Gilyak

116, 178, 184, 527, 756

"Customs differ from coast to coast, and from village to village, and here is a point of divergence. In many cases I believe the cham, or medicine-man, is not called in to officiate [LSS: At the sacrifice of the bear during the bear fête] possibly because the influence of his office is on the wane, and as the Tro Gilyaks told me 'we have no great cham now.' "

567 However, there are no forms or obligatory expressions of
554 esteem of any kind. In general, a kiss, bow, or hand-shake
576 are, as we said, not often used by Gilyak.

Beside the aged, the rich, and the brave, shamans are
756 especially esteemed, but here again we see reflected the
184 respect [233] which is paid a superior mind. The shamans do not form a separate, exclusive class but live like other people, but they draw an additional income from their craft. It frequently happens that the shaman is also the son of a shaman and has, in a manner of speaking inherited his "science". Some, however, become students of another shaman for a considerable sum, still others become impromptu shamans whenever the "power" descends on them. Women can also become shamans, as we have said. It is arranged so that large villages have their own shaman, whereas several smaller ones fall within the territory of one shaman.

The work of these priests is probably rooted partly in self-delusion, but in any case there is a considerable addition of intentional deception.

756 Fortunately they themselves, although smarter than the
576 rest, are not very superior, and can therefore not teach the
554 people anything very harmful, nor have they been able to make a privileged place for themselves. The shaman's advice is sought where every-day experience does not prove adequate, but the counsellor is not generally treated with great veneration. Most of the shamans are received without any kind of greeting, only famous ones are met with a bow; beyond Sofiyskoye there was even one before whom the whole house went on its knees when he appeared at the door in order to perform his magic. In general the shamans not only enjoy a certain esteem, but they are also feared. Nevertheless, there are cases where people refused to pay a shaman because of his false predictions and his ineptitude, and sometimes shamans are even flogged. Their magic practices will be considered later.

622 Finally, there are the "starosti" (1), that is, elders who
177

1. This is a Russian word.

are appointed by officials. They are, however, not actual mayors; they have nothing to say and are scarcely more than intermediaries through whom the official gives his orders to the community, for these starosti speak Russian well and are in general intelligent people. [234]

423 Property. Among the Gilyak the notion of real property exists, although not in such a strictly individualistic sense as among civilized peoples. The territory of a settlement consists of the customary fishing sites, as well as the streams, and their banks, along which they hunt sables. But the Gilyak never make any claims to nearby territory which they themselves do not use. Use is the absolute element of property. While they recognize
[185] [648] their rights to the streams and the nearby taiga where they set their traps, the Gilyak have freely permitted Tungus from the mainland to hunt the sable and reindeer some tens of versts from their settlements, although it could be easily foreseen that this would lead to the complete disappearance of the sable from those Gilyak territories. But on the other hand they are extremely strict in their rights to those streams along which they set snares
423 and traps. All the streams of the territory of the settlement are
428 divided in perpetuity among the families of that clan which first settled near these streams and used them, and these streams, their tributaries, and separate extensions pass by inheritance and are divided among the sons on the same strict principles as any real property among us. Moreover, if a stream is bequeathed to be shared among several brothers, the co-inheritors take turns using it through the year. It is worthy of note that although the streams thus divided among the brothers and clansmen greatly vary in value with relation to the advantages of hunting, they are never re-alloted, but remain at the continual disposal of the same people. It is possible that the reason for this phenomenon is the fact that younger brothers in certain cases enjoy advantages in
423 the matter of inheritance. On the other hand, fishing sites are not held in such absolute possession. Where the god has been lavish, the Gilyak does not consider himself justified in fencing off this bounty exclusively for himself. The Gilyak is not in the habit of lying in the hay or of eating and not giving to others.
166 Very often the Gilyak move from one settlement to another or
423 journey at given seasons for fishing or sealing, and the indigenous inhabitants of the settlements do not even dream of considering this a violation of any of their rights. Without asking anyone's

186

186 ETHNOCENTRISM--exaltation of the ingroup (e.g., consciousness of kind, local pride, patriotism, class consciousness, old school tie); unfavorable judgments of other groups (e.g., race prejudice, religious intolerance, national antipathies); overt manifestations (e.g., snobbishness, discrimination, ethical dualism, nationalism); symbolic representation (e.g., flags, anthems, emblems, national heroes); channeling of hostilities (e.g., sports rivalry, ethnic scapegoats); etc. See also:

609 reception, and nonetheless only in the rarest cases will the
594 Gilyak refuse to tender his hospitality to the Russian who has
609 wandered his way. Where the Gilyak have dealt cruelly with
829 such fugitives (1), it was only in pursuance of clan vengeance
* 614

1. The Gilyak regard Russian fugitives as one clan, the representatives of which answer for one another.

for slain clansmen -- just what they consider their duty to do with respect to /128/ their own tribesman-murderer. But isolated acts of this sort do not at all change their general
• 186 relations with members of other tribes. There are, of course,
609 among the Gilyak, as among civilized peoples, national
829 prejudices, but they are to be attributed entirely to ignorance, to lack of acquaintance with strange, unknown elements, giving a wide play to fantastic notions and fears. These prejudices exist among them even toward their own tribesmen who live in more remote regions. Thus the Gilyak of the western shore of Sakhalin are wont to represent their tribesmen of the Okhotsk shore as little short of cannibals, at any rate as extremely evil and inclined to theft, although this is the purest prejudice, the result of ignorance or generalizations from single cases. In the very same way after the first expeditions of our Cossacks in the seventeenth century the Gilyak called the Russians nothing other than kinr (devil), but then the Cossacks gave abundant cause for it, not only by their strange outer appearance, their novel garments and arms, but by a whole string of senseless cruelties and brigands' greediness for "the forties of forties" of valuable fur pelts. But now that the Gilyak have met peaceful Russian people, they recall their ancient "prejudice" as a funny anecdote and can conduct themselves with true humanity toward their neighbors.

But we have strayed somewhat from our main theme. We
174 can now resume it.
* 614
615

/265 cont./
602 preserved in the form of remnants even among peoples who
604 by now have shifted to paternity, for example, the peoples
191 of the Caucasus, where a tribesman has the right to steal his uncle's horse, if the latter refuses to give it as a gift. Among the Altaians the saying that "a tribesman is worse than seven wolves" has been preserved to this day.

584 Moreover, the role of the brother in giving his sister in
593 marriage is quite characteristic. In many cases, it is not the father, but the brother who plays the main role in this affair; the agreement to the marriage depends on him, and the bride price is handed over to him.

194 Not a few other extremely indicative traces which may
196 be considered remnants of maternality have been preserved in the language and customs. Thus, if a Gilyak wishes to say
591 that he is married, that he has a wife at home, he says:
191 n'i-umgarvo ivrâ, literally "I have a wife's village" (n'i -- I, umgar -- wife's, vo -- village, ivra -- there is), an expression completely corresponding to the present-day way of life of the Ainu, among whom to this day maternality has been preserved, and often husband and wife live in different settlements, and the former shows up to live with her for several months, and then he returns to his own settlement, so that a man has, besides his own native settlement, still another settlement where his wife lives.

194 Another example: the term for designating a person's
611 origin is the expression pandos', literally "root of birth."
614 This term indicates not the clan of a man, as would naturally
• 186 be expected under the contemporary agnatic system, nor the settlement in which he was born, but the place of his mother's clan. It is interesting to note in this case the reverence with which the Gilyak regards the homeland of not only his mother, but also her female ancestors. No matter how distant such a settlement might be, every man tries to find an occasion to visit, and more than once my /266/ Gilyak companions during the time of my travels amazed me by the tenderness and

/266 cont./
194 reverence with which they approached a settlement where,
611 according to them, one of their female ancestors had once
614 lived.
• 186 In several places to this day, to a question about origin, the Gilyak point to the places from where their mothers and wives came. For example, in the settlement of Nyyvo at the mouth of the Tym' river on the eastern coast of Sakhalin, they reply to the question about the origin of the inhabitants of that settlement, "We are Nyurskie," i.e., come from the settlement of Nyur, which is on the northernmost tip of Sakhalin, and, when I asked for an explanation of this strange answer, it was explained to me: "Because we take wives from Nyur."

Thus, these people reckoned their origin according to the place of the homeland of their mothers, for, as we saw above, the wives of the Gilyak are taken predominantly from the clan of the mother. I shall introduce still another interesting remnant.

553 Usually at the present time children are given names
184 according to the clansmen of the father. Such is the general
614 rule, but there are still places (for example, the settlement
611 of Nanivo on the west shore) where they give names according to the brothers and clansmen of the mother; thus, it is as though the children were members of the mother's clan.

602 All these are remnants which are entirely out of line with
611 the agnate organization of the contemporary Gilyak clan,
174 but they are remnants which are intimately bound up with the present-day psychology of the Gilyak. For the Gilyak them-
[582] selves they are not remnants; this is made clear mainly by
[614] the marriage norms, according to which spouses are cousins, the children of brother and sister, and the members of each clan preferably take wives from one and the same clan, so that the psychologies of paternity and of maternality cross each other, and in the main between male and female lines there does not exist that gulf which is present in those agnate organizations where the Gilyak norms of marriage are not in effect.

/667 cont./
426 that the Gilyak expression for "to be indebted" or "to have debts" -- a concept which must be very familiar to the Gilyak in view of the conditions prevailing among their neighbors, the Goldi and the Ainu -- escaped both Glehn and me, in spite of our otherwise quite copious word lists.

735 Be that as it may, the help given to a poor Gilyak in dis-
tress by his richer fellow-villager, business friends, or other acquaintances does not consist of their getting this or that on credit, but of being given free (Gilyak pai) what is needed to
181 maintain life. And, to be sure, this is done as a consequence of the national-communistic spirit, which, more or less peculiar to all primitive peoples, is in no slight degree inherent in the Gilyak. More, however, than among other peoples, the
• [186] Tungusic tribes, for instance, the communism of the Gilyak is strictly national, that is, active only within the tribal boundaries, which is conditioned and nourished by their sharp linguistic differentiation from all the neighboring tribes and their intense
421 national consciousness. Furthermore, the mind of the Gilyak, so much oriented toward trade, gain, and the increase of property, sets certain limitations on it, for it by no means puts all goods at its service without distinction, but rather only those which Nature herself provides in sufficient quantity and in a condition practically ready for use, and therefore labels, so to speak, as common property. The Gilyak regard as such primarily the products which the sea and the rivers furnish them in quantity, fish, seal, and the like, as well as, next, the dog, fed almost exclusively on these products and indispensable even to the poorest because of its fur, and, finally, what the local forest furnishes them in nourishing or refreshing roots, berries,
735 and other vegetables. It is taken for granted, therefore, that in
421 case of need the rich Gilyak will give to his poor fellow-villagers and other fellow-tribesman who approach him for help as much of his supplies of the products mentioned (fish, seal, etc., and dog furs) as is required to satisfy their most urgent needs in food and clothing. And as long as his supplies of these are not exhausted, no one will perish from hunger or cold. It is quite

/669/
423 Finally, they also embrace the communistic principle in
224 that they have no limitations or restrictions on fishing and hunt-
226 ing, except for the places on the river where they have their
619 salmon weirs and those spots in the forest where their traps and self-shooters are set up. Thus they tolerate it, wholly without limitation, when the Liman Gilyak go to the Amur River to fish, and the Tschomi Gilyak go far downstream on the Tymy River for salmon fishing, and the latter, in turn, move to the sea-coast to catch kangi. It is true, the Tschomi and the Tymy Gilyak have ties of hospitality with each other. Also, in the
[648] vast forest the Gilyak permit even Olcha and Samagir to penetrate into their territory without molesting them.

685 Like the communism, the inviolability of property is also
[421] based upon the national principle. I have seen even old and
[123] dignified Gilyak men who could not resist a small theft, for example, a piece of butter or the like, quite apart from the young people, who go so far as to cut open and pillage travel bags, etc., as happened to me in the village of My in the Amur-
• [186] Liman. I was repeatedly warned by the Amur Gilyak about the inhabitants of the village of Langr, located at the entrance to
685 the latter. The opposite, however, that the Russians steal from
648 the Gilyak, happens much more frequently, and the temptation to remove a makeshift door or a fish net hanging in front in orde to enter a storehouse and to pillage it is indeed much greater. Even the small burial houses were not safe for their contents, though they did not contain anything but a few articles of symbolic significance. Thus it came about that I became acquainte
[192] with the principal international relationship between the two peoples from the Gilyakized Russian term for "to steal" (ukradnt Russ. ukrast), and the Gilyak word (enngarsitsch) did not becom known to me until much later. But it hardly ever happens that one Gilyak will steal anything from another. Indeed, I met
685 persons, such as Judin in Tebach, Mradamn in Ssabach, etc.,
123 whom I could fully trust even from an international standpoint. The former, for instance, after a few days, returned to me a cigar case which I had left in his yurt, and there was not one

7 As far as deceit is concerned, it is very rare among the
6 selves but is practiced against Russians. The cheating
9 usually consists in a Gilyak asking for a loan of money fro
6 a Russian, promising him fish, sable, etc., in return and
then not reappearing. However, one is not justified in ass
ing from this that the Gilyak have two different moral
standards, which would contradict our previous statement
The discrepancy may be much more simply explained. To
sell something at too high a price to a Russian or to take h
money and not return it, - such things many Gilyak take th
liberty of doing because they think Russians in general are
mightier and wealthier than themselves and they feel that f
this reason they would be forgiven. But more frequently t
are motivated by the feeling that civilized persons would b
the first to cheat them. Russian and Chinese merchants o
played nasty tricks on them, in fact it has happened that a
Gilyak lost all patience and control and hurled himself on h
shameless creditor in order to make an end to the latter's
7 ever-increasing demands. It is actually surprising that,
9 having been taught by such masters, the majority of Gilyak
7 nevertheless refrain from cheating, and this fact is highly
appreciated by decent Russians. Often I heard peasan
of neighboring villages say: "The Gilyak are in gener
more honest than our sort, especially those who live
in distant villages [225], for they do not even permit
themselves to cheat strangers." (1) However, one must

1. I myself had the following experience. I bought some ear-rings from a Gilyak woman and gave her a ruble in paper money because I had no change. The woman took the money with some astonishment. Somewhat later when the little steamer with which I had arrived weighed anchor, the woman suddenly appeared rowing toward me in a boat and called out to me that the ear-rings were "not silver, just ordinary ones". Obviously she did not want to be taken for a swindler.

not believe that the peasants are generally dishonest;
on the contrary, they are an upright people, which

members of a village -- or -- as in the case of a suicide -- it is automatically omitted.

Since the soul of a murdered person flies to heaven, it does not need any of the articles such as are placed in the raff for the wandering soul of a person who died a natural death. (Bm. I, pp. 52-54.)

62. Gilyak. As the Gilyak (on the west coast of Sakhalin) told me, they burn their corpses and erect wagn over the ashes of murdered persons. (2 W.R. I, p. 8.)

63. Gilyak. The Tymy Gilyak assembled in Ngachd-wo (on the left bank of the Tymy on Sakhalin) said that they likewise usually burn their corpses, as is done along the Amur, in the Liman, and on the west coast of Sakhalin up to Arkai (excl.). A raff is erected over the ashes of the cremated corpse and, as along the Amur, has a kakk, pyk or tutut, and pyk-ngit or tutut-ngit in it. The pittyssj is present in the raff and among the Tymy Gilyak bears the designation raff-njo, that is, burial-house storage-chamber, which wholly corresponds to its significance. Only the tscham-ngar is missing (*). (2. W.R.I, p. 45.)

* See Appendix 53 /p. 1233/, 55 /p. 1234/.

64. Gilyak. From Arkai on, along the west coast of Sakhalin, south to Pilja-wo, the last Gilyak village, the Gilyak are said not to cremate their corpses which is regarded as uitsch, but to deposit them in wooden coffins in small houses, just as among the Tungusic tribes of Manchuria and Sakhalin and the Ainu (2 W. R. I, pp. 8, 45.)

/773/ According to another report, the corpses are interred south of Arkai (2 W.R. II, p. 25).

65. Olcha. In the forest not far from the Russian village of Bogorodskoye in the vicinity of the Olcha village of Pullj (Pulu on the map, on the right bank of the Amur), there were two very

/15 cont./

174 174 types of animals mentioned are actually encountered only very rarely in the territory of the Gilyak on the Amur and, on the other hand, very frequently in the territory of their Tungus neighbors, the Goldi, Olcha, Orochi, and Samagir, and therefore there is nothing surprising in the fact that the Tungus names spread among the Gilyak, but even if in Schrenck's time the animals mentioned were encountered there somewhat more frequently, this could be a matter of pure accident. It often happens that extraordinary reasons, such as the appearance of a new and strong enemy, compel this or that animal to save itself by flight from its normal territory to distant places, but such phenomena do not prove that the new territory in which these animals accidentally appeared was their primordial habitat. In general, how convincing Schrenck's conclusion is may be seen from the fact that the tiger is absolutely not encountered on Sakhalin and very rarely enters the territory of the Gilyak on the Amur, but nevertheless both the Sakhalin and the Amur Gilyak have their own name for it, "klund."

172 174 192 On the contrary, everything speaks for the fact that on Sakhalin it is the Gilyak who are the newcomers, having replaced or driven out their predecessors -- the Ainu. Let us start with the linguistic /16/ data. The Gilyak still call trees and some sea animals that are absent on the continent by Ainu terms, such as nistan' (maple), tarman' (yew tree), nuguchep (sea pig?), and others. Furthermore, we have even more objective proof that in any case it was not the Gilyak who were the most ancient aborigines of the island. Throughout the entire territory of Gilyak settlement on Sakhalin Island, right up to its northernmost extremities, one encounters the remnants of ancient dugouts, in the form of round and more or less large pits, and, upon excavating them, I found pot fragments and some implements of the Stone Age. The Gilyak call these pits nothing other than kugi-tul'kch (Ainu pits), a name which quite clearly indicates that the Gilyak regard the Ainu as 172 the original inhabitants. The Stone Age implements and the pot fragments found in these pits are regarded by the Gilyak as the handiwork of the gods (the pot fragments, for example, are regarded by them as the pots of a heavenly man who dropped them

/17 cont./

174 Thus, it is indisputable that the Gilyak are relatively late arrivals on Sakhalin. There are, however, many reasons for believing that the territory occupied by the Gilyak at the present time cannot be considered very ancient, that, strange as it seems, the Gilyak arrived in their present territory from more northerly areas closer to the Arctic Circle. Indeed, some of the peculiarities of Gilyak life seem to be clear survivals from a period of residence in 174 a colder climate. The most typical proof of this kind is a remnant 171 connected with their winter abode -- the dugout. The Gilyak dug- 342 out is built in the manner of the Kamchadal. But while there is no door in the Kamchadal yurt, because of the severity of the arctic winter, and its function is performed by the smoke opening, among the Gilyak, due to the lesser severity of the winter, the dugout has a passageway from which a low, sliding door leads into the yurt.

There are also times when the smoke opening in the Gilyak 342 yurt once again performs the function of a door as among the 178 Kamchadal. This is during the days of the bear festival, when the furthest echoes from the most remote antiquity come to life from the mist of millenniums, when a ritual which has not changed for tens of centuries is observed with reverential strictness. Then there returns the memory of the smoke opening, which at one time served as the only entrance into the yurt: through this opening a Gilyak with the skin and the meat of the bear killed during the festival descends down a pole which is specially set up for this occasion. At the end of the festival all the accessories of the ritual, as well as the bones of the bear, are carried out of the yurt through the same smoke opening. The violation of this ritual is regarded as the greatest sin. Those Gilyak who have adopted the Manchu yurt, where there is no smoke opening, are forced to open their windows of fish skin during the days of the festival, in spite of the February frost, so that in this extraordinary /18/ way they can take the sacred relics in and out and thus, albeit approximately, perform the ancient ritual. That the fact cited may be in actuality a remnant of their way of life is clearly proved by the fact that the very concepts for "enter" and "exit" from the yurt are expressed in Gilyak by words whose literal meaning is "dive in" and "dive out"

/18 cont./

342 342 (kusind and jugynd), which is fully consistent with the manner of 178 entering and leaving through the smoke opening.

I shall not at this point speak of any other aspect of the 171 arctic way of life. I shall mention only the remarkable fact that 174 riding on dogs (we encounter it among the Yukagir, the Chukchee, 342 the Eskimo, the Aleut, the Koryak, and the Kamchadal) is undoubtedly a characteristic peculiarity of the purely arctic way of life adopted by the natives of the Amur region, the Ainu, the Goldi, and the Orochi, from the Gilyak. The Gilyak term "tu" -- dog -- 582 led -- became the property of both the Ainu and the Tungus tribes. 614 The priority, as it were, of the Gilyak in this respect is clearly revealed in everything. The Ainu and the Tungus tribes (the Goldi and the Orochi) have adopted from the Gilyak not only the term and the principle of conveyance on dogs, but also the details of building the sled, the ways of sitting on the sled (astride, with the feet on ski along the sides of the sled), the harness of the dogs, and driving them. It is remarkable that among the reindeer Chukchee, among whom dog-raising is preserved only in legends, the Gilyak way of sitting on the sled (astride) has been preserved to the present. The same way of sitting was habitual among the Kamchadal as well.

In connection with this hypothesis, it is interesting to compare a very widespread legend.

174 Among the numerous legends that I have collected about 173 the origin of the Gilyak clans, I have frequently encountered a 332 legend about how this or that clan came to Sakhalin on the so- 610 called "hoyykh." By "hoyykh" the Gilyak mean everything that is carried on the current of a river or sea, for the most part clods of earth or tundra turf broken off from the bank, and also floes of ice which are carried on a sea current. One such hoyykh is still pointed out on the eastern shore of Sakhalin in Nyyvo Bay, where it formed a miniuscule island opposite the settlement of Takvro. 614 It is alleged that a part of the clan now living in the settlement of Tangi on the western shore appeared on this hoyykh. There is nothing impossible about conveyance on a hoyykh. It not infrequently happens that during the spring hunt for seals a sudden

/37 cont./

174 my clan must, in turn, go to a third clan, whose ancestresses were 835 sisters of the male ancestors of my clan. In the kinship terminology 582 this limitation is clearly expressed in the fact that I do not call the 614 daughter of the sister of my father-in-law (an'ge), but simply navkh, and she calls me, not husband (pu, ivn), but ytk, akhmal'k. Such was the type of the primitive structure of the family and clan, reconstructed a priori from the kinship nomenclature. I did not, however, arrive at my conclusions a priori.

In spite of all the favorable conditions indicated by me 582 which relaxed the exclusiveness of marriage within a particular 614 clan, the old principle continues to be dominant up to the present day. Upon first acquaintance with the way of life of the Gilyak, not yet knowing their kinship nomenclature in detail, I was impressed by the persistent tendency of each clan to take wives predominantly from one particular clan, namely, from the clan of one's mother. P'fand'ukh umgu genedzh urdzhra -- "You must take your wives there from whence you came, i.e., from the clan of your mother" (1); thus the Gilyak taught me their matrimonial

[192] 1. The etymology of the word p'fand'ukh is interesting: it is composed of pi (ones own, your), pandf (kinsmen of the mother), and ukh (from). The word pandf is from pandynd -- "to be born."

[835] wisdom. Although now it is permitted to take wives not from the clan of one's mother, the terminology has imprinted an old prohibition on this group of women: brides not from the clan of the mother bear the name yokh, i.e., a woman with whom sexual intercourse is prohibited (thus, for example, elder brothers, for whom sexual intercourse with the wives of the younger ones is prohibited, call the latter yokh), while a bride from one's mother's clan is called an'ge (wife, any woman with whom sexual intercourse is permitted). Indeed, the favorite form of marriage among the Gilyak even now is marriage to a daughter of a brother, own (preferably) or agnate, of the mother, but in any case a kinsman -- "brother" of the father. On the other hand, marriage with a

/48 cont./

174 This likewise explains the custom of avoiding one's father- 582 in-law (for he may not be one's mother's brother); this also ex- 614 plains why, for example, the Gilyak calls a bride who is not 582 from the clan of his mother by the certain yokh /see yokh on 614 p. 76/, a term meaning a category prohibited with regard to sex, because a woman who is not from his mother's clan originally could not be his wife; and other such phenomena.

Finally, this explains the universal custom of the bride price, 174 582 the custom of a payment for one's bride. Abduction is a sin 582 against the clan of the one abducted, a sin which demands atone- 614 ment, by force or by a material fine from the abductor. Among 173 the Gilyak this sin of atonement comes down to the third gen- 684 eration inclusive. The bride price, therefore, is that same 582 "blood-money," that same material form of atonement for a sin, 192 as for the killing of a clansman. It is not a coincidence that the blood money for a slain clansman and that for an abducted woman bear the same name, tkhusind, among the Gilyak.

174 In conclusion I shall allow myself to make another, perhaps 583 somewhat risky conclusion. Let us suppose that, as frequently happens after wars, the men of clan A who take wives from clan V have died out and there is no one to continue the clan. The maidens of clan V then remain /49/ without husbands for the parents' fear of the punishment of the gods is stronger than their love for their children. From here it is one step to the killing of maidens. A considerable time must elapse for the superstitious spirit of primitive man to reconcile itself to necessity and begin to resort to the deception of the gods, arranging the comedies, sometimes cruel, of mock abduction.

V.

Religion of the Gilyak

771 In his world view the Gilyak, like every primitive man, is an animist. A dead, unreasoning nature does not exist for him; on the contrary, all nature is endowed with life and reason. If the Gilyak could parody the famous dictum of Hegel, he could say with greater right than the latter that all that exists is rational.

/81 cont./

*614 First of all, the very term that the Gilyak use to express the concept "clan" is of primitive origin. It is khal', which literally 192 means: icabbard, sheath -- a felicitous symbol for a single womb, for unity of origin. As concerns the features of their clan union, 614 gains from the conflict. Usually, this most important religious 628 procedure of the institution of blood money is completely ignored, 771 and indeed traces of religious ceremonies of reconciliation are not preserved among all peoples, among the Gilyak, as we shall recount later on, this is distinctly clear from the ritual of ransom, which demanded a preliminary blood sacrifice in the form of a battle between representatives of the warring clans, the killing of dogs, and the feeding of the spirit of the dead man with their blood.

628 Now let us proceed to the practice of this institution. 537 The principal role in the procedure of reconciliation is played 564 by the so-called khlaj-nivukh (1).

*614 192 197

1. I use the term of the more widespread western dialect.

Khlaj-nivukh -- literally: the explaining man, /104/ eloquent, orator. Such a man enjoys special regard in the eyes of the Gilyak, for in his view the eloquent individual is the chosen one of a particular deity who constantly inspires him, dwells in him, and inspires in him beautiful, convincing speeches and an irresistible influence on his hearers. The very quickness of speech, the ability to speak fluently and rapidly for a prolonged time, even apart from the content of the speech, is already considered a talent of the highest order. "His tongue turns like the wings of a windmill," thus, with awe, does the Gilyak characterize outstanding orators. The latter, in turn, regard themselves as chosen 532 ones. On the continent they always carry a wooden rod, on the head of which is carved a human face, depicting, apparently, that deity which inspires them and helps them to convince others. At pathetic moments they wave these threateningly, swearing to break them in the event of the failure of their arguments and bring the wrath of the gods upon themselves and their intractable opponent.

/188 cont./

602 and between the women and the elder tuvn of their husbands
[601] on the other. As is well known from the kinship terminology,
the individuals of these groups call each other by the prohibi-
602 tory terms jokh and atk. These last terms are likewise used by
184 daughters-in-law and mothers-in-law to designate each other.
Between them, as between the individuals of the prohibited
categories, once again psychic intercourse is not permitted,
although not with uniform strictness everywhere. Among
some, for example, among the Gilyak of the estuary of the
Amur, neither conversation nor jokes are allowed. In other
places business relations are allowed, but jokes and conversa-
tion are forbidden. The prohibition of psychic intercourse
does not exist between sona-in-law and mothers-in-law.
602 Now how the prohibitions are realized in life remains to
be explained. The Gilyak themselves classify the psychic
• [192] forms of intercourse between prohibited categories with the
terms: indyad (to look, khernd (to converse, to talk), lerund
(to joke, play, play pranks), and vakrund (to quarrel, dispute,
revile). But not all of these four forms are applied equally
between all the categories. Thus, we have seen that the
father is forbidden only lerund (jokes, playing pranks) with
his daughter, but he is permitted to converse with her and
all the more to revile her. The prohibitions on "looking in
the face" -- indyad -- on the contrary, are in effect only
between "brothers and sisters"; lerund applies with equal rigor
between all categories. There remains the prohibited khernd.
This term embraces two concepts: conversation and dis-
cussion, and business relations. The first are absolutely for-
bidden: /189/ one can get along without conversations, and
besides conversations may lead further. It is another matter
with business conversations; sometimes it is absolutely im-
possible to get along without them. Thus, for example, the
elder brother frequently takes the place of the father in re-
lation to the younger brothers, and it is impossible to avoid
having dealings with him; therefore in extreme cases the
younger brothers may address the elder brother. Brief direct

/250 cont./

831 Such instances must not be regarded as a general
192 phenomenon, however. Along with the factor of heightened
sexuality and sexual freedom, other, restraining factors
are also acting. Among the married women, such factors
are maternity, economic cares, and, finally, among both
married and unmarried women, such feelings as love and
bashfulness. In general, however, sexual dissoluteness plays
no small role in the life of the Gilyak, not only in an econo-
mic, but in a psychological sense as well. Ordinarily
the Lovelaces either do not maintain households at all or,
if they do, maintain their economies very carelessly. Both
[826] in life and in poetry one constantly comes across sharp
reproaches and the reviling of the youth by the older people for
laziness at work in connection with licentiousness. And
[842] furthermore the Gilyak themselves attribute childless marriages
831 to dissoluteness. But the saddest of all is the influence of
158 dissoluteness of the psychics. A whole series of nervous
disorders specific for the Gilyak, such as myarechenie among
both men and women, and diseases connected with the full
loss of psychic composure (elf-control /given in English/)
are the result of dissoluteness, which furthermore, among
women, is accompanied by serious transgressions in the realm
of the sexual sphere, and the latter, in turn, lead to the
appearance of hysteria.

831 Side by side with the wide sexuality and sexual freedom
• 192 described above, the feeling of love still plays a great role
in the life of the Gilyak. The most extensively used term
for love, ef'-mund, denotes both sexual love and love in
general, for children, friends, etc. There is a special term
for reciprocal love -- os'mund: for marriage for love,
[835] of'mur-kir, vayind. There are also some other terms for
[1062] love, for example, ayind and others, but there are no special
terms for "beloved" /male/, "beloved" /female/, although
584 /251/ one can say es'mula-ligayvyn, i.e., "man whom they
593 love," but in the language of lovers the beloved designate
each other either by the terms "husband" and "wife," or by

/251 cont./

831 words signifying "my man, my woman," -- a'as'mych,
• [192] ef'ash. The Gilyak themselves consider love a normal stage
of life which everyone must experience in his youth. This
view is very well conveyed in a song which I noted down
on the Amur, in which a girl, complaining of her mother's
nagging about her passion, sings:

[539] Mother, mother, dear mother,
Has thou forgotten thine own youth?

(Literally: "Thou hast forgotten thine own past time,
let me be!")

831 Parents, however, never reproach their children for their
882 amorous passions. When the youth do hear the grumbling of
593 their elders, it is most often due to purely economic considera-
tions, since during the period of passion the young people
neglect their work and become careless and inaccurate. In
general it is not even permissible to react in any way to the
sexual passion of the children, maidens included. If the
[684] father or brother finds out about the fornication of his daughter
or sister, he not only may not use force against the seducer,
but it is even forbidden to summon him to a duel, and he
may not even be angry with the daughter. They treat the
amorous passions of the children as a perfectly natural
phenomenon. The mother in particular is often even the
confidante of the amorous secrets of her children. In many
[533] songs which I noted down on the Amur, sons constantly
address their mother, sharing with her their amorous suffer-
ings, seeking advice as to where and how to find their beloved.
Serious remonstrances by the parents, active remonstrances
going to the point of pitilessness, are encountered only in
the case of love for a person of a forbidden category. In
such cases, the parents themselves urge their daughter to
584 commit suicide. Often the pitilessness of the parents, mainly
593 of the father, becomes manifest when love frustrates an
advantageous marriage, one which has been agreed on since

/258/

XII.

Methods of Obtaining a Wife

584 Data from the epos. It is first of interest to reconstruct the
558 picture of the acquisition of a wife in the old days according
to the data from the popular epos. Judging from these data,
especially from the so-called d'asfund (poems), the acquisi-
tion of a wife in the old days was not at all an easy matter (1).

• [192] 1. That the procuring of a wife was
not a simple matter is shown by the
very expression for this undertaking,
an'gej nanygind, in which the verb
nanygind is a technical term for the
hunting of a beast, usually accom-
panied by difficulties in the search and
all sorts of dangers.

On the contrary, one of the chief exploits of the heroes is
the search for a wife. In order to find his wife, the hero of
a Gilyak poem must undertake the most distant and hazardous
journeys to the end of the world; he must sail over stormy
seas, even ascend to heaven or descend to the kingdom of
the underworld or the bottom of the sea, not to speak of all
sorts of heroic duels with whole clans of the most fearsome
foes -- duels encountered in the course of these peregrinations.
Why is it so, why must the hero, a strong man, of
necessity seek his wife far away, when he has every opportun-
ity to find a wife nearby?
First of all, we shall note that the aforementioned term
an'gej nanygind, "to seek a wife," may lead one to think
that the ordinary mode of securing a wife for the heroes was
force, abduction. True, this, too, was done by them, but
most frequently they obtained their wives in the most
peaceful manner, without even paying anything. This is

/270 cont./

192 in one's own wealth, although it only amounted to the
584 possession of several pieces of silk material, Japanese sabers,
585 and so forth. There appeared on the scene a tendency toward
differentiation. The rich man desired to associate with and
[545] become related to only rich people. In the question of the
choice of a wife there appeared new dictates. One demanded
of a wife that she be from a family of equal wealth and,
consequently, of an equally high social rank. And now, even
in the ancient "tylgund" -- legends -- there is heard in
matrimonial dealings the expression: "He (or she) is not my
equal." On the other hand, wealth allowed one to manifest
128 a special fastidiousness in the choice of a wife, to seek
556 women who were famous for their beauty, their skill, who
58 were outstanding for their beauty, their domestic talents,
614 their artistry in sewing, and other feminine tasks. But once
marriage came to be practiced between members of alien
clans, the former simplicity of concluding marriage vanished.
There appeared on the scene the new institution of bride price,
which introduced into the institution of marriage the element
of purchase-sale: besides this, marriage between persons of
alien clans demanded preliminary negotiations and the pro-
cedures of betrothal. We now turn to these institutions.
The terms of betrothal. The procedure of betrothal is ex-
• 192 pressed by various terms, denoting literally, "to agree, to
584 come to an agreement about the bride"; hence, the match-
maker -- "the man who makes an agreement"; bride --
"future wife"; groom -- "future husband." For us, the terms
for groom and bride are particularly interesting. With
orthodox marriage there is no special term for groom and
bride, for according to the right of birth the groom is called
[194] na -- husband, and the bride -- an'gej. The term jokh,
which is used nowadays to designate the bride, is entirely
inadmissible with orthodox marriage, for, as we have seen,
with orthodox marriage jokh is a term of prohibition for sexual
intercourse. Thus, the term itself shows that the procedure
of betrothal arose after the weakening of the regime of
orthodox marriage.

/270 cont./

584 orthodox marriage. For an arrangement concerning an orthodox
[194] /271/ marriage what a young girl thinks is even the special
584 term ulag'ind (passive clause vyrgyen).
Persons participating in the betrothal. On the side of the groom
584 the representatives are: 1) father and mother; 2) brother of the
582 father; 3) elder brother of the groom; 4) husband of the sister
of the father. The role of the latter individual is explained
separately by the norms of orthodox marriage. According
to this law, the husband on the side of the father is the
father of the husband of the sister of the groom. Since by
the norms of Gilyak marriage his daughter cannot marry the
brother of his daughter-in-law, the husband of the sister of
the father considers it his duty to promote the marriage of
his closest askimak, the brother of his own daughter-in-law.
If the father is dead, he is replaced by one of the ordla
584 n'tvuzk (honored persons) among his clansmen. Since the
602 marriage is considered the affair of his clan, these frequently
614 participate, in addition to these persons, several honored
clansmen. When the betrothal involves a very wealthy per-
[556] son, the honored clansmen come in several boats, bringing
[593] with them at once the articles of the bride price, and fre-
quently, if the dalugan plus the rich bride price makes the
proper impression, they immediately take the maiden away
with them upon the conclusion of the negotiations.
584 The bridegroom also attends the betrothal. If he is all
585 alone, or if, on the contrary, he is quite wealthy and re-
584 nowned, he can become betrothed by himself. In one song the
[553] maiden sings to her beloved: "Holding my hand, betroth me."
545 Matchmakers are unnecessary in the case of a married
584 man who wants to marry a second wife. Then he himself
584 goes to the father of the first wife, but often the latter
614 herself goes to her own clan or to another one (if there are
no suitable candidates in her own) for the selection and
betrothal of a new girl-friend for her husband.

584 Lakkan: Whatever I have, (with it) I am ready to s
583 although I have nothing.
584 Pevn: If thou hast something, wilt thou not pity me
thou not wish to help?
Lakkan: To this day I have refused thee nothing, i
so?
Pevn: Of course.
Lakkan: If thou shalt have something, thou wilt have
pity on me. Once thou shalt have something, I shall als
have, is it not so?
Pevn: If thus hast thou spoken, it gladdens me. Th
truth thou art ready to give me what thou hast?
Lakkan: What I have, if thou shalt ask, I am ready
give the dowry.
After this the matchmaker again pours the drinks an
finally, unexpectedly announces: "Thou hast promised t
give me what thou hast. Now you have a daughter, I ha
son. Let us become akhmak'i."
To this Lakkan replies: I have already given my wo
others.
Pevn: What if you did give your word to another ma
You also gave your word to me before witnesses. I will p
court with you.
583 After such preliminary negotiations, they proceed to
[584] business negotiations concerning the bride price.
Bride price and dowry. In the Gilyak institution of the b
price, payment for the bride, the term that the Gilyak c
this institution is extremely characteristic. This term, l
lave, throws light on the very origin of the institution.
194 In the Gilyak language bride price is expressed by th
583 word as', as'r from asimynd (?) -- to give as a gift, so
• 192 literally as', as'r means a present, a gift, which the fam
or the clan of the groom gives to the family or the clan
the bride. That this term was not formed by chance is
from the following. In other ritual cases where compen
[628] with valuables is obligatory, for example, in the case of
ransom -- damages paid for an abducted woman, for a
murdered man -- the term used is us'kind, which means

The Soviet authorities transferred the Udege from the isolated huts which were scattered over a wide area to larger compact settlements. This brought them within the range of medical attention and educational facilities. As a result of this contact with Soviet Russian culture, the young generation of the Udege now speak the Russian language 'almost without any accent'.[38] The next step in the development of the Udege will be that they will forget their own native tongue, and soon 'the last of the Udege' will really have disappeared.

THE NIVKHI

Near the mouth of the Amur is the National District of the Nivkhi. They number just over 4,000, of whom 1,700 live in Northern Sakhalin, and the rest on the Soviet Far Eastern mainland and on three small islands lying off the mouth of the Amur. These islands, Udd, Langr and Kevost, were ignored by the Soviet authorities until 1936, when the famous Russian pilots Chkalov, Baidukov and Belyakov, landed on Udd Island during their trans-polar flight. From that moment the islands became very popular. They were renamed after the three pilots, and it became almost a Russian patriotic duty to develop and colonize the little archipelago. The Soviet Far Eastern fishing industry established a plant there, and Russian workers' settlements were built on both Chkalov and Baidukov Islands, which had previously been inhabited exclusively by Nivkhi.

The Nivkhi of the Asiatic continent are very conscious of the fact that, together with the Nivkhi of Northern Sakhalin, they form one single people. Accordingly, under pressure of persecution by the Soviet authorities in the late 'twenties', the Shamans of the mainland Nivkhi fled to their kinsmen on Sakhalin. But these Shamans only fell out of the frying-pan into the fire, because of the activities of the local anti-religious fanatics. In 1930 the League of Militant Godless in Northern Sakhalin even destroyed the Nivkhi cemetery in an attempt to cure the 'natives' of their religious prejudices. This action caused considerable unrest among the Nivkhi, who lodged a complaint with the authorities. The latter apparently condemned the 'left-wing excesses' of the Sakhalin atheists.[39]

In theory, the Sakhalin Nivkhi live in two National Districts, the 'Western Sakhalin National District', and the 'Eastern Sakhalin National District' which, together cover a large part of Northern Sakhalin. In point of fact, both National Districts have been completely fictitious right from the beginning of their existence. The so-called Western Sakhalin National District, for instance, had, in 1933, only a few hundred natives among its 17,000 inhabitants.

"to pay." It is curious that this very word /276/ uwkland = "to pay" is derived from the word uwkind, which in the middle voice is a synonym for "to fight." Thus uwkland literally means "to fight the active voice of this same verb). In other words -- uwkind was originally an institution of revenge, later replaced by ransom -- peacemaking for a payment of damages. This evolution can still be traced even now in the epos. In one poem written down by me, where the hero has gone to take revenge for his murdered father, they ask him on his return: Pytk uwkind pyltd? -- "Did you fulfill uwkind for your father (literally uwkind -- fulfill), did you take vengeance?" He answers: "ain khukhtu!" -- "I killed them all." Here the term uwkind is used in the same context of the act of blood revenge. But in another poem the same term is used in the sense of ransom. "Tyn nafsh uvkim -- "For their (clan composition) the paid damages, ransom."

From all this it is clear that the bride price in its original sense was not at all a payment for the bride, but a gift, although obligatory. But this becomes obvious from the fact that this gift was by no means one-sided. For the father of the bride it was just as obligatory to give, in addition to the dowry, a post-wedding gift to the groom, and those gifts of clothing common in various values for several years, and they were very often no less than the bride price (1). It is considered a disgrace not to

1. Here is an illustration of the institution of the bride price as an institution of mutual gift-giving, one of many examples which I wrote down. An elder in the settlement of Pronte, a man who was not well-to-do, gave as bride price for his daughter /ууг/ two Chinese kettles, one Japanese /котёл/, and five dogs. In exchange, the father-in-law sent his son-in-law two Chinese robes and for two or three

(man) and one none (only for tinder and flint).

8. Hunzh -- a tobacco pouch, ślno of dei'; for both men and women. Tobacco is placed in the pouch and the hunzh.

Sometimes husband and wife, or a wife and her husband, put their children, and vice versa. The deceased is given nothing more than the things enumerated. Shagund -- valuables -- are hung around outside and inside the yurt.

Before the funeral guests are entertained from morning until night. Among the rich the entire village is entertained; they drink vodka and place vodka before the deceased. It is necessary to be gay, but they do not dance.

No bows, or talet, or songs (see recited -- pwrind).

On the following day the men go to cut firewood for the cremation of the deceased. They cut down larch and fir, and for children -- none-willow; to cut larch or fir for children is a sin. The men select a good tree, otherwise it is a sin. They cut down one or two trees. The firewood is cut lengthwise and unfailingly a definite length: /227/ among some, up to a sagene in length (the clan of Pirunkai), among others, one sagene less one hand. The roots are not touched, and the branches are thrown away. The logs are placed in three rows, lengthwise and crosswise. The second row, the second log, the second row feeds the deceased (ma ulgryvn achind), but they do not put anything in his mouth. On the third day the yurt is cleaned -- tav mund, the yurt is swept, the fire is purified -- pagr mund; the sacrificial fire is prepared, and tugar amind is performed -- "they feed the fire" (the new master, or a classmang-- mos' is thrown into a fire started with the branches of a fir, but nothing is said.

When all the preparations have been completed, they eat, drink vodka, and then bring in a dog tied. The deceased is placed on the dog sled, tied to it with thongs, and four men lift the dog sled and carry it on their arms out to the place of cremation. A "zryuk" (dog) is tied to the place where its master slept. They walk around the fire three times with the dog sled and the deceased, and they have a reciprocal three times. After this the dogs and the dog sled are taken to the side, and the deceased,

/129 cont./

To conclude the series of names for the island of Sakhalin occasionally mentioned above, the readily explicable, as it seems to me, etymology of the last-mentioned name, which, in the Gilyak language, is considered here in passing. I believe that "Laer-mif" originated from "La-erri-mif," which, since "La" is the Gilyak name for the Amur, but "erri" means stream or river, and "mif," land, earth, is to say "Amur-River-Land" (8).

8. The Amur region itself is called "La-mif" among the Gilyak.

Hence the Gilyak name for Sakhalin has the same meaning as the one that, in the Tungusic Jesuit missionaries, Father Gerbillon sent by Emperor Kang-hi to explore the island wanted to express with the designation /130/ "Saghalian ang hata," although this expression, according to Klaproth, is not quite correct (1).

1. See above, p. 282, note 1.

This automatically calls forth the thought as to whether the Gilyak name for the island in the form "La-erri-mif" was not translated into Russian.

If one summarizes all that has been said about the Ainu, the conclusion can be drawn that they were pushed out of the Amur region by the Tungusic inhabitants, who, from Nyuchi, by the Japanese in the historical period, and were forced to move farther north. The large mountainous island of Jesso /Yesso/ in the center of the Japanese mention also seems also to be the Ainu region, which they alone occupied until the arrival of the Japanese and which among them was simply called Aino /Ainu/ Island (Aino-tonsin, Ainoo). From there they may have occupied the southern part of Sakhalin and the nearest of the Kurile Islands, Kunashir and Iturup, even in ancient times. The Japanese mention, in Jesso, Ainu women and girls also certainly forced them to spread farther in two directions, north and northeast. On Sakhalin the expansion of the Ainu seems to have been more peaceful and gradual than on the Kurile Islands,

Funeral ceremonies. After closing the eyes of the deceased with a hat they stretch him out and fold his hands across his stomach; they (wife, mother) let down their hair and that of the deceased. They try to lift the head, putting garments under it, or, in the case of the poor -- straw. Sometimes the wife or the husband cuts off a piece of the head. Tobacco and a pipe are placed on the breast, and the guests come up one by one and smoke from this pipe into his mouth. The wife, or some other near relative, or, finally, /226/ an unrelated old man or old woman places at his head a small sag-fish food, vodka, and cold water; the relatives come up from time to time, eat what has been put there, and again fill up the cup.

The deceased should not be dressed in garments made of leather or fur (skin, for a drop of fat might fall into the fire, and that is a sin. Ornamented things, too, may not be given, for otherwise the deceased will lose his way. The garment for the deceased, the paid damages, ransom, of dei' and silin (see" and provided in a multiple number, the rest in the singular. All the women assemble for the sewing of the garments. The garments are sewed "tightly" or "not strongly is a sin -- "ulgyt." The deceased should not be washed.

The deceased is dressed in the following garments:

1. Ulgyt, bare, but unfailingly without wadding; no belt; no modesty pants.

2. Pwr' -- leggings.

3. Ki -- boots of dei'; of the same shape for men and women; the tops are short; the soles are also of dei'; they are put on the naked foot.

4. Tighy -- a hat also of dei'; the hat looks like a child's hat with the hood backwards.

5. Vlmyuh -- mittens with one finger, of any color; no sleeve coverings.

6. Ochuh hir -- glasses, i.e., eye patches of dei'; three fingers in breadth. Earrings and bracelets are taken off.

7. Vigyr' -- a belt, a piece of simple dei'; white in color, or, for the poor, a piece of sealskin (chekmhar) of dei' (for

/136 cont./ A Gilyak from Ukiyan in the Tumnin Valley, very well-versed in his native language, gave me the names of the Amur region and who had undertaken many trading voyages to the mainland and was acquainted with the Ainu and Orochi languages, named the Amur, among other peoples on the continent already known to me, the "Kikhal," who were said to live along the seacoast to the south of de Castries /Deriuzhin/ Bay. There has already been mentioned some tribes above a village located on the east coast of Sakhalin and at present inhabited by Gilyak and in addition by Orok, which, according to the former people, bears the Gilyak name of "Kiku-wo" (10). A conjecture as to what circumstance is

10. "Wo" means "village" in Gilyak.

responsible for this name in /137/ to be expressed later. If, however, we continue to discuss the Gilyak name for Sakhalin, I would show the conclusion from the fact that among the Gilyak it sounds just the same as among the Goldi and, with slight modification, also among the Udegeh that the Ainu borrowed it from the latter, and not vice versa. For along the entire line from the Chongar to the sources of the Ussuri, the Goldi are in close proximity to the Ainu, and there have all kinds of associations and contacts with each other; I myself have repeatedly met Orochi paning through Goldi territory; between the Ussuri and the Orochi, on the other hand, there extends a long stretch of uninhabited land, and the contacts between these two peoples can only be exceedingly few. Though the Gilyak in the interest of trade often come down along the west coast of Sakhalin as far as Sirannuni, the deserted mainland coast, only very sparsely inhabited by Orochi, remains alien and unknown to them. The sea, too, becoming wider toward the south and not freezing in the middle in winter, precludes any contact between the Orochi and the Sakhalin Gilyak living opposite them -- the Japanese mention, in Jesso and Ainu as well, as living by those designations, then, the Gilyak seem to have first become acquainted with the Orochi through the Goldi. If one

#200 (192) ...ashed in much as possible. The house is provided with windows (1) on all four or at least three sides, and, to be sure, the two longitudinal walls; the and the rear transverse wall each have two, the front transverse wall one. Even in the most spacious Gilyak houses I never saw more than these seven windows (1); very often,

#201 however, only one in the front transverse wall is absent, as, for example, in the Tebach house standing in the foreground on Plate XI, and not infrequently the other transverse wall and the two longitudinal wall have only one window each, which is then always placed unsymmetrically closer to one or the other corner of the house; in fact, in the smaller houses even the window in the rear longitudinal wall is absent, so that the number of windows in them is reduced to three. Nevertheless, even these, because of their considerable size, light the interior of the house sufficiently. The windows are sometimes square, three to four feet in size; sometimes somewhat wider than high, or vice versa. They have no #202 crossbars, but instead only a number of vertical little sticks equal in distance from one another, and fish bladders take the place of glass between them. In particular these are skins from Salmo Lagocephalus Pallas-hycha, or, on Sakhalin, Salmo-tscho (2).

#192 2. Known by the Russians throughout Siberia under the name ...

the most common kind of kitchen in the Amur River, made as thin and transparent as possible by scraping and pounding, and then sewed together in such a way that the seams form many longitudinal lines and a few transverse lines running in a zigzag. #342 The windows do not open, but are only lifted out with the whole frame. The door inside the house consists of stamped clayey #343 mass. To the right and left of the entrance are the two hearths (c, Gilyak: ...) made of clay. They are fed through square

#344 ... chimneys. Accordingly, at that time, to begin with, three village#345 lages, each consisting of a single earth yurt, still lay to the south of Pogibi. In Dibengi, coming from the north, one encountered the first Chinese winter-yurt, which, however, was in turn followed by four villages, each consisting of one earth yurt. To the south of Tatsun-tsego, which consisted of one earth yurt and one Chinese yurt, beginning with Tulki (1),

#346 in Gisha it is called Jordon-tsig-wo.

there is a series of villages which consist only of houses of the latter type. This, as has been said, is the most populous part of Sakhalin, with the largest villages, among them Tamlin-wo, in my time notorious for its predatory population, and, according to the Gilyak, numbering over 12 houses (2). The last of these

#347 2. Gilyks found only nine. The great number of houses and inhabitants of this village is indicated by its name, for tamla, tamlatch, or tamlamch means "numerous" in Gilyak.

#348 ...ochadyf villages on Sakhalin, lying in an uninterrupted row, in Tymovo or Poro-yo, on the east coast of Sakhalin, and then go northward beyond this village and given only earth yurts for the remaining part of the west coast of Sakhalin up to the northern tip of the island. According to my information, however, the Chinese winter-yurt also predominates there, for after a small #349 ...ngf village, Mumh-wo (in Gilyks, Mutyr), there follows Pilja-wo with one earth yurt and one Chinese yurt, which was formerly probably larger, and then there are two more nehadyf villages, Tumi-wo and Ngyw-wo (in Gilyks, Ngyd), the latter of which is quite large (five yurts) and does not lie far from the northern tip of the island (the Mif-ryh, as the Gilyak designated it to me). According to its location on the small bay which #350 Krusenstern called Nadezhda Bay, Ngyw-wo must be the same village that this navigator visited in 1805. From his quite detailed

resistance. It certainly existed among them long before they became acquainted with salt, as can be seen from the fact that they do not have any independent designation for it, but generally adopt modified foreign one. For the Gilyak designation for salt was probably /445/ borrowed from the Manchurian dialect Dongolian: dabasun (1). On the basis of this etymology, I would

1. Klaproth, *Asia polyglotta*, p. 298: Spachaltan (Lingoistic Atlas) p. XXXXVI.

also presume that the Gilyak first became acquainted with salt at the time when a Manchu tribe, the Dunchenen, engaged in agriculture, livestock breeding, and the like, lived along the lower Amur from the month of the Sungari to below the mouth of the Usuri, from where they were transplanted to the Chancha in the middle of the seventeenth century upon orders from the Chinese government (2).

2. See p. 318 above.

In the two centuries since then salt has found no acceptance among the Gilyak — certainly present day ones that we are etymological need for it.

Sugar, sugar (Gilyak nakn), on the other hand, finds great approval among them, and so too, in the form in which they became acquainted with it from the Russians (3). The Chinese

3. Could it not be that the Gilyak designation given for it was borrowed from the Russian/sachar/?

sugar already known to them earlier, brown in color and only faintly sweet in taste, had no attraction for them, and since, moreover, it is to be had only for a little money, it is not in any way of exception from the Chinese traders along the Amur, who usually carry with them only small quantities of it for their own use,

copied from the Chinese must be mentioned, a specimen of which, from the village of Tebakh, is represented in the table, Fig. 6. These two their origin among the Gilyak more to the imitative instinct, which readily makes itself felt in particular with regard to trifling Chinese, than to a real need, because they are practically never found in use among them.

As one may always observe, the bulk of the household and table equipment made by the Gilyak themselves is exclusively of wood or birch bark. Earthenware is quite unknown to them, and they prefer make any themselves nor is there used among them, in spite of their contact with the Chinese and Japanese, the porcelain made by these peoples, for it not a single piece of it, usually one or several of the cups with which they are, in the case, also for eating the above-mentioned kinds of grain, though they are not by any means /447/ implemented used exclusively in connection with their festivals, as might be, since they have from their erotic origin and the complete lack of any ornamentation and carving. I myself saw the Gilyak use them often enough in their everyday life. In contrast to these man-produced, undecorated bowls turned by the Gilyak, all the other above-mentioned vessels made fundamentally by the Gilyak themselves always stand out because of all sorts of decorations put on them, which, moreover, they remain of the artistic carvings which we shall discover on the implements used exclusively at the bear festivals. For the above-mentioned cups, the vessels prescribed above, bowls, spoons, etc., for the execution of the carvings on them and on other utensils, the Gilyak use, in addition to

Russian colonization of the island, therefore only quite recently, and, in the case of the Gilyak, it is not to be expected that one may travels on it, or

Schrenck's and Gilyak's

They did not come across it and considered it, when they saw the drink some, "very strong tea." On the other hand, liquor was, of course, generally known in the Amur region, and, to be sure, to the Gilyak as well as to the other people of this mainland. Under the name (of Malayan-Chinese origin) arak or arki, also sometimes spelled the Mongolian, and Turko-Tartaric peoples of Siberia (6). Undoubtedly

6. See the glossaries for the above-named peoples in Castrén's ethnological works, where, I trust, see, for course, many modifications of this general designation applied to grain and to milk spirits, such as araka, araki, arnaki, etc.

Undoubtedly liquor among the Amur peoples dates from the time of their earliest contact with the Chinese and has spread among them, as among the Mongolian peoples, like the Gilyak, and especially the Amur-Gilyak to Sakhalin, Chinese liquor must have soon been introduced in the Gilyak, Orok, etc. The latter, to be sure, had an opportunity to become acquainted with liquor from another source, from the Japanese, from whom the Ainu obtained their liquor, the so-called sake, and even learned how to make a weak sake themselves (1), but the stronger and presumably cheaper

The Ainu

of the Sakhalin on the Amur, bought from the Gilyak, to be sure, but, as I was mentioned above, treated differently and in particular only fed outside, may fall short of the Gilyak dogs in this respect.

Dogs are kept by the Gilyak for a particular use and nature. In comparison with the Ainu-Sakhalin name, as the sled used for traveling on dog is called by the Russian, the Gilyak sled is larger, lighter, distinguished by a different type of harness, as a result of a flexibility, no less durable. Its form and construction is always well proportionately wider than long, so that in making it it seems that a certain proportion with regard to the individual dimensions of the sled, and, in particular, the runners. I had every opportunities to become familiar with the construction and measurements of these sleds because the Gilyak people, who had arrived with Udeyevsk on temporary quarters and even had permission to spend their sleds in a corridor of it, after had been the Gilyak people, who, while they stayed in their affairs in the village. An ordinary sled which I measured, consisted of the runners (Fig. 1, Ind the following /476/ principal dimensions: the length from one end of the other was 14 feet and 8 inches (Russian or English), the width 1' 6", the height in the middle (including the protective sides to be discussed forthwith) 11". Thus, the sled was precisely 13 times longer than wide and 12 times longer than high. Regarded as a whole and with respect to the individual parts, in construction is the following: the narrow and thin sides / runners (Gilyak: tonkn), p. in the illustration) are horizontal only in the middle and bent upward at both ends, the latter being much greater than upward. Because of their thinness, they would wear out easily, to protect them from this and at the same time to give them the proper upward curve toward the ends, they are provided on the underside

company middendorff undertook his journey through the northern steppe of the Russian mountains from the Sea of Okhotsk to the Upper Amur, and whom, among all the peoples of Siberia, this general designation best fits. Corresponding, however, to the greater prosperity and polish of the Tungusic peoples of the lower Amur region in contrast to their Siberian fellow-tribesmen, their ski, too, especially those of the Gold and Samagir, are finer, more artistically and artistically made, so that they probably represent the highest degree of perfection that has yet been achieved for this implement. They are longer and proportionately wider than the sled of the Gilyak ski. The length can be given only in general terms and approximately, for, in fact, they cause the rule is that they must always be the length of the individual the when they are intended — a rule which, of course, is not always observed. In spite of their larger dimensions, the Gilyak ski, which, to be sure, is not simply call them — the Gilyak call them /477/ i.e., Samagir ski — are much lighter than the Gilyak ski because of the extreme thinness of the board. This thinness of the board and the peculiar, slightly wavy shape that is imparted to it during the bending result in the extraordinary flexibility of this ski. As one can see from the illustration

The side-mountings are usually likewise of wood and can easily be replaced when need be. In the spring, when, when the snow melting in the ran sticks to the wooden sides and makes travel very difficult, instead of the wooden mountings, some made of of whalebone (Gilyak [illegible]), the sides, wooden protective sides are covered with a whalebone plate, as in the illustration, or, more generally, with a sealskin, where this material is more readily available (1). A very characteristic feature of the

1. As was discussed in the first volume of this work (p. 198), these quite long whalebone plates come from the jaws of whale which the Gilyak call kalto and which presumably is balaena australis (Desm.) Lesson, or at least the bone plates are taken from the lower jaw or the ribs of Balaenoptera longimana Rud.

Gilyak kayak, the one most frequently stranded along the coasts of the Sea of Okhotsk. Even among the Russians in Siberia bone or whalebone mountings are often used on the sleds, especially for travel over sea ice which is covered with salt crystals that have separated out (Vosnesf., Putesh. po nav., Ser. Ib. 1. pp [illegible]. Bone / Jawbone along the Northern Coasts of Siberia and through the Arctic Sea/, VI, II, p. 28). According to the information given by A. Schrenk in the Leipziger Tageblatt, bone sled-mountings (sled-runners), as well as bone skates, were formerly used in several regions of Germany, for instance, in the province of Brandenburg, in several Bavarian lake districts, in Salzkammergut, and

226 92 thin cord, initially single, but very soon divided into three strings which are attached by their ends, at about half the length of the net, to its opposite wall. When the net is to be set up, its lower end is drawn together into a bag by means of a strap, it is weighted with stones above at the lower edge of the bag opening, and, by means of the cords on it, it is fastened to the above-mentioned myr piles, whereby the side of the net equipped with the slit in its upper part is turned toward the middle of the river, and the opposite one toward the bank. In order to give the net more support and also in order to pull it out later, a long, thick cord runs from the opening of the bag to the bank and is fastened there to a pile. /530/ Once the net is set up, a Gilyak stations himself in a boat at its exterior point of attachment at the end of the second row of piles and holds the signal cord in his hand, putting each part of it between two fingers. The salmon ascending along the bank and now coming upon the willow plaiting built out crosswise to them find no way through it and, in order to get around it, crowd along the plaiting running downstream and thereby get into the net. This is made known to the Gilyak

A salmon-weir (Gilyak myr) in the Amur River.

on guard by a pulling and tugging on the signal cords, and, as soon as he can assume from the repeated and strong tension on them that the net is

226 171 648 Tymy River; no less understandable, however, is the harm that they do through this to the Orok and especially to the Gilyak of the entire Tymy Valley who rely on the abundance of fish of their river.

Nothing special is to be said about the catching of the fish living permanently in the Amur, such as carp, eelpout, sheatfish, pike, etc. for it is carried on with ordinary nets during the /531/ periods when there is no more important fishing, therefore especially in winter, under the ice, in the same way as sturgeon is then caught. In the calm, lake-like wide places with a muddy bottom, of which there are many along the banks of the Amur River, and which are always connected with it by a more or less swampy branch of the river or a small watercourse, I have seen the Gilyak set up bag-shaped nets on poles in order to catch crucians and similar fish, which are abundant in these small basins.

One type of fishing must be given special consideration, both on account of its great importance for some of the Gilyak, and also on account of the characteristic, original way in which it is carried out. This is the kangi fishing along the west and east [136] coasts of Sakhalin. The importance of the kangi fish (Gadus wachnja Pall.) for the Gilyak and the way it is used have been discussed above (p. 653 ff.). The vast quantities in which they appear directly under the ice of the sea permits the Gilyak to employ the simplest means to catch them in abundance. All [192] they need for this is a span-long iron hook (Gilyak kätsch-kossj, Pl. XL /see p.1020/, Fig. 1) hung on a cord about three feet long which can be moved up and down by means of a wooden handle. The Gilyak sitting beside the hole in the ice casts with this short fishing-rod without any bait, in that he lets it down into the water and immediately draws it up again, pulling one fish after another onto the ice. In the few minutes that I stood by -- it was on February 27 (March 10), 1856, near Arkai on the west coast of Sakhalin -- my Gilyak pulled out several dozen fish, which the hook had sometimes caught at the gill flaps and sometimes at the lower jaw or the mouth. Some fir branches

/532 cont./

286 uniform in shape. Nevertheless, as we shall see in a moment, only a few, about four, can be distinguished among them as the most important and most practicable sizes on the basis of the principal types of fish. But before we discuss them in more detail, consideration must be given to one instrument which is used by the Gilyak for knotting all nets, no matter how fine or coarse they may be, for an uninterrupted and an even flow of the work. This is the so-called pork (Pl. XLI /see p.1021/, Fig. 7) -- a wooden reel revolving around its axis, with two arms at the top and at the bottom, on which the cord for the net is wound and which is hung by its lower handle-end on a ceiling beam of the /533/ yurt or elsewhere, so that the threads required as the work progresses always run smoothly and unchecked to the knotter.

The two most important tools used by the Gilyak for net- [192] knotting are a peculiar netting-needle, Gilyak kilks (1) (Pl.

1. Among the Olcha it is called ssarpol, and among the Goldi ssarfo.

XLI /see p.1021/, Figs. 1-4), and a rectangular wooden board called kiwu (2) (ibid., Figs. 5 and 6). The former consists of

[104]

2. The w in this word is pronounced like the English w. Among the Olcha the kiwu is called keror or kerul.

a long, narrow, and thin wooden plate, the lower end of which is two-pronged as a result of the cutting out of a section, while in the upper half two long cutouts running parallel to the edges and meeting just short of the tip, leaves a long prong in between reaching almost to the tip, which I shall call the upper prong to distinguish it from the two on the lower end. The cord to be used for making the net, unwinding from the above-mentioned reel, is wound around these three prongs, and, indeed, in such a manner that it is alternately slung around the one and the other of the two lower prongs and, in between, always around the upper prong.

/533 cont./

286 Wound in this manner, the kilks, like a shuttle, moves from one
192 side to the other and back again, providing the material for the net and at the same time, knotting its meshes. But in order to make the latter and at the same time give them a certain uniform size, the kiwu is used, a rectangular little board, straight and horizontal at the top and bottom and indented at the sides, with two, approximately triangular cutouts, which, however, seem to be there only for stringing these boards on a cord, like a bunch of keys, and thus making it easier to store them.

286 The larger the meshes of a net are to be, the larger must
192 be the instruments used in making it, the kilks and the kiwu.
226 The net used for catching hausen (patch-tscho) and occasionally
225 also for seals -- Gilyak patch-kä -- has the largest meshes and, correspondingly, is made out of the thickest cord. Therefore to make it the largest instruments are used: the netting needle, Fig. 4, called patch-kä-kilks by the Gilyak (also tolles-kilks and kerwagn-kä-kilks), and the corresponding mesh-board, patch-kä-kiwu, Fig. 6 on the plate cited. Then, according to size, the equipment used for the knotting of the sturgeon net, Gilyak tukki-kä, follows: tukki-kä-kilks (also jaghsin-kä-kilks), Fig. 3, and tukki-kä-kiwu, Fig. 5 of the plate named. The next smaller, third netting-needle, Fig. 2, called anga-kä-kilks or also nokn-kä-kilks, is used for making the nets with which such fish as pilengat (Cyprinus carpio), mimk (Hypophthalmichthys dybowskii), kych, etc. are caught. A fourth, even smaller netting-needle, Fig. 1, was designated for me by the Gilyak as myrch-kä-kilks, that is, as the needle which serves for making the bag net (myrch-kä) used in the above-mentioned salmon weirs. They added,
286 however, that nets knotted with this needle were also used for
226 catching the tengi, S. proteus. /534/ From this one may conclude that the bag nets of the salmon weirs used chiefly, or indeed, as far as I could see, exclusively, for catching S. lagocephalus are relatively fine-meshed, for even fish much smaller than S. lagocephalus, such as S. proteus in particular, do not require finer nets. And that is probably the result of learning by experience that with larger meshes in a bag net the fish entering it in

/534 cont./

226 great multitudes and heavily crowding one another could easily
286 slip through, which would considerably reduce or even bring to naught the mass catch of the most important of all fish aimed at by erecting the myr. Furthermore, this bag net need not be made out of a very thick cord, because, when filled, it is immediately dragged to the not very distant bank. I did not see the mesh-board which go with the latter two netting-needles, and which of course, are likewise of correspondingly smaller size in comparison with those mentioned earlier. Since the Gilyak have even finer nets than the myrch-kä, such as, for example, the bag nets used in the smaller river-branches and lakes for catching crucians and smaller fish, they must certainly have even smaller netting-needles and mesh-boards than the last-named ones, even though always of the same form; but these are of so much less importance that, when I inquired about them, they were neither able to show me any nor give me special names for them.

286 Now when the knotting of a net with the instruments described is being done, a special wooden fork designed for this purpose is fastened to the bench in the yurt, on the edge of the boat, or wherever the work is to be done, and one of its prongs is used to hold the net being knotted, while over the other one are hung the pieces already completed (1). After the knotting

[192] 1. The Gilyak designation for this fork remains unknown to me; according to Maack (op. cit., p. 130), the Goldi call it chalang.

is completed, the net is edged all around with cord twisted out of willow bast and is provided with a second cord of this kind at the upper and lower ends on the outside, running close to the first one and connected with it only at individual points. While
227 fishing, small stones or the above-mentioned wooden or bark
[286] floats are fastened between these two cords as required. The nets of the Gilyak are always handled with great care and

/536 cont./

Gi 226 hunting inherent in them, as in all Tungusic tribes, makes it
184 certain that they will prefer methods of fishing that are less
Gi 226 common among the Gilyak. For example, the /537/ above-mentioned method of fishing with a hook attached to a wooden
Gi 226 clog, which is little used among the Gilyak, is very popular
184 among the Olcha and even more among the Goldi, both on the
Gi 226 Amur and in particular on the Ussuri, and, judging by the striking
184 correspondence in the designations for the individual pieces of
Gi this fishing apparatus among the former and among the latter (1),
Gi
[192] 1. For example, the anchor part of this apparatus is called tschabch by the Gilyak, tschaghbe by the Olcha and Goldi; the main rope fastened to the bottom by means of it is called tyk by the former, dyka by the latter; the clog equipped with the hook is called kita by the former, kuital and kuitzale by the latter.

I am inclined to believe that the Gilyak, despite the fact that in most things concerning fishing they may be regarded as the teachers of their Tungusic neighbors, have borrowed this method of fishing from the latter. Still greater and more characteristic in comparison with the Gilyak is the preference of the Olcha and in particular the Goldi for catching sturgeon and hausen with the above-mentioned and illustrated (Pl. XLI /p.1021/, Fig. 8) too, the fact that the Gilyak term for this weapon (tschak) is very similar to that of the Olcha-Goldi (dshogbo) seems to me to argue in favor of a borrowing of it on the part of the Gilyak from their Tungusic neighbors, whereas the much simpler one-pronged harpoon, the tugngy, was probably theirs originally. In the
Gi 226 preference of the Olcha and Goldi for this method of fishing,
[224] which is closest to hunting, indeed, in fact is more fish-hunting than fishing, their Tungusic hunter-nature is clearly to be seen.
Gi Moreover, it is intimately bound up with the boldness, ease, and
[501] adroitness with which they glide over the water in small

/544 cont./

225 Along the seacoast and in the Amur-Liman seal-hunti
184 takes place during every season of the year. In winter and in
[192] general as long as there is an ice-cover, the Gilyak lie in wai
[221] for the seals at the places where they come to the surface of t ice to breathe, in order to kill them with the ordinary harpoon the tugngy (2) (Pl. XLII /p.1022/, Fig. 2), also used for spear

2. This designation primarily refers to the iron point illustrated, but it is also used for the entire harpoon equipped with a pole for hurling it.

sturgeon and hausen, or, when they have crawled out on the i itself, to cut them off from the water /545/ and simply club t The latter can be done more often and to a greater extent in t spring, because then the seals are said to enjoy coming out on the surface of the ice to sun themselves. Both the Tschomi
[221] Gilyak whom I met in Poghobi and the inhabitants of Tägl on mainland coast of the Sea of Okhotsk told me that the month April, arkail-long, was the month in which more productive s hunting begins along the seacoast and in the Liman. In the A on the other hand, seal-hunting is practiced only when the riv has no ice, and, to be sure, especially in August, the pilja-tschrar-long, because then the seals go into the river in greate numbers in order to feed on the masses of keta salmon (S. lago cephalus) going up it. There is a similar situation at the mou of the Tymy on Sakhalin, where not only the Gilyak and Orok living there, but also the Gilyak coming from the upper cours of the Tymy to fish, engage in seal-hunting as well as fishing For the former and in open water everywhere, in the sea as wel
[192] as in the Amur-Liman and the Amur River, the Gilyak some-times use the ordinary harpoon (tugngy, Pl. XLII /p.1022/, Fi 2), which is hurled from the boat, and sometimes, and most often, another weapon intended especially for seal-hunting, w is called lych among them. It consists of a board about a foo long, which rises a little in front and runs out into a horizonta

/517 cont./

226 spongy that it is dangerous to step on it, or is covered with water -- this ushers in the most meager and difficult period for the river-dwellers, since human beings and dogs live on only the scanty remains of the winter supplies. Moreover, all communication between the villages on the Amur ceases at this time. The Gilyak therefore waits impatiently for the opening of the river, when it becomes lively anew and fishing and traffic on it are again possible. The opening up of the Amur River is therefore always a joyful and important event in the lives of the Gilyak and is appropriately hailed by them. As
96 soon as the river is entirely free of ice, a boat manned by as
226 many oarsmen as possible sets out from every village of any size
782 in order to offer it, on a swift journey and amid loud shouts of
114 joy, the customary sacrifices, that is, to toss pieces of jukola, berries, millet, tobacco, and the like into the water. On May 14/26, 1856, shortly after beginning my upstream return trip from Nikolayevsk, I had the good fortune to meet, between the villages of Wair and Magho, such a boat on its sacrificial voyage (see Pl. XXXIX /see p.1009/). It was a long boat with
501 one steersman and 13 oarsmen. The latter, each with two oars, sat in a row up to the prow of the boat. Above them rose three light racks, each consisting of two upright rods connected at the top by a crosspiece. The oarsmen rowed in perfect time and with full force, and the steersman for his part helped at each stroke of the oars with a powerful stroke of the steering-oar. Thus, amid the wild shrieks of its occupants, the boat shot past us like an arrow. It is therefore not impossible that some of its equipment escaped me. For instance, I saw nothing hanging down from its racks, and yet they must have the purpose of carrying something, even though, in view of their very weak nature, it could only be quite light objects. And so this
192 automatically leads me to the conjecture that they are intended
